The Investors' Review.

The Protectionist Agitation.

Admirable addresses continue to be delivered in Parliament and out of it in vindication of the free trade position of the United Kingdom. Nothing can be more true than the statement made by Mr. Bryce in Aberdeen that protection may be a gain to the rich, but it never is so to the poor, and although it was none too polite Sir William Harcourt spoke the truth when he said that the Chamberlain propaganda was a wild cat affair, and an experiment in financial kite flying. It is that, and a good deal more, in an evil sense. We all work in the dark, however, and beat the air, so long as the Government abstains from formulating its plans. The followers of the Colonial Secretary deal in vague generalities, cheap-Jack appeals to "imperial" patriotism, to the vulgar ambitions of the multitude and the lowest forms of human vanity. Already the *Pall Mall Gazette* has got as far as to tentatively yap "pro-German." The old age pensions lure is revived in order to disguise the heartless cruelty and class selfishness of this factitious and wholly unjustifiable agitation; and the worst of it that arguments based on facts, carefully thought out reasonings, appeals to commonsense and experience, every weapon in the armoury of the patriot and statesman, are of little use against the torrent of bombast or invective, the turgid generalities with which the country is deluged. Facts are carefully eschewed when they are touched upon at all, or else twisted out of shape so as to be almost unrecognisable. A perfect unscrupulousness marks the conduct of this re-presentment of an oft exploited economic heresy. Obviously the people who are most zealous in the Colonial Secretary's service have no qualification at all for dealing with the subject in an intelligent manner. They only know how to play upon the baser kind of human passions, and unless something can be done to force the Government to come to details and to show its hand, much of the excellent work now doing by free traders of all shades of politics promises to be in vain.

Will the Government, for instance, as a preliminary to the proposed changes in our tariff system, nominally to bolster up certain colonies, and especially Canada, direct our Consular agents abroad to prepare, as they easily can do, a statistical exhibit for each country of the hours of labour of workmen in certain leading branches of industry, the rates of wages paid, the average cost of provisions, and the scales of rent exacted for the tenements in which the workmen live? Mr. Bryce told his audience in Aberdeen that the workmen in Germany have to toil on an average twenty-nine days in the year more than workers in Britain, and that nearly three-fourths of the population of that empire have incomes under £45 a year, with wages latterly falling instead of rising. It was shown in these columns the other week, on the authority of an eminent French economist, that the wages of French iron-workers are low compared to ours, and that their hours of labour are on the average longer. What we want, however, is an authoritative exhibit of the facts relating to Germany, France, and the United States, as being the three great countries most prominent for their protective policy. Let us have the truth about the position of the working classes in these countries, together with such illustrative examples as can readily be accumulated. Let us also have some weighty summing up of the general influences determining the social and economic status of the working classes in these countries, and, alongside facts, and historical or sociological reviews of this description, place similar facts and statistics relating to our principal home industries. If there is to be any genuine investigation preparatory to changes in our tariff, it must take some such shape as is here described. Without facts of this kind, carefully collected and collated, it would be in the highest degree dishonest towards the uninstructed masses of this country to trap them into assent to a policy which might very well mean their ruin and the nation's decay. What free trade has given us we know; let us also understand what protection has really done for the victims thereof.

We had an interesting example of slip-slop statistics the other day in an answer made by Mr. Chamberlain to a question put to him by Mr. D. A. Thomas. That gentleman had asked for some account or display illustrative of the growth of our trade with the colonies, and Mr. Chamberlain got his secretary to add up some figures, and threw them at the querist's head. According to the right hon. gentleman the average figures of exports of British and Irish produce to the colonies showed steady and large increases. In five yearly periods, beginning with 1876, the totals given in the answer were £67,455,000, £81,295,000, £81,187,000, £75,168,000, and £86,143000 the last of these totals relating to the figures for the five yearly period ended with 1900. As they stand, these figures show anything but uninterrupted progress, but Mr. Chamberlain winds up with the triumphant looking fact that in 1902 the total rose to £109,029,000. Upon this leap seemingly he based the inference that the exports showed "a large and continuous increase." Yet his own figures disproved that statement, and as to 1902, high though the total may be, it is so obviously to a great extent the product of our war outlay, where it is not the product as in Cape Colony and Natal of extravagance in borrowing which can only be described as insane, that the less said about it the better. Appended to this article is a summary table of the movements of trade in 1902 and in the four preceeding years, with our principal or most prominent colonies, as recorded in the annual state-

ment of the "Trade of the United Kingdom with Foreign Countries and British Possessions," just published. We have not gone further back than the volume, because it is unnecessary for our present purpose to do so. These tables make it still more plain that there is no such steady and remarkable progression in our colonial trade as Mr. Chamberlain would have us believe. Some of the colonies did a poorer business with the mother country in 1902 than in previous years. There was, for instance, a notable decline last year in our export to New South Wales, and little increase anywhere except to Canada, the Cape, and Natal. Canada bought more because she sold more, partly that and partly because her productive power has been stimulated within the last three years to an extent which has yet to be proved enduring and wholesome by gold discoveries, by large investments of United States and British capital in her mining and other industries, and by an unprecedented inflow of immigrants. As for South Africa, the wonder is that the Cape and Natal do not show even more swollen figures than the tables contain when we consider to what appalling totals the expenditure of British money in South Africa amounted in the years 1899-1902, inclusive. As they stand, these figures relating to South African trade, especially when both sides of the story are taken into view, are significant indications of the unreality of the progress made, and of the unwholesome character of the "expansion."

Examine details a little. The largest increases shown in 1902 are attributable to exports of metals to the colony, followed by important increases in articles of clothing and in tissues paid for out of the wealth we have scattered and lost there or out of the loans the colony has raised. This side of the subject is altogether ignored by the clamourers for preferential tariffs as a by-path through which universal protectionism may be reached here. We shall not enter into this subject now, because we have not space, and because it is difficult to trace the amounts of capital in all the forms under which it may be supplied to a new undeveloped country, but there is one fact which stares us in the face in looking at these figures, and in contrasting them with our imports from the colonies, it is that not one of them can be paying for their imports out of their own produce. Least of all, are the South African colonies so paying. From this statement, which cannot be gainsaid, we may go on to make another equally significant not one of these colonies, or all of them together, could take the place of foreign countries in supplying us with food or with our principal imports of such raw materials as cotton, copper, iron ore, tin, flax and certain kinds of timber. Canada alone sends us any appreciable quantity of food, but that is quite a recent development. We do receive from Australia a large proportion of our imports of wool, but we could dispense with Australian wool more easily than we can dispense with supplies of grain from the United States, the Argentine Republic, or the countries bordering the lower Danube. These colonies are all valuable to a certain extent, but we could let every one of them take the bulk of their trade elsewhere without dying of the loss. They, however, are all compelled to send most of their goods here, because the mother country is almost their only creditor. No change, then, in tariff arrangements could ever do more than unhealthily force or over-stimulate the exports of these colonies in certain directions, but the forcing can never by any possibility deliver us from the necessity of leaning upon countries called foreign for the bulk of our supplies in all the leading commodities, essential to our manufactures or to our sustenance. The United States, for instance, sent us last year about £6,130,000 worth of oxen and bulls, and Canada about £1,610,000. Most of our maize comes from the States, and Canada cannot grow that grain. Are we to violently displace such important contributions to our means of subsistence in order to drive the pastoral and agricultural industry of Canada into a condition of utterly diseased expansion? Is our only aim to be the furtherance of land "booms" in the north-west? Wherever one touches facts and tries to weigh their meaning, one is driven to the conclusion that this protectionist agitation, sprung suddenly upon the country, has nothing whatever to recommend it. Nothing indicative of an industrial or economic emergency here. It therefore does not deserve the serious consideration of any man of business. It cannot be prompted by any genuine spirit of patriotism, and is certainly an agitation started and carried on without knowledge and without any settled or intelligent design to benefit the home population, or the "empire" as a whole. Emergency there is in the colonies, even in Canada, as the subjoined figures show—stagnant exports and swelling imports, but we cannot better help them to surmount their troubles than by keeping our hands free, our doors open, to all the world, so that all may be tempted to give us their continued custom.

The British Electric Traction Company.

There is so much of a fascinating description in the details of this great company's mass of undertakings that we cannot hope to deal with the whole subject in one number. For the present, therefore, we shall take the accounts of the company itself. These, according to the report, show a net profit for the year closed March 31 last of £266,400, including £27,438 brought forward. This takes no account of the premiums amounting to £90,337 received on new shares and debenture capital issued these having been carried direct to the reserve. After deducting the proportion of general expenses chargeable to revenue, and also expenses incurred in connection with schemes not proceeded with and written off, the latter amounting apparently to £66,170, the net balance left is £208,162, out of which the preference dividend is provided, £552 written off furniture, and £2,500 off licensing and testing expenditure. The balance left enables the directors to declare a dividend at the rate of 10 per cent. per annum on the ordinary capital, making with the interim dividend at the rate of 6 per cent., 8 per cent. per annum, and still leaves £24,912 to be carried forward. As already intimated this dividend is 1 per cent. less than the distribution for 1901, but then the capital account has in the interval been heavily increased, 75,000 new £10 preference shares having been issued in December last at the price of £12 per share. This yielded £900,000, and in addition debentures to the

amount of nearly £250,000 seem to have been sold or pledged. Altogether the new capital brought into the business during the year amounts to about £1,150,000, and in addition £310,000 in shares had been created and issued to buy up the Brush and Electrical Power undertakings, so that altogether the capital to be paid upon including debentures, is nearly £1,500,000 larger than it was on March 31, 1902. A decrease in the dividend in the circumstances was to be expected, all the more as so many of the enterprises carried on by this company are in a partially finished or altogether raw and undeveloped condition.

The balance-sheet now amounts to the formidable aggregate of £4,836,524, and of this total no less than £3,569,658 represents investments in subsidiary undertakings to the number of 84. How far these undertakings actually pay or promise to pay in the future forms an extremely interesting problem, which we shall hope to deal with at an early date. We have our fears, but for the present it is better to confine attention to the balance-sheet of the parent company. It does not please us much, because it betrays a strenuous necessity for still more capital. That is the most obvious lesson of the figures. The company, for instance, recently created £280,170 of 5 per cent. perpetual debenture stock, making the total amount of such stock in existence £1,250,000. The amount mentioned does not seem to have been all sold, but a memorandum in the balance-sheet informs us that a further £150,000 of debenture stock has been lodged with bankers as part security for loans. Are we to infer that this is in addition to the £280,170 recently created, and if so why was this addition necessary? Altogether, including £200,000 borrowed from bankers and £64,000 representing deposits made by sundry associated companies the actual debt of the company stands at £1,325,572, and this is exclusive of £103,655 owing to sundry creditors, so that the burden of debt is getting on towards £1,500,000, and the assets are, as may be inferred from the statement just made about investments, of an unliquid description. That is to say, the bulk of the share capital created for subsidiaries remains in the possession of the B. E. T. Company, and must be held by it until prosperity on the part of these subsidiaries enables it to dispose of its holdings to the public. In addition, moreover, to the shares and debentures held by the company, there are sundry debtors to it for the sum of £985,229, including £816,351 due to it from other companies in respect of sale of undertakings and on construction and other works.

Figures like these mean an enormous strain in financing the business. As the company takes shares and debentures, usually unsaleable, for its advances, it necessarily has to borrow the money, and, as a matter of fact, the whole of the reserve fund, now amounting to £550,042, is absorbed in carrying on the business, over and above the borrowings and share capital. So completely are the resources drained that at the end of March last only £57,838 was on hand in the form of cash. As the final dividend of 5 per cent. for the half year requires upwards of £66,000, and as preference dividend and debenture interest continue daily to accrue it is difficult to see how the company is to avoid another immediate heavy issue of capital in order to put it in funds. More debt it ought not to create and issue, and yet apparently it is further debt that the directors contemplate raising, for the shareholders are to be asked at an extraordinary general meeting to alter the articles of association so as to empower the board to borrow up to the amount of the "subscribed" capital of the company. This, the report goes on, "will enable the directors to raise upon second debenture stock ranking subsequent in point of charge an amount equal to the 5 per cent. perpetual debenture stock now authorised." In other words, debt to the amount of another £1,250,000 may be placed ahead of the share capital. This is not a pleasant prospect, but on the system of finance followed by the company we fear it is inevitable. Yet it possesses some excellent properties, and the exhibits of traffic receipts and passengers carried are on the whole of an encouraging description. None the less are the auditors, Messrs. F. W. Smith and Company, constrained to say that the value of the securities representing investments cannot be certified by them. We are not surprised, for many of these securities cannot have any assessable value for several years to come, some may never have value of any sort. Nothing, perhaps, shows the present strain so vividly as the absence of any addition to the reserve from the profits of the past twelve months. The year before £20,000 was "transferred" to that account from profit and loss, but there is nothing at all for it this year beyond the premiums on new issues of capital and the day of such premiums is we fear over. Next week we shall review the position of the subsidiary companies so far as disclosed in the very interesting, though imperfect, summaries of their accounts appended to the main report.

Economic and Financial Notes and Correspondence

The Quarter's Revenue.

We must not be rash in drawing inferences from the figures of the national income for the past quarter. That portion of it retained for imperial purposes shows a net decrease of £611,446 on the figures for the corresponding quarter of last year, and it may be that a period of decline has been entered upon which will leave its mark on the figures at the end of the fiscal year. For the present, however, the totals do not necessarily to any material extent belie Mr. Ritchie's forecast save in the case of Excise. His budget estimate assumed an increase of £600,000 under this head for the twelve months, and the first quarter shows a decline of £270,000. We think this shows a tendency, and a poverty likely to continue. For the present, however, the loss is much more than balanced by an increase of £768,000 in the customs, upon which only £207,000 more was expected for the entire year. The corn duty, however, ceases to be levied from the first of this month, and long before the year is out, if the international sugar convention is embodied in our revenue laws, there may be other disturbances calculated to bring the yield of customs for the entire year down to Mr. Ritchie's estimate, or below it. Estate duties also show a decrease of £600,000 for the quarter, as against an estimated shrinkage for the entire year of £550,000. This is not pleasant, but the death of two or three millionaires might bring the figures up again, and close the year triumphantly under this head. We have less hope of the stamps revenue, from which the Chancellor of the Exchequer expected an increase of £200,000 in the entire year, and the falling off of £140,000 in the first quarter is significant of the continued stagnation of domestic business, especially of Stock Exchange business. Perhaps, however, this sinister indication will also take a change for the better, thanks to the cheap money or banking credit now with us, and we prefer to wait for at any rate another three months before beginning to draw unpleasant inferences all round. It would, indeed, be a dreadful thing for our War Minister and First Lord of the Admiralty, let alone our doleing local government boards and sect-endowing education boards were the revenue to continue to shrink in the manner disclosed by the returns for the first quarter of the current year. Mr. Ritchie, when he chucked away 4d. of income tax and maddened the Colonial Secretary by abolishing the corn duty, just when Canada was at the top of its boom, only left himself a mere handful of money at the end of the year, and will have supplementary estimates to face for the Somaliland war, for the new empire of Nigeria, under a variety of other heads, before the twelve months have run their course. A declining revenue would consequently mean a return to profligate borrowing habits quite shocking to think of, unless, indeed, Mr. Ritchie, really gets the first £10,000,000 of the Transvaal contribution, and utilises part of that to meet his deficiency.

Income tax shows a decline of £390,000, and that also may have some unpleasant significance, although we must not dwell upon it yet, just because the tax for the current year is 4d. in the £ less than that for the past year, and that alone involves an estimated loss of about £8,500,000 on the entire twelve months. The arrears,

however are collected on the fifteenpenny scale, and as yet very little of the new year's tax has been accounted for. The figures, however, now deserve watching week by week, because the dividend for the first half of the current year upon all sorts of joint-stock enterprises will now begin to be distributed, and it will be interesting to note whether the decline in the yield of the tax proceeds henceforth at a greater speed than was estimated. Post Office and telegraphs keep up fairly well, and the small increases shown in the revenue therefrom are encouraging as far as they go, affording another reason why we should not yet sit in judgment nor proceed to draw unpleasant inferences. There will be lots of opportunity for these. A word may be added with reference to the amount paid over to local authorities. This shows a decrease of nearly £73,000 compared with a year ago, the net decline in the entire revenue being £684,168. Up to date the sum paid over to local taxation has been £1,878,000, compared with £1,951,000 in the first quarter of 1902-3. Altogether the revenue of the quarter came to £34,410,913, of which £32,532,983 was the imperial portion. It is a great slice of the earnings of the people.

The United States Budget.

Preliminary figures have been sent over by the New York correspondent of the *Times*, and may be recorded here. They state that the federal revenue for the fiscal year ended on June 30 amounted to $506,176,590, or a decrease of $57,228,000 (upwards of £11,500,000) on the figures of the previous year. Expenditure, on the other hand, has risen at a really appalling rate, the total outgoings for the year having amounted to $558,887,525, or $87,676,000 more than in the previous year. This is an increase of upwards of £17,500,000, and accordingly the deficit for the year seems to amount to the disquieting sum of about $53,000,000, or say nearly £11,000,000. In making up his forecast last December, Mr. Shaw, the Secretary of the Treasury, calculated upon a surplus of some £8,000,000, but so many internal taxes have been knocked off, and so many additional outlays incurred, that this is the actual result he arrives at. The Government in Washington has been pouring out money without stint in all directions, absolutely without regard to the revenue, merely to keep up a brave show of plutocrat-republican imperialism, and perhaps to find pretexts for still further increases in the already nation-destroying tariff. The navy cost upwards of £3,000,000 more in the year just closed than in that ended June 30, 1902, the total outlay being $82,697,000. No less than $118,550,000 disappeared in the war department, and pensions absorbed $138,426,000, or nearly £28,000,000, an increase, if we mistake not, of some importance on the figures for the preceding year. The Republican bribery fund is thus kept full whatever the condition of the Treasury may be, and it is the most shameful item now appearing in the budget of any country describing itself as civilised. Doubtless the Philippine and the Cuban wars have been utilised as a pretext for endowing political supporters throughout the Union with additional incomes from the public purse, but none the less is such a total as this an unmitigated disgrace to a free people, and a signal mark of its moral degradation.

The Birkbeck Building Society.

We must begin by congratulating the present management of this old society on the improved form in which the report is drawn up. Excrescences of a disagreeable and to some extent misleading kind, of whose presence we used to complain, have been dispensed with, and we get in the fifty-second annual report a straightforward summary of the affairs for the year ended March 31 last. As is well known, although called a building society, the principal business of the Birkbeck is that of banking; banking, however, of a somewhat peculiar description, whose characteristic features may be said to have developed simply because the bank is hampered by its building society foundation, and compelled to work within the lines of the original scheme. It still does a building society business, and the accounts are complicated by receipts from "shareholders" and repayments to such, yet the principal business is that of an investment or deposit bank, carrying on also current account business as an ordinary banker, but using the net balance accumulated each month or year principally to increase the amount invested in marketable securities. For instance, the total of mortgages and loans on securities amounted on March 31 last to £877,439, exclusive of £6,148 invested in mortgages the interest on which was more than twelve months in arrear at the date of the balance-sheet, and £2,585 in property on hand. But the aggregate of the balance-sheet is £11,423,634, and out of this no less than £8,971,000, in round figures, is invested in Stock Exchange securities. On the prudence with which this investment business is carried on, the stability of the bank depends. If the investments are good on the whole there is no reason why the business should not go on for ever; if, on the other hand, a large proportion of the money is laid by in stocks of a speculative description, the end might be sorrow. As far as the summary given indicates, there seems to be no present ground for apprehension on this score. In other words, the amount of money in speculative kinds of stocks must be small, unless we are to put colonial inscribed stocks in that category, which, we fear, must be done, although the managers of the bank may not be blameable for laying large sums away in that direction. A note in the balance-sheet says that on March 31 last there was a depreciation on the value of the investments owing to a temporary shrinkage in the market quotations, but that this was covered by the reserves, aggregating £554,774, and other balances. Would it not, however, be prudent to increase the permanent guarantee fund at a more rapid pace than now if that be possible? Last year's profits nearly made up the £25,000 added to this fund for the year, but it still amounts to only £250,000. The net profits of the year were only £21,197, and it must be a question with the management whether too high rates of interest are not being paid to stockholders and depositors if absolute safety is to be attained. Last year, for example, the amount paid away in interest and discount was £269,381, exclusive of a bonus of £14,752 paid upon the "A" and "B" shares. Against this the total receipts from interest, dividends, ground rents and net profit on the sale of investments, etc., was only £342,616. In addition, £12,336 was received from a number of small items of income. Management expenses, however, took £43,808, and the heavy sum of £19,030 was paid as income tax, the final result being the net profit as above mentioned. Some relief on the income tax item will be given this year, but we have a feeling that it might be better to knock, were it merely 2s. 6d. per cent. off the interest paid to deposiors, so as to permit the reserve to be accumulated at a greater speed, in view of the considerable risks involved by the investment of nearly £9,000,000 in a variety of marketable securities. The expenses do not seem to be excessive, considering the amount of the business done, but £262,305 looks a large amount to be sunk in bank building, offices, shops, and chambers. Perhaps, however, much of this property yields sufficient rental to cover interest on the outlay. On the whole the report pleases us except in this one particular.

Working Expenses on United States Railroads.

Some intersting facts on this subject make their appearance in the last number of the New York *Commercial Chronicle* which has reached this country. The figures relate only to Vanderbilt roads, but as these are amongst the best managed railroad properties in the States, it may be assumed that if working expenses in their case swallow up most of the increase in gross receipts, the other railways throughout the country will make similar exhibits. It is the habit of the New York Central Railroad Company to issue a preliminary statement for the final quarter of the year ending on June 30, partly an estimate, and in this way it makes up its annual figures provisionally some weeks before the actual close of the company's financial year. On this basis the past twelve months' working on the New York Central's system east of Buffalo, that is, on the lines directly worked by the New York Central Company, shows an increase of $6,634,232 in gross receipts, or upwards of £1,300,000. The whole of this, however, except a sum of $116,921, has been swept away by the working expenses, so that the shareholders are practically

no better off because of the larger earnings than they were before. As regards the year now closed, this disappointing result has comparatively little significance, because the company has never distributed its full net earnings in dividends, at least not in recent years. It pays 5 per cent. to the stockholders and earns something over 6 per cent. Last year, for instance, the excess balance left was equal to 1.6 per cent. additional on the $132,250,000 of stock now outstanding. Should, however, the policy of stock issues continue and prove to be of the same magnitude as the recent additions, it might very well come about that the net earnings would not be sufficient, even when eked out by dividends from the dependent companies such as the Lake Shore and the Michigan Central, to provide the full 5 per cent. Net revenue has been helped in the year just closed by the refunding of large amounts in 6 and 7 per cent. bonds at 3½ per cent., but even that help will not always be available, and the outlook is therefore clouded.

It is the same with the other Vanderbilt roads, and we probably see in the large growth of expenses one consequence of the control of industries in the States by monopoly combinations. The railroads are compelled to pay higher prices for fuel, for iron and steel, for all the materials employed by them in the up-keep of their properties. Higher prices also imply higher wages to the employees, the cost of living having been sensibly raised all round, thanks to the trusts that live and batten on the community behind the high tariff wall. Until, therefore, conditions change so that railroads are able to buy in a free market, so that workmen are not stripped of their earnings, we must look for a continuance of this increased ratio of current expenditure on all American railroads. To some extent they have sought to balance the strain put upon their earnings through the enhanced cost of everything they have to purchase by raising their freight charges, but it is doubtful whether they could keep these up were trade to slacken. Notwithstanding the enormous strides made in combining the great railroad systems of the Republic under the management of a small knot of Wall Street financiers who work in harmony, rate wars will be certain to break out directly traffic falls away sufficiently to deprive some of the roads of full employment for their rolling stock and equipment. There will be a fight as to who shall have the full rates and who shall go empty, and we rather think the fight is about due. Some reports, indeed, declare that it has already broken out in the west; if so, it will not be long before it spreads eastward, and should the Canadian Pacific Railway succeed, as it surely must, in persuading the Dominion Government to subsidise a fast line of Atlantic steamers in its interests, that common carrier up north will become a powerful agent in forcing a conflict. A war of rates on the ocean has probably commenced now and is certain to break out with extreme virulence before long. That war will extend to land carriage, and the danger must not for a moment be lost sight of by investors on this side. There is nothing in the outlook to tempt them to risk their money in American Railroad shares of any class, and no substantial foundation for the enhanced prices now being engineered by the gamblers and by financiers solicitous to unload.

Frank Jones Brewing Company.

Speaking relatively, this undertaking enjoyed quite remarkable prosperity during its last financial year, and the directors take the opportunity of asking shareholders to provide them with some badly-needed working capital. Extensions since the formation of the company have swallowed up most of that originally provided, and if the company is to operate to the best advantage, more money is imperative. As shown in the report of the company, dealt with elsewhere, the past year's profits were sufficient to provide the twelve months preference dividend, and all the arrears, amounting to £16,000, but the directors think the company requires the cash more than the shareholders, and are not prepared to recommend the distribution of the full amount. They are not averse, however, to striking a bargain, and ask proprietors to accept one half of their arrears, and waive the remainder on the condition that the £8,000 so set free is made the nucleus of a special reserve account for providing working capital. Should they agree, the amount to be paid to holders will be 2 per cent., of which they will get 1 per cent. with the dividend for the past year, and the other 1 per cent. out of the profits of the current year, or as soon as the revenue allows. In return the directors undertake to build the special reserve to £26,000, by appropriating net profits over and above the preference requirements, to the extent of £6,000 per anum, equivalent to 1½ per cent. on the ordinary capital. After this special fund has been got together, 10 per cent. of the surplus net profits in each year, when the preference dividend has been provided, will be set aside to a preference dividend reserve fund, until it reaches £16,000, such money to be separately invested for guaranteeing the payment of future dividends on the preference shares. The contemplation of prospective wealth like this almost makes one thirsty.

Dear Sugar and Mr. George Martineau.

We thank Mr. Perris for the following note. That Mr. George Martineau would prove to be wrong is, sad to say, only what our long acquaintance with him and his courageous obliviousness to facts inconvenient to his point of view led us to expect:—

5, Henrietta Street, Covent Garden, W.C.,
June 30, 1903.

To the Editor of the Investors' Review.

Sir,—I have been greatly amused by Mr. Martineau's letter on this subject in your last issue. A certain degree of persistence in argument is to be expected in so good a partisan; but there is a point at which the refusal to see plain facts ceases to possess any element of virtue. Mr. Martineau talks throughout his letter of a rise of sugar prices up to September last, and even declares that they have since "fallen away and continued to do so." I append to this letter a summary of a more elaborate table of sugar prices which I have had taken out, covering the period from the beginning of July, 1902, to the end of May, 1903. This summary shows, for two typical kinds of beet sugar, first, the average of each month's prices, and, secondly, the percentage of rise above the level of last July. You will see that in both cases the rise had only commenced in September last year, has gone on pretty steadily ever since, and amounts to rather more than a third. All Mr. Martineau's ingenuity in talking about the average price of the bounty period, that is to say, the average price for 20 years past, is powerless to disguise the fact that the rise of price has amounted to one-third upon the total imports of sugar into the United Kingdom in twelve months, and therefore represents a loss to the country in that period of about £4,900,000. Mr. Martineau says that, if the Convention comes into force, the price of sugar will range between 9s. and 10s. per cwt. At the end of May prices for British West Indian fair brown were 8s. 6d. to 8s. 9d., for German-Austrian 88 per cent., f.o.b., about 8s. 4d., and for granulated f.o.b., ready 9s 9d. It is evident, therefore, on Mr. Martineau's own confession, that the Convention is going to produce a further rise in prices; and it is simple brazen self-contradiction to suggest that "the consumer will be a gainer and not a loser."

Faithfully yours,

G. H. Perris.

Table of Sugar Prices from July, 1902, to May, 1903.

	Geaman-Austrian 88 per cent. f.o.b.		Granulated f.o.b.	
	Average price. s. d.	Rise over average of July, price per cent.	Average price s. d.	Rise over average of July price per cent.
July	6 0	—	7 4½	—

April	8 2¼	38.5	9 8	31.07
May	8 4	38.8	9 9½	32.76

Navy Waste.

It is paralysing, that is the worst of it. We spend such enormous sums during peace upon experiments in shipbuilding, upon ports, dockyards, harbours, artillery, boilers warranted to burst, in the construction of ironclads guaranteed to break down, or so forth, that were a war to occur we should be helpless before it had continued three months. Mr. Edmund Robertson drew attention on Thursday afternoon to the frightful total now attained by this branch of the national outgoings. The amount for the current year, he said, including appropriations in aid, was £35,836,000, but that is exclusive of £4,000,000 of

money to be poured into "naval works." He deducted the annuity of £500,000 payable during the year as interest and sinking on past borrowed "works" expenditure, and so brings the total out at about £39,500,000; but surely that interest ought to be included. It is part of the load laid upon our backs by this demented system of competition in extravagance, and we may say £40,000,000 of the people's earnings go to augment and maintain the navy and whatever works are connected therewith in a time when we are supposed to be at peace with all the world. If peace is so costly, what would war mean? It would mean the obliteration of England as the world's banker. So little interest did the House take in the shocking progress all these figures show towards national inanition, financial and industrial, that Mr. Robertson's speech was interrupted by an attempt to count it out. Significant that of the quality of imperial patriotism, and the value of the representatives of the people as guardians of the public purse. Yet there were Liberals ready to back up the extravagance. Some even complained that the money spent was not enough. What are these people aiming at? How long could we keep a fleet such as we are supposed to possess in a fighting condition were we at war? We should be defeated by the break down in our national credit long before victory saluted the imperial flag, perhaps before the first gun had exploded. It is time for the nation to try to get the vapours out of its head and devote itself to the study of its own affairs. More than half this money, we are persuaded, is absolutely wasted. Spain was not strengthened by its expenditure on the great Armada.

The Latest Bank Absorption.

Little more than twelve months' ago the Union Bank of London effected the most important banking amalgamation of recent years by absorbing the business of the old established private firm of Messrs. Smith, Payne and Smith's, of Lombard Street. The name was thereupon changed to the Union of London and Smith's Bank. Since then, among others, the London and Yorkshire Bank has been taken over, and now comes the announcement that an amalgamation is to be effected with the institution known as Prescott's Bank. It only recently changed its name from the clumsy one of Prescott, Dimsdale, Cave, Tugwell and Co., and is made up of several private businesses, the first fusion coming into force in January, 1891, when the business of Prescott, Cave, Buxton, Loder and Co. was joined to that of Dimsdale, Fowler, Barnard, and Dimsdales, Miles, Cave, Baillie and Co., of the Old Bank, Bristol, and Tugwell, Brymer, Clutterbuck and Co., of the Old Bank, Bath. In rapid sequence came fusions with G. Moger and Co., of the Bath City Bank, Deane and Co., bankers, Winchester, Harwood and Co., bankers, Thornbury, and Bulpett and Hall, bankers, Winchester. Finally, the business of Thomas Butcher and Sons, bankers, Tring, was absorbed, and the bank found itself in possession of twenty branches, five of them in London. The official announcement concerning the amalgamation is as follows:—

"A provisional agreement has been entered into for the amalgamation of Prescott's Bank, Limited (subject to the confirmation of their shareholders), with The Union of London and Smiths Bank, Limited. The shareholders of Prescott's Bank will receive five shares in The Union Bank for every nine of their shares, and a meeting of the shareholders of the Union Bank will be convened immediately to sanction the necessary increase of capital. Messrs. H. W. Prescott, F. W. Buxton, C. C. Cave, E. W. Barnard, R. F. Miles, and A. M. H. Walrond will join the Board of The Union of London and Smiths Bank, Limited, and the management of the country branches will remain in the same hands as heretofore."

At the present moment the paid up capital of Prescott's is £502,904 in £25 shares, on which £8 has been paid up, and under the terms of the provisional agreement, the par paid-up value of the five Union of London and Smith's £100 shares, £5 10s. paid, will be £5 10s., more than that of the nine surrendered Prescott shares, viz., £77 10s. against £72. No market quotation exists for the latter, but the nominal value of the Union Bank shares handed over is £541,337, and the market value about £1,362,000. The liabilities of the public of the combined institutions will be about £30,000,000. The Union of London and Smith's Bank propose to issue 50,000 new shares, but only the 34,924 required for the present business will now be allotted.

The Gaze Case.

Hambro and Son v. Burnand and Others.

Though seemingly hard on Messrs. Hambro and Son, the decision given by Mr. Justice Bigham in the action brought by them against Mr. P. G. Burnand, Col. Draffen, Mr. P. Mordan, Mr. R. A. Read, and Mr. R. J. Elwell, can only be regarded as just and equitable, whether looked at from a legal or a business point of view. The suit arose out of a question of liability on certain guarantee policies which had been issued in the names of all the defendants to cover certain bills drawn by Gaze and Co., Limited, and accepted by the plaintiffs. On the drafts not being met by the tourist agency, the guarantors were called upon to pay, and it then came out that although the names of Colonel Draffen and Messrs. Read, Mordan and Elwell appeared in the policies they had been placed there without their knowledge, and by the defendant Burnand, as their agent. They had, it is true, prior to the issue of the policies, authorised the remaining defendant, Burnand, to carry on an underwriting business at Lloyd's on their behalf, and for this reason it was contended they were liable on the policies in question. Burnand, however, soon after the first guarantee was given, became a director of Gaze and Co., and must have known it was an insolvent business. All subsequent policies were therefore, as Mr. Justice Bigham pointed out, issued by Burnand for his own ends, since without them Messrs. Hambro and Son would have refused to accept drafts. This was the chief reason his lordship gave for not holding Colonel Draffen and Messrs. Read, Mordan and Elwell liable on the policies, the whole responsibility for them attaching to the defendant Burnand. In certain quarters it is thought the decision will check this class of business on Lloyd's, but we fail to see how. What may happen is that instead of holders of policies accepting per procurationem signatures they will insist on each underwriter signing for himself, so that no question may arise later as to the liability of the signatories.

American Thread Company.

It is so often our duty to say hard things about certain companies, that it affords us infinite enjoyment when something pleasant can be placed on record. The latest report of the American Thread Company, covering the year to March 31, provides an opportunity for some nice words, and we seize it without delay. The exhibit placed before shareholders at this time last year must have filled them with dismay so rapidly had the company drifted on the downward course, and probably few dared anticipate the marked recovery that characterised the past twelve months' operations. Balances from manufacturing accounts of branches, and income from investments are returned at £280,758, from which general management expenses absorbed £34,829, bond and other interest £58,136, and difference in exchange £862, while the regular £62,000 is allowed for depreciation. The net balance, therefore, is £124,931, and compared with 1901-2, the improvement is the great one of £81,373. Deducting a year's preference dividend to December 31, £50,535, and adding balance brought forward, £23,502, the amount available for disbursement is £97,899. Therefore, the common stock can be returned to the dividend list with a 4 per cent. distribution, and the big sum of £63,179 is carried forward, subject, as usual, to the three months' preference dividend, £12,634, and a percentage of the net profits payable to the executive committee. Nothing is now said regarding stock-in-trade, so presumably the new basis of valuation referred to in last year's report works satisfactorily. The item is in the balance-sheet at the ponderous figure of £813,179. Additions to and sales of properties during the twelve months leave their value a little higher than a year ago, and closed works account figures as an asset for £30,320. With the credit now proposed, the depreciation fund amounts to £263,500. The company is indebted to the English Sewing Cotton Company, which owns practically all the common shares, to the extent of

£104,360, and to sundry creditors owes £93,310. On the other hand sundry debtors come to £159,361, and cash to £44,738. Then there are sundry investments, principally composed of the company's own investments of £20,987 and Wool Exchange investment £44,620. Some changes have occurred on the directorate during the past year, and these, it is hoped, will facilitate the working of the business.

The Rejected Allsopp Petition.

It is a thousand pities that Mr. Justice Byrne did not see his way to dispose of the factious opposition to the petition for the reduction of the Allsopp capital. That the reorganisation scheme was not all that could be desired no one would for a moment deny, but it was an honest attempt to deal with a highly difficult problem, in which many antagonistic interests had to be reconciled, and no effort had been spared to formulate proposals considered fair to all concerned. Their sanction might have gone far towards the re-establishment of the company's credit, making it easier later on to deal with the immense item of goodwill which, as we pointed out when analysing the reconstruction scheme, must ever be a source of weakness if allowed to remain at its present figure. Had the opposition been of any weight or importance its success might have been endured with some sort of calmness, and it must be particularly disheartening to the chairman, who has made a praiseworthy endeavour to set the concern on its legs, that all the labour should be turned to nought by the action of a few malcontents, headed by Dr. L. C. Alexander.

Coats' and the English Sewing Cotton Company.

So much mystery had always surrounded the relations between J. and P. Coats and the English Sewing Cotton Company that none outside the inner circle were ever aware exactly how matters stood. It was known, however, that the two concerns never worked very amicably together, and many have not hesitated to assert that although the great Paisley company ostensibly viewed the incorporation of the smaller business with a friendly eye, it has used its powerful position to the latter's damage and humiliation. How far such accusation was supported by facts it is almost impossible to say, but most will be ready to forget the past if the news be true that much more friendly relations now exist between the two companies. Friction seems to have arisen chiefly in the conduct of the foreign trade, mainly Spanish, but this is at length at an end. Arrangements have been concluded with Coats, the English Company, and other interests, under which the leading thread mills in Spain, including those of these two companies, have been concentrated under one management, in which J. and P. Coats hold the controlling position. This is expected to remove the trouble formerly existing, and also to tend towards more profitable working. Both concerns are making economies in various directions, and it is said that the English and American Thread Companies are now better provided with raw supplies than for some time back. The two companies are acting in concert with respect to the fixing of prices. All this is good news for English Cotton shareholders, and as the American Thread Company, in which the English business holds a controlling interest, has recovered much lost ground, there may still be hope for the undertaking. Unfortunately trade generally is poor, not only at home but for China and many of the big over-sea markets, due to the high selling prices necessary to meet the inflation in value of the raw material. On the other hand, the demand in and for American is still described as fairly good. It is still, therefore, a case of monopoly against the forces of nature.

The Unreformed Corporation!

Both the *Daily News* and *Truth* have drawn attention to a disgraceful state of affairs in the finances of the City Fathers, and one that demands immediate and full investigation. Some little time back the Corporation had a report drawn up showing the general and financial position of the city, but the disclosures were of so startling a character that it was thought inadvisable to publish the document. Some details, however, have leaked out, in spite of every common councillor having been placed on his honour not to reveal the report or its contents to outsiders. One is an admitted deficit of £72,382 on income and expenditure during the last seven years. This is bad enough, but when read in connection with the last annual comparative statements, it becomes black as Gog and Magog. For the annual statement shows the annual revenue to have increased from £397,437 to £445,211 since 1892. Yet all the time this additional wealth has been pouring into the civic coffers, waste on Heaven-knows-what extravagances has been going on, and the above accumulated deficit piled up. Were the burden of this borne by the city alone the matter would still be serious, but when it is remembered that Greater London has to pay its share the whole business becomes monstrous and iniquitous. Why should those portions of the metropolis outside the square mile be compelled through the markets to pay for the feastings and functions of an obsolete and out-of-date concern like the City Corporation, in whose management it has no voice? It is surely time the control of these markets, from whence the greater portion of the city's revenue is derived should pass into the hands of the County Council, as the real representative of what municipal life exists in London. We hope these revelations may help to bring about the revocation of the municipal charters, though much more will be required before the Kingdom of Turtle is scoured and cleansed. The whole metropolis ought to be in the hands of the County Council, to whose management also the whole of the misused trust funds in the hands of the Livery Companies ought to be transferred. There would then be no necessity for Wernher Beit or other bosses' aid to technical education.

Critical Index to New Investments.

*** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, ana enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

North-Eastern Steel Co., Limited.

With a share capital of £400,000, and an issue of £250,000 4½ per cent. first mortgage debenture stock, this company requires further funds to develop and provide additional working capital for a branch recently established, to pay off temporary loans, and other purposes. It therefore offers £150,000 6 per cent. second mortgage debentures at par, secured on 66 acres of freehold land at Middlesbrough and the iron and steel works erected thereon, together with a floating charge on the undertaking. During the past five years £236,694 has been spent on new plant, bringing the valuation of the property on December 31 up to £561,764, and in addition stocks represented £171,616, debts £70,810, and cash £794, or a total of £804,984, against which there were the first mortgage debenture stock above mentioned, £52,754 owing to sundry creditors, and £66,766 on loans and bills payable, leaving a surplus of assets over liabilities of £435,464. Profits during the past eighteen years amounted to £709,163, of which £149,066, or over 20 per cent., was written off for depreciation. These figures, however, do not show the real state of affairs altogether, as profits have dwindled considerably of late. In 1897 they were at their highest, and amounted to £57,940, but they have fallen away pretty steadily since, being £48,091 in 1898, £46,033 in 1899, £4,284 in 1900, and £25,925 in 1902, while in 1901 there was a loss of £14,727. Since this issue was settled a union has been arranged with Messrs. Dorman, Long and Co., Limited, and shareholders are to receive 3¼ shares of £1 each in that company for each £5 share in this, and the ordinary share capital

of Dorman Long is now being increased from £1,000,000 to £1,500,000 in order to carry out this transaction. The security for the debentures has certainly been broadened by this step, and they may be regarded as a fair speculative investment.

Great Western of Brazil Railway Co., Limited.

Under its contract with the Brazilian Government of July, 1901, the length of this company's system has been increased to 702 miles by the leasing, purchase or construction of other lines, and as the company was obliged to take over from the Government the working stores belonging to the six leased lines further capital has become necessary. These stores were valued at £60,500, and another £25,000 has to be found for the purchase and completion of the Ribeirão and Bonito line, so the directors have decided to issue 5,000 £20 shares at par, making £400,000 out of an authorised total of £500,000, in addition to which there are debenture stocks for £572,250. Instalments are payable £1 per share on application, £4 on allotment, £5 on September 30, and £10 on December 31, yet the shares carry full dividend as from January 1 last, which represents a fairly substantial discount. The actual results of working the present system are reported to show a net profit of £38,000, and the directors consider that a reasonable estimate of the probable results for the second half of the year indicates at least a similar amount of net profit. Debenture charges amount to £34,335 per annum, and the board is consequently hopeful that the dividend may be maintained at the 6 per cent. rate of the past two years.

Woodstock Transvaal Gold Mine, Limited.

This is a second reconstruction of a company of the same name possessing mining properties near the confluence of the Queen's River with the Kaap River, and about three miles from the Sheba Mine, together with an option of purchase of about 135 claims adjacent to the mine for £500 in cash and £10,000 in shares. The new venture has a capital of £100,000 in 10s. shares, and holders of the 177,705 shares issued by the old company have the right to subscribe for an equal number credited with 7s. per share paid up. Subject to this right, 177,705 shares are offered for public subscription by tender, and 2,295 shares are offered at par. The mine is said to be equipped with plant and machinery, including a water race and turbine of over 100 horse-power, but the prospectus is strangely silent about the work done, although this has been almost entirely in the way of development, and the public may safely leave the offer alone without losing any great chance of wealth.

Sangli Gold Mines, Limited.

This company acquires from the Kaputguda Syndicate, Limited, certain gold bearing properties, described as highly promising, situated in the State of Sangli, India, and some adjacent blocks in the Dharwar District. The capital is £75,000 in £1 shares, of which 56,252 are offered for subscription and 18,750 are allotted with £4,000 in cash in payment of the purchase price. Very little work beyond a partial clearing out of old workings appears to have been done as yet, but Messrs. John Taylor and Sons seem very confident regarding the future, and that fact has weight.

Meldrum Bros., Limited.

When this Manchester company was formed in 1900 the capital was fixed at £125,000, divided into 50,000 5½ per cent. cumulative preference and 75,000 ordinary shares of £1 each, and all the preference and 50,000 of the ordinary were issued, but further funds being required owing to the growth of the business another 25,000 preference shares have been created, and are now offered for subscription. The assets, including £48,657 for patents and goodwill, and £15,872 for lands and buildings, and, deducting trade liabilities, are valued at £106,549. Since the formation of the company, dividends of 8 per cent. per annum have been paid on the ordinary shares, in addition to writing off £2,522 for preliminary expenses, and £1,000 from goodwill, commencing a reserve fund with £1,000, and carrying forward a sum of £2,542 at the end of last year. The present issue would therefore appear good enough, but appeals chiefly to the local investor.

Liverpool Corporation Stock.

The Bank of England is authorised by the Corporation of Liverpool to receive applications for an issue of £1,000,000 3 per cent. stock at the price of 95 per cent. Of this sum £100,000 is required for general sanitary purposes, £300,000 for waterworks, £250,000 for street improvements, and £35,000 for electric supply. The stock is in addition to and ranks *pari passu* with the existing 3 per cent., and is redeemable at par on or after July 1, 1942. On June 23 the total debt of the Corporation was £12,803,166, exclusive of £259,038 represented by loans to the School Board, but in this amount there are mortgages and temporary loans of £3,651,934, of which upwards of £600,000 will be paid off out of the proceeds of the present issue. The rateable value of the City is £4,305,767, but the Corporation owns a large estate and other municipal property, such as waterworks, electric lighting, tramways, markets, etc., the average income from which during the ten years ended January 1 was £110,000, excluding the tramways and electric lighting, which in 1902 yielded a profit of £108,912, after providing for interest and repayment of debt. Instalments of 30 per cent. each are due on July 20, August 17, and September 2, but these may be paid up in full on or after July 20 under discount at the rate of 3 per cent. per annum, and as a full six months' interest will be paid on October 1 the stock is cheap enough.

Hall and Co., Croydon, Limited.

As the directors stated in their report, this company has acquired since the close of its financial year a new property at Ewell, at a cost of £11,600, and now requires further capital to pay for this, and to provide for the erection of new and up-to-date works for the manufacture of cement. An issue of 25,000 ordinary shares of £1 each is therefore offered for subscription at the price of 25s. per share, and holders of preference and ordinary shares are entitled to preferential allotment in the proportion of one new share for every 10 preference or 5 ordinary shares held. The record of the undertaking is a good one, the dividends on the ordinary shares having been 7½ per cent. for the last three years, and the outside public, therefore, will probably stand little chance of an allotment.

Motor Horse, Limited.

This company is formed for the purpose of acquiring and developing the British and French patents for Carmont's system of centre steering for road vehicles, under which it is claimed that a motor propelled either by steam, petrol or electricity can be attached to any description of ordinary four-wheeled vehicle either temporarily or permanently. It is further asserted that the use of this motor will prove much more economical than horses, but beyond a demonstration or two no practical working seems to have been done. Yet the promoters ask £50,000 as the purchase price, of which not less than £5,000, nor more than £15,000 is to be in cash, and the balance in shares. The total share capital is £100,000 in £1 shares, but of these 20,000 are reserved for future issue, and 35,000 for the vendors, and only 45,000 are offered for subscription, together with £25,000 6 per cent. first debentures. Where the security for these debentures comes from it is impossible to say, as beyond the patents, a conditional contract with the London Road Car Company, negotiations for contracts and two motors already constructed the company possesses absolutely no assets of any description.

South Staffordshire Tramways (Lessee) Co., Limited.

The British Electric Traction Company is making desperate efforts to raise money through its subsidiaries, and hardly a week passes without one or more of these appealing for subscriptions. This particular company has secured from the original South Staffordshire Tramways Company sundry leases and agreements covering about 23 miles of line, and ranging from three years from January 1, 1901, upwards. Part of the system is at present worked by electric traction, and for the purpose of converting the sections in Darlaston and Tipton the company offers 10,000 6 per cent. cumulative preference shares of £5

each at par. During the three years to December 31 last, the number of passengers carried rose from 5,853,410 to 7,220,979, and the gross receipts were £38,939, £41,443, and £40,828, but the net profits came to £5,272, £5,807, and £3,236 in these years, respectively. The falling off in profits in 1902 is ascribed to the fact that certain portions of the line were in course of reconstruction for electric traction, but this explanation seems hardly adequate, seeing that the decline in gross receipts was no more than £615 and the reduction in profits £2,571. The methods of the B. E. T. are not, as we have frequently insisted, those of sound finance, and as this undertaking is completely under the thumb of the Octopus which appoints three out of the five directors, investors might perhaps find a better security.

Argentine Government Northern Central Railway Bonds.

The London and River Plate Bank offers £2,770,720 nominal in these 5 per cent. bonds of 1890 to the public at 87 per cent. They are a direct obligation of the Argentine Government with a charge on the extensions of the Northern Central Railway, and constitute part of an issue of $15,000,000 gold, or £2,976,000, of which £205,280 have been drawn and redeemed at par. The balance is now offered on the terms mentioned, and it is stated that £2,076,960 of these bonds are deposited as collateral security for an advance made to the Argentine Government in 1902. Out of the proceeds of this sale the undischarged balance of that advance will be paid off. Applicants must send the usual 5 per cent. on application, and 5 per cent. is payable on allotment, 20 per cent. on the 15th inst., and 57 per cent. on August 4. Payments in full under discount at the rate of 3 per cent. may be made on and after the 15th inst. The first coupon is payable on January 1 next.

The Assam Railways and Trading Company.

An issue of £450,000 in 4½ per cent. mortgage debenture stock, part of an authorised £500,000, is offered by the directors of this company at 102. It will be secured by a first mortgage to the trustees of the railways, collieries and concessions of the company, and by a floating charge on all its other assets, and the loan will be repayable at par on July 1, 1931, but may be redeemed on six months' notice given at the option of the company any time after January 1, 1921. In the event of voluntary liquidation before the ultimate date of redemption, the stock must be redeemed at 105. According to the prospectus the assets, consisting of railways, collieries, saw mills, brick and pottery works, together with investments in other companies, aggregate £1,045,059, and the net revenue from all sources for the past ten years has ranged from £47,210 in 1893 to as high as £62,595 in 1901, the figure for the earliest date being the lowest. It only requires £20,250 to pay interest on the debenture stock now issued, and this is not by any means all new debt. The money will be largely used for the purpose of retiring existing debentures to the amount of £380,000, bearing a higher rate of interest, and to consolidate the loans of the company. Holders of the existing 5 per cent. debentures may accordingly exchange into the new stock on the equitable looking terms set forth in the prospectus. Outside subscribers must send 5 per cent. on application, pay 12 per cent. on allotment, including the premium, and 25 per cent. on September 15, the remaining 60 per cent. falling due on December 15.

The United Plymouth Hotels, Limited.

This company has been formed with a share capital of £150,000, divided into 7,500 6 per cent. £10 cumulative preference shares, and 75,000 ordinary shares of £1 each. Of this capital 5,000 preference shares are now offered for subscription, and 40,000 ordinary shares, both at par. Also £140,000 in 4½ per cent. first mortgage debentures to be guaranteed by the Law Guarantee and Trust Society as to principal and interest, are likewise offered at par. The bonds are redeemable at 105 on six months' notice at any time after the first three years. There are second mortgage 5 per cent. debentures to the amount of £20,000 in existence, but these have been already applied for, and are not offered for subscription. The company acquires altogether five hotels in Plymouth from the Hotels Syndicate (Plymouth), Limited, and the valuation of these properties is put at £310,000. It is estimated that the net profit will be £19,500 per annum, and the interest on the various debentures together with that on the preference shares requires £11,800. For the properties bought the company is to pay £279,500 (of which £34,500 will represent goodwill), £234,500 of it in cash, £25,000 in fully paid preference shares, and £20,000 in ordinary shares. We do not like the thing much, and it must not be forgotten that the P. and O. steamers are going to cease calling at Plymouth.

William Owen, Limited.

This is a silk mercer and draper's business in Westbourne Grove converted into a limited company with a share capital of £200,000, half in 5½ per cent. cumulative preference and half in ordinary shares of £1 each. There is also to be a mortgage debenture stock for £100,000, and the whole of this stock is offered for subscription at 102, together with the whole of the preference shares at par. A valuation of the freehold and leasehold properties belonging to the firm puts the total at £164,032, and Messrs. Deloitte, Dever, Griffiths and Co. certify that the profits for the past five years have averaged £16,150 per annum. They have been, on the whole, steady profits too, so that the business seems to be put before the public on reasonable terms, and it is stated that no promotion money has been or will be paid, nor any portion of the capital underwritten. The vendor intends to hold nearly the whole of the ordinary shares, and the business is transferred free from any charge for goodwill, the total valuation of the assets being put at £261,753. All costs of issuing the company are met by the vendor.

Passing Events.

Where does India come in under Mr. Chamberlain's protectionist fustianisings? It is part of the empire and a very big part too. Our trade last year with the dependency was not the most flourishing of recent years, and yet it totalled up to £62,215,000, against less than £35,000,000 with Canada. Is India to be left out in the cold by Joseph? Occasionally, when its harvests are good, it sends us wheat in important quantities supplementing deficiencies elsewhere. Shall we boycott that wheat or give it a favoured dependency tariff, so that it may compete with the Canadian? Perhaps Mr. Chamberlain is going to arrange matters so as to give the Canadian Pacific Railway the carriage on Indian wheat, and thus avoid jealousies. Will he also favour Indian cotton against Yankee, or will it merely be the cotton manufacturers of India that he will protect against those coming from foreign countries. How is India going to benefit by inter-imperial preference? Perhaps some of the moonists now agitating for a return to protectionism will address themselves to this question, and when they have settled it we shall be ready to put a few more. As, for instance—nay, one at a time is enough.

It is interesting to see such a representative gathering as that of the Free Trade Unionists in the House of Commons on Wednesday afternoon. The number present was 54, and for the most part they were men of weight in the country a good deal in excess of the heads counted. Viscount Goschen and Sir Michael Hicks-Beach were the natural leaders of the party, but amongst those present were Lord Hugh Cecil, Colonel Denny, the famous Clyde shipbuilder, Sir Edgar Vincent, Mr. Churchill, Sir J. Dickson Poynder, Lord H. Bentinck, Mr. J. W. Galloway, Mr. W. F. D. Smith, Mr. Gibson Bowles, Mr. T. W. Russell, Mr. Herbert Tritton, Sir Barrington Simeon, Major Seely, Mr. William Peel, Mr. Lees Knowles, and Mr. E. Beckett. Mr. Hobhouse was called to the chair, and Sir Samuel Hoare, banker, moved the first resolution, which was seconded by Mr. J. Heywood Johnstone. It was to the effect that a committee should be appointed to examine the probable effect of the suggested changes on the unity of the empire and the social and industrial welfare of the United Kingdom. The resolution was spoken to by Sir Michael Hicks-Beach, Lord Goschen,

and others, both of these men giving no uncertain sound. Agreeably with the first resolution a committee was appointed, composed of the following gentlemen: Sir Michael Hicks-Beach, Mr. E. Beckett, Mr. R. Cavendish, Lord Hugh Cecil, Colonel Denny, Mr. W. J. Galloway, Sir J. Gorst, Hon. G. Goschen, Sir S. Hoare, Mr. H. Hobhouse, Sir C. Renshaw, Hon. W. F. D. Smith, Major J. Seely, Mr. Austin Taylor, Sir Edgar Vincent, and Mr. Yerburgh.

The protectionists also held a meeting, but, as might be expected, it was not nearly so businesslike, although full of sound and fury. It will be the duty of free traders of all shades of politics to muster in support of the Tory and Liberal Unionist gentlemen who have taken the decided step of separating from party ties on this great issue, for the one necessity of the people paramount above all others is instruction. The masses are quite ignorant of the meaning of free trade and protection, and because of their ignorance become an easy prey to the manufacturer of fine sounding phrases, the retailer of political cant.

Several Australian revenue figures have been promptly transmitted by telegraph at the close of the fiscal year on June 30, and we may summarise them here for what they are worth. New South Wales declares a revenue of £11,532,133, or an increase of £353,919 on the previous year. Of this no less than £200,603 came to hand in the final quarter, and the last month alone of that quarter showed an increase of about £318,000. This wonderful result smells of cooking, and yet the Treasurer expects a deficit of £50,000 on the year. We have not the least doubt that the figures are, to an unknown extent, hollow.

Victoria boasts of a revenue of £6,936,392, or £70,000 less than that of the previous year, the principal decrease of £325,000 being attributed to railways. An increased balance of £184,000 was paid into the State Treasury from the Commanwealth. Here, also, we think the figures an exaggeration, although by no means to the extent of those of New South Wales.

From Adelaide somes the news that the revenue for the year, amounting to £2,472,266, was £43,700 larger than the previous year's income, and that the surplus for the year will be about £20,000. How many loans are going to be floated on the strength of these pretty exhibits?

Queensland still has brown or black labour, and perhaps that enabled its handful of whites to distil a revenue of £3,526,500 in the past fiscal year, or but £8,500 less than in 1901-2. It is wonderful, but the expenditure was better still—down by £249,000. Long may such parsimony flourish. But how about the upkeep of the railways?

The best show of all is made by the Commonwealth, which received from Customs and Excise in the year ended June 30 last £9,681,000, or £640,000 more than the estimate. On this money no less than £43,000 went in what is called "defence," but that was £103,000 below the estimate, and £195,000 was saved on the Post Office expenditure, which came to £2,571,000, against receipts of £2,445,000. Even so, however, this department was worked at a loss. The total revenue returned to the States of the Commonwealth was at £8,200,000, or £880,000 above the estimate. We hope this kind of thing will continue.

The revenue of Newfoundland for the fiscal year closed on June 30, amounted to $2,200,000. It is not enough.

The difficulty of arranging that indemnity payment by China continues acute, and is insoluble on the lines laid down by the grasping Powers because, as Chang Chi-Tung keeps declaring, China is in real financial embarrassment. This eminent Chinese statesman, who is now in Pekin, has further declared that all the provincial viceroys and officials were led to believe from official indications sent them by the Chinese peace envoys, Prince Ching and Li Hung-Chang, that the indemnity was only 450,000,000 taels of silver, without reference to fluctuations in its relation to gold. He further contends that if this indemnity is to be payable in gold, the 5 per cent. Customs duties must be paid in gold also, not in silver, since, owing to the fall in the white metal, these duties are now not an effective 5, but only a 4 per cent. tax. The *Times* Pekin correspondent adds that Chang Chi-Tung seems more interested in the financial than in the Manchurian question, and we are not surprised. Chinese bondholders of all descriptions ought to support the Pekin Government in their own interest, for if this indemnity is exacted upon a gold basis it will make China bankrupt and involve trouble, and probably loss, to holders of the earlier debts of the empire.

Why cannot the great imperial powers cut up Venezuela, grab its minerals, hang or enslave its inhabitants, and have done with it. That should be a job after the imperial republican Roosevelt's own heart. But they are doing their best, although the English claim formulating agent, Mr. Harrison, is not pleasing our clamant sufferers. The British colony has learnt "with dismay" that he refuses to press for cash in payment of damage done by the rebels or revolutionists. Other powers are not so scrupulous, and already France has asked for £2,800,000, Belgium for £600,000, and the United States for £720,000. Go on powers, great and small, it will make no difference to bankrupt Venezuela.

We are very much obliged to Lord Ranfurly for so plainly indicating the character of "imperial" patriotism in New Zealand. He has been opening the Parliament out there, and according to old established custom made a speech, no doubt drawn up for him by Seddon and Ward, probably by Ward alone. In the course of this speech he is reported to have said that "important fiscal changes would be necessary to enable the giving of preference to the mother country on the lines adopted by Canada, but in such a way as was best suited to the requirements of the colony." Exactly so. We are very much obliged to you, Lord Ranfurly, for being the mouthpiece of a little frank selfishness. New Zealand cannot lower her duties in our interest, except by first compounding with her creditors, and it will cost her nothing to raise her tariffs against foreign countries to any further height likely to be effective in misleading the ignorant British public.

So our third campaign against the Mullah has ended like the previous two in practically nothing, the only difference being that this time our troops have not suffered an overwhelming disaster. So far all the successful fighting appears to have been done by the Abyssinians, and if this turns out to be correct we had better leave to them the business of hunting the Mullah, or being hunted by him.

The Government has actually decided to practise economy, but only in a tiny way. Next year, or the year after, all naval subsidies to the merchant marine will cease. We are wasting about £78,000 per annum on these subsidies, and they have been perfectly useless from the first. But what courage our ministry must have. Appropriately on April 1, 1904, it is to give notice to terminate the doles. Eighteen months hence, therefore, we may begin to save money.

It seems a pity that Mr. Roosevelt laid himself open to such a sharp rebuff from Russia in the matter of that Jewish petition to the Tsar. Had it merely concerned Mr. Roosevelt and his fussy Cabinet at Washington, we should not have cared a straw, but interference of this description is certain to be injurious to the Jews remaining in Russia. What does Mr. Roosevelt know of the problem these unfortunate people present to the Russian administration? Is he so ignorant as to imagine that riots against oppressed and down-trodden Jews are mere spontaneous exhibitions of the Russian peasant's race passions? The Jew in Russia has been down-trodden for centuries, and never more than since the emancipation of the serfs. And the oppression has degraded him. To his debased moral instincts the free serfs appeared a legitimate prey. He has been the drink seller and the usurer of the peasants, and has often robbed them without ruth or scruple until these wretched beings have turned upon him in a passion of revenge. How to arrange for peace between such creditor and such debtor is therefore one of the most acute social problems the Russian Government has to solve, and outside inference like that attempted by Mr. Roosevelt and his "petition," will not tend to smooth the temper of the administration. Moreover, the petition of the United States Jews implied that the Russian Minister of the In-

terior is a liar. Altogether he has made a very nasty mess of it, and had better expend his imperialistic ardour in safer directions, at home, for instance, where there exist many disabilities affecting the social status of the Jew.

So Mr. Detring, the arbitrator, has decided in favour of the Railway Company's claims in the land dispute with Russia at Tientsin. "The railway wins practically on all the points in dispute," Reuter informs us, and the news is good, if Russia submits to the award.

It will be gratifying to Mr. Chamberlain to know that the Barbados Commercial Hall Committee had passed a resolution recording its "gratification" at his advocacy of preferential tariffs. Barbados is such a terribly important item in our great empire. The resolution is to go by mail, which shows a thrifty spirit.

We are glad that Sir Percy Fitzpatrick has spoken out in the "legislative council" of Pretoria against the proposal of Lord Milner to hand four-tenths—is it that or five-tenths?—of the Premier Diamond Mine to the prospectors without compensation. He declared that the profit on the first 50 ft. of this mine will amount to £8,000,000, and whether that estimate is correct or not there can be no question that the transaction, as far as it can be followed in this country, wears a look of a shameful surrender. If Lord Milner had taken a leaf out of the book of the Chartered Company up north and said to these mine propspectors, "you can have the whole property to work provided 50 per cent. of the profits are paid into the Treasury of the Transvaal," we should have had nothing to say; but to so arrange the trick as to give the De Beers monopolists control of this apparently fabulously wealthy "find" without any apparent provision for the interests of the state is perfectly disgraceful. Why cannot some of the independent men on both sides of the House support Mr. Arthur Markham in his efforts to direct public attention to this disgusting looking job? There might even be a transaction entered into. The Government could say, "give us half the profits of this mine, and we shall be delighted to modify the provisional contract relating to that £30,000,000 loan you dangle before the eyes of the British taxpayer."

Talking of diamonds though, we should like to know how the De Beers Diamond Buying Syndicate is faring with the sale of the stones under its existing scale of prices. It cannot be too often mentioned that everything about this part of the De Beers business is kept dark. Having secured the monopoly of diamond mining for a joint-stock company, of which they are the principal owners, the men behind De Beers form a separate organisation for selling these diamonds. They constituted themselves the exclusive buyers of the stones from De Beers and sell them the world over as best they can. Now the figures relating to the exports of diamonds from Cape Colony, published in our "Annual Statement of Trade," indicate that a remarkable increase in the price of the stones has been ordered by these irresponsible gentlemen. In 1898 diamonds weighing 3,476,509 carats were received in this country from Cape Colony, and the value of these diamonds was put down at £4,523,815. In the past year, however, the weight of diamonds sent from the Cape to England was only 2,634,207 carats, but the value is entered at £5,380,390. This means that the price per carat in 1898 was little more than 26s., whereas it is now nearly 41s. Is the sale of diamonds continuing in such volume as warrants this increase in the price, or has the diamond buying syndicate an increasing stock on hand? Light on this point would be most useful.

An Ottawa message from the *Times* correspondent tells us that Sir Thomas Shaughnessy, the President of the Canadian Pacific Railway, is conferring with the Dominion Ministers about a fast Atlantic steamship service. The other day this Government went through the farce of receiving tenders from existing lines of steamers trading between the United Kingdom and Canada, and promptly rejected the lot. This was a foregone conclusion, and we could not help being amused at the readiness with which the managers of these lines played into the hands of the Government, for we do not believe it ever wanted any independent line of shipping, the object being to go through a parade of fairness in order to smooth the way for a contract with the Canadian Pacific Railway. It is quite nice, therefore, of the *Times* correspondent to tell us that "in view of the failure of the recent call for tenders it is realised that the Canadian Pacific Railway Company is the only corporation which could give a steamship service adequate to Canada's needs." The belief is further announced that only a few days will elapse until the announcement is made that a contract has been arranged. That is just as we should expect.

It is most sad and we grieve. The new York correspondent of the *Manchester Guardian* wires to his paper that the United States press has begun to mock at the dazzling "J. Pierp." The *Western Financier*, it seems, avers that "in West Mississippi Mr. Morgan could not float a cork," and the United States *Investor* of Boston likens his home coming to "a return from Moscow." This is horrible, and worse than all the Shipyard Trust, an affiliation of the International Marine Trust, has been declared bankrupt after emitting evil odours of flush-water finance in the neighbourhood of the doughty Mr. Schwab, whose magnificence as presiding genius of the Steel Trust was lately a leading theme in all newspapers.

Can it be true that the German shipbuilding industry is depressed, suffering from a certain slackness owing to production in former years having gone beyond the necessities of the German mercantile marine? This in a protected country is really too bad. But worse follows, for the Germans are constantly increasing their export of raw malleable iron plates and of tinplate from Germany to England for shipbuilding purposes. In 1900 the export of this class of material to England only amounted to 1,672,200 kilogrammes, whereas last year it rose to 20,825,600 kilogrammes. Can it be that our shipbuilders are actually making an extra profit for the benefit of themselves and the British working man, let alone the British shipowner, by importing cheap building material from Germany? The thing will have to be enquired into. Dear ships mean cheap freights—Eh, no? Don't they?

A first dividend of 4s. in the £ has been paid under the deed of assignment of J. and J. W. Pease, bankers, in Darlington. How much more, we should like to know, will the creditors receive, and what would they have got now but for the subscription by friends of £140,000? The *Northern Echo* says that the unsecured liabilities, originally estimated at £705,000, have been increased, while the net assets, which were set down at about £450,000, are less than was at first hoped. Perhaps the liquidator will issue a statement at an early date to let us see how the brilliant political banker managed to dissipate the moneys entrusted to him. The three largest creditors, it may be repeated, were the North-Eastern Railway, whose claim came to £230,000; Pease and Partners, Limited, to whom £119,000 was due, and the Consett Iron Company, whose claim was £90,000.

A glowing account of land sales in the Canadian North-West has been telegraphed by the *Times* Ottawa correspondent, the Canadian Pacific Railway having disposed of 2,639,529 acres for $9,693,950, as compared with 1,536,454 acres and $5,145,842 last year. The Hudson's Bay Company also did well, selling 368,678 acres for $2,086,603, against 196,844 acres and $999,685 in 1901. Even the Canadian Northern Railway sold 263,351 acres for $911,336. No less than 110,100 immigrants arrived, compared with 55,261 the year before, and homestead entries increased 150 per cent., owing to the enormous influx of British settlers. This is splendid, and if it continues the North-West will indeed be settled. It is a big "if," though, and we should like to know how much of the purchase money remains unpaid.

A notice has been issued by the board of the Argentine North-Eastern Railway Co., Limited to the holders of prior lien 4 per cent. debenture stock, informing them: "That each £100 of prior lien 4 per cent. debenture stock will be exchanged for £100 Argentine Government Rescission Bond, carrying interest from July 1, 1903, together with the sum of £10 in cash and £1 18s. 2d., being the half-year's interest less income tax, payable on August 1 next in respect of prior lien 4 per cent. debenture stock,"

provided the holders consent. They probably will. Fractions will be sold, and the cash distributed.

We quite expected it. Lord Milner's "legislative council" has had to issue a second appropriation bill to cover an extra Transvaal expenditure of £579,210 for the fiscal year just closed. The items include £216,500 in adjustment of the deficiency in the Orphan Chamber Trust on the account of the late Government, and £20,000 for the restoration of churches destroyed during the war. The balance is principally for "public works." All things considered the figures must be deemed moderate.

TRADE AND PRODUCE.

Wheat.—Fortunately sunshine has come not too late to benefit the wheat crop, and with a continuance of fine weather, we may yet have a good harvest. At present the supply on hand of home grown produce is very small, and farmers, therefore, are demanding stiffening prices, in spite of the fact that the stoppage of the import corn tax will bring foreign wheat more freely into the market. Last week deliveries were 38,983 qrs., at an average price of 27s. 6d. per qr. Pending the abolition of this duty the markets are doing very little, prices of foreign wheat keep firm owing to the small supplies, but discouraging cables have had an unfavourable effect. Spot parcels are in poor demand, with an easier tendency latterly, and speculation almost nil. The American markets have had a more or less bearish tendency this week. Export business has been very small, and the weather and crop reports extremely favourable. Bradstreet estimates the quantity in sight east of the Rockies at 11,725,000 bushels, against 10,342,000 in the previous week, and 8,841,000 bushels in the corresponding week last year.

Wool.—Generally speaking the woollen trade is dull, complaints more or less prevalent from the dealers therein, and it is difficult to foresee what will galvanise it into life again. The present paralytic position is due to several adverse causes. Wet weather in the early part of the year, which ruined the home trade in manufactured goods, the abnormal cost of cotton yarns, and the high prices of Colonial wools. Nor is there much hope of any change. Fine weather has come too late to materially help the home trade, cotton is going higher still, and also merino wools on account of their scarcity, while the popularity of cross-breds will keep them from falling. English wools have to a certain extent benefited by these prohibitive prices, and are now being more used than for years past, Shropshire and half-breds selling at hardening rates for both home and export. Stiff prices have hampered foreign trade also, but it is a turn better of late. Continental houses are having to buy at last to supply their immediate wants, and Colonial trade keeps fairly active in all branches.

Linen.—Business remains quiet and steady, and the dull season is passing in a very satisfactory manner. In fact, this last week or so has been comparatively lively, the continued high prices of cotton is showing merchants the foolishness of expecting any fall in linens, and sending them into the market more freely with their orders. Union goods are still much sought after, but the difficulty of getting cotton yarns at anything like reasonable rates is likely to tell against them soon. Other branches of the trade are very quiet, brown power looms, damasks, housekeeping goods and dress linens holding their own, and in these last several orders are already coming in, and preparations being made for next year's trade. In the export trade no change is visible, most of the foreign and colonial markets doing an average amount of business for the time of year, the United States still continuing the most disappointing buyer, and Canada, as usual, the best. Prices in the yarn market continue to harden, particularly in tows and coarse foreign descriptions, and orders have been more numerous. The prospects of flax are reported as being good, the recent rains having greatly helped the home crop, and advices being favourable as regards Russia.

Cotton.—Both the Liverpool and New York markets have been in a highly excited state this week, the fluctuations in prices being both extreme and frequent. So much so, that for the moment it is absolutely impossible to form any idea of their future course, as any hour may see either a sharp break or a rapid rise. The fight between the New Orleans bull clique and the whole of the cotton trade is raging fiercely, the former being credited with owing about 200,000 bales of cotton, which was the whole available supply of spot cotton at the end of June in America. In their endeavour to force the bulls to unload, the bears are not only shipping cotton from those mills in the States which happen to be oversupplied, but are also sending it over from Liverpool, hoping that in the end the New Orleans gang will become surfeited. Unfortunately, although the restricted consumption will assist the bears in their operations, their adversaries are both strong and powerful, so that the struggle will be severe and protracted. Indeed, Sir Jacob Behrens and Sons do not expect lower prices to be reached this year, and also would not be surprised if next season commenced with middling at about 6d. per lb. Should this forecast prove right, the cotton trade in Lancashire will have a very hard time. During the last few days prices have shown a weaker tendency, which was started by rumoured disagreements among the bulls, and assisted by better crop reports. With the markets for raw material in such an unsettled state business in yarns is getting worse and worse, and spinners are finding it impossible to keep free from stocks, even though running on short time. The home markets are almost as bad as the foreign, and yet it is difficult to see how the situation can be changed. In cloth only a small trade has been done in miscellaneous lines, as both India and China persist in making offers much below current rates. As manufacturers have about exhausted their cheap material, such offers are impossible, and business is therefore at a standstill.

Spot was easier at Liverpool on Friday, American middling being quoted at 6.64d. and Egyptian fair at 8 7-16d., though dealings in both were limited. Futures, however, were excited and irregular, the price for July being 6.33d. and for October-November 5.33d.

Iron and Steel.—The warrant market at Glasgow has been quiet this week, although the tone on several days was considerably stronger than of late, as consumers showed more disposition to purchase. Speculation, on the other hand, has been restricted on account of the small number of warrants in circulation. In raw iron good business was done, and the output of the furnaces is well maintained, makers being encouraged by the continued decrease of stocks to keep up their production. For the moment the class of pig-iron in greatest demand is Scotch hematite, for which merchants quote 61s. 6d. delivered in trucks at the West of Scotland steel works. Most of the orders ar for home consumption, the foreign enquiry being quiet, and though shipments were better than last week, they are still comparatively small. Makers of finished iron and steel continue to complain of the scarcity of orders except those engaged in turning out structural works, for which several new contracts have been secured, with a good prospect of more to come. The output of the shipbuilding yards for the six months just ended is the smallest for eight years, and many of the yards are very bare of work with little hopes of getting any until the shipping trade shows some signs of improvement. In the north of England the trade in pig-iron is remarkably healthy, makers having no difficulty in disposing of all they can produce. Steel rail makers are also busy, and likely to continue so, as orders are coming in from abroad, while the American rail mills are so busy filling home contracts that they have no surplus left to throw on foreign markets, which assists our makers by removing a dangerous competitor. Makers of steel plates are, on the other hand, by no means happy, notwithstanding the reduction they have made in price, for, with freights in such an unhealthy condition, there is nothing to tempt owners into giving orders for new vessels Over in Barrow the position of the hematite pig-iron trade remains practically unchanged, a fair amount of orders being still on hand. The steel trade is also busy on rails, but the difficulty makers find is to keep the mills on full time, until the forward delivery orders they have booked require attention, prompt orders being scarce. Here also shipplates and shipbuilding materials are also in little demand, a condition which is not likely to change for some time yet. The shipbuilding yards are quiet, the long-waited-for orders not yet having appeared on the scene.

Coal.—It is well that the coal trade of the country as a whole is not suffering from the same depression prevalent in Lancashire, else it would indeed be in a bad state. Industries generally in that district are in an unsatisfactory condition, and as coal is a necessity in their working, it naturally partakes of the slump. Wales, Scotland, and the northern counties are in better plight, but on the whole the coal trade is decidedly duller. During the past week the decrease in shipments from the Scottish ports was over 30,000 tons compared with the week before, and clearances 24,000 tons behind those of the corresponding week last year, home coal is naturally in less demand, some of the collieries are only working part time, and prices have an easier tendency. On the other hand in the north of England large consignments have been sent to the Humber ports, with sometimes more than the contract price being obtained in the open market. Gas contracts are slower, and generally at easier prices.

Copper.—Early in the week values were decidedly better, and the market fairly active, notwithstanding bull liquidations and bear pressure. The position, however, was never strong enough to sustain a long attack from both parties, and Wednesday saw a reactionary movement set in. This was accentuated by the news that the chief American producers had again broken their price to European consumers, and though at the close on Friday the market was steady, its tone was decidedly flat, £56 10s. being the quotation for cash, while £56 2s. 6d. was asked for three months.

Tin.—After starting the week in rather a nervous fashion, this market became stronger under favourable advices from the East. Before the effect of these had passed off there came a firmer enquiry for cash deliveries, which assisted in keeping the market steady, even though the East sent over lower prices, and at the close on Friday quotations were £126 15s. cash and £124 for three months.

Sugar.—This week has seen further liquidations by holders who were led to sell by the favourable weather and the unfavourable statistics. Prices, therefore, during the week show a decline of about ¼d. per cwt., though at one time the fall was as much as 1d. to 1¼d., on account of the trade showing little inclination to support the market. Our imports continue above the average, 30,000 tons having been received this week, against 17,000 in the corresponding week of last year, and this alone should improve the situation at the end of the season. So far as next season is concerned, consumption will be almost as important a factor as crop results in determining prices. As Mr. Czarnikow points out, it is all very well to argue that a present quotation of 8s. 7½d. for January-March represents 9s. 3d. for October-December following, but that price is not certain except for an adequate quantity. Should there be a reduction in the price of roots, it would immediately reduce the area of sowings, and this in turn would re-act on the present moderate level of values. Moreover, there are powerful interests, especially in France, engaged in working for a rise, and if large stocks continue to be held off the market in the hopes of

prices becoming more remunerative to growers, the season may open with a healthier market. Meanwhile it can only be repeated that prices are moderate, compared with the future cost of production, and though there is still a heavy weight to be sold or held the weather is favourable. Beet values have moved from 7s. 9d. to 7s. 8¾d. June, and from 8s. 8½d. to 8s. 8d. for January-March during the week, but in cane there is practically no change from previous rates, business in this class of sugar being still restricted to small parcels. The Sugar Bill has not yet come on for discussion, nor have the Brussels delegates been summoned to another meeting. In America the market continues apathetic, values on the week showing a fractional decline. Still, with the better weather, there may be an increase in the demand for refined, and if so, this should help raw. Stocks are down to 318,000 tons, the landings for the week being 29,000 tons, while meltings totalled 36,000 tons.

Freights.—Chartering in the outward market has been moderately active, and though no alteration in rates has taken place, the tone continues steady. To the Baltic ships can still be got on a basis of 3s. 9d. Tyne-Cronstadt, and there appears no likelihood of change in this direction for some time to come. It is possible that there may be in the end no strike at Genoa, and this has had the effect of reducing rates to that port. At Barcelona, however, it is almost impossible to get vessels discharged on account of the labour dispute now proceeding and fixtures are for this reason non-existent. To the other Mediterranean ports business is steady, with rates much the same as those last week, but for the Western Islands there is little or no enquiry, though freights are easy. The demand to South American ports is limited, quotations ranging from 8s. Cardiff-Buenos Ayres to 11s. Santos, while the outward market to the East is remarkably flat, only two or three fixtures having been made all the week, one of which was to Port Arthur. In the homeward market business is still as dull as ever, and even from those ports, which show a little sign of life, rates remain unchanged. The only market showing any improvement is the River Plate, and handy vessels can obtain 18s. 6d. United Kingdom or Continent but only for August or September loading, prompt positions being practically neglected.

DIVIDENDS ANNOUNCED.

RAILWAYS.

White Pass and Yukon.—Interim dividend of 2½ per cent. (5s. per share), will be paid on 10th inst.

BANKS.

Anglo-Foreign.—Interim dividend at the rate of 5 per cent. per annum (3s. 6d. per share), for half-year ended June 30, payable on the 15th inst.

Bank of Bengal.—Dividend at the rate of 10 per cent. per annum for past half-year, placing Rs.4,00,000 to reserve, and carrying forward Rs.5,48,000.

Bank of Calcutta.—Dividends on the preference and ordinary shares at the rate of 6 per cent. and 5 per cent. per annum respectively will be paid, placing Rs.50,000 to reserve, and carrying forward Rs.29,093.

Bank of Mauritius.—Interim dividend of 6s. per share in respect of half-year ended June 30, being at the rate of 6 per cent. per annum.

Bank of New South Wales.—Dividend at the rate of 10 per cent. per annum, placing £15,000 to reserve fund, and £16,072 is carried forward.

German of London.—Dividend on account of 5s. per share.

Lancashire and Yorkshire.—Interim dividend for past half-year of 15s. per share, being at the rate of 15 per cent. per annum.

Lloyd's Bank.—An interim dividend for the half-year ended June 30 of 14s. per share, being at the rate of 17½ per cent. per annum, payable on August 1. The dividend for the corresponding period of last year was at the same rate.

London and Hanseatic.—Interim dividend for the first half of 1903, at the rate of 5 per cent. per annum.

London and South Western.—A dividend at the rate of 16 per cent. per annum for the half year ended June 30, with £2,500 transferred to staff retirement benevolent fund, £15,000 applied in reduction of bank premises account, and about £43,300 carried forward. A year ago the dividend was at the same rate, £15,000 was transferred to bank premises account, and £39,271 carried forward.

London and Westminster.—Dividend of 7 per cent. for half-year ended June 30 last, carrying forward about £34,000.

London City and Midland.—Interim dividend at the rate of 18 per cent. per annum, carrying forward £268,226.

London Joint Stock.—Dividend at the rate of 12 per cent. per annum, carrying forward £38,000.

London and South Western.—Dividend at the rate of 16 per cent. per annum for half-year ended June 30, carrying forward £43,300.

Williams-Deacon Bank.—Interim dividend for the half-year ended June 30 of 10s. per share.

INSURANCES.

Employers' Liability.—Interim dividend of 2s. per share, being at the rate of 10 per cent. per annum.

Liverpool Mortgage.—Interim dividend of 1s. per share, being at the rate of 5 per cent. per annum.

MINES.

Brilliant Central Gold.—Dividend of 9d. per share, payable on 14th inst.

Brilliant Extended Gold.—Dividend (No. 3) of 6d. per share, payable on July 20.

Duke United.—Dividend (No. 13) of 6d. per share.

Golden Blocks (Taitapu).—Sixth dividend of 6d. per share, payable July 4.

Ginsberg Gold.—Interim dividend of 10 per cent.

Ida H. Gold.—Further interim dividend of 10 per cent., making an aggregate interim dividend on account of current year of 20 per cent.

Johannesburg Estate.—Dividend (No. 20) of 10 per cent.

Kalgurli Gold.—Treated 3,815 tons for 3,625 oz. (£14,047).

Mount Morgan Gold.—Dividend of £12,500, being 3d. a share for the month of June.

New Primrose Gold.—Interim dividend of 15 per cent.

Pahang Corporation.—Dividend on the preference shares for the half-year ended June 30 at the rate of 10 per cent. per annum, payable on the 24th inst.

Queensland Menzies Gold (No Liability).—Dividend (No. 26) of 10 per cent., payable on the 15th inst.

Rietfontein "A."—Interim dividend of 10 per cent.

Robinson Deep Gold.—Dividend of 10 per cent., payable about August 26.

MISCELLANEOUS.

A. and S. Henry and Co.—Interim dividend on the ordinary shares at the rate of 6 per cent. per annum for the half-year ended May 31.

Amazon Steam Navigation.—Final dividend of 5s. per share (making 4 per cent. for the year), carrying forward £1,175.

Argentine Land and Investment.—Dividends of 6d. per share on account of the year ended December 31, 1902, and of 1s. per share on account of the year ending December 31, 1903, making together 1s. 6d. per share, less tax, on the preference shares.

Australian Agricultural.—Dividend of 30s. per share, making, with the 25s. paid in February last, £2 15s. per share on the operations for the year 1902.

"Bodega."—Further dividend on the ordinary shares of 2½ per cent., making, with the interim dividend, 5 per cent. for the year.

British Moss Litter.—Interim dividend upon the ordinary shares for the six months ended June 30 last, at the rate of 10 per cent. per annum.

Daira Sanieh.—Dividend at the rate of 3s. per share on the ordinary shares.

Electric Construction.—Dividend at the rate of 6 per cent. on the ordinary shares, placing £2,000 to reserve fund, carrying forward £4,394.

Electrical Power Storage.—Dividend of 6 per cent. on the ordinary share capital, carrying forward £594.

Eley Brothers.—Interim dividend of 5s. per share, payable on July 21.

English Velvet and Cord Dyers.—Interim dividend for the half-year ended June 30 at the rate of 6 per cent. per annum.

Gophir Diamond.—Interim dividend of 2 per cent. per annum on the ordinary shares for the half-year ended June 30.

Harrison, Barber.—Interim dividend at the rate of 5 per cent. per annum for the half-year ended June 30.

Horace Cory.—Interim dividend at the rate of 8 per cent. per annum on the ordinary shares for the half-year ended June 30.

Henry Ford.—First interim dividend for the current year of 7½d. per share.

Ingersoll-Sergeant Drill.—Interim dividend on their stock, which enables the English company to pay an interim dividend of 2½ per cent. on the ordinary shares.

Jeinga Valley Tea.—Dividend of 5½ per cent. on the preference shares for the twelve months ending June 30, 1901.

Johannesburg Consolidated Investment.—Dividend of 10 per cent. (2s. per share).

Jokai (Assam) Tea.—Dividend of 4½ per cent. on the ordinary shares, making 4½ per cent. for the year.

Law Guarantee and Trust.—Interim dividend of 4 per cent. for the half-year to June 30.

Leicester Brewery and Malting.—Dividend of 5 per cent. (making 10 per cent. for the year), placing £5,000 to reserve.

Maypole Dairy.—Interim dividends at the rate of 15 per cent. per annum on the ordinary shares for the half-year ended June 30.

Mines and Banking.—Interim dividend at the rate of 5 per cent. per annum for the six months to June 30, payable on July 13.

Nelson Share Syndicate (Nelson's Teas).—Interim dividend at the rate of 20 per cent. per annum on the ordinary shares for the quarter ended June 30.

Norfolk and North American Steam Shipping.—Interim dividend for the half-year ended June 30, at the rate of 10 per cent. per annum.

North's Navigation Collieries (1889).—Interim dividend at the rate of 5s. per share, being at the rate of 10 per cent. per annum, on the preference shares, and 7s. 6d. per share, being at the rate of 15 per cent. per annum, on the present ordinary shares, payable on July 29.

Patent Victoria Stone.—Interim dividend at the rate of 10 per cent. per annum (being 5 per cent. for the half-year ending June 30).

Peel River and the Mineral.—An interim dividend of 1½ per cent., payable on July 21.

Thomas Parker.—Dividend of 6 per cent. for the year ended April 30 last.

Union Discount Company.—Dividend for the past half-year at the rate of 11 per cent. per annum, carrying forward £44,542.

United South Africa Association.—Dividend at the rate of 10 per cent. per annum for the period ended June 30, on the amounts from time to time paid on the shares.

Established 1824.

CLERICAL, MEDICAL AND GENERAL

LIFE ASSURANCE SOCIETY.

Assets nearly 4 MILLIONS Sterling.

The Results of the 1902 Valuation showed—

1.—INCREASED RESERVES.
2.—INCREASED PROFITS.

THE SURPLUS DIVIDED WAS £597,415.

The Investors' Review.

The Week's Money Market.

BANK RATE 3 PER CENT. (Reduced from 3½ per cent. on June 18.)

Norfolk House, Friday Evening.

Only one significant fact emerges in the story of the Money Market this week. The open market had to go to the Bank for about £13,000,000 in all to enable it to get over the end of the quarter demands for what is called money. Thanks to the possession of a nearly infinite quantity of pawnable securities such as the Bank of England will make advances upon, the whole of this credit was obtained without trouble, and as £9,700,000 of it remained in the possession of the borrowers up to Wednesday night, short credits have been cheap ever since the new month came in. On Thursday morning borrowers could boast that they had refused money at 2 per cent., but before the day closed they were often ready enough to give 2½ per cent. for over-night loans, and on Wednesday night, in their urgent desire to escape from the necessity of taking money from the Bank on seven day loan at 3½ per cent., they gladly gave 4, and even 5 per cent., for such credits as they could borrow until next morning. It will be Wednesday next before the market has paid back all it owes, and meanwhile there are large sums being released by dividend and interest payments, which help to swell the supply of floating credits. Day by day the market redeems large amounts of its securities pawned at the Bank, and still credits remain abundant at 1½ to 2 per cent. on call and 2 per cent. for a week, sometimes even 1¾ per cent. The India Council, however, renewed a fair amount for a fortnight at 2½ per cent., and the excess in the supply is already not very formidable.

Discount has been tending downwards all week, and we fear the rate is now not better than 2¼ per cent. on remitted bills of sixty and ninety days currency. January bills have been done at 2½ per cent., and as the discount houses have now reduced their allowances on fixed deposits by ½ per cent., to 1½ per cent. for call money and 1¾ per cent. for notice money, the wild competition for bills at finer and finer rates may perhaps go on. Some houses struggled for 2 5-16 per cent., and even 2⅜ per cent. on four months' paper, calling the rate for sixes 2⅝ per cent., but most of the business was done at 2¼ per cent., and the banks were to-day buying bills from the brokers at 2 3-16 per cent. Six months' bills are rather out of favour. The supply of paper continues good, but nothing remarkable.

We are still unable to see solid ground for relying upon cheap money throughout the autumn. It may be that the disbursements of the Treasury in payment of dividends, and for stock bought on sinking fund account, as well as in redemption of the Exchequer bonds payable on the 7th of next month, will enable the market to live comfortably after repaying all it owes to the Bank. Foreign exchanges, however, are adverse, and all the bullion coming to this country will probably be taken for abroad. The Bank itself may even lose some sensible part of its stock should discount rates remain as low as they now are, and at latest by the middle of next month we may expect to see the market hardening up again, while later in the autumn it is more than an even chance that we shall have a hardening market and an advance in the Bank rate. The diseased ease now visible is, in short, the best guarantee possible that the prophecies of those who look for dearer money later in the year will be fulfilled. Bullion movements have been utterly insignificant this week, but the French demand has been strong enough to raise the price of bars to 77s. 10d. per oz., and it is probable that arrivals will all go abroad.

Moreover, we have New York with us always struggling to live upon worm-eaten credit, and to keep a fair show of solvency at home while exporting bullion to pay the debts of the financiers abroad. Call loans ran up to 10 per cent. on Wednesday in Wall Street, and the cheapness which has come since has not been anything like so pronounced there as here. Exchanges, too, show an upward tendency in New York, and this has only to continue to force out more gold and to intensify the struggle of the credit manipulators there to get assistance on European markets, and so avoid a domestic liquidation. In short, the outlook everywhere is still unsettled.

SILVER.

Dealings in this market were again on an insignificant scale, but the announcement of a French tender for 16,500 kilos, to be settled to-day, produced a rather more cheerful feeling, and with some slight indications of a revival in the Indian demand the week ends with prices steady at 24 7-16d. per oz. for immediate delivery, and 24⅞d. per oz. for future metal. The American Government is still buying silver in connection with its Philippine currency scheme, and up to May 29 the purchase on this account amounted to a total of 7,078,000 oz. For the Rs.50,00,000 India Council drafts offered this week applications amounted to Rs.37,18,35,000 in bills and Rs.3,23,00,000 in telegraphic transfers. Of these only Rs.23,35,000 were lalotted in bills, and Rs.9,00,000 in telegraphic transfers, tenders for which, at 1s. 4d. and 1s. 4 1-32d. per rupee, respectively, receiving in full, but the Council subsequently specially allotted a further Rs.7,65,000 in bills at 1s. 4d. per rupee. Next Wednesday another Rs.50,00,000 will be offered.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict., cap. 32, for the Week ending on Wednesday, July 1, 1903.

Stock Market Notes and Comments.

A cheap money market "boom" has been confidently predicted, and jobbers in all sections of the Stock Exchange were eager in the beginning of the week to take advantage of the coming rush of outside buyers. Prices were put up for Home Railways, in the Kaffir market, for Yankee Railroad shares, for the investment class of industrial stocks, and even for Foreign bonds. Consols naturally gave the signal and lead the way upward. It all looked most promising for a fine summer efflorescence of "bull" profits. By the middle of the week, however, the glitter had gone off, and markets settled down to a condition of apathy not excelled at any time during the last four years. A little investment business is proceeding, will always proceed, but even that is said by some to be of smaller volume than usual. Others say they are doing more and we are glad to hear it. It is speculation, however, which is sorely wanting. The public either cannot or will not see the numerous temptations spread before it, and remains absolutely indifferent to reassuring accounts from the Rand, from the great grain growing districts of the United States, from the zealously boomed Canadian North-West, from Brazil, from the Argentine Republic, from all points of the compass. Accordingly on each occasion when the professional operators have lifted quotations and caused a surface glow of hope to spread over the market, prices dwindle away again and settle back to where they were before the demonstration started. What is the use of dwelling upon or trying to analyse markets in this dead and alive condition? "You might tell us of out of the way investments to be picked up." Yes, but what would you say if the price of such investments went down 5 or 10 per cent. after you had bought them? They might be good enough whatever the price, and perfectly safe, only you would always have a grudge against those who told you to buy before they "touched bottom." We cannot tell you when prices will be lower than they are now any more than when they will be higher. It is, however, probable, if cheap money remains with us over this month and part of next, that many descriptions of investment and semi-investment securities will see higher quotations. But if dearer money comes along in the autumn, all this elevation by pneumatic pressure may disappear in twenty-four hours. You must really judge for yourself, and if the money you possess burdens your pocket turn to out of the way stocks not in the current of market gambling. There are still a good few of such available although not all cheap.

People here who are hoping for mountains of gold as the result of an importation of Asiatic labour by the Rand magnates should note the significance of the Cape Parliament proceedings reported this week by cable. Even the representatives of De Beers who describe themselves as "Progressives," led by Sir Lewis Michell, joined in the protest against the importation of such labour, and the resolution against it was passed unanimously. We are also told that the meeting of Boers at Heidelburg declared itself emphatically against this step, and infer that if the importation of Chinese is persisted in by the cosmopolites of Johannesburg, they will succeed in uniting all the white men of South Africa against the domination of England in a manner never before witnessed. Will that conduce to the ultimate profitableness of Kaffir mines?

John Brown and Co.

It is pleasant to get a letter like this, and we gladly insert it. We know well enough that John Brown and Co. is one of the greatest firms of its kind in the country, and our only fear in regard to it is that its capitalisation is increasing at too great a speed. The whole difficulty could be got over were the accounts more explicit, drawn up so as to show appropriations for depreciation, and such like:

To the Editor of the Investors' Review.

Dear Sir,—In case you have not seen an account of the meeting of John Brown and Co., we send you a *Sheffield Telegraph* giving the account of the meeting.

The Chairman's remarks answer your question in your paper of June 20, referring to the increase of their assets and capital. £383,000, odd. The company bought during last year the well known firm of Thomas Firth and Sons, and we should consider this a very good asset, as we should say it is one of the best concerns in Sheffield. We would also point out to you that cash and bills on hand, £17,258, *only* represents cash and bills on hand, as most large companies' banking account is included under the heading of sundry debtors or sundry creditors, as the case may be.

Yours truly,

Staniforth and Ball.

The Week's Stock Markets.

When dealers commenced business on Monday it was with the firm conviction that the long drawn out period of public apathy and stagnant markets was at length at an end. Not many went so far as to predict a boom, but all round the House a feeling of cheerfulness prevailed, and business showed some signs of broadening. Investment buying seemed to be on a larger scale, and here and there a slight revival of the speculative spirit was said to be visible. So jobbers at once became busy, filling up their books in anticipation of the rush to come, and while this process was going on prices naturally mounted. Sad to relate, however, the outsiders, instead of tumbling over one another in their eagerness to buy, meanly took advantage of the higher quotations to snatch an unexpected "turn" and, having done so, disappeared from the market, leaving the dealers with nice little bundles of stocks and shares to dispose of as best they could. Prices, therefore, went back all along the line, and evidently that boom is going to take a lot of starting. Naturally plenty of reasons were advanced for this exasperating action on the part of the

public—the Stock Exchange was ever ready with excuses—and we were told it was due to possible friction between Russia and the United States regarding the Kishineff massacre, and also to the fear that the seemingly plentiful supply of money would bring forth a swarm of new loans. For the latter apprehension there are very good grounds indeed, Home Municipalities having already made a start, and nearly all our "priceless" Colonial possessions are going to allow us to lend them more money. It is said that Australasia intends to ask for £10,000,000, and the Cape is determined to be first amongst the South African Colonies. Nor have foreign countries any intention of being left out, an Argentine loan for £2,770,720 making its appearance to-night. The borrowing fever then will soon be in full swing, and, as it cannot but have an adverse effect on investment stocks of all kinds, clearly this is not the moment to buy.

Consols started with a splendid upward sweep, chiefly owing to the comparatively easy terms on which bargains for the rise could be continued on Monday. After being almost ruined by a lengthened period of 4 and 5 per cent. contango money, jobbers were so overwhelmed at getting their "bull" accounts continued at 3¼ per cent., that to raise prices ½ was but the work of a moment. The making up price was 92, and nothing could stop the advance until 92 13-16 was reached. Profit-taking then sent quotations back a little, and the finish ⅞ better on the week for money, at 92 5-16, 92 7-16, and ⅞ harder for the account, at 92 7-16, 92 9-16. Transvaal threes touched 1 7-16 premium, and leave off at 1⅜ premium, being a gain of ¼. Khakis put on ½, and all other British Funds showed a tendency to improve, particularly Indian Sterling loans. Amongst Home County and Corporation stocks, Liverpool 3½ per cent. rose 1, but lost it again when the new issue was announced. L.C.C. and Edinburgh 3 per cent. each put on 1. Quite a number of Colonial issues were marked higher, doubtless in preparation for new emissions. Cape and New South Wales 3 per cent. put on 1½, the 4 per cent. of the last-named state 1, and the 3½ per cent. ½. Victoria 4 per cent. were 1 better, and a gain of ½ was visible in South Australia 3 per cent.

Again the market for Foreign Government bonds gives us little or nothing to describe. Argentine and Brazilian issues were supported by Paris and held firm at trifling advances each day until Wednesday, when they received further impetus from the report of a forthcoming issue of Northern Central Railway bonds, which sent them up sharply. Among Inter-Bourse securities the principal events were a decline of 1 in French Rentes, and a smart recovery in Spanish "sealed" bonds. A fall of ½ in Japanese 4 per cents. brought in a few buyers, but they closed without recovery. The news from south-eastern Europe had a depressing influence upon Bulgarians and sent quotations down 2.

Hopes of a period of cheap money with the accompaniment of a rush of speculators and investors after the turn of the half-year were quite sufficient to make the Home Railway market cheerful, and in the early part of the week it certainly seemed as if the public intended at last to take a hand. So good were the prospects that dealers asserted that business would develop in a much more satisfactory way in this section than in any other, and prices consequently were firm. By Thursday, however, there were ominous signs that the activity was once more to prove a mere flash in the pan, and quotations either stood still or slipped back a little. Nevertheless, substantial improvements on the week were almost universal. South-Eastern ordinary rose 2 and the deferred 1¼, South-Western ordinary and deferred put on 2 and 1, Brighton deferred 1½, and North-Eastern 1½. Great Northern deferred and District advanced about 1 each. Hull and Barnsley gained ½, and even Chatham ordinary was ¼ higher. The demand for Scotch stocks showed no sign of slackening, and Caledonian ordinary and the deferred ⅞ up, while North British preferred improved 1½, and the deferred 1. All the preference issues of the last named company from 1884 onwards were lifted in a fashion which seems to point to a conversion scheme being brought forward.

It was announced on Saturday last that practically the whole of the Pennsylvania's new issue had been subscribed and a large proportion paid up in full, and this success, even when coupled with a good return by the New York Associated Banks, had but a moderate effect on the Yankee market. Support on this side was somewhat languid, and Wall Street seemed undecided, although prices were at first brought up to our level. Then prophecies of good divi-

dends and glowing crop accounts were put about in an attempt to make matters a little more lively, and a few buyers were tempted in, but in prevailing conditions it is exceedingly difficult to keep up even an appearance of activity, and Wall Street operators quickly grew tired of their efforts. Profit-taking followed, and values dropped away again almost as quickly as they had risen. On balance, however, our list shows improvements more or less substantial practically throughout, Norfolk and Western ordinary leading with a rise of 2¼. Atchison ordinary, Baltimore ordinary, Pennsylvania, Milwaukee, Erie ordinary and first preference, Reading first preference and Southern Pacific were all about 1 higher, Union Pacific common put on 1½, and Chesapeake,, Louisville, Ontario, and Southern preferred advanced about ½, Reading second preference advanced 2, and the ordinary 1.

Canadian Pacific shares hardened steadily all week and finished 1½ up, but Grand Trunk stocks suffered from the disappointment over the monthly traffic statement. Instead of the substantial improvement in net earnings looked for, the return showed an increase of no more than £6,300, and explanations as to the cause were somewhat anxiously sought without success. The gross receipts on the main line were £60,500 better, yet only £7,400 was saved, while for the five months to the end of May the net increase is no more than £8,200 out of £320,500 advance in gross earnings. High coal contracts were again blamed for the poorness of the result, and already the bulls have turned their eyes towards the June figures confident that this time they cannot be mistaken. At one time all issues were lower, but a bumper traffic for the last nine days and June wiped out the losses, and final quotations show little movement. Among Indian Railways a few improvements were recorded, including rises of 1 each in Bengal and North-Western ordinary and preference, and Burma Railways, Indian Midland and Bengal Nagpur guaranteed stocks.

In the Foreign Railway market a demand was said to have sprung up for the privileged issues of the principal Argentine Railways, and the firmness spread to the ordinary stocks, so that at the end there was quite an array of substantial improvements. Buenos Ayres Great Southern ordinary rose 2, and the preference and debenture stocks 1 each, Buenos Ayres and Pacific ordinary and 5 per cent. debenture stocks were also 2 higher, and the two preferences 2 up, and Argentine North-Eastern prior lien gained 2, while Argentine Great Western ordinary and second debenture, all Buenos Ayres and Rosario issues except the preference shares, Buenos Ayres and Valparaiso debentures, Buenos Ayres Western debentures, and Cordoba Central 5 per cent., and income debenture stocks all advanced 1 to 1½. Cordoba and Rosario first debenture stock exceptionally lost 1. Among other South American securities Central Uruguay ordinary and debenture stocks fell 1, but the Northern Extension debenture was that amount higher. La Guaira and Caracas debenture stock receded 2, but San Paulo 4 per cent. debenture stock put on 2. Mexican Railways were inclined to harden at first, but the first preference left off ½ easier. Villa Maria and Rufino preference shares were marked up 4, and the two debenture stocks 3 to 4 without apparent reason for the change.

Except in the case of an odd security here and there, the Miscellaneous section has not shared in the promised revival of business, about which so much has been heard in other markets. Dealers, however, were much more cheerful, and ready to mark up prices on the smallest provocation. As little or nothing has been heard of Marconi and his wireless system lately, confidence in Telegraph stocks has been to some extent restored, with the result that Eastern Telegraph stock improved 3, and Anglo-American preferred and deferred closed 1 and ¼, firmer, after being higher. National Telephone deferred stock also hardened, and finished 1½ up. Iron and Steel issues were likewise firm as a rule, but Vickers were exceptionally weak at one time. They subsequently recovered. North-Eastern Steel first mortgage debenture stock rose 3½ on the success of the new issue. United States Steels went higher, owing to the rally in Wall Street, caused by the belief that Morgan had checked sales of new bonds by the Underwriting Syndicate, but finished below the best. Nearly a dozen changes were recorded amongst Banks, ranging from advances of 1 each in Bank of Australasia and Union of Australia to one of 1-16 in Robinson. The first dividend for the half-year ended on June 30 was declared on Wednesday by the London and Westminster Bank of 7 per cent., and is 1 per cent. less than for the corresponding period of 1902. Very little selling ensued, but jobbers put the price down 2½. The London City and Midland, London Joint Stock, and London and S. Western distributions were unchanged. Allsopp stocks flinched on the refusal of the courts to sanction the

reconstruction scheme, but rallied, and closed unaltered. American Brewery issues came into favour, under the lead of Frank Jones, which improved on the report recently issued. Milwall Dock ordinary stock also attracted a good deal of attention, and the final price showed a gain of 4½. London and India Docks "B" debenture and preferred stocks improved 1, the only other changes in this division. Textiles for the most part showed a hardening tendency, with trifling gains in one or two cases. James Nelson shares, after fluctuating pretty widely for them, closed with an advance of 1-16. Eastman's went back on profit taking, but other Meat shares remained fairly steady. Aerated Bread shares fell ¼, and British Tea Tables were also fractionally lower. Bodegas were offered with some freedom, and relapsed ¾, the cause being an unsatisfactory report, with a reduction in the dividend to 5 per cent., the lowest ever paid by the company. Among Water stocks, Southwark and Vauxhall ordinary stock was bought with sufficient vigour to send the price up 3, but most of this advance was speedily wiped out by realisations. Lambeth debenture stock declined 2, and East London 3 per cent. debenture stock ½.

Idleness pervaded the Stock markets to-day, even in the investment sections, with dulness in Copper shares, caused by a reported reduction in the price of the metal by the Calumet and Hecla and other vendors, and a general flabby tendency in the Kaffir market.

Answers to Correspondents.

[*A Fee of Five Shillings per query is charged for replies under this heading. Letters, Five Shillings extra per letter.*]

D. J. B.—I do not think you should sell now. The fall is to a large extent due to poorer returns, and it is possible that these may continue for some time yet, but those who ought to know think that the company should be doing better before long. This is really the best we can say about any security of this kind.

W. B. J.—Yes, I think you would not do much amiss to buy a few more shares. What must be described as the raw material is steadily improving in price, and I think we shall have a recovery before long from the extreme depression of the past eighteen months. Were people less sick and poor quotations would have risen before now. Thanks for your criticism.

J. M.—These shares have already had a fair rise, and I doubt if you should begin to purchase them now. The market is worth watching, and the shares might be picked up if there were any set-back. They are purely a speculation.

F. D. L.—If you can obtain the stock at the price you suggest it ought to be a cheap purchase, as there should be sufficient security to cover this particular issue. I think, however, you will find it very difficult to deal in the stock.

MINING NOTES AND NEWS.

The strength displayed in the beginning of the week by other sections of the House afforded an excuse to the Kaffir Circus to likewise put on a bold front, and the opportunity was not to be missed. Business was far from large, but some information published regarding the investigation of the Asiatic labour question by the Transvaal Chamber of Mines' Commissioner was rather liked by the "bulls," and prices began to creep forward. A moderate amount of local and French support gave a helping hand, and it looked as though the upward movement might be kept going for a little while. The market was said to be short of stock, and this, coupled with the persistent talk regarding the importation of Chinese labour, caused some nervousness amongst the Continental "bears," and their re-purchases made the tendency seem quite buoyant. It was, however, but a passing phase, and the Circus soon relapsed into dulness and inactivity, notwithstanding some further dividend announcements, this time by the Barnato group. In the "street" on Wednesday prices were banged about rather severely in places, and since they fall much more quickly than they mount, a good deal of the early improvement was soon lost. Trading was entirely professional. Just towards the end the market firmed up a little, but there was no solid foundation to the movement, and prices fell away again, leaving off listless within a fraction of last week. With the exception of Chartered, which, as always, moved with Kaffirs, Rhodesians were inclined to resist the dulness, and mostly finish higher. Northern Coppers in particular were a good spot on the result of a test smelting from one of the company's properties. De Beers had a better appearance at the

outset, concurrent with a sharp drop from £35 to £31 in Premier shares, the result of the circulation of unfavourable rumours regarding the property. Then, however, came the news that Sir Percy Fitzpatrick estimated the profit likely to be derived from the first 50 ft. of the Premier mine at eight millions sterling, and Paris sales of De Beers deferred resulted, and they were driven under 20. "Bear" covering brought them back to 20⅛, and at that they close, looking none too strong. Premiers finish about 32.

Egyptian things attracted very little attention, but Nile Valleys, Sudan Minerals, and one or two others scored small advances. Golden Horseshoes continue weak in the Westralian market, where business is almost at a standstill. Lake Views, however, picked up a trifle, and Boulders came in for attention on a good strike. Words cannot describe the condition of the Jungle section, and not a great deal can be said regarding miscellaneous mines. Broken Hill Proprietary were rather miserable, and the water trouble must be acute indeed, since someone is going to try to produce rain by sending columns of gas into the air. Support from the colony prevented them from closing at the worst. Etruscans fell away, but business in them is confined to very few dealers, most people, with great good sense, leaving the shares severely alone. Strattons were sent over 10s. on reports of good developments, while Lyell things, after steady improvement, went off a little. Tintos were strong at first with the metal, but relapsed on the news that the United Metals Selling Company was reducing prices. Indians were dull because it was said that holders were selling to put the money into Kaffirs, but none of the dealers in the latter could trace the cash.

Associated Financial Corporation.—It seems but yesterday that Horatio's last reconstruction scheme was carried amidst the acclamations of his faithful associated financiers, but in reality a whole six months have elapsed, and for our sins we must peruse and compress into the smallest possible space, yet one more interim report. As soon as the needful was obtained Mr. D. D. Rosewarne left for Australia, and grateful shareholders will surely sing his praises, for he has been amazingly busy. In one short half year he has been actively engaged in visiting the various properties in which the corporation is interested, organising a proper system of development, superintending the erection of machinery, and generally furthering the interests of the corporation. The mines to which special attention has been devoted are:—Group 1: Pine Creek, Union, Great Northern, Princess, Murchison, Loddon Deep Levels, Great Lucknow Consols. Group 2: Associated Mount Jackson, Mount Diamond Copper, The Stapleton. Group 3: Great Coolgardie, Burbank's Auxiliary Associated, Northern Territories Minerals, and Prospecting. As regards group 1 the directors positively had the temerity to interrupt the development of these famous mines, and demand substantial trial crushings. Here is the result:—

	Tons.	Ozs.
Princess Murchison	5,670	5,700
Pine Creek	2,150	2,224
Great Northern	1,700	1,900
Union	101	324
Great Lucknow Consols ...	773	1,746

What more natural then than that the Princess Murchison should be likened to the Great Fingall, and that subsidiary companies will probably be formed to take over the Pine Creek and Great Northern mines, "to assimilate their constitution to that of the other members of the group." You know Horatio said he would never ask you again for a single penny, not as Associated Financial shareholders, but if you like to finance the subsidiaries would he be so ungrateful as to say no? Never. The Loddon Deep Leads are a portion of a group that have produced no less than 1,554.360 oz. of gold, valued at £7,513,810, without, unfortunately, the aid of the Loddon Deep Leads, but it is all right, and by September—these happy events are always timed some months ahead—regular gold returns are expected to commence. In their concluding remarks upon this group the directors say they do not desire to enter upon any speculation or surmises as to the future, and leave shareholders to form their own opinion upon the material before them, which is both kind and thoughtful. We believe the directors when they say they have nothing to do with the price of the corporation's shares. No. 2 group consists of properties from which good results are contemplated in the second financial year, after the mines in group 1 have been placed upon a paying basis. We fancy a printer's error has crept in here. Should it not be, the hundred and second financial year? At the present moment the principal work on hand is to get rid of one of the Associated Mount Jackson directors. No. 3 group is a bit neglected, pending developments of Nos. 1 and 2, and the Greek Kalends will probably be time enough to discuss it.

Crown Reef.—By one means or another the directors of this rich Transvaal gold mine managed to make a brave show for the year ended March 31 last. Of these means, the principal was the reopening of the upper levels understood to be exhausted. From these all the props, the "old crushed pillars," the cleanings from stopes, and odds and ends of unexhausted reef, have been taken, the props being apparently replaced by timber, and the unmined south reef leader has also been tapped, giving "most excellent gold values." "It will be advisable," the manager says, "to reopen the entire old mine to the surface," and the work will extend "over many years." As the deep levels are also promising well, the inference is that the life of the mine will be extended long beyond another five or six years. For the sake of the buyers at high prices we trust it will be so, and that the dividend may soon again mount to 190 per cent. per annum. In the past year the aggregate dividends came to 130 per cent., which is not bad for an industry distressed by dear labour, and a 10 per cent. tax upon profits. The total yield of gold was 106,293.901 oz. fine, worth at £4.24,773 per oz., £451,230. In addition the company's share of the gold found in the Pretoria mint, when the British entered the town, was £6,594. Working epenses of all kinds, including development, the capital account having been closed since 1895, took £222,797, and £14,275 was handed over as 10 per cent. tax on profits. The final net revenue was thus £215,115, and after paying the two dividends—75 and 55 per cent.—aggregating 130 per cent., or £156,000 on a paid-up capital of £120,000, and adding £15,600 to reserve, a balance of £43,515 was left to carry forward. Throughout the year the mill ran a total of 353-115 days on an 80 stamps basis, and crushed 162,315 tons, equal to 5,745 tons per stamp per 20 hours, and the yield of fine gold per ton milled was £1 15s. 11.348d. Produce from sands and concentrates and from slimes brought the total yield per ton treated up to £2 15s. 7.191d. Total cost per ton came to £1 9s. 10.870d. per ton, against £1 6s. 9.547d. in 1901-2, and £1 4s. 0.949d. in 1899, but the higher expenditure must not be put down to dearer labour, for 7s. 5.144d. of the amount is extraordinary charges, gold tax, etc., so that on the old basis, last year's expenses were only £1 2s. 5.726d. per ton. Yet the wages of the whites amounted to 38.110 per cent. of the total outlay, and Kaffir wages, "including food," came to only 6.298 per cent. of the total, or but .094 per cent. more than the outlay on dynamite. Reserves of ore, at 818,000 tons, were 101,200 tons more than at March 31, 1902. Much improvement work has been done on the surface, including four new steel receiving tanks, new machinery, and new wooden gratings, to replace the old rock filters at the bottom of the tanks. Altogether £50,870 was spent out of income in these additions. The assay value of the ore in the 8th and 9th levels respectively was 1 oz. 10 dwts. 22 grs., and 2 oz. 12 dwts. 12 grs. per ton, but the lode is only 7¾ in. wide in No. 2 level, and 1 ft. 4 in. wide in No. 9. The south reef is wider at 2 ft. 3 in. in No. 8, but only 1 ft. 2 in. wide in No. 9 level. In the former the assay value of the gold is 15 dwts. 7 grs. per ton, but in the latter it was 2 oz. 4 dwts. 5 grs. What this implies we are not sure, but it is obvious that the cost of mining must go up enormously when work is concentrated on these thin veins of gold bearing ore. The balance-sheet is strong, and the reserve invested in good securities now stands at £118,025.

Knights.—The Kaffir market has recovered a little from the effects of the bombshell thrown by this company a month ago, and we now get the terms of an explanatory circular issued in Johannesburg by the directors on June 8. They say that when milling operations were resumed with 60 stamps in May, 1902, it was confidently anticipated that the supply of native labour would increase, admitting not only of the maintenance of development, but the addition of further stamps. It is unnecessary to say the anticipations regarding labour have not been realised, and it comes to this, that with the large amount of construction work now going on, if milling is continued development must be neglected, and the ore reserves seriously diminished. At present they amount to 280,000 tons, whereas the consulting engineer considers that the full 200 stamps should not be started with less than 700,000 tons. A year and a half will be required to complete the equipment, and a very large amount of development can be accomplished while the construction work proceeds. Milling could be continued as at present for the next twelve months, but at the end of that period it would be necessary to close down for development, with the unfortunate result that the rock drill men and experienced natives would be dispersed. Working costs, too, are high, with only 60 stamps operating, and the directors consider it in the best interests of the shareholders to close down and proceed with development. In eight or nine months' time a very large amount of ore will have been developed, and if the conditions with regard to native labour are altered, the question of recommencing milling with 60 or more stamps, until the new equipment is completed, will be considered. With regard to the labour problem, the board says there is every reason to hope that adequate supplies will be forthcoming "from some source or another," and even should the labour be more expensive than that at present employed, there would still be more advantage in the larger mill as compared with the smaller than under existing conditions.

Houtpoort.—Big things are expected from this company, whose first annual report is now in shareholders' hands. The period covered is twelve months to April 18 last, and we are told that the company entered into possession of the property on May 5, 1902, the vendors agreeing to accept the entire purchase money for the freehold estate, including past expenditure for development with fully paid shares. This, at least, shows confidence. The engineer reports that the sinking of the shafts Nos. 1 and 2 has disclosed about 1,500 ft. of reef longitudinally, which is estimated to yield without further sinking, upwards of 100,000 tons of ore of an average value of 1¾ oz. per ton. Latest news reports good progress with developments, sufficient to supply a big mill for many years. Offers to purchase portions of the property have been received, but at present they are not being entertained, the directors considering that as progress is made, better prices should be obtained. Up to date mine development has cost only £3,391, owing to the large quantity of work done, and paid for by the vendors, and the company's resources are ample. Including the final call on the working capital shares paid since the date of the balance-sheet, cash amounts to £35,146, and floating liabilities are trifling. Also the undertaking has 50,000 shares in reserve, and as the current price is over 4, it is not likely to be pinched for money.

Geelong Gold Mining Company.—In the old Geelong mine only a small amount of development work was done during the year ended December 31, but in order to prepare the mill for regular crushings of the Valley ore, a start was made in August on low grade surface debris, mixed with ore taken from the existing stopes. Both these sources which furnished respectively 18,511 and 17,069 tons to the end of April, 1903, may now be regarded as exhausted. In view of this, £24.348 has been taken from the reserve, and written off development and expenditure. That fund had also to bear the loss incurred during actual working, £2 849, and is now

completely extinguished. Total expenditure for the twelve months came to £34,110, including allowance for depreciation, against receipts of £21,675, and apart from the loss provided for from reserve, there is the expenditure relating to the period when the mill was not crushing—January to July. It amounts to £9,586, and has been carried to the balance-sheet to figure as an asset. A large amount of development work was done upon the Valley mine, the main shaft being sunk to 537 ft. The reefs as opened up to date has been invariably good, both as to widths and values, and a first crushing of ore from the stopes of the mine took place in April with satisfactory results. Native labour has been abundant at both of the company's mines throughout the entire year, and continues so to date. The Gwanda Railway is expected to reach the properties well within the present year, and the good effect of the line in reducing working costs is already being felt. The parent company, the Matabele Gold Reefs and Estates, had a right of call at 1½ on shares of the company to the extent of one-half of advances to the company, and exercised it on 4,000 shares, which have been allotted in satisfaction of £6,000 so advanced. When this transaction took place we are not told, but at present Geelong shares are worth only about ⅞.

Eagle Vulture Mines.—According to the annual report of this company made up to December 31 last, milling was recommenced on the 19th of that month, but it was not until the 29th that the battery started on full time. During January it ran steadily up to the 26th, and there seemed every prospect of smooth continuous working, when a serious misfortune befell the company. As a result of an abnormal and sudden rain, 45 ft. of the earthwork embankment in the centre of the wall of No. 3 dam was carried away, and the No. 2 dam below it being broken by the flood, all milling operations for the time being were stopped. The work of repair was taken in hand without a moment's delay, but the damage was not made good until too late to catch any more of the season's rains. Meanwhile the mill ran very intermittently on water obtained from other sources, and to the end of May crushed 5,659 tons for 3,576 oz., the tailings, estimated to yield nearly 4 dwts. per ton, being stored for future treatment. Very little development work was accomplished during the twelve months, but it was actively resumed at the beginning of the present year. Reserves are about 45,000 tons of all grades from 5 dwts. upwards, of which some 20,000 tons may be counted upon as from 15 to 18 dwt. ore. It is said that the quartz lends itself readily to simple treatment by mill and ordinary cyanide process for a high extraction of its values. Net development expenditure for the year was only £524, making the total to date £32,105. Outlay in London was £1,880, and in South Africa £4,624, while interest absorbed £2,112, and depreciation £2,030. Up to date £13,252 has been spent under these heads, and there is a debit to profit and loss of £1,969, money found by the Matabele Gold Reefs and Estates Company, to which £23 078 is owing.

Jessie Gold Mining Company.—During the year 1902 this company spent £10,613 on development, etc., and £4,845 on permanent works, making the outlay to date £31,038. A further net sum of £2,899 went in expenses here and in South Africa bringing the total administration charges to £6,040. The company owes £13,18 to creditors and £681 on a bank overdraft, against debtors £8,249 and cash £317. Mr. Huntley took over engineering charge of the property at the close of February, 1902, and development work since is described as rapid and satisfactory. It is hoped that milling will be commenced some time during the present year, either at the company's own battery or at a larger mill in the district.

Ashanti Gold Fields Corporation.—Mr. John Daw, the general manager and engineer of this company, recently visited the property, and shareholders are now favoured with his report. The attention of the staff, as in former years, has been mainly confined to the opening and development of the principal mines, and without detriment to such work to increasing the monthly output. For the first ten months of he current financial year the company recovered 23,108 oz., from 22,739 tons, and the yield of gold for the entire twelve months will exceed the aggregate production from 1898 to 1902. Great advantages are expected to accrue from the opening of the railway which, Mr. Daw was informed, was to be officially taken over from the Government on July 1. From that date a regular daily service of trains will be initiated, and as the steamship companies are competing with each other for passengers, freights, etc., to and from the coast, there seem grounds for the belief that quicker vessels will be built. Should they be, the distance from London to the company's property will occupy only 14 days, meaning a great saving of time and expense in the transmission of the staff, machinery, and stores. We have not the space to give details of the development work done, but it seems of a useful and substantial character, the Obuassi mine in particular opening up well. Its No. 1 mill—the first light stamps sent out—is still running, and the officials hope to keep it at work until the new 50 stamps are ready. No. 2 mill is in excellent condition, but the addition of the extra 20 stamps progresses slowly, as a modification is being made with the engines, which will prevent them from getting to work as early as anticipated. The Ayeinm mill is described as splendid, but here a water difficulty had to be contended against, now happily surmounted. All the new machinery, a few details excepted, has been shipped from England and is arriving on the property. When erected—about January, 1904—this plant will consist of a 50-stamp mill, a complete cyanide plant, hoisting, pumping, electric plants, etc. It will be fed by four lodes, and it is said that enough quartz can be raised from the Ashanti shaft alone to keep it regularly at work. The outlook therefore seems encouraging.

Ashanti Sansu Mine.—This is an Ashanti Gold Fields subsidiary also favoured with a visit from Mr. Daw. Work has been continued in levels Nos. 1, 2, and 3, and in each there was a continuous run of quartz. As explained in former reports, only a portion of the vein has been removed, the width varying from 5 to 12 ft. The average value was the satisfactory one of 27 dwts. to the ton. The deepening of the main shaft has not received such direct attention and supervision by the managers as Mr. Daw had hoped, but attention is now being given to this. When addressing the shareholders on February 4, he mentioned that beyond the portion of the reef which was being mined a large quantity of lower grade ore averaging probably 10 to 12 dwts. remained. The desirability of milling this was considered, and since May 1 several hundred tons have been put through the value being kept at about 20 dwts. by mixing with richer ore. As the mine is deepened and opened, this policy can probably be continued, and taking the whole year into consideration, the general average should not be less than one ounce to the ton. The cost now of mining crushing and recovering will be reduced from 33s. to 24s. per ton. On May 1 the twenty additional stamps commenced working, making 40 stamps, and capable of crushing about 2,000 tons per month.

Gold Fields of Eastern Akim.—This company was formed in December, 1898, and lucky shareholders have just received a profit and loss statement for the three years and nine months to September 30, 1902. It is rather a curious production, running into substantial looking figures. The first item or series of items on the credit side consists of net proceeds in cash and shares of leases and option sales to five separate companies, and amounts to £174,128. Then we have Government contribution to cost of road, £3,742, Colonial and Agency account £4,050, and various other small items, the total "receipts" including the machinery, plant, tools, buildings, etc., being £186,516. To "earn" this cost £54,632 in West Africa and £10,989 in London, while £38,250 is written off in respect of properties sold, and £10,140 off securities. After disposing of these things the directors proceed to transfer assets figuring for £144,144, to a shares suspense account, pending realisation, so there is a debit to be carried to the balance-sheet of £71,638. Altogether the company possesses 144,144 shares, and judging from their market quotation where there is one that shares suspense account is very necessary. Cash balance amounts to £582. The company continues to devote much energy to the establishment of satisfactory means of communication between the seaport and Accra and the properties, and appears to have accomplished some useful work. Delay in organising a proper system of transport has retarded progress in the trading department, and until a solution of the carriage problem is found, and business is commenced on an extensive scale, the company's stores will not, it is feared, prove remunerative. A scheme for the amalgamation of the New Castle Gold Corporation is now virtually complete, and good progress is being made with regard to the acquisition of the leases for the land forming Takoradi Bay.

Curtin Davis Proprietary Company.—Not much mental strain is involved in perusing this company's report for the six months ended April 30. It is the fourteenth half yearly production, and the directors tell shareholders that a large number of properties have been inspected during the period under review. One property, situated in New South Wales, the board hoped would prove of sufficient value to justify its purchase, but unfortunately further exploratory work has demonstrated it to be of too low a grade to pay. At the present time examination of other properties are proceeding, and the directors will continue their efforts to secure a property suitable for investment. How kind and thoughful. Will not the shareholders raise their fees? Capital paid up is £182,229, and the chief asset consists of mine account, £156,731. This seems to be a property at Dundas, now let on tribute, and which returned the company during the six months £1 4s. 2d. Apparently the directors have been nosing round Artlunga, concerning which some particulars are given elsewhere, as another credit item is "Artlunga Inspection Account, cash in hand, £90." Altogether the money possessed amounts to £237, but the company has £9,944 invested in Metropolitan Board of Works 3½ per cent. debentures, and floating liabilities are not heavy. Including the £1 from tributors, revenue for the half-year was £157, expenditure came to £904, and fully £8 was allowed for depreciation, so the debit balance is swelled from £15,242 to £15,998.

Burma Ruby Mines.—This company's experiences during the year to February 28 last were unfortunate. Unprecedented floods in July last washed away the pipe line, and launder of the electrical power plant, and necessitated a complete stoppage of two months to repair damages. The mines became so filled with debris that had to be passed through the washers that the period of unproductive working was actually much longer. Nor was this all. To make matters worse, the quality of the ground dealt with was less valuable, the explanation being that the byon (ruby earth) had been worked up to the edge of the large banks of earth caused by former top-stripping, and it was necessary to remove them before the byon underneath could be reached. As the most economical way of doing so is to pass them through the washing machines large masses of dead earth had to be dealt with, reducing the value per truck. These banks are now practically finished, and in the coming year the returns are expected to improve. We hope so, because the past twelve months' operations resulted in a loss of £1,545, the expenditure being £74,842, including £7,737 allowed for depreciation, against an income of £73,297. As a set off to the misfortunes of the year, the directors are able to state that they have arranged with the Secretary of State for an extended lease of 28 years. At first the Government wanted a rent of Rs.3,00,000 per annum and 30 per cent. of the net profits, but the board thought this too onerous, and got the rent reduced to Rs.2,00,000 as a minimum, to be increased by 30 per cent. of the amount, if any, by which the collections from holders of licenses exceed Rs.2,00,000 in any year. The financial position is satisfactory.

Tyee Copper.—The directors of this company do not say much in their annual report brought up to April 30, but the deficiency is made good by lengthy statements from the mine superintendent and smelter manager. Also the local director and general manager will give a full account of the property at the forthcoming meeting, so shareholders cannot complain of paucity of information. What they have so far seems of a decidedly encouraging character. The method of arriving at the ore reserves is perhaps not the safest, but the mine superintendent says it would be almost an impossibility in the Tyee mine to expose any large amount of ore on four sides without going to a very large and unnecessary expense, as the ore bodies are so irregular in shape that they would have to be "simply honeycombed" with working to expose all the ore in them. The work has been laid out more with a view to finding bodies of ore, and then to extracting the ore from them in the most economical way than exposing as much as possible. This sounds all right, and we hope it is. Anyhow, the ore reserves are estimated at 96,085 tons, said to be a most conservative calculation. Since April 30 the developments are reported excellent, and have added largely to the reserves. As for the smelter, that is exceeding expectations, and the whole report is pervaded with considerable optimism. The profit and loss account, however, is the real test, and here the display does not take away the breath. Net proceeds of matte sales were £40,115, and the company made a profit of £232 on boarding its employees, which does not seem kind. From all sources the income was £44,590. Mine expenses were £21,098, smelting charges £11,325, and London outlay £2,326, while £820 was allowed for depreciation. Net profit, therefore, was £9,022, but shareholders cannot have it; should indeed wait some little time for a dividend, because there is such an asset in the balance-sheet, as commission paid on second issue of shares, £30,000, and the financial position generally needs strengthening.

Blackball Coal Company.—The profit and loss account of this company simply informs us that the gross profit on working account to the end of December last was £10,847, and that after writing off £3,916 for depreciation, the credit is £6,931. From this is deducted the London expenditure, and a net profit of £4.597 is left. This, with the £384 brought in, is disposed of as follows: £575 is set aside towards a depreciation fund for the aerial ropeway on account of the building of the permanent bridge and line of railway; £2,000 goes to reserve, raising the fund to £4,000, a dividend at the rate of 2½ per cent. is declared, and a balance of £1,697 is carried forward. A good balance-sheet is issued.

Company Reports and Balance Sheets.

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Bank of New South Wales.

Everything seems to go swimmingly for this bank, and a few more pounds were added to the profits for the six months ended March 31 last. The total was £115,793, against £115,354, and with a larger balance brought in, the sum for disposal is £131,072, or an advance of £4,022. The directors again propose a dividend at the rate of 10 per cent. per annum, with another £15,000 added to reserve, and an increase in the balance to next account of £4,022 to £16,072. The bank's liabilities show very little change, compared with the same date last year, notes in circulation being £993,808, deposits £21,343,062, and bills payable and other liabilities £2,791,440. On the credit side bills discounted, loans, and advances to customers amount to £18,535,243, and what are termed cash assets to £9,353,542. The latter includes coin, bullion, and cash balances £5,136,648, a small decrease against the same period of 1902, bills receivable and remittances in transit £1,904,240, and investments £1,737,022. Two new branches were opened during the half year.

National Bank of New Zealand.

Profits of this institution dipped a little during the year ended March 31 last, the total revenue, after deducting interest on deposits and providing for bad and doubtful debts, amounting to £123,288, compared with £128,184 in the preceding twelve months. At the same time expenses rose to £66,429, so the net profit, including balance brought in, and with rebate deducted, is £10,466 down, at £62,761. As the reserve got the benefit of an increased profit shown last year, it is fair perhaps that it and not the shareholders should suffer now. It will therefore receive £10,000 less at £30,000, making it £180,000, the dividend is again 10 per cent., and a decline to £7,761 takes place in the carry forward. Both notes in circulation and current and deposit accounts show expansion to £257,104, and £2,838,524 respectively, but bills payable are rather lower at £308,313. Coin and bullion is down a little to £529,092, and cash at bankers and money at call has fallen £35,987 to £73,639. Investments have further risen sharply to £168,077, and bills discounted, advances, etc., are up rather more than £100,000 at £3,005,773.

British Aluminium Company.

This undertaking shows up a little better in respect of the year to December 31 last, and it is something to the good that the accounts have not this time required a year for their preparation. Balance from trading account was £39 980, and the revenue from all sources £41,695, and after providing a great variety of charges the net income is £20,771. Compared with the preceding twelve months, this is an improvement of £8,246, the advance in the trading profit being £11,576. The profit, however, still falls short of the charges, debenture interest requiring £15,000, charges on stocks of metal, being interest and commission on loans in connection therewith, £3,110, and depreciation £6,053. Thus the debit balance is increased from £18,965 to £22,358. As will be remembered arrangements were made with the debenture holders last autumn whereby payment of interest due November 1, 1902, and May 1, 1903, was postponed, and deferred warrants have been issued to the stockholders for the amounts due. The £10,000 authorised to be raised in priority to the debenture stock was borrowed in January last, and £2,000 has since been repaid. To sundry creditors the company now owes £42,087, against debtors £16,736, and cash £3,765. Patents and goodwill remain as before, at £100,000, but the suspense account has been slightly reduced by adjustments to £79,983, and from the auditor's certificate, we learn that it is the intention of the directors at an early dae to deal with the account as a whole. Presumably it will be deducted from the capital reserve of £185,985. £6,000 seems a very small amount to be written off property, buildings, works, plant, and machinery valued at £577,100, including £1,917, added during the year, and judged by their earning capacity we should say these assets were much overvalued. The directors, however, tell us that the sales of aluminium continue to increase so satisfactorily that they deem it necessary to take steps to extend the water power installation at Foyers by the erection of two more dynamos, and to increase the capacity of output of the several works of the company. These extensions will involve considerable expenditure, but it is satisfactory to learn that the board hopes to provide it without making any fresh issue of capital or increasing the debenture debt. When the last report was issued in November, 1902, it was announced that unless more favourable conditions could be arranged, the manufacture of carbide would be discontinued. Happily a considerable reduction in the cost of manufacture has been effected which justifies the continuance of this branch. Relations with the other aluminium producers continue friendly, and the original understanding with them was modified last January to the future advantage of this company.

Trustees' Executors' and Securities' Insurance Corporation.

In the twelve months ended May 31 this concern, now enjoying less romantic days, received about £1,000 less from interest, dividends, commissions, and transfer fees, than in the preceding year at £39,177. Profit on realisations, however, were up £426 to £13,187, fees earned for acting as trustees, etc., rose £610 to £5,606 and rents, etc., £432 to £10,897. Total revenue was £68,866, and after deducting debenture interest and all other charges, which were higher, the net revenue is £39,483, or a drop of £469. Last year a sum of £6,559 was required to extinguish the item of accrued interest, so that all receipts might be treated on a cash basis, and no such appropriation being now necessary, the directors are able to place £15,000 to reserve, an advance of £5,000. Then they give the shareholders an additional ½ per cent., at 5½ per cent., and carry forward £8,550 against £8,817 brought in. Reserve fund now stands at £85,000, all invested in tip top securities, and cash amounts to £39,180. The ordinary investments are considered worth their balance-sheet figure. And how about the Winchester House leasehold property.

Electric Construction.

Notwithstanding increased competition among both home and foreign manufacturers of electrical machinery, with the consequent reduction in price, this undertaking reports another satisfactory year's trading. Revenue from all sources for the year to May 31 was £61,165, or £1,399 more than in the preceding twelve months, but loan and debenture interest, £12,620, general charges, £19 071, and allowance for maintenance, £3,736, were all higher, and after setting aside the usual £5,000 for depreciation, the net balance is just £240 to the good at £20,737. Its division is on the same lines as a year ago, the preference shares receiving 7 per cent., the ordinary shares 6 per cent., and the reserve fund £2,000, while a substantial addition can again be made to the carry forward, which goes up from £3,504 to £4,395. Properties, patents, and goodwill are all lumped together in this company's balance-sheet, and we cannot tell the proportion of intangible assets, but additions for the year were very modest at £1,864, making the total £385,388, and the depreciation and general reserve funds reach £82,000. Shares in other companies, £81,303, have been pledged to secure loans of £60,000, and the company's interest in the Madras Electric Tramways is down for £87,673. Creditors and bills payable come to £43,336, against debtors £103,768, bad and doubtful accounts provided for, and bills receivable £2,060. Cash comes to £16,741, and £9,100 is invested in Consols.

Electrical Power Storage.

This company's annual report is made up to May 31, and in it the directors tell us that business increased in every direction, the output exceeding that of any previous year. Every type of cells was represented in the improvement, power, lighting, automobile and launch cells having all been in larger demand. The increase in profits, however, is trifling, a mere £103, at £11,039, but the balance brought forward of £855 was larger, and the sum for disposal is £11,984, compared with £11,362. So, after again adding £5,000 to reserve, and £1,000 to the contingent fund, the directors advance the dividend 1 per cent. to 6 per cent., involving a reduction in the sum carried forward to £594. Savings now amount to £26,000, as a set-off to the patents and goodwill, etc., in the balance-sheet at the large figure of £88,285, and we are glad to note that part of the money has been invested separately, even though some of it is in shares in other undertakings. Debts owing to the company exceed creditors by £10,000, a sum of £10,656 is

held in cash and stocks at cost or under, are down for £18,812. The expanding business called for more accommodation, and during the period under review £5,566 was spent on buildings, plant, etc., against £1,246 allowed for depreciation, these properties now being valued at £16,824.

Frank Jones Brewing Company.

A truly remarkable recovery took place in this company's profits during the twelve months ended February 28 last, no less indeed than 50 per cent. The increase in the sales was the comparatively small one of 11,293 barrels to 263,156 barrels, but the gross profit including interest, sundry receipts and rents receivable, rose almost £30,000 to £92,552, and after spending about £1,000 less on repairs and allowing £200 more, for depreciation, the balance is £77,514. London expenses absorb £3,270, and with the addition of interest and transfer fees, the disposable sum is £74,596, an increase of £30,274. Debenture interest draws away £25,000, and in dividing the balance the directors make an excellent start by appropriating £6,275 towards writing off the remainder of the bad debts suspense account. An interim dividend of 3¾ per cent. was paid on the preference shares in December, and it is now proposed to pay a further 3¾ per cent., making the full return of 7½ per cent. Then, subject to the sanction of an arrangement referred to in another column, a further 1 per cent. will be distributed to the preference holders on account of arrears, and £8,000 placed to reserve, leaving £1,372 to be carried forward. A year ago the board was compelled to withdraw £3,000 from reserve in order to distribute 5 per cent. on the preference capital. Capital outlay for the year was £12,382, and only £3,925 as above mentioned, was allowed for depreciation, so once more the property account is swelled, this time to £1,216,681. General reserve reaches £8,000 only, separately invested, but trading accounts are well in favour, cash amounts to £25,602, and stocks are valued at £75,337.

Tamplin and Sons' Brewery, Brighton.

Another small expansion took place in this company's profits during the year ended May 17, revenue from all sources being some £2,000 above that of the preceding twelve months. The total was £79,875, from which expenses absorbed £28,595, and depreciation £4,471, leaving £46,810, an advance of £1,517. Adding £5,084 brought forward, interest, etc., the directors have £51,956 to disperse, of which the reserve gets the overpowering sum of £1,000, making it £54,000. Then having provided the debenture and preference interest, the board gives dividends and bonus aggregating 12½ per cent. to the ordinary shares, a rise of ½ per cent., leaving £6,451 to be carried forward. In addition to the general fund the company possesses a property reserve of £61,166, or £115,166 in all, against estates and goodwill of £771,445. Trade liabilities and deposits are modest at £5,695, against which there are book debts, rents, and loans £19,499, cash £16,719, investments £2,453, and stock £23,904

Bodega Company.

This company's gross profits were satisfactory enough in the twelve months to March 31, the revenue earned being £1,900 above that of the previous year, at £85,093. There was a pretty big drop to £559 in the balance brought forward, but interest and transfer fees were a trifle higher, and the income from all sources was £1,027 better at £86,264. But to earn this sum cost an additional £7,525 at £64,868, leaving £21,395, compared with £27,893. Having provided £1,985 for maintenance and repairs the directors have £19,411 to scatter, being a drop of £2,995, and not only must shareholders submit to another 2 per cent. drop in their dividend to 5 per cent., but they must pay their own income-tax as well. The balance carried forward is £411. Not a word of explanation is forthcoming for this rapid retrogression, and probably shareholders will become a little inquisitive at the meeting to be held next week. How is it that the freehold and leasehold premises, trade marks, etc., have declined £30,233 to £57,732? Stocks, £123,471, are a little lower, and so are floating liabilities, while cash has improved substantially to £23,074, and sundry debtors owe £11,808. The reserve, such as it is, stands away from the business in high class securities.

Assam Railways and Trading Co., Limited.

As its title indicates, this company draws its revenue from various sources, including railways, collieries, and shares in other companies, which in the year ended December 31 yielded it a total profit of £57,687, compared with £62,595 in the previous year. The company's own railway showed gross earnings of Rs.8,51,880, or a decrease of Rs.76,698, coal traffic having produced Rs.67,111 and general traffic Rs.9,587 less, and as expenditure was only Rs.14,579 down, at Rs.4,40,693, the net revenue of Rs.4,11,187 was Rs.62,119 smaller. This, converted into sterling, amounted to £27,412, and with £29,697 profit on general trading, £4,897 received as dividend on the holding of Rivers Steam Navigation shares, £782, as interest from the Brahmaputra-Sultampur Railway and £27 from transfer fees, gave a total revenue of £62,815. From this was deducted interest, commission to management in India, allowance to debenture premium redemption account, and sundry small charges, leaving the profit of £57,687 above noted. Debenture interest, interim dividends on the pre-preference "A" shares, and new 6 per cent. preference shares, and a payment on account of arrears on the preferred "A" shares having been provided, there was a balance of £21,771, out of which a half year's dividend on the pre-preference shares, and new 6 per cent. shares have been paid, and it is now proposed to pay a further 6s. per share on the preferred "A" shares, making 11s. 6d. for the year, and to carry forward £1,471.

United River Plate Telephone Co., Limited.

A further substantial increase of £9,629 was recorded in the gross revenue for the year ended March 31 at £124,470, but the receipts from interest, etc., fell off a little, so that the total income was £8,849 up at £129,565. Working expenses in the River Plate, however, required £64,360, or £8,066 more, and after paying London charges, debenture interest, preference dividend and the interim dividend on ordinary shares, and writing £3,314 off the holding of Provincia. Telephone Company's shares, the available balance was only £28,899, compared with £33,406 a year ago. With £6,415 brought in, this was raised to £35,313, of which £20,000 was transferred to reserve, and the ordinary shares receive a final distribution of 4 per cent., making a total of 7 per cent., but the amount carried forward was reduced to £3,713. Capital expenditure was heavy at £80,219, bringing the outlay to date up to £574,725. No allowance for depreciation seems to be definitely made, but this is not a matter of much importance, seeing that a reserve fund of £95,000 has been built up, and the company holds real estate in the River Plate valued at £91,195, and has securities taken at cost of £104,190.

Montgomerie and Co., Limited.

The directors of this company complain bitterly of the way in which the tax on grain ate into their profits for the year ended April 30, and state that the average price paid by them for foreign wheats worked out at exactly the same price as during the previous year, plus the one shilling per quarter duty, while the charges made to the consumer were not increased. Sales for the year were increased by £12,210, but notwithstanding this the gross profits were no more than £286 higher, at £14,329, and as expenses rose by £126 to £6,964, the net revenue was only £159 up, at £7,365. With a larger balance of £1,457 brought in, the amount available came to £8,822, compared with £7,314, and after meeting debenture interest and preference dividend, the ordinary shares once more received 8 per cent. The allowance for depreciation considered necessary is still infinitesimal at £188, but another £100 is written off preliminary expenses, and £2,869 is carried forward. Capital expenditure has risen from £65, 44 to £66,306, so that the depreciation written off is totally inadequate, but in other respects the position of the company is good, as against a sum of £1,826 due to sundry creditors, £14,313 is owing from sundry debtors, stock is valued at £9,527, and cash amounts to £2,682.

W. H. Chapman and Co.

This concern is engaged in the wine trade, and the directors seem to think that no business was so severely affected by the 1s. 3d. income-tax as it was. Nevertheless, the company's turnover shows a moderate increase, and in the twelve months ended March 31 the trading revenue was £11,098, to which is added £4 for transfer fees, making a total of £11,102. Depreciation of leases, income-tax, and auditors' fee take £697, leaving £10,465. Having provided the preference dividend, the directors again propose 8 per cent. on the ordinary shares, managing director is entitled to £675, and £1,013 is distributed amongst the staff. Then the directors' fees require a further amount of £500, a similar sum is placed to reserve, making it £11,000, and the carry forward is slightly reduced from £1,389 to £1,263. The most striking item in the balance-sheet is the enormous stock of wines, spirits, etc., valued at no less than £99,530, practically four-fifths of the capital being represented by this entry. Leasehold buildings, goodwill, trade marks, plant, etc., are down for £38,453, trading accounts are moderately in the company's favour, and cash amounts to £3,701 only. Needless to say the reserve is entirely involved in the business.

Lungla (Sylhet) Tea Co., Limited.

The total crop for the year ended December 31 was 1,974,304 lb., and although this was an increase of 50,853 lb., compared with the previous season, it fell short by 170,496 lb. of the estimated quantity. All things considered, however, the company had not much to complain of, as, in spite of unfavourable weather and adverse markets, the average price obtained was slightly better, at 6.93d., against 6.88d. per lb., and the cost laid down in London came to no more than 5.23d., compared with 5.39d. Gross profits amounted to £12,912, and after deducting manager's commission, and adding £1,482 brought forward, the total available was £13,740. Debenture interest took £3,750, preference dividend £5,631, and income-tax £560, leaving a balance of £3,798, of which £3,000 is used to write off the balance of preliminary expenses and £798 is carried forward. The directors have again drawn only half fees, leaving the other half in abeyance until the company is in a position to pay a dividend on the ordinary shares, but this self-denial will not have to be practised much longer if the same progress continues to be made, as the sum used to wipe out preliminary expenses would have allowed the payment of a small dividend. Trading balances, according to the balance-sheet, were well in favour of the company, the total liabilities amounting to £24,819, against which tea in transit and other assets in London and India were valued at £32,596, temporary loan interest, etc., stood at £2,442, and cash at £6,221, while £1,147 had been spent on advances at gardens and payments on account of the current season. As soon as possible, however, attention should be devoted to the capital account, now standing at £263,373, or a valuation of about £48 10s. per mature acre, which is somewhat excessive.

Lankapara Tea Co., Limited.

The report of this company for the year ended December 31 affords a pleasant contrast to those of the majority of its competitors, as everything appears to have worked in its favour. Not only was it fortunate enough to secure a crop considerably in excess of the estimate, and 284,374 lb. above the yield of the previous season, but a good standard of quality was maintained, and the average price realised was consequently 0.14d. higher, at 6.47d. per lb., resulting in an increase of £7,963. A substantial saving

was also effected in expenditure, and notwithstanding the larger crop, the outlay was only £650 more, so that the cost per lb. was no more than 4.32d. against 5.96d. per lb. The manager's commission having been paid the net profits came to £7,957, from which is deducted the debit balance of £1,302 brought in, and after meeting debenture interest, and setting aside £1,000 for redemption of debentures, there was a balance of £5,419 available, and the directors are in the happy position of being able to pay a dividend of 10 per cent., and to carry forward £419. Assuredly the change of management has worked wonders, and the Hon. E. Hewitt deserves great credit for the metamorphosis he has effected. The company owed £7,000 on bills payable, £3,149 to sundry creditors, and had overdrawn its bank account by £348, but against this tea on hand represented £14,474, and cash £497, and there was a further sum of £6,000 on deposit, so that funds were more than ample.

Jhanzie Tea Association, Limited.

The hopes indulged in of better times in the season ended December 31 have not been realised, and the outturn of tea only amounted to 1,047,333 lb., or 46,356 lb. more than in 1901, and 144,667 lb. short of the estimate. Nor was there much consolation to be obtained from the average price realised which worked out at 8.62d. per lb., compared with 8.56d. last year, and 8.67d. in 1900. But as the gross receipts amounted to £37,395, against £35,342, while expenses were only £853 up, at £36,840, the net result was a profit of £555. Even with the help of £192 from interest on investments, £194 from profit on the sale of 1 lakh of rupee paper, £43 underestimated in 1901, and a refund of £550 by the agents here and in Calcutta, the total available, after deducting the debit of £47 brought in, and meeting income-tax and subscription to the Indian Tea Market development fund, was insufficient to pay a dividend. The managing agents, therefore, take £1,000 from reserve on the plea that prospects are brighter, and with this money pay dividends of 2½ per cent. on the ordinary, and 1¼ per cent. on the contributory shares, carrying forward £36. This is the last occasion on which the latter class of shares receive half dividend, and from now on they become ordinary shares, so that more money will be required for dividend purposes in the future, and it will need all the expected good fortune to bring the company back to its palmy days of 10 per cent. distributions. The loan from the bank has been reduced from £8,000 to £3,500, but the amount due on bills payable and to sundry creditors is slightly increased to £17,324. Against these, stocks have risen to £19,630, sundry debtors owe £2,877, and cash in hand stands at £779, while £1,324 less has been spent on account of the current season at £4,742. The company, however, has been forced to realise half its holding of Government paper, leaving it with £6,319.

Jorehaut Tea Co., Limited.

Disappointment was again the experience of the directors of this company in the year 1902, as not only did the crop of 1,841,153 lb. fall short of the estimate by 218,607 lb., and of the previous yield by 11,541 lb., but the average price obtained was 0.24d. lower, at 8.72d. per lb., and the gross proceeds from sales were consequently £2,160 smaller at £68,618. Including interest on investments and sundry credits, the gross profits were £67,907, of which expenses absorbed £57,715, leaving net profits of £9,121, compared with £6,814. Both gross profits and expenditure last year were apparently much higher, but it was largely in appearance owing to the method of dealing with the rupee accounts at that time. This balance was insufficient to enable the directors to maintain heir dividend at 10 per cent., and they therefore followed the plan adopted a year ago and withdrew a further £879 from the reserve fund. In order to carry into effect the alteration in the conversion of the rupee outlay into sterling, it was necessary to write down the rupee assets appearing in the last balance-sheet from 2s. to 1s. 4d., and the amount of £2,056, so written off has been deducted from tea estates, together with a sum of £1,192, which had been carried since 1878 under the heading of bungalow furniture. These deductions bring the outlay on the estates down to £99,395, or about £17 per planted acre, which is reasonable enough. The company owed £22,000 on bills payable, and £3,416 in other directions, but held ample assets, including £30,159 in tea, £4,817 in accounts outstanding, and £7,299 in cash.

Attaree Khat Tea Co., Limited.

A crop of 1,000,000 lb. was looked for in the year ended December 31, but the season closing earlier than had been expected the actual yield was only 29,349 lb. above that for 1901 at 845,340 lb. Ill-luck also attended the company in its working at the Paneery factory, the teas from which realised 1.36d. per lb. less at 8.33d., and notwithstanding an increase of 0.12d. per lb. to 9.29d. on the yield from the more important estate, the average on the whole crop was 8.97d., compared with 8.35d. Expenditure, however, was reduced by £1,822, and worked out at a cost of 7.55d. against 8.35d. per lb., and the net profits, after payment of manager's commission, was therefore £4,781, or £1,384 up. With £1,832 brought in, the disposable balance amounted to £6,627, and by reducing the allocation to reserve from £2,000 to £1,000, the directors continue to pay a dividend of 6 per cent. against 4 and 5 per cent. in the two preceding years, and to carry forward £1,623. Notwithstanding past disappointments, the managers only reduced their estimate for the current season by a trifle of 4,000 lb., which seems a little sanguine. The company's financial position is decidedly strong, the amounts due on bills payable and to sundry creditors, etc., only totalling £14,104, against which stocks of tea amounted to £18,373, sundry debtors owed £2,160, and the cash in hand and in transit was £2,562.

Aibheel Tea Co., Limited.

This company again tried the plan of disposing of part of its produce in Calcutta, and out of a total crop of 294,286 lb. sold 109,905 lb. in that market, but the result was less encouraging than had been hoped, and it has been decided to send the whole of the current season's output to London. The average price realised in Calcutta was only 4.98d. per lb., or if the charges which would have been incurred in shipping here are added, 5.89d. per lb., compared with 6.57d. obtained in London. Gross receipts amounted to £7,214, and expenditure, including manager's commission, to £5,972, leaving a profit of £1,242. To this is added £294 brought in, and after transferring £500 to reserve, and paying the preference dividend, the ordinary shares receive a distribution of 5 per cent., or 1 per cent. more than a year ago, leaving £16 to be carried forward. The balance-sheet shows a favourable position, with assets largely in excess of current liabilities.

Bordubi Tea Co., Limited.

This company was only incorporated in November, 1900, and has not yet reached the stage where its operations can be measured by the results obtained, but with 940 acres under cultivation, of which 140 were added last year, a crop of 96,640 was gathered and realised an average price of 10.72d. per lb., compared with 11.08d. in the previous season. Working expenses were heavy owing partly to the cost of building material for a new withering house, and amounted to £9,503, but against this £4,310 was realised on the crop, and £83 came in from interest, so that the net addition to capital outlay was £5,110, making a total to date of £34,597. The company owes £6,000 on bills payable, and £772 to sundry creditors, to meet which there are £2,634 in stocks, £1,716 in cash, and £1,045 spent on coolies for 1903. It is estimated that the crop for the current season will be 200,000 lb., at a cost of £10,443, which, on the basis of last year's prices, would leave a deficit of about £1,650, so that it is very evident further capital will be required if the company is to succeed. There is, however, still £1 per share on 3,655 shares, which can be called up in addition to 245 £10 shares unissued.

MINING RETURNS.

Bayley's Gold Mines.—Crushed 231 tons of ore, yielding 87 oz.

Brilliant Block.—Value of the bullion produced at cyanide works £750.

Brilliant Central.—Crushed 3,040 tons for 2,219 oz.; cyanide £1,497.

Brilliant Extended.—Crushed 2,360 tons, 1,216 oz.; concentrates, etc., 950 oz.; total 2,166 oz.

Chaffers.—A trial parcel of 135 tons of ore treated at Boulder

Champion Reef Gold.—14,895 tons produced 14,966 oz.; 19,332 tons of tailings (cyanide process) produced 2,332 oz.; total, 17,292 oz.

Main Reef mill gave a return of 106 oz. 17 dwts. 12 grs. of fine gold, value £4 per oz., and a profit of £195.

Chinese Engineering.—Output of coal, 15,500 tons; sales 16,000 tons.

Day Dawn P.C. Gold.—Crushing 784 tons, 672 oz., valued at £2,355; 37 oz. from stullings, valued at £120; cyanide works, 1,320 tons of tailings treated, produced bullion to the value of £781; concentrates sold for £337.

Duke United.—990 oz., value £4,083.

Dundee (Natal) Coal.—Output 10,686 tons.

Golden Links.—(Eclipse Lease)—1,540 oz. from 2,175 tons crushed; treated by cyanide, 648 tons, yielding 98 oz.

Kinta Tin Mines.—320 piculs produced, value $15,000. Eusof's Rent $5,000.

Komata Reefs Gold.—Crushed 1,260 tons, bullion, recovered £3,075.

"Lloyd" Copper.—186 tons copper.

Mount Lyell.—21,342 tons of ore has been treated, the average assay value of the ore before treatment being: Copper, 2.02 per cent.; silver, 2.18 oz. per ton; gold, .088 oz. per ton. The converters have produced during the same period 496 tons of blister copper, containing copper, 491 tons; silver, 49,293 oz.; gold, 2,070 oz. There has been treated 5,086 tons of metal-bearing fluxes and North Mount Lyell Company's ore.

Murrin Copper.—Produced matte containing 120 tons fine copper.

Natal Navigation Collieries.—Output 11,128 tons.

Nimrod Syndicate.—Second clean up by Atlin Mining Company 125 oz.

Ooregum Gold.—11,911 tons produced 5,939 oz.; tons of tailings (cyanide process) produced 1,198 oz.; total, 7,137 oz.

Queensland Menzies.—Crushed 645 tons for 1,225 oz.; cyanided 480 tons for 110 oz.

St. George's Coal Company.—Output 7,746 tons.

Smelting and Refining of Australia.—Dore bullion shipped to London containing 8,743 oz. gold and 52,550 oz. silver; also 114 tons copper matte containing 239 oz. gold, 8,550 oz. silver, and 55 tons copper. The soft lead produced during the month and disposed of in the colonies was 515 tons.

Velvet Rossland Mine.—187 tons first class ore yielded 197 oz. gold, 8,706 lb. copper; net returns from smelters, $3,750; 46 tons "fines" yielded 17 oz. gold, 2,250 lb. copper; net returns from smelters, $292.

THE REVENUE RETURNS.

I.—AN ACCOUNT OF THE TOTAL REVENUE OF THE UNITED KINGDOM, in the undermentioned periods of the Year ending March 31, 1904, as compared with the corresponding periods of the Preceding Year.

Quarter ending June 30, 1902.			Quarter ending June 30, 1903.				Expired portion of the year ending March 31, 1903.			Expired portion of the year ending March 31, 1904.

COMPANY MEETINGS.

OHLSSON'S CAPE BREWERIES.

The fourteenth annual general meeting of Ohlsson's Cape Breweries, Limited, was held on Monday, June 29, at the Cannon Street Hotel, E.C., Sir Harry Bullard, M.P., presiding.

The Secretary read the notice convening the meeting and the auditors' report.

The Chairman: The total profit for the year, including the amount brought forward, is £236,358. This amount is subject to certain deductions, making together £37,246, leaving a balance for disposal of £199,111. Out of this we propose to add £70,000 to reserve account, bringing it up to £160,000, to be further increased during the current year from premium on the recent issue of ordinary shares to £685,000; to pay a bonus on the fully-paid ordinary shares, to March 31 of £2 a share, free of income-tax, and to carry £39,611 to next account. This, I am sure you will agree, is a most gratifying result for the year's work. If you will now turn to the balance-sheet you will see that our share capital has been increased since I met you a year ago by the issue of 30,000 new ordinary shares of £5 each, which were issued to the holders of the old ordinary shares at the end of last year at a price of £15 a share. At the date to which the accounts are made up £5 only per share, half consisting of premium, had been paid up, and from April 1 last we shall be paying a dividend on double the ordinary capital, which ranks for dividend under the accounts of the year now closed. On the other side of the account we have added £235,990 4s. 7d. to the cost of land, breweries, etc., and we have expended £18,658 6s. 3d. on movable machinery. Under the heads of stock-in-trade and sundry debtors, loans, etc., a considerable increase is shown upon last year's figures, accounted for by the addition of the Johannesburg business and the general extensions of our trade. As we have stated in our report, we have every reason to be pleased with the result of the eight months' working of the Johannesburg business. Notwithstanding that during the first few months following upon our having entered into possession the difficulty of obtaining materials, and the cost of them when obtained were very great, I can inform you that the profits realised have exceeded our anticipations. Not only does the beer produced maintain its reputation, but by the exertions of our manager and staff there we were enabled to more than double the output without adding to the plant. Very shortly after acquiring the business we set to work to increase the plant, and extensions are now completed which enable us to meet, for the present at least, the demand for our beers. For some months past we have been brewing lager beer at our new brewery in Cape Town, and I am glad to say we are turning out an excellent beer, and are doing a good trade in it, and one which we have no doubt will steadily increase. There is one other matter which I must refer to, and that is the increase in the work and responsibility thrown upon us, your directors, as the result of the growth of the business. Our turnover is now ten times what it was when this company was formed, and our trade which was then confined to Cape Town, now has its ramifications spread over a very large area. We have found it absolutely necessary to add to the number of directors, and have been very fortunate in securing the valuable services in this respect of Mr. Gerald Buxton, of Messrs. Truman, Hanbury, Buxton and Co., Limited, whose election you will be asked to confirm to-day. I now move that the report and accounts for the year ending March 31 last be received and adopted.

Mr. J. H. Brodie seconded the motion, which was carried unanimously.

The bonus recommended was declared, the retiring director was re-elected, and the appointment of Mr. Gerald Buxton was approved. The auditors were reappointed.

A vote of 200 guineas to each of the directors and to the secretary as a bonus was unanimously agreed to, and at a subsequent extraordinary general meeting the articles of association were altered, increasing the directors' remuneration from £1,600 to £3,000.

Thanks were voted to the managing director and staff, and also to the Chairman and his colleagues, and the proceedings terminated.

HOUTPOORT.

The second annual general meeting of shareholders in Houtpoort, Limited, was held on Wednesday, July 1, at the offices of the company, 94, Palmerston House, Old Broad Street, E.C., Mr. W. F. Lowndes Frith presiding.

The Secretary having read the notice convening the meeting,

The Chairman said: Gentlemen,—The accounts we present to you are free from complexity, perfectly lucid and necessitate but little explanation. We have what is commonly called a clean certificate from our auditors. We purchased our large freehold estate for shares only, no cash being paid in consideration, as usually happens. The vendors were sufficiently far-sighted to forego the immediate advantage of a cash sale for the ultimate benefit to be derived from the holding of the company's shares; but, nevertheless, it was a great convenience to us to be exempted from parting with cash, since it left us the whole of the £40,000 paid up on the shares issued for cash intact for the purposes of working capital, and so relieved us of any anxiety respecting the future. You will have noticed that the inclusive general expenditure only came to £996 3s. 8d. We have been careful to economise the resources of the company, and are of opinion that there is no necessity for a large London office or an expensive staff. Your directors have assisted the shareholders by not claiming any fees for their services during the past year, although they have worked hard to place the company in its present strong position. Having implicit faith in the company's future, they decided upon taking this course, not, I can assure you, from motives of philanthropy, but as being willing to adopt a course which would materially assist the company in its initial career, and relying upon the shareholders, who reap the benefit, to make them such reasonable compensation as may be warranted by the amount of the dividends as they become payable. The expenditure on mines development account is £3,390 15s. 3d., which, however, you are not to accept as in any way indicative of the actual development effected on the property, since the sinking of the shafts referred to as Nos. 1 and 2 in the engineer's report, the boring and the extraction of a considerable quantity of ore, representing together an outlay of many thousands of pounds, was carried out by the previous owners, who accepted fully-paid shares in lieu of cash for the money they had spent on the development of the mines. Turning to our resources for the future, you will see that we start our new financial year with a working capital in available cash of no less a sum than £35,004 12s. 1d., and should further working capital be found necessary, we have provision for it in the shape of 50,000 unissued shares, which were set apart to provide for such a contingency, and for which we have already had offers. Now, gentlemen, to come to the property. The railway traverses our property, and affords us ready facilities for transport; a sufficiency of water is available, and the ground is easy to work, no great quantity of timber being required, as the hanging wall of the stoping ground consists of sandstone, and is sufficiently strong to support the roof. With these advantages the expense of mining and milling is reduced to a minimum. Our staff at the mines are making good progress. Already a splendid reef has been developed, running 3 ft. wide from near the surface, and this will supply a big mill for many years. In this one reef to the depth, so far, of less than 150 ft., there has been opened up more than 100,000 tons of ore; and, of course, the quantity of ore available for crushing increases with depth. The buildings it was incumbent upon us to erect at the various centres of labour, although cheap, are serviceable. At the present time our engineer is engaged in sinking a new shaft, which will be known as No. 3, and is situate 500 ft. eastward from No. 1, and he is connecting these two by a level at a depth of 100 ft. from surface. The reef has also been located 200 ft. eastward from No. 1 shaft, and the level I have mentioned will be ventilated by sinking from this point while opening up the reef. Under these circumstances your directors can with reason congratulate you. That the main reef traverses the property is now a certainty; and in view of this certainty, and considering that all our calculations have been based upon this, and this only, leaving out of account the possibility, now converted into the probability, of further strikings, we might almost say our undertaking partakes of the character of an industrial enterprise.

The resolution was duly seconded and carried unanimously.

The re-election of Mr. W. F. Lowndes Frith as a director was also unanimously agreed to, and Messrs. Mellors, Basden and Co. were reappointed auditors. The meeting concluded with a hearty vote of thanks to the Chairman, to which he briefly replied.

TRANSVAAL EXPLORING LAND AND MINERAL

The ordinary general meeting of the Transvaal Exploring Land and Minerals Co., Limited, was held on Tuesday, June 30, at Winchester House, Old Broad Street, E.C., under the presidency of Mr. James S. Hepburn. The secretary read the notice convening the meeting, and the report of the auditors was also read. The Chairman first dealt with the figures in the profit and loss account, the chief item on the debit side being the £15,220 written off for the prospecting concession which the old company was formed to work in conjunction with the Transvaal Lands Company. This concession had been the subject of litigation which was decided against the company and necessitated the writing off of the amount referred to. After deducting all charges and expnses and bringing in the amount brought forward from last account, the total profit for the year amounted to £25,348, the premium on th 1902 issue of shares being included in this sum. Having dealt with the sundry items in the balance-sheet, the chai man then turned to what he described as the most satisfactory item of all, namely, the freehold properties and interest in prope ties standing at £157,777 The first of these was the proclaimed gold farm of Tweefontein, in which the company holds the freehold of 6,465 acres. This farm was thrown open to the public in April last, and fully taken up, the company securing in addition to its rights as owners, 320 claims in the re-pegging. The second property was the Eersteling Gold Farm, of which not only the freehold, but the mineral rights also were the property of the company, and were regarded by the board as a most important asset. In Cape Colony the Beaconsfield Farm had been acquired, the special feature of this property being the existence of large deposits of nitrates and other mineral salts, the true value of which could not yet be estimated. Another property held by the company was a seven-sixteenth interest in the Excelsior Colliery in the Transvaal, which, however, might have to be disposed of unless some satisfactory arrangement as to flotation could be come to with the owners of the remaining nine-sixteenths, while in the Eastern Transvaal there was the Carolina Freehold Estate of 13,466 acres. In addition to these the company is also possessed of four stands and buildings in Johannesburg, three freehold properties in the Waterbery district, the group of farms known as the Maclear Freehold Estate in Cape Colony, and 130 Fair View claims in the Barberton. It would therefore be seen that the value of these properties given in the balance-sheet was a very moderate one, and when developed they should prove worth considerably more. The Chairman then dealt with the remaining items of the balance-

sheet, and concluded his remarks with a brief reference to the financial position of the company and its future. Sir Frederick Young having seconded the motion for the report, the resolution was unanimously carried, the proceedings terminated with a vote of thanks to the chairman.

NEXT WEEK'S MEETINGS.

MONDAY, JULY 6.

Amazon Steam Navigation.—Cannon Street Hotel, noon.
Attaree Khat Tea.—138, Leadenhall Street, 2.30 p.m.
Frank Jones Brewing.—Winchester House, 12.15 p.m.
Geelong Gold.—Cannon Street Hotel, noon.
Gold Fields of Eastern Akim.—Institute of Chartered Accountants, noon.
Hardebeck and Bornhardt.—Winchester House, 2.30 p.m.
Hudson's Bay.—Cannon Street Hotel, 12.30 p.m.
Imani Gold Mining.—Winchester House, noon.
J. H. Kenyon.—45, Edgware Road, 4 p.m.
Natal Land and Colonisation.—Winchester Hous, noon.
Union Jack Consolidated.—Winchester House, 3 p.m.
West Nicholson Gold.—Cannon Street Hotel, 2.30 p.m.

TUESDAY, JULY 7.

British Aluminium.—Winchester House, noon.
Credit Foncier of Mauritius.—Cannon Street Hotel, 12.30.
Eagle-Vulture Mines.—Cannon Street Hotel, 2.30 p.m.

LOAN.

ARGENTINE GOVERNMENT

6 Per Cent. Railway Bonds of 1890

(Northern Central Railway Extension Bonds).

£2,770,720 in Bonds to Bearer.

Principal and Interest payable in Sterling in London—and in Paris, Berlin, and Hamburg, in Francs and Marks respectively, at sight exchange on London free of all Argentine Taxes.

Interest due 1st January, 1st July.

Principal repayable by half-yearly drawings at par through a Cumulative Sinking Fund of 1 per Cent., which may be increased at the option of the Government.

The London & River Plate Bank, Limited,

offer the above Bonds for sale at the price of 87 per Cent., payable: 5 per Cent. on Application; 5 per Cent. on Allotment; 20 per Cent on 15th inst.; 57 per Cent. on 4th August next.

Payment in full may be made under discount at the rate of Three per Cent. per annum on or after the 15th inst.

Scrip will be delivered against surrender of Letters of Allotment to be exchanged for the Bonds on and after 4th November next.

The First Coupon will be payable on 1st January next.

The Bonds are the direct obligation of the Argntine Government, with a charge on the Extensions of the Northern Central Railway as defined in the General Bond.

The Bonds are created by virtue of Laws 1,733 of the 16th October, 1885, 1,888 of the 9th October, 1886, and 2,652 of the 30th October, 1889, authorising an issue of $15,000,000 (dollars) Gold, or £2,976,000, of which amount £205,280 have been drawn by the operation of the Sinking Fund at par. The remaining £2,770,720 are now offered for sale.

£2,076,960 of these are deposited as collateral security for an advance made to the Argentine Government in 1902, the outstanding balance of which is repayable on the 1st November next, and will be repaid from the proceeds of these Bonds.

A copy of the General Bond can be inspected at the offices of the London and River Plate Bank, Limited.

The Subscription list will be closed on or before Wednesday, the 8th inst., at 4 o'clock p.m.

The Allotment will be made as early as possible after the Subscription is closed, and where no Allotment is made the amount paid on application will be returned.

Failure to pay any of the instalments will render all previous payments liable to forfeiture.

Prospectuses and Forms of Application may be obtained from

NEW ISSUE.

ABRIDGED PROSPECTUS.

LIVERPOOL CORPORATION STOCK

Issued at £3 per cent. per annum, payable Half-Yearly at the Bank of England, on the 1st April and the 1st October.

Further Issue of £1,000,000 £3 per Cent. Stock.

PRICE OF ISSUE £95 PER CENT.

The First Dividend, being Six Months' Interest, will be payable on the 1st October, 1903.

Trustees are authorised by the Trustee Act, 1893, to invest in this Stock, unless expressly forbidden by the instrument creating the Trust.

The GOVERNOR and COMPANY of the BANK OF ENGLAND give notice that by arrangements made with the Corporation of Liverpool, under the provisions of the Liverpool Corporation Loans Act, 1894, as amended by the Liverpool Corporation Loans Act, 1897, and in pursuance of resolutions of the Town Council of Liverpool, they are authorised to receive applications for £1,000,000 of Liverpool Corporation Stock, bearing interest at £3 per centum per annum, payable half-yearly at the Bank of England, or at any of its Country Branches.

The Stock will be in addition to, and will rank pari passu with, the Liverpool Corporation £3 per Cent. Stock already existing, and will be redeemable at par, at the option of the Corporation, on and after the 1st July, 1942.

For particulars as to the position of the Corporation, see detailed prospectus, which may be obtained on application at the Chief Cashier's Office, Bank of England; at the Liverpool Branch of the Bank of England; at all other Branches of the Bank of England; of Messrs. Mullens, Marshall, and Co., 4, Lombard Street, London, E.C.; or of the City Treasurer, Municipal Buildings, Liverpool.

The Books of the Stock are kept at the Bank of England in London, but arrangements have been entered into whereby assignments and transfers may be made at the Liverpool Branch of the Bank. Dividend warrants are transmitted by post, unless otherwise desired.

Applications, which must be accompanied by a deposit of £5 per cent., will be received at the Chief Cashier's Office, and at the Dividend Pay Office (Rotunda), Bank of England, Threadneedle Street, London, E.C., or at the Liverpool Branch of the Bank. In case of partial allotment, the balance of the amount paid as deposit will be applied towards the payment of the first instalment. Should there be a surplus after making that payment, such surplus will be refunded by cheque.

Applications must be for multiples of £100. No allotment will be made of a less amount than £100 Stock.

The dates at which the further payments on account of the said Loan will be required are as follows:—

On Monday, the 20th July, 1903, £30 per cent.;
On Monday, the 17th August, 1903, £30 per cent.;
On Wednesday, the 2nd September, 1903, £30 per cent.;

but the instalments may be paid in full on or after the 20th July, under discount at the rate of £3 per cent. per annum. In case of default in the payment of any instalment at its proper date, the deposit and instalments previously paid will be liable to forfeiture.

Applications must be on printed forms, which can be obtained at the Chief Cashier's Office, Bank of England; at the Liverpool Branch of the Bank of England; at all other Branches of the Bank of England; of Messrs. Mullens, Marshall, and Co., 4, Lombard Street, London, E.C.; or of the City Treasurer, Municipal Buildings, Liverpool.

The List of Applications will be closed on, or before, Wednesday, the 8th July, 1903.

Bank of England, London,
2nd July, 1903.

The Investors' Review.

One More Chartered Report.

It is very kind of the team of eight gentlemen presided over by the Duke of Abercorn, assisted by Earl Grey and Lord Gifford and "tooled" by Mr. Alfred Beit, to issue another report. It only comes down to March 31, 1902, so that it is of the nature of ancient history, but none the less is it a great condescension, for which shareholders ought to be dutifully grateful. And it must have involved a good deal of anxious labour, with some little study of aristo-directorial style to compile so voluminous a document. It runs to 137 paragraphs, and informs the listening nation that the company's offices have been transferred to Beit Buildings, London Wall, where all the affairs of the railways and associated enterprises of the great Chartered parent have also found a home. This will ensure some trifle of rent to the great and endowing A. B. Further, we are informed that Cecil Rhodes is dead, and that money is required for a memorial to him, in the shape of a colossal statue on the slope of Table Mountain. Of this money £10,000 has already been contributed by De Beers, but the Chartered Company does not seem to have any funds to spare, so the directors gently appeal to the shareholders. What say ye, Grace of Armagh. It is also graciously made known that Administrator Milton has been made a K.C.M.G., that Major-General Baden-Powell has been presented with "a silver model gun," and Major-General H. C. O. Plumer with a sword of honour, that Sergeant Barclay and Captain Gilson have been D.S.O.'d, and that the distinguished secretary and manager of the Chartered Company, Mr. J. F. Jones, has been made a C.M.G., that Mr. Lewis Mitchell has been knighted, becoming "Sir," and that Lord Kitchener thanked Rhodesia for its help during the war, and wished it prosperity. These are all most interesting items of information, well calculated to inspire shareholders with delight in the value of their investment, and there are lots more, as we shall see.

It pleases this noble board to tell us that the cost of administrating Rhodesia in the year ended March 31, 1902, was £710,563, and the "income" £435,255, thus leaving a deficit of £275,310. For the year ended March 31 last the expected deficit rose to £299,296, but estimates may be wrong, and in the year ending March 31 next the deficit is put at only £126,258. We are therefore getting on, and in course of time may have a surplus manufactured of a sort sufficient to warrant the directors in asking British taxpayers to recoup them for their long self-denial by the payment of, say, £15,000,000 as the price of admitting Rhodesia into the great coming South African "federation" of states. It is terrible to think what prolonged self-denial these good and great gentlemen, peers and bishops with humbler shareholders, have had to endure. Deficits, by the way, are really larger than as above stated, because the figures given relate to Southern Rhodesia alone, whereas North-West Rhodesia and North-Eastern Rhodesia have also little budgets, and from summaries of them we gather the shortage there for the three years ending March 31 next is expected to be about £150,000. This would bring the entire deficit for the three years on the whole masquerade up to about £850,000, and the wonder is how the money continues to be found.

We look in vain for information on this point from the directors. It is not the kind of knowledge they could be expected to condescend upon, but they are very particular to give us all the news they can about their army, or "police," and other interesting points. They tell us, for intsance, that they mean to maintain a force of 550 Europeans and 500 natives at a saving soon to be in actual being of about £60,000 per annum, although only £40,000 of it will be available in the current year. Also there is a corps of volunteers, with 120 "cadets" added to it—but that information we rather think appears in the report of Administrator Milton. However, and harking back sixteen months, it is Epps's Cocoa to know that new drill halls, with gymnasia and "schools of arms" have recently been erected at Salisbury and Bulawayo, and that the volunteer "force" has had £8,790 applied to the furthering of its efficiency, that a detachment of the Rhodesian army, including volunteers, had the honour of being present at His Majesty's coronation, and that Rhodesia was represented for the first time at the Bisley meeting of 1902, that the "geodetic arc of the meridian" has been carried to the Zambesi—No "Leander Starr" dancing before—that an outbreak of rabies occurred in Southern Rhodesia early in September last, which we suppose means September, 1901, that the final delimitation of the eastern boundary of Southern Rhodesia has been arranged by the governments of Great Britain and Portugal, and that there has been partial failure of native crops, which has increased the flow of natives seeking work away from home, thus giving a fuller labour supply over the country than has ever been previously known, and illustrating the truth of the "ill-wind" proverb. All these items are dainty and precious, as well as information about the increase in the gold output, about the 150,000 lb. of rubber of the value of over £10,000 exported from North-Eastern Rhodesia—in the twelve months ended March 31, 1902, and about directorial tours. North-Eastern Rhodesia, in the same time, imported £63,433 worth of foreign goods, and how it paid for them we do not know any more than this Chartered board.

The railways are declared to be flourishing, and "net revenues" are stated for quite a long period of time, from September, 1901, in fact, down to March 31, 1903—"by

cable" this year, so eager is the board to be up to time in some things. We regret, though, to see that the net income for the first three months of the present year seems to be about £14,000 less than in the first three months of 1902, in spite of the fact that in the meantime the length of lines worked has risen 300 miles. However, a "train-de-luxe" now runs regularly once a week each way between Cape Town and Bulawayo, and the fare has been reduced from £20 to £15 15s. If this does not bring prosperity we should like to know what will. It must be an L S. D. boon to the European population of Rhodesia, or to those adventurous travellers who desire to inspect it, that such a train should run. Administrator Milton lets loose the news that there are actually 9,000 "wage-earning" males within this empire of potentialities, 6,912 of them European males over sixteen years of age, and 2,021 male colonial natives "earning good wages." Are these latter all white? Sir William Milton does not say, but he does enter into another elaborate calculation to show how light the taxation of the "great and glorious" he administers is, and he arrives at a happy conclusion by first of all setting aside the native paid taxation, which is put at £113,000, including £97,000 from hut tax—the total native population by the way being little over 500,000—and £16,000 from Customs duties on imported articles consumed by the natives. Then 91,000 is produced from post office and telegraph services, from land sales — surely capital these? — and from fines, and another £86,000 comes from mining revenues and company licenses, paid out of capital raised in London. This leaves only £145,000 to be otherwise found, and £75,000 of this is described as duties paid upon goods which cannot be strictly called necessaries, so that finally we arrive at £70,000 as the real taxation upon whites, and this gives a burden per wage-earning resident of slightly over £16 per head or £9 13s. 4d. per head of the population of 15,000. Who would dare after this to say that Rhodesia is overtaxed? In fact if duties upon articles other than necessaries are taken off the burden is successfully brought down by the cyphering administrator to £7 13s. 4d. per male adult, or £4 13s. per head of the population of 15,000 white—man, woman and child. It is interesting to note, however, that the average cost of importation amounts to 73 per cent. of the invoice value of the goods bought, and there are other suggestive bits of information which may be valuable to some people, although not particularly so to us. Sir William, after this feat in romantic statistics, ought to be in the running to succeed Lord Milner.

Two balance-sheets are presented at the end of the report, that for the year ended March 31, 1901, and that for the succeeding year. They do not give us any more information than usual, although the details seem overpowering in their variety. One always interesting point may be mentioned: the sum lost in carrying on the melodrama. Up to March 31, 1902, the total dead loss acknowledged was £3,493,319, so that it must now be about £4,000,000, or perhaps something exceeding that. The aggregate of the latest balance-sheet is £10,076,004, but the company has not spent all this money. Over 1,098,200 of its shares were given away for "concessions," and some of them sold at £6 to £8 apiece by the happy concessionaires. It appears, however, to have received £3,337,556 in the form of cash as par value on shares issued, together with £3,507,976 in premiums, so that about £7,000,000 altogether in British money has been poured into this empire in embryo, with its white population estimated at 15,000. Some shares were issued in the year ended March 31, 1902, for £186,575 in premiums was received during that period. Also the directors seem to have sold a few shares in subsidiaries, for the holding of shares and debentures (nominal value £604,289, and book value £1,076,270) was reduced during the year by £214.000. This cannot have been writings down, so it probably represents sales. And for all that the company must be rather short of money, and we see that it owed £127,222 at the latest date given on bank overdrafts and liabilities under guarantees in South Africa, besides £84.083 to creditors, officials, etc., etc. It also owed £374,577 to the trustees for the 4 per cent. and 3 per cent. debenture holders of the Rhodesia Railways, Limited, and £75,000 to its London bankers, or did owe that fifteen months ago. What it may owe now must be more, much more. It had, however, about £50,000 in cash March was a twelve month, and it had advanced £134,570 on securities in London, loans representing we presume a little contango business, done to turn a sure-looking copper or two, so that it was not then absolutely gravelled. But it must be bumping a good deal now.

One huge item of its expenditure is £2,707,000 on wars, and its total holdings of shares and debentures amount to £2,120,000, but what cash was paid for these we do not know, in fact there is not much to be gained from the closest examination of this balance-sheet, and what we should like to see is a properly drawn up profit and loss account, showing how much the company has so far lost by its railway and other adventures, by the Cape to Cairo telegraph and other gigantesque enterprises of the late Cecil Rhodes, and a little of how much its promoters have gained.

A note in the balance-sheet reminds us that the company pays £5,000 a year for ten years from May 7, 1897, to the Rhodesia Railways, and a further subsidy of £5,000 per annum for ten years from September 8 of the following year. It has also guaranteed the interest on £2,000,000 of Rhodesia 5 per cent. first mortgage debenture and debenture stock for twenty years from November 1, 1895, and the principal, premium and interest of £4,250,000 further debentures of the Rhodesia Railways issued or to be issued at varying rates of interest. Furthermore it has guaranteed interest for twenty-two years from October 1, 1897, on £2,500,000 of Mashonaland Railway 5 per cent. first mortgage debentures and 2 per cent. for twenty years from April 1, 1901, of the interest on £250,000 Ayrshire Gold Mine and Lomagunda Railway Company's 5½ per cent. first mortgage debentures. Current liabilities in respect of pensions, widows' and guarantee funds and under sundry concessions and agreements are mentioned, together with a guarantee of principal and interest on a loan of £12,000, and on March 31, 1902, liabilities for amounts not called up on shares held came to £42,426. This recital opens up a considerable vista of liabilities, which might cause anxiety were the directors not so perpectly sure of having their whole adventure laid upon the backs of the humble British taxpayer.

Six Months' Foreign Trade.

It has been wonderfully good for a country going to the dogs, but ruin must be coming soon if the protectionist agitators are in the right. Here are we month by month and year by year importing goods to a far higher value than we export, and again, if the protectionists are right, this must spell ruin, especially as, according to them, we have to pay the Customs taxes imposed by those nasty protectionist countries to whom we still send a considerable amount of our produce. How the thing is done we should be much obliged if these gentlemen would tell us. Last month, for example, which compares squarely with the same month in 1902 so far as working days go, we imported foreign goods to the value of £41,295,550, or £630,225 more than in the previous June, an increase of 1½ per cent. True we exported £1,019,577, or 4¾ per cent. more of our produce than we did in June, 1902, the total being £22,271,960, but that miserable total affords wretched consolation to those who see the country going to ruin by selling at a profit, and they will not find much to cheer them even in the figures of re-exports of foreign and colonial produce, although these are up £241,724 on the month, to a total of £5,850,852. Our protectionists do not want this trade at all, at least not the foreign part of it, only the inter-imperial, and we wish them joy of getting their way. The increase in this re-export business was 4.31 per cent. for the month, and nearly 10 per cent. for the six months. Obviously the business of the country is going to pieces, and the sooner it has no trade at all outside the empire the happier will it be. "Inter-imperial" business is so simple—you order what you please to any extent the heart desires, and then draw on posterity to meet the bill.

Six months of the year have now elapsed, and it may be of some interest to refer to the figures for that period

as illustrative of the terrible decay now going on. In our imports of foreign and colonial merchandise, there is a decrease for the six months of rather less than 1 per cent. —0.84 per cent. to be about exact. We need not give the total figures, as we doubt the power of the Chamberlainites to read them, but those who are curious and capable will find them in our usual tables. Our export trade of British and Irish produce alone shows an increase of 5.27 per cent. in the six months, but on our total outgoings and incomings, including bullion and re-exports of foreign and colonial produce, there is still a difference, apparently, against us for the six months of £87,707,000 ; that is to say the value of our exports of all description was short of the value of our imports by that amount. This excess of import values, however, is not so glaring as it has been in recent years, and shows a decrease of £12,439,000 on the figures for the first six months of 1902. The question that vexes the spirit of the new protectionist, to whom economics are strange, is—how can this kind of excess go on month after month and year after year without making us utterly bankrupt, especially if part of our exports go to pay foreign taxes? After all, in the long run, and even in the short run, trade is only barter. Accidentals left out, we take our goods in our hand and go to the foreigner and say, "will you accept these in exchange for such and such articles of your production which we require?" and the bargain is struck on terms expressed in some sort of currency. If, however, we are getting so much more than we give, obviously a

debt must be accumulating against us, and we shall one day have our creditors coming down upon us for the difference. There must, surely, be some other explanation of the remarkable persistence of an excess in our imports, were it merely because this liquidation in bankruptcy has not only never taken place, but never shows the least sign that it could take place. To all people except Chamberlainites the explanation is the simplest possible. First of all, our export values are "free on board" values only, and do not include the cost of over-sea carriage to the countries to which the goods are going, or of insurance, commissions, and so on. Were the figures stated at the other end they would consequently be larger by perhaps 10 per cent., perhaps more. Imports, on the other hand, are taken into the accounts plus the cost of freight and insurance, etc., from places of shipment, so that while the export figures are less in total than the ultimate sum realised, the imports are higher than the actual cost at the point of purchase. In reality, though, there is not very much in this point, because the bulk of the freight, interest, commissions, and insurance money goes into the pockets of British shipowners, British underwriters, bankers and agents—still does that, in spite of the terrible competition of the foreigner, about which so many wails are now heard down Brummagem way—no wars going on you see.

The total British tonnage of vessels entered and cleared at British ports in the first six months of the current year was, respectively, 10,180,112 tons and 12,018,640 tons, whereas of foreign vessels the totals entered in the six

months was 5,570,000 tons, and the total cleared 7,477,000 tons, and it would require a very close scrutiny to say how much British capital there was in this foreign shipping. We do not, for instance, know where the figures of the Morgan shipping combine are now entered, whether under the British flag or under that of the United States, but it does not matter much where, since the money in them, or that they represent, is in the pockets of British investors. The figures, moreover, include coasting vessels, and are of small value as proof of the intrinsic position of our ocean carrying trade. Assume the worst interpretation possible, and still it is true that our own is the profit on much the largest part of foreign goods carrying.

Just by way of helping the unstatistical, and of further elucidating the excess of imports problem, it may be well to mention further that we possess a considerable volume of foreign investments, running into some thousands of millions sterling, and that on the whole these investments have hitherto yielded very respectable returns to those who found the money. Some important share of our large imports consequently represents the remittance of interest on these investments. The crude mind, such as our great Colonial Secretary loves and illustrates, can only fancy gold coming in to pay this interest, only no one ever finds it. The Jingo imperialist and other distressful creatures are awfully disturbed though in their sleep by dreams of gold streaming out of the country to pay for the excess of the imports, and imagine, doubtless, that the interest on our foreign obligations is paid out of nothing, or never paid at all, since the debtors do not pour gold in upon us. As a matter of fact, in ordinary business circles people of understanding know quite well that the Argentine country

sends its wool, its hides, its grain, its live animals, its beef and mutton, in payment of the interest upon its European debts, that Brazil sends its coffee, its gums, tobacco and spices, that the United States, still by far our largest foreign debtor, sends its wheat and cotton, its beef and food produce of all sorts, that India sends its tea, sometimes its wheat, its indigo and cotton, and always its rice. From all over the world we are drawing tribute in kind in this way every day in the week all the year round, and the raw produce or other thus brought in is converted by the due process of sale to the consumer, or to the foreign purchaser, into the currency of the realm, and in regular course each creditor of the foreign state, of a company working abroad, gets his modicum of interest. In this fashion the great commerce of the United Kingdom is kept going on its even way, and no dangerous accumulation of foreign obligations rises up to meet the mother country and compel her to pour out her slender stock of gold or to part with her securities or confess bankruptcy. The day might come, were protectionists to have their way, when we should have to incur both of these kinds of impoverishment and to "own up," but it is not likely to happen in any destructive fashion, outside our Australian colonies perhaps, as long as we do not attempt to cure protectionism in other countries by taking a bad dose of the disease ourselves. Unfettered imports form the best guarantee possible of the continued profitableness of our foreign investments.

With these general observations—which may perhaps be of use to some people who, unfamiliar with the economic forces governing our foreign trade, are puzzling about this

excess of imports and racking their brains to account for the extraordinary persistence of prosperity in our foreign trade notwithstanding this apparently deadly load of debt piling up against us—we must leave the trade accounts this month. There is really not very much of a noticeable kind in them. They do not differ particularly from the accounts of previous months and years. Our trade is fairly steady and good, only swollen out at such points as South Africa, where the squandering of war money and the diligent borrowings of Cape Colony and Natal, as well as share issuings by some of the Rand companies, bulge out the totals of our exports. But unless this borrowing is kept up the figures will by and by fall back to their proper level. It may, however, be mentioned, in illustration that of the total export of locomotive engines for the first half of the current year, nearly 28 per cent. went to South Africa. Some complaint has been heard about our exports of textile machinery. The narrow nd arrogant Jingo mind imagines that the prosperity of other countries must be our destruction, and fastens upon the export of textile machinery as a sign of our decadence. It may be that, but it keeps wonderfully persistent all the same, and meantime brings bread to many thousands of our working classes. Therefore it is interesting to note that out of a total export of this class of machinery in the past six months amounting to £2,151,000, about 59½ per cent. went to European countries and most of the remainder to British India and the United States. Are we going to destroy this trade in order to be revenged upon the prosperity of the foreigner, or is it more rational to look for an increased exchange of commodities between countries the more they concurrently advance in industrial prosperity and the resulting disposable wealth? It may be added that our export of cotton tissues has been, and continues, bad, not so much because our customers are unable to buy as because speculators in the raw material have been what is called "cornering" it with a view to make fortunes out of human misery. Would that kind of thing be stopped by a protectionist tariff? Where would we gain anything by yielding to the infatuation of the imperially minded decadent? How vividly Bishop Boyd-Carpenter figures up the most significant point of this decadence!

Australian and New Zealand Notes.

Melbourne, June 3.

Preferential Trade and the Naval Subsidy.

The Government, probably from a desire not to appear too hard upon Mr. Chamberlain, dismissed the preferential trade question with merely a passing reference to it in the Governor-General's address to Parliament. The excuse made was that other more urgent subjects would prevent the consideration of Mr. Chamberlain's latest imperialistic fad this session. If the Ministry had been outspoken, as it had a right to be, it would have declared straight away that Australia could not subscribe to a scheme which everybody of common sense out here knows would be fatal to our commercial prosperity. By thinking men, it is regarded just as another of the Colonial Secretary's dodges to engulf Australia in his damnable vortex of imperialism. Australia knows better than to be foolishly led into such a trap. It is to her best interests, and she knows it, that in her commercial relations she should be upon the best terms with every other country, so as to secure world-wide markets for her products. Consequently, so far as Australia is concerned, Mr. Chamberlain can reckon that she is quite as wide awake as he is, and that she will have nothing to do with his latest scheme.

The Federal Parliament has not got to business yet. It is still engaged on the address in reply to the Governor-General's opening speech. The naval agreement is a subject upon which there is considerable difference of opinion. One prominent member, Mr. Higgins (the leader of the Melbourne Equity bar) has declared strongly against it. Some members will support it, mostly for sentimental reasons. They have not the brains to see that it is an attempt on the part of England to impose indirect taxation upon Australia, differing only in its indirectness from the taxation which brought about the American War of Independence. It is too soon yet to discern what will be the probable outcome of the naval agreement when it is submitted to the House, but if it chances to get through it will be anything but a voluntary act on the part of the people of Australia. Its consideration ought really to be postponed until the people, at the elections towards the end of the year, have an opportunity of expressing their opinion upon it. In that case, there would be no uncertainty whatever as to its fate; it would be rejected by an overwhelming majority of the electors. £200,000 a year would pay interest on a big loan with which to commence the building of an Australian navy; yet Sir Edmund Barton wants to throw this amount absolutely into the sea for a protection that would not be worth twopence to us in the event of a great European war. Canada is much more in need of this so-called protection than we are; yet, in spite of her geographical position, she refuses to subscribe any subsidy whatever. Australia has far more reason to say "no" to the proposal, and those members who vote for it will know what it has cost them at the next elections. It is incredible that anyone endowed with common sense or a spark of Australian patriotism can be frightened and deceived by the bogies that are raised by imperialists as to Australia's helplessness but for the British navy, and how easily she might become the prey of hostile powers. Australia will know how to defend herself in the very, very remote contingency of any attempted invasion of her soil. All she requires to do now is to build a navy of her own for the protection of her harbours and coast line, instead of throwing money away, as Sir Edmund Barton proposes to do, towards the maintenance of a squadron over which the Commonwealth will be unable to exercise the smallest control.

Dreadful Distress in Australia.

Winter is now upon us, and the distress that exists all over Australia is as terrible as can be conceived. In front of all the labour registry offices crowds of men assemble every day in the remote hope of picking up an odd job. In the streets, gangs of men are loafing about from day to day, because they can find nothing to do. If the corporation sends two or three of its men to do some job of street repairing, scores of their class watch them while they do it. If a painter is putting in a pane of glass or painting a signboard or a verandah post, he is surrounded by a crowd of idle onlookers, and scenes like these are going on every day. The streets swarm with beggars—the seeing and the sightless—playing all sorts of instruments, just as they do in English cities, and begging for alms as people pass by. Those who are above resorting to open mendicancy of this description are in shocking straits, many of them without proper shelter, food, fire or clothing. Suicides from despair have been very numerous. Last week a man murdered his wife and two children in a Melbourne suburb, and then destroyed himself, because he was without work or the means to provide for them. But while all this distress is known to exist, very little is being done to relieve the absolute necessities of the working classes, or to provide work for them. People could subscribe money, and the *Argus* could open a fund, a week or two ago to reward blackleg engine-drivers and firemen who were receiving double wages for their disloyalty to fellow workers. The same paper has now a

fund open for the relief of the Jews in Russia, and the same people are again subscribing to it. Yet they will allow their own poor and distressed people to starve and do away with themselves in their despair, without helping them! There is no fund open by the *Argus* for the starving unemployed of Melbourne, who can be counted by hundreds. The State is losing its adult population at a considerable rate of decrease; yet amongst its politicians no man has been found with sufficient brains to stem the exodus and solve the unemployed difficulty, which will be constantly with us until all big estates are broken up by compulsory sale and the land sub-divided amongst the people. This will not be done while the Irvine Government remains in power. It is a class-interest Government, which the workers have to thank themselves for, because of their political apathy in allowing a Conservative Ministry to impose itself upon them. They are wiser now.

Notes from New York.

New York, June 30.

It is a long time since the country has been so stirred as it is by the almost daily revelations concerning the scandals in the post office, though it is not the only government department in which corruption is rife. The enquiry so far has resulted in showing that the American taxpayer who has had to make good the annually recurring deficits in the postal administration of the country, has been the prey of a gang of bandits who owed their appointments to President McKinley and his successor the actual President, and of the railway companies that carry the mails. Millions and millions that should to-day be in the United States' Treasury or have been expended to give the American public increased and decent postal service, and a parcels post, have been diverted into the pockets of contractors for postal supplies, who have had to pay blackmail to the officials, or into the pockets of useless employees who have had to pay their patrons a commission for planting them on the public service. It sounds almost comical, but some of the official and journalistic apologists for this condition of things are actually pleading that only those guilty culprits who were appointed to office by President Roosevelt should be punished, for that it would be an insult to the revered memory of Mr. McKinley to punish those he had nominated.

Nearly the most important thing, however, just now is the weather and its influence on the crops. The rainfall in this part of the country is abnormal. For the month just closing it is double the average for thirty-two years back. In one day alone double the quantity of rain fell that was registered in the whole month of June in several years. The effect on the crops generally is disastrous, and the price of vegetables and fruits is twice and three times those of ordinary seasons. Looking out over the country generally it is believed that the winter wheat will be a fair average crop, but that spring wheat and maize will make a poor showing. But all depends upon the remainder of the summer and the early autumn. If that is propitious, a good deal may be recovered. Then the cotton crop is the subject of much anxiety—both for present and future reasons. Speaking last week with a southern man who is in New York in connection with the cotton speculation now deranging the market, he told me that the cotton and cottonfields of the south were being fast worn out, and that it was a matter of only a few years before this country would have to look abroad for some of its supplies of raw material. The fibre of much of the cotton produced on the old lands is getting shorter and brittle, due to the insufficient fertilisation of the soil. At one time, he said, the waste of the seeds after the oil was extracted went, along with the rest of the plant, back on to the land; now hardly anything is returned, even the pith of the stem having an industrial value and being utilised. Nine cent cotton he looked on as a thing of the past. The consequence of the disturbance caused by the unprincipled speculation now going on is that mills are shutting down and operatives thrown out into the streets. This may not be so much felt now while summer lasts, and other employment of some kind or another may be found, but if it is carried into the autumn and the coal mine magnates carry out their threats to lock out the miners at the beginning of winter, why, then the situation will be one of a kind not easy to deal with, and not pleasant to contemplate even from this distance of time.

These are all matters that should be considered by investors and even by speculators on your side. The matter of the railway returns is also of interest. At present they are making a good showing, but it is based on the large increase of rates made at the time of the small increase in the wages of certain classes of their employees last winter. It is not based on sound normal conditions, it is really fictitious, as will become evident in the event of adverse trade resulting from a bad season and unprincipled speculation in the necessaries of industry. The derangement of everything, due to the causes I have touched on, will naturally make itself felt in financial matters, so that high prices for stocks and bonds of any kind can hardly be looked for. In fact, until the Presidential election is over and the President installed, we can hardly hope for steady conditions.

The cable will have informed you that the United States Shipbuilding Trust is to pass into the hands of a receiver. How long will it be before some of the other inflated creations follow suit?

Economic and Financial Notes and Correspondence

M. Loubet's Visit.

Never since the days of the Norman Conquest has this country seen an invasion of the French to equal that of this week, though happily the objects of the two expeditions are widely different. The popular reception given to M. Loubet was sufficiently cordial to satisfy the most exacting and chauvinist Frenchman, even after allowing for the fickleness of the crowd, which is always seeking some fresh object for its momentary hero-worship and its cheers. But beneath the froth and vapourings of the man in the street there is a strong and growing current opinion among the more intelligent portion of both nations in favour of a better and more cordial understanding between the two, a desire which pacific invasions like the present will do much to foster. The thousands of Frenchmen who this week have crossed the Channel for the first time will learn far more of our ways and manners during their short visit than they could ever gather from all the British they meet on the Continent, the remark of M. Delcassé that we are more amiable at home than abroad being only too true. Moreover, under the cordial feelings of the moment we are more likely to regard our neighbours in a less insular and prejudiced light, and in so doing discover that they are not the emotional and shallow race our jingo journalists have painted them. Perhaps no better type of the Frenchman, not Parisian, could be found than M. Loubet who, apart from the fact of his being the representative of a great nation, is well worthy of the respect we have paid him though the multitude in paying it was possibly not aware of the President's innate nobility. However, time will alone show if the fleeting impressions of the moment are to endure. We sincerely hope they will. For a time France undoubtedly will be the fashion in this country, as the King has set his seal upon the friendship, but whether France reciprocates the good feeling or not will depend largely upon ourselves. For we shall be judged not by the emotions of the hour but by our conduct in the days to come. We have honoured the French Republic in the person of its President, it is true, but if before many days are past some slight cause of friction between the nations is magnified by our yellow press until it attains the dimensions of a *casus belli*, all good feeling will be swept away. Yet neither country has interests which really clash with those of the other, or that could not be settled by arbitration, and if some of those scribes on both sides, who profess to lead the people, will muzzle themselves, the better sentiments which have now sprung up will rapidly develop and

become strong. Then, perhaps, we may ask with some chance of being heard and answered, why all this waste of money on naval armaments?

Babes of the British Electric Traction Company.

They are of various complexions, but all bear an undoubtedly strong resemblance to their parents, and suffer from water in the head. It has been a wearisome business getting together the figures set forth in the subjoined table, and we take it as an indication of the distressful condition into which the B. E. T. Company has fallen that it has changed the form in which the accounts of its subsidiaries are rendered. A year ago we had pretty well all the balance-sheets set forth, together with the certificates of the auditors, and that was found an excellent and enlightened method of displaying the facts. This year instead of balance-sheets and auditors' certificates we get nicely printed maps and a mere bald summary of figures, often difficult to understand. So meagre are these figures that we are not prepared to swear to the accuracy of their interpretation in every instance, but if there is any mistake

(a) Including £181,397 for patents and goodwill.
(b) Including £35,000 shares and debentures in General Electric Company.
(c) Also possesses 56,000 shares in tramway company.
(d) Includes £729,296 shares in North Metropolitan and Harrow Road Companies. Profit on the half-year ended December 31.
(e) Profit from March 27 to December 31.
(f) Includes £223,029 shares and debentures in North Staffordshire Tramways Company.
(g) Profits for seven months to December 31.
(h) Includes £20,000 shares in Birkdale Lighting Company.

we can honestly plead the excuse that the slender data supplied are often terribly obscure. One of the most striking features in connection with these B.E.T. companies is the tremendous cost per mile of their tramway undertakings. In all instances the figures given in our tables are rather under the fact, and when we find such a concern as the Auckland (N.Z.) Tramways figuring for £34,000 per mile—in reality it is nearly £35,000—it is possible to draw an inference, but the inference would be so unfavourable to the future career of the B. E. T. Company and its children that we prefer to leave each reader to exercise his own mind upon it. As a guide, however, it may be pointed out that £20,000 per mile is a high rate of cost for any electric or other tramway company. Where new districts are opened up, and where lines pass through districts comparatively thinly populated, the cost ought not to exceed from £10,000 to £12,000 per mile. Now you can draw the inference.

But the most obvious lesson of these figures is one of impecuniosity—paper in volume but no cash. The B.E.T. Company has not been able to get the public to take up the securities it has manufactured for its dependents, and consequently the great bulk of the share capital and some important amount of the debentures are held by the

parent. Hence, as we pointed out last week, the necessity for powers to be granted to that parent to increase its debt. In many instances it seems to have advanced more money than the total amount of the created share and debenture capital of its creature, or else that creature has gone into debt to an extent in excess of its authorised capital, whether share or borrowed. This means dependence upon bankers for advances and increasing dead weight, unvendable capitalisation. Unless some stroke of finance brings a large amount of new money into the treasury of the parent to permit it to continue financing the babes, paper will form their winding sheet. Another point that deserves notice is the paucity of the reserves. We do not gather anywhere that substantial sinking funds have been formed, although that is of the highest importance to tramway companies, light railway companies, electric power companies, and such, all of which work upon leases which at longest may be termed short. Some of the properties controlled by the B. E. T. Company had already exhausted the greater part of their term before it acquired them, and a most serious state of affairs must arise when the leases in such instances expire, unless ample provision has been made to write off the capital, capital which must be considered to have exhausted its utility during the period for which the lease ran. There are reserves in some cases, but never to an adequate extent. The Birmingham and Midland Company, for instance, shows £58,443 as reserve and depreciation, but we should like to know first where that money is, and next what proportion it bears to the probable loss when the lease, now we believe nearly run out, actually expires. The newer companies cannot be said to have addressed themselves to this problem in any effective fashion, and the impression consequently conveyed by a study of such figures as the parent company allows us to see is highly unfavourable to its continued stability. We heartily wish it were otherwise, but it is never prudent to blink facts, and we do not know one authentic instance where principles of honest finance have been neglected in the early career of a joint-stock enterprise that has not brought condign punishment upon those who forgot their duty. Taking the figures as they stand we do not believe that the dividends declared, few and far between though they have been, have in any instance been fully warranted by the profits. This seems a hard saying, and if we are wrong we should be only too delighted to do justice to this aspiring corporation and its swarming offspring.

Weighty Facts from Lord Welby.

One of the most interesting speeches recently delivered upon this preferential and retaliatory tariff question was that of Lord Welby's in the House of Lords on Monday last. It was reminiscent. When he was at the Board of Trade between forty and fifty years ago, he remarked, the reign of protection was not entirely over, and he assisted the Financial Secretary in the preparation of the Budget of 1860. What then struck him, and remains in his memory, was the extreme difficulty experienced in the administration of preferential and retaliatory duties while they were in full swing, beyond the anomalies of the system and the injury they perpetrated upon large trading interests, as well as the unjust preference they gave to certain classes. Therefore his lordship went on to suggest that His Majesty's Government should cause a return to be made illustrative of the working of preferential or retaliatory duties between 1815 and 1842, a period when these duties were at their worst, and when the world was enjoying profound peace. It is an excellent suggestion which must not be lost sight of, and the remainder of Lord Welby's speech was in itself a powerful argument in support of the demand. He pointed out, for instance, that in those days the duty on coffee was 6d. per lb. if it came from the colonies and 1s. 3d. if it came from foreign countries, with an intermediate duty of 9d. per lb. if the foreign coffee came by way of the Cape of Good Hope. The result was that it actually paid importers from Hamburg and the Continent to send the coffee a junketing journey to the Cape in order to bring it back here at the duty of 9d. He rightly characterised this as an absurdity, but it was more, it was a premium upon dishonesty, and there is nothing more appalling in connection with high tariffs, whether preferential or not, than the extent to which they foster dishonest trading. Probably the foreign trade of the United States at the present time is more worm-eaten with actual fraud and dishonest practices of every description than that of any other nation on earth, and it is so because of the injustice, the cruel anomalies, and frightful dead weight of the Dingley tariff. This also is a point which must not be lost sight of by those who are fighting the Chamberlainite Jingoes.

If we return to a system of protection mingled with retaliation, and cultivate the spirit of hatred and jealousy between nations, after the manner prevalent at the close of the Napoleonic wars, we shall inevitably degrade the British trader into a trickster and a knave and the good name of the country for honest dealing is almost certain to be lost. Lord Welby went on to give another illustration furnished by wool. In 1841 the duty was 1d. per lb. on foreign wool, and in that year we consumed 42,000,000 lb. of foreign wool and 15,000,000 lb. of colonial wool, besides 92,000,000 lb. of the home grown article. It was calculated that the extra charge on the raw material amounted to between £500,000 and £600,000, the value of our exported woollen goods being between £5,000,000 and £6,000,000, so that the difference amounted to a 10 per cent. tax on the finished product. Referring to the capricious effect of unjust duties on prices, he said it was the intention of Parliament then to give an all round general protection of about 30 per cent., but ministers had to confess that in practice instead of protection ranging around 30 per cent. it ranged from 30 to 250 per cent. In 1810 fears existed that the trade in over-sea timber would be put an end to, and encouragement was given to ships bringing timber from Canada by putting a duty of 55s. per load on foreign timber. This duty was not taken off when the war ceased in 1815, but lasted for a very long time, and before the committee sat in 1835 it was calculated that we had imported 1,000,000 loads of timber, 600,000 coming from the colonies and 400,000 from foreign countries. The duties received was £1,400,000, but the price was raised not by that sum but by £2,750,000, no less than £1,350,000 going into the pocket of the producer. It had further been calculated that the sugar and wheat duties used to take £18,000,000 out of the pockets of the consumer, in addition to the amount of the duty. Doubtless, and it would be so again, is so always. Impose any duty you like, and the consumer almost invariably pays in the long run from one-and-a-half times to two-and-a-half times the amount of that duty. It naturally and with deadly certainty follows that a return to protection means not merely lower remuneration in kind for work done, but restricted employment, because, as the purchasing power of the community lessens, markets become restricted; and the imagination fails to conceive what horrors would arise in our densely populated cities were the Chamberlainite decadents to have their way.

Turkish Unification Amendments.

The committee formed as a kind of British protective body in connection with the conversion of the Turkish Debt have gone about their business with praiseworthy energy, and have rapidly formulated some modifications in the interests of those whom they represent. At a meeting held on Wednesday resolutions were passed embodying amendments to the unification scheme of an eminently reasonable kind, but we dare not hope to find them receiving favourable consideration at the hands of the various Continental syndicates and associations which seem so enamoured of the scheme as it stands. Here are the resolutions:—

1. That the committee are of opinion that Mr. Babington Smith's proposals are more advantageous to the bondholders than the Unification Scheme, and regret that during the long period that has elapsed since M. Rouvier's project was first brought forward no steps were taken or attempt made to ascertain the views of the British holders of Turkish Bonds before an agreement was entered into with the Turkish Government.

2. That the committee are not prepared to recommend the bondholders to accept the Unification Scheme in its present form.

3. That in view, however, of the fact that the Unification Scheme has been approved by the Sultan and is influentially supported in France and Germany, the committee are prepared to advise the bondholders not to oppose it, provided modifications to the following effect are introduced:

(a) An undertaking from the Turkish Government that they will make good the sum required for the service of the Debt in the event of the assigned revenues proving insufficient and the reserve fund being exhausted.

(b) The rate of exchange for Series C to be not less than 42½.

(c) Article 8 of the draft decree to be amended so as to secure that the repayment of any sums taken from the reserve fund shall constitute a first charge on the whole of the surplus net receipts in the following year or years before any division of such surplus between the Government and the Debt takes place.

(d) The period of eight years fixed by Article 2 of the Draft Decree for the prescription of Bonds of the Series not presented for exchange to be extended to fifteen years as in the case of the Drawn Bonds.

4. That the above resolution be communicated to the various syndicates and associations representing the holders of Turkish Bonds in France, Germany, Austria, Italy, Belgium, and Holland, and that they be requested to co-operate in securing the above-named modifications, which are so obviously reasonable and fair.

5. That the committee recommend, in order that there may be no ambiguity in the issue to be submitted to the bondholders, that the further meeting of bondholders should not be held until after Lord Alverstone has delivered his award.

What means the reference to the delay in ascertaining the views of British holders? Is it a well deserved rebuke to the Council of Foreign Bondholders?

The Linotype and Machinery Trust.

With the recent history of the two undertakings only too vividly before them, shareholders of the Linotype and Machinery Trust Companies have long been aware of what their ultimate fate must be, and are doubtless quite reconciled to the immense sacrifices they are now called upon to face. Yet will it be surprising if they give a ready acquiescence to the proposed scheme for the reorganisation and amalgamation of the two businesses, not because of its unfairness to any particular interests, but as a protest against the mismanagement and unsound business principles which have brought the companies to their present condition. Before agreeing to any plan, proprietors should endeavour to obtain some guarantee as to the future conduct of affairs, by insisting upon a reconstruction of the board, filling with intelligent business men the places of those who have guided the companies so rapidly on the downward course. Under this or any other scheme large sums of money will be required to set the concerns on their legs once more, and unless the same is handled with care and foresight the existing deplorable condition of affairs may easily become accentuated. Shareholders must not forget that a splendid invention is possessed, one practically without rivalry worthy of the name, which, moderately capitalised and properly conducted, would have produced good steady returns for an almost indefinite number of years. But in the hands of its present controllers the business has been loaded down with an immense capital, real and unreal, in a manner which made eventual disaster inevitable, and the shares of the Linotype Company are now at rubbish prices, practically unsaleable in any quantity. To those who paid par for their securities the losses are terrible enough, but what of the unfortunates who became involved at some of the big prices revealed in the following comparative tables:—

LINOTYPE COMPANY.

MACHINERY TRUST.

Ordinary Shares of £1 each.

	1897.	1898.	1899.	1900.	1901.	1902.	1903.
Highest ...	*15¼	†3 1/16	3½	3¼	2 1/16	1 15/16	1 11/16
Lowest ...	*11⅜	†2⅝	2 13/16	2 7/16	1 9/16	1 5/16	1 3/16

* £5 Shares. † £1 Shares.

Before propounding the scheme of reorganisation, the directors indulge in a few preliminary observations of a very common-place order, in which they seek to throw the principal blame for the collapse on the trade depression, and special forms of competition from which the company has suffered. Nevertheless are they compelled to admit the blunders of the past in the way of inflating the capital by means of bonus shares, for which no cash equivalent was received, also they admit the necessity of writing down the assets of both companies, especially in respect of the book value of machines on hire-rental or in stock, to such an extent as will bring down their prices in the company's books to a level below that at which any present or reasonably prospective competing machines can be profitably sold. That is the directors' nice little way of putting it, but what has really happened is that large numbers of machines have been let on hire, and the whole of the rental treated as profit, little or no provision having been made for replacing those machines when they were worn out, and fit only for the scrap heap. Their original cost was, of course, charged to capital, with the result that the stocks of machines became immensely over-valued.

In formulating their proposals the directors have to some extent taken the present market prices of the companies' securities as a guide to the basis of valuation on which to exchange into the shares and stock of the proposed new company. This it is intended to call Linotype and Machinery, Limited, the authorised nominal share capital to be £2,500,000 in equal amounts of 6 per cent. cumulative preference and ordinary shares of £1 each, while the debenture debt is fixed at £1,500,000. Thus the undertaking will have a nominal capital of £4,000,000, as compared with £5,500,000 of the two existing companies, of which £2,950,000 will be issued in exchange for present holdings, and £550,000 for cash, the balance of £500,000 being held in reserve. The subjoined statement sets out very clearly the actual debenture stocks and shares of the new company to be issued, against debenture stocks and shares of the present Linotype Company and Machinery Trust, and also the amount to be issued for cash:—

EXISTING COMPANIES.		NEW COMPANY. Linotype and Machinery, Ltd.		
Linotype Company.	£	Debenture Stock.	Preference Shares.	Ordinary Shares.
First Mort. Deb. St.	750,000	£750,000 "B"	...	...
5 % Cum. Pref. Sh.	100,000	...	£100,000	...

Def. Ord Sh. ...	1,000,000	...	...	£300,000
	£2,850,000	£750,000	£500,000	£500,000
Machinery Trust.				
First Deb. Stock ...	250,000	£250,000 "A"	...	...
6 % Cum. Pref. Sh.	250,000	...	£250,000	...
Ordinary Sh. ...	500,000	...	£200,000	£500,000
	£3,850,000	£1,000,000	£950,000	£1,000,000
Additional Capital, to be issued for Cash		£500,000 "A"	£50,000	...
		£1,500,000	£1,000,000	£1,000,000

Note.—The "A" Debenture Stock will constitute a first charge on the entire assets of the new company, and the "B" Debenture Stock a second charge. The new Preference Shares will bear 6 per cent. cumulative interest, and have prior capital rights over the Ordinary Shares.

It will be seen that Linotype debenture holders are called upon to submit to their stock becoming of second rank instead of first, but as compensation the interest is raised ½ per cent. to 4½ per cent., and they get the additional security of the Machinery Trust assets, which is certainly better than their own. Machinery Trust debenture stock will still, as now, be a first charge, but alongside it will rank the £500,000 to be issued for cash, so here the holders make some sacrifice. Both stocks will be assured by a sinking fund covered by redemption policies effected with the Sun Life Assurance Society. Preference shares of both companies will receive an equal exchange into the new undertaking, the Linotype preferred ordinary shares of £1,000,000 get 400,000 6 per cent. cumulative preference and 200,000 ordinary shares of £1 each, and the deferred ordinary shares of £1,000,000, 300,000 ordinary shares of £1 each. The Machinery Trust ordinary capital is £500,000, and for that will be given 500,000 ordinary shares and 200,000 preference shares, all of £1 apiece.

Provision is also made for distributing £50,000 in cash, £20,000 going to Linotype preferred ordinary shares, and £10,000 to the deferred ordinary, and £20,000 to Machinery Trust ordinary shares. Of great importance to the holders of the junior securities is the immense amount of new capital, no less than £550,000 required to pay off floating obligations and provide additional working capital. As we have already said, this money must only pass into the hands of those capable of handling it to the best advantages of the company. We do not think, therefore, that the shareholders should be in a hurry to respond to the directors' urgent appeal for proxies, as a few alternatives to the directorate as proposed by the present board seem very desirable. This is, be it added, the mildest possible criticism of what is at bottom a shameless tale of delusive finance. Only we think much should be endured rather than that the businesses should be completely wrecked. Not one penny of the new debt should have been required if the businesses had been prudently, faithfully and economically managed from the outset. Had they been that though, there would have been no scope for market rigging, for fancy share premiums and the accumulation of flashy private fortunes.

"Old Ebony" After Free Trade Scalps.

Dear old *Maga!* Chamberlain's new protection phantasy is to it as the breath of the salt ocean is to the reindeer, giving new life and courage. In the days of long ago when men were fighting for the overthrow of protection, *Blackwood* proudly tells us it was in the front rank of those battling against the movement, and the repeal of the corn laws. Now to its joy it sees those ancient doctrines, or some of them, dragged forth from the dusty limbo of the past to serve as a plank in the platform of our ex-republican Colonial Secretary. But it is as a sample of the style of literature with which the country will soon be flooded by the protectionists that the article on "A Self-Sustaining Empire" is interesting. The writer, when not applauding Chamberlain's newest fad or gently chiding him for tacking to it old age pensions, indulges in would-be sarcasms and attacks on all free traders living or dead, Russell, Cobden, Bright are all severally handled. Lord Goschen is elegantly described as the Jumbo of free trade, though where the sting of this lies is not made clear. The Opposition are mocked because they have not forced the question to an issue in the Commons, but have preferred Red Indian tactics. Every protectionist naturally wants the question raised while the present Parliament is in power, knowing that were the subject made a party question the Government would at once command a majority on party motives alone. Hence the indignation at the Opposition methods. Of sound arguments the article contains none, every statement made being entirely *ex parte*, and served up to suit a protection palate. The free trade movement of 1846, we are solemnly told, did two great wrongs, one to British agriculture, and the other to the colonies. With free imports of wheat the British farmer has sunk under his load of rent, taxes, and public burdens, giving place to his foreign rivals. But would protection have enabled him to weather the storms of recent years and pay the heavy taxation arising from the Crimean and South African wars, the vast doles to landlords and clergy, and the rapidly mounting "peace" expenditure on the services? We doubt it, for had there been a tariff of any sort in force breeding poverty anywhere outside "Old Ebony's" one pet class, the nation could never have survived the imposition of one-tenth of the burdens now placed upon it. But so long as one section of the community is fat, the rest may go hang, is, and has ever been the creed of *Blackwood's Magazine*. It has no "enthusiasm of humanity," and can only love down to the landlords. As for the woes of the Colonies, these arise from free borrowing and not from free trade here. But, taken rightly, there is no small amusement to be got out of this sort of thing. Assert and assert, objurgate and denounce, curse and misrepresent—run amok in short, and you attain the true blue *Blackwood* political style.

A Friend in France.

The following note puts rather a strain upon our modesty, but it also expresses so well the fraternal sentiments which we hope to see grow and flourish more and more between France and England that we print it as it stands. Assuredly the all-too-brief visit of M. Loubet has been an unqualified success in this direction. Our own King's part, too, has been nobly done. It is for the two peoples to follow the good example set:—

Domaine de Grangeneux,
Suze la Rousse, Juillet 8, 1903.

Cher Monsieur.—Abonné á l'Investor je me delecte chaque semaine enchanté de lire votre prose ferme energique en méme temps que souple et fine.

Vous écrivez une jolie langue. Permettez moi, Monsieur, de vous en féliciter.

Ce qui est plus rare que le beau style c'est la pureté de la conscience, la probité professionnelle. Vous possédez ces qualitiés au plus haut degré.

Vous écriviez il y a quelque temps non sans amertume, tous ceux qui écrivent pour le public la connaissent, que vos lecteurs en général ne s'empressaient guére de vous témoigner leur reconnaissance en vous ecrivant de temps en temps quelques lignes d'encouragement.

Tout d'abord veuillez excuser le pauvre lecteur balloté par tout de tempétes et qui souvent tombe de Hooley charybde en Whitaker Sylla.

Ensuite, veuillez croire, cher Monsieur, que, bien que ne vous ecrivant pas, le lecteur, comme la statue legendaire, n'en pense pas moins! Il ecrit surtout pour se facher. Son silence est satisfait. Un petit groupe de Français que j'ai initié a vos doctes leçons vous admirent et respéctent en vous un ecrivain indépendant un semeur d'idées fortes et nobles dont le grains lévera croyez le. Vous avez du sauver par vos conseils bien des gens be la ruine. Combien vous doivent de gros bénéfices qui n'ont point pensé á vous en remercier.

Pour moi j'ai déja en l'honneur de vous envoyer mes sincéres compliments et je saisis avec empressement l'occasion que m'offre le visite de notre respecté President dans votre splendide ville de Londres pour vous les renouveler et vous prier d'agréer en méme temps l'expression de ma respectueuse cordialité.

Elevé dans le respect et l'amour de l'Angleterre par un pére qui parlait votre langue et me l'a apprise de bonne heure j'ai pendant de longues années parcouru votre métropole et vos colonies dans un but d'instruction pratique.

C'est pour moi un bien beau jour, prévu et prédit depuis long temps que celui qui voit le rapprochement des deux nations les plus civilisées du Monde dont l'union serait colossalement fertile en progres au profit de la civilisation.

Depuis la Révolution nous ne faisons guere qu'appliquer vos lois en nous les appropriant.

Trop tard, hélas! chaque fois. Vivé l'Angleterre! cher Monsieur.

Yours respectfully,

G. Pyrol de Biermont.

Official Corruption in the United States.

Our New York correspondent writes as follows:—The revelations of corruption in the administration of the Postal Service go to show that rottenness pervades the whole department. Here in New York the post office has afforded opportunity for private pillaging of the public which has been availed of to an incredible extent. The ways in which it has been carried on are innumerable. Buildings rented from friends at exorbitant rents; relatives pitchford into well-paid berths for which they are notoriously incompetent; and superfluous and unnecessary offices created in which relatives of high officials and supporters of Senators and Congressmen of the dominant party have been placed. President Roosevelt on his return from his rush tour in the west on learning of the discoveries that had been made during his absence, gave orders that the scandals should be probed to the bottom. The *Evening Post* immediately suggested that he should go to the top. It would seem as though he had done so, and discovered more than he expected or wished to know, for he has issued instructions that there must be no more publicity given to the reports of the enquiry that is going on. The rakes-off made by officials on contracts for supplies to the department are already known to have been enormous, going into the tens of thousands of dollars on items. In a contract for small bags, in which $18,000 were paid, $10,000 was what is called "graft," or a "rake off"; the man who supplied them only receiving $8,000. This is but one instance of what has been going on. The question is, to whom does all the graft go? Some of it is confidently stated to have gone into the Treasury of the Republican National Committee to be used for election purposes next year, and curious people are asking against or for whom is it going to be used. Other departments of the national administration are beginning to fall under suspicion, for it is felt that if so much peculation and corruption can go on so long unchecked in one, there is a presumption that it may be going on in others. The Navy Department is one

Ships are hardly out of the builders' hands before things begin to go wrong, and sums amounting to quite large per centages of their original cost have to be spent to remedy "structural weakness "or some other defect. Enormous quantities of powder for the large calibre guns have recently had to be thrown overboard from ships for alleged deterioration, owing to inferior quality of material and manufacture, and that it had become dangerous to the ships and guns. This almost universal rottenness is briefly and simply the outcome of the spoils system, under which successful and unscrupulous politicians reward their equally unscrupulous supporters by putting them into public office with opportunities for public plunder Under the Democratic administration of Mr. Cleveland an effort was made to place the Civil Service on a permanent non-partisan basis, with merit and capability as the only qualifications. Hardly, however, had the Republicans come into power under Mr. McKinley, than whole classes of the Civil Service were restored to the spoil system, with the result now being exposed.

One of the phenomena of New York municipal politics just now is the appearance of the lately dismissed Chief of Police, Mr. William Devery, as a candidate for the Mayoralty. Mr. Devery had so well used the advantages and opportunities of his positions in the police force from simple constable up, that went he went into enforced retirement, he invested several hundred thousands of dollars in real estate. He is now carrying on a vigorous campaign, especially against Tammany, to which he owes a grudge, and is expected to poll quite a considerable vote in the election this autumn, unless, as some predict, Tammany should employ "pecuniary persuasion" to induce him to retire. Others say that Mr. Devery, who always refers to Mr. Croker as the Marquis of Wantage, is out for revenge and not bribes. We shall see. In connection with police corruption here, it is not very long ago that a police sergeant died suddenly in the station he was in charge of, and when his desk was opened, over $40,000 in notes and a large quantity of valuable jewellery were found in it. The most extraordinary and disturbing feature in all this is not the dishonesty of the public official, but the apathy or complete indifference of the plundered public itself.

Critical Index to New Investments.

*** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

R. and H. Green, Limited.

This company owns the freehold premises, comprising two dry docks with workshops, offices, etc., known as the Blackwall Yard, and has a share capital of £40,000 in 3,984 ordinary and 16 founders' shares of £10 each, of which 3,000 ordinary and 16 founders' shares have been issued, together with £30,000 in "B" debentures. There is also a mortgage of £60,000 and a debenture of £2,500 outstanding. In order to pay off these, and to enlarge the graving dock, an issue of £75,000 4½ per cent. first mortgage debenture stock is offered at par. When the alterations and improvements have been made the dock will be the longest graving dock on the River Thames, as distinct from those within the property of the London and India Dock Company, and will be capable of admitting vessels up to 8,000 tons. The extensions and improvements contemplated are to be completed to the satisfaction of Messrs. Fuller, Horsey, Sons and Cassell, and in their opinion will make the property worth as a going concern £125,325. During the last five years the business is said to have largely developed, while the auditors certify that the annual profits for the six years to December 31, after paying all charges, and making liberal provision for depreciation and maintenance of buildings and plant, have been sufficient to meet the interest on the present issue and leave a considerable surplus.

Weston-super-Mare Grand Pier Company.

This company has been incorporated by special Act of Parliament for the purpose of erecting a low-water pier at the above watering place, so constructed as to admit of boating at any state of the tide, and to enable steamers to call and leave at any hour, while electric cars will run from end to end. The undertaking is supported by Messrs. P. and A. Campbell, Limited, passenger steamship owners, and by the Cardiff Railway Company, both of which have representatives on the board. The capital of £100,000 in £10 shares is offered for subscription, and although no portion has been underwritten, £30,000 has been guaranteed. In addition to this the company has powers to create debenture stock to an amount not exceeding £25,000, which will be issued hereafter, and it is estimated that after providing for interest on this sum, and other charges, and placing a substantial sum to reserve, the balance of profit would be sufficient to pay 8 per cent. on the share capital. This result is, of course, pure guess work, but while it may err on the side of optimism, there seem to be reasonable grounds for anticipating that the venture will prove successful.

Bournemouth Corporation 3 per cent. Redeemable Stock.

The National Provincial Bank of England is authorised to receive applications for £500,000 of the above stock at the price of 92 per cent., payable 5 per cent. on application, 17 per cent. on allotment, and two instalments of £35 on August 14 and September 25. This issue ranks *pari passu* with the existing 3 per cents., and is redeemable at par on April 1, 1933, or at the option of the Corporation on or after April 1, 1913, at the same price. Of the amount produced £395,511 will be applied towards paying off loans and temporary advances, and the balance for works of a reproductive nature, such as tramways, street improvements, and the purchase of freehold and leasehold properties. The electric tramways, although they have only been in full working order for a few months, have already proved a great success, and it is expected will yield a handsome surplus after providing for all outgoings, including interest and sinking funds. It is estimated that the population is now 62,000, and the rateable value of the borough is put down at £477,356, while the Corporation owns the pier and golf links, and leases the winter gardens and pavilion, all of which are revenue producing undertakings.

Oriental Telephone and Electric Co., Limited.

The company, of which this is the successor, was originally formed in 1881 as the Oriental Telephone Co., Limited, for the purpose of working the Edison and Bell telephone patents in the East, and in 1892 added electric lighting to its business. In addition to possessing telephone exchanges in Madras. Rangoon, Moulmein, Singapore and Mauritius, and an electric lighting branch in Calcutta, it holds large interests in several subsidiary undertakings. The company and its Indian subsidiaries have recently obtained renewals of their telephone licences for a period of sixty years from April 1, 1903, in consideration of which they have undertaken to metallic circuit their systems. The total capital is £300,000, divided into 200,000 ordinary and 100,000 6 per cent. cumulative preference, of which 179,313 ordinary shares have already been issued, and in order to provide the funds required for the conversion, half the preference shares are now offered for subscription at par. Not a word is said about the results achieved in the past, nor even about the profits in the future, but this is hardly surprising when its record is examined. The ordinary shares have, it is true, received dividends of 6 per cent. for the past year or two, but only by starving the reserve and ignoring the question of depreciation on exchanges and goodwill, so that at best the present issue must be regarded as far from first class. Half of the shares, however, have been underwritten by Messrs.

Foster and Braithwaite, and the other half by Messrs. J. and A. Scrimgeour for a commission of 5 per cent. and a brokerage of 3d. per share.

Santa Rita Nitrate Co., Limited.

With a share capital of £100,000 in £5 shares, this company offers for subscription at par an issue of £40,000 5 per cent. debentures out of a total authorised of £50,000, in order to provide funds for the repayment of the £11,000 outstanding of the 6 per cent. debentures issued in 1896, and for the erection of a suitable maquina with all the latest modern improvements, to deal with the nitrate deposits of the Santa Rita grounds. This estate was carefully examined in March, 1902, and it was estimated that, apart from the Carolina property, the grounds contain over nine and a quarter million Spanish quintals of nitrate. Net profits for the three years to December 31, 1902, were £14,166, £17,023 and £18,834 respectively, so that the interest on the present issue is amply secured, and as far as principal is concerned the debentures are to be redeemed at £105 at the rate of fifty debentures per annum, commencing August 1, 1904.

Mexican Sugar Refining Co., Limited.

The British Investors' Underwriting Corporation, Limited, is once more to the fore with a privately issued draft prospectus of the above company, which is so incomplete that it does not contain the names of bankers, solicitors, or auditors. Of the three directors, the first is described as a director of the Parral Mines (spelt Parrall), a concern whose shares at the time the latest Mining Manual was issued were quoted at 1s. 6d.—2s. 6d., another is connected with the Dominion Fairview G. M. Company, about which little information was obtainable, and the third is a director of the National Guarantee Corporation, whose name is not even known to the compilers of the S. E. Year Book. The company is to have a capital of £700,000, divided into 500,000 ordinary and 200,000 preference shares of £1 each, and is endeavouring to issue £200,000 6 per cent. first mortgage debentures out of a total of £300,000, at par. It is to acquire sugar cane plantations of 10,000 acres or so, about 20 miles from Tampico, and a wonderful picture is drawn of the profits to be made from the production of sugar and alcohol. These are estimated at £20,431 per acre, or at least £204,000 per annum when the whole estate is under cultivation. And this Eldorado the Corporation is willing to sell for £500,000 in ordinary shares or cash and shares. In order to avoid payment of the Mexican Government taxes on companies with a large capital, a small company has been organised to hold the property, with a share capital of £150,000 in £1 shares, all to be the property of the English company. Pending the organisation of the latter 100,000 shares of the preliminary company are offered for subscription at 25s. per share, with a bonus on each six shares taken of one £10 debenture bond in the English company, and provincial investors are being circularised with an invitation to assist in the underwriting. They had better throw the documents in the waste paper basket.

Passing Events.

We share the indignation of the Shanghai correspondent of the *Times* over the miserable trick played upon the Chinese Government in the matter of the indemnity payments due at the end of last month. He points out that the current rate of the tael on June 29, when the foreign power representatives fixed the figure against the Chinese, was 2s. 4d.; yet the commission, on the motion of Russia, decided to claim payment at the 2s. 3d. rate, fixed without consulting the Chinese, who were without the means of protesting or contesting. This difference of a penny amounts to 3½ per cent., and involves a total loss to the Chinese Government of over £40,000 on the half-year's payments. Russia alone benefits to the extent of 80,000 taels by this measure. "In whatever light they may be regarded," says the correspondent we quote, "such methods, which amount to an organised attempt at plundering a defenceless debtor, are unworthy of the representatives of great nations, and afford moral justification to the Chinese to maintain their refusal to pay in gold." We cordially endorse that stricture.

Western Australia has actually a surplus of £200,000 for the year ended June 30 last, so the Premier says that the state will be able to continue "a vigorous public works policy" without approaching the London market before January. This is very kind of him, indeed, and we shall not weep if he keeps away from our market a few months beyond that date.

And the Victorian Treasurer has a surplus of £153,199 on his fiscal year, the strenuous man—mainly accruing from the commonwealth. Supplementary estimates were cut down to £44,000, the lowest for fourteen years, £186,462 was saved on votes and special appropriations, and £606,000 was knocked off the ordinary expenditure—wages docked, strikers' pay forfeited, railways starved and such like. But after such zeal the new borrowing should be smoother and underwriters satisfied with less than 2 per cent. commission.

Sir John See's Government in Sydney has been amending the colony's accounts for the year ended June 30 last. Its efforts have raised the deficit from £236,781 to £484,355 on an adjusted income of £12,367,378, and an outgo of £12,624,953. The figures do not fit, but they are all we have yet, these and the news that "loans for expenditure on public works amount to £4,802,752." Pile it up! After all borrowing in London is easier than raising sheep on waterless deserts.

A venerable Scotsman who has many descendants in New Zealand writes to us: "The New Zealanders are great admirers of your friend 'Joe,' and say if he would put a tax on foreign butter and give the colonies a preferential tariff the colony would grow by leaps and bounds." How eclectically unselfish is the patriotism of the colonist. "If you ruin yourself, oh dupes of the mother country, so long as we prosper all is well."

The Canadian Government is going to give a bonus of $15 per short ton on all lead produced in the country during the next five years. If, however, the price of standard pig lead in the London market exceeds £12 10s. per long ton, the bounty is to be reduced proportionately by the amount of such excess, the total payment not to exceed $500,000 in any one year. This is reciprocity after the Canadian manner.

Another proof of Canada's filial love of and ardour for the mother country's best interests is found in the new bounties on dominion made wire rods and structural ironwork and large steel plates. Rod manufacturers are to be encouraged by a bounty out of the taxes of $6 per ton, and the ironworkers are to have $3 per ton. That capital-smothered affair the Dominion Steel Company is laying down plant to enable it to fight us in these products, and as it could not do that if left alone, it is to be thus buttressed. Over and above the present bounty of $2 per ton on pig iron and $3 per ton on steel ingots and puddled bars made in Canada will be also paid. How deeply our children love us.

How much more beautiful to the protectionist eye is the record of United States foreign trade than ours. The figures for May, just published, show that the Union exported $100,508,000 worth of merchandise in that month, and got back only $78,935,000 worth. In other words, $80 worth of imports cost $100 worth of exports to pay for them, whereas with us £100 worth of exports brings back nearly £180 worth of imports. This surely explains how tremendously rich the United States are, and what power they have over the world's resources? In the whole eleven months of their fiscal year, down to May 31, their merchandise exports exceeded their imports in value by 381,000,000, or upwards of 28 per cent., and even this was a narrower margin than it has often been, for it meant about 72 cents to the dollar returned in import values. Such are the blessings of a high protective tariff, the absence of a native mercantile marine, and a permanent condition of indebtedness abroad.

The Indian Government announces the issue of a rupee loan for two crores, or 200 lacs of rupees, bearing interest at the rate of 3½ per cent. per annum, and not liable to

be discharged before December 31, 1920. Tenders will be received in Calcutta, Madras, Bombay, Allahabad, and Lahore up to July 22, and instalments will be payable on August 4, September 3 and 23. Following the usual custom, the Governor-General in Council reserves the right to declare on or before July 15 the minimum rate at which tenders will be accepted.

Lord Milner was graciously pleased to inform the Intercolonial Railway Council what he proposes to do with the £35,000,000 guaranteed loan, of which £30,000,000 was lately issued here. It seems £6,000,000 is to go to liquidate previous liabilities, including a deficit of £1,500,000 on the first year's British administration of the Transvaal, and £2,500,000 on account of the debt of the late republic, another £2,000,000 going to loyalists in Cape Colony and Natal as compensation. Then £14,000,000 is to be devoted to the purchase of the Transvaal and Orange Colonies Railways, £5,000,000 to repatriation and compensation in those colonies, and £10,000,000 to new developments, half of it for new railways, £3,000,000 for land settlement, and £2,000,000 for other public works. This is fine.

Autocratic methods seem to be coming into vogue with much swiftness in the new Australasian Commonwealth, and the latest victim of zeal on the financial side is the well-known firm of Dalgety and Co. It is accused by the Customs officials in Melbourne of cheating the revenue. As far as we can judge from the company's statement of the facts, it is in no way guilty, yet the goods, consisting of so many cases of Japanese natural mineral water in bottles, have been retained until the action is heard, and in a most high-handed manner. Obviously a company of the standing of Dalgety and Co. would not be guilty of trying to evade the duty on bottles if it were really leviable, which it does not seem to be upon natural mineral waters. However, we shall know more about it when the case is tried. Only, why should the bureaucrat despots stick to the merchandise?

So our sugar is to be made dearer according to the decree of the Brussels Conference of sugar industry representatives from Russia, Austria-Hungary, Germany, France, Belgium, and Holland held in the middle of this week. These great gentlemen have adopted resolutions calculated to prevent the flooding of the British market with foreign sugar. The export will be limited to the average amount sent here in recent years, and a system of allotment will be instituted in each of the signatory states. By this cartel or forestaller's bond it is hoped that the price of sugar will be maintained at its present scale in Europe, and that "English prices will be raised by one or two francs." How much that means per pound we shall presently find out.

A movement is on foot in the Stock Exchange to induce the committee to give prominence to the natural indignation which is felt at the practices of defaulting Foreign Governments by making a short reference to their misdeeds in the Stock Exchange Official List, where the securities are publicly quoted. The request is backed up by several important firms of brokers and jobbers who hope that this official mark of disfavour may act as a deterrent to others contemplating a departure from the paths of rectitude, and also assist the public in discriminating between the issues of dishonest States and those which meet their obligations.

Mr. Emile Garcke, naturalised Britisher and first-class imperialist, thinks the few newspapers that opposed his anti-municipal campaign in Birmingham and elsewhere had "axes to grind." To such a mind as his that must be the most natural of all explanations; but how about that little paper the B. E. T. eminences started in Birmingham to help its corporation bulldozing enterprise Failed to grind its axe for lack of capitalist emery we suppose.

After some imitative insolence towards the independent press which has dared to criticise the B. E. T. and its methods, insolence that does not increase our respect for him, Sir Charles Rivers Wilson told the shareholders by way of confession that the city editor of the *Pall Mall Gazette* was not far off in guessing the dividend and interest revenue of the company at probably less than £150,000. It was only £138,000, this Grand Trunk chairman and B. E. T. director admitted. The imposing yet insufficient £264,504 was made up otherwise by engineering and Parliamentary fees, £30,000—paid out of the children's capital, as likewise much of the £16,000 received as directors' fees from the same source—and other fees and commissions, £79,000—likewise dubious and ephemeral stuff.

Great news for English lawyers. Whitaker Wright is coming home—tired of the law's delays across the pond. "Shall hasten home to prove my innocence," he tells the Official Receiver. Yes, yes.

Let Sir Robert Giffen look to his laurels. The Bishop of Ripon is a rival statistician. He discoursed on Monday last in the House of Lords upon what he described as the "shortage" of children in this country after a manner which revealed him to be an apt pupil of a great master. We are 1,100,000 short of children, he says, and he went into details indicating that not merely the home population, but the Canadian and Australasian populations were failing to increase in a manner that pleased him. But what would he have? Is he, by his knowledge of history, able to point to any race, tribe, or community that became "imperial" in the course of the world's history before it was half rotten and in a state of decay, ready to become an easy prey to the "barbarian"?

The Standard Oil Trust has bumped up against the Disconto-Gesellschaft over the Roumanian oil fields. So far the points in the game have been scored by the Germans, working through the Liberal party, but the Americans have not yet given up hopes. With the American output of petroleum slowly but steadily declining, Rockefeller and his associates must seek pastures new, and Roumania is the most tempting. So if peaceful methods fail they will have to fall back on those used to form the famous oil trust.

The *Financial News* is of opinion that the new phrase "freer trade" is catching on. We should not wonder. It is just the sort of trashy falsehood that the ignorant mob has a sure affinity for. And if the adventurous Joseph get his way trade would undoubtedly be "freer" for all our rivals the more we put our own in the fetters of protectionism.

Mr. G. H. Perris has written and Messrs. Methuen have published at the handy price of 1s. a little book entitled "The Protectionist Peril," which should be most useful and helpful to sincere people in want of guidance amid the mazes of Jingo ignorance and word twisting. To those who walk by flags and cannot read figures the book will be of no use; they cannot read it knowing only such words and phrases as "unity of empire," "imperial federation," "loyalty," "pro-German," "free trade fetish," and so on. But the book is honest, written by a man with a conscience, and therefore valuable.

The English League for the taxation of land values have seasonably printed a sixpenny edition of the late Henry George's "Protection and Free Trade," which ought to put it within the reach of everybody. An intelligent study of it would clear the mind of many cantings. Get it and try.

It has been semi-officially revealed to the world that the Morgan Shipping Combine, otherwise the International Mercantile Marine Company (unbounded), has made a profit of £150,000 in the past half-year, after paying bond interest and sinking fund charges, but nobody believed the revelation, and the preferred shares went abegging below 20. Probably depreciation on the tubs in the Trust could easily do with £500,000.

The National Bank of South Africa has re-opened its branch at Leydsdorp (Transvaal).

According to a cable received from Messrs. A. Bársdorf and Co. the output of gold during June from the Witwatersrand and outside districts was 238,320 oz., valued at £1,012,322, compared with 234,125 oz. during May, worth £994,505, and with 142,780 oz. in June, 1902. Natives distributed during the month by the Native Labour Association were 7,009, against 5,057 time expired and other wastage, making a net gain of 1,952, the number employed being 64,454.

MINING NOTES AND NEWS.

The market has had its attention occupied during the greater part of the week with the settlement. Tuesday was contango day in mines. The preceding account, like so many that have come and gone, was unrelievedly quiet, the public continuing apathetic in spite of many dividend declarations. No Chinese have yet arrived on the Rand, whilst the blacks appear to be only dribbling in. Rumours have been plentiful, so have authentic facts, chief amongst the latter being the news that the Cape House of Assembly has pronounced against the admission of yellow labour, that Lord Milner does not look for any easement for twelve months, and that the Boers have adopted a resolution against the importation of Asiatics. Prices consequently tended downwards during the fortnight, though the declines on the whole were slight, with the exception of a relapse of £2 in Tanganyikas, 9-16 in Western Rand Estates, and ⅜ in Zambesia Exploring, the majority of the falls ranging from ¼ to ⅛. These were offset by a few rises, such as ¼ each in H. E. Props., Forbes Rhodesia, Red and White Rose, Transvaal Exploration, Treasury and Welgedacht, 3-16 in Robinson Deep and Johannesburg Estates, and ⅜ in De Beers deferred.

In the Westralian group the two principal changes were a loss of ¼ in Associated Northern Blocks, and a gain of 9-32 in Lake View Consols. West Africans also receded, the shrinkages including ¼ each in Ashanti Goldfields, Sekondi and Tarkwa, and West Africa Gold Concessions, and 3-16 in Ashanti and Gold Coast Explorers. In the miscellaneous list Etruscans put on 3-16, and Rio Tintos ½.

The Kaffir account was of very small dimensions, and no extraordinary exhibition of energy was needed to cope with the carry-over. Rates ruled about the same as at the previous settlement. Gold Fields, East Rands, Rand Mines, Modderfontein, and Randfonteins were continued at 4 to 5 per cent., whilst Barnato Consols and Johnnies Investment were done at 5 to 7 per cent. The general rate was 6 to 7 per cent. De Beers issues and Jagers were arranged at 3 to 4 per cent., the Chartered rate being 1½d. to 2d. On Rhodesians the charge was 6 to 8 per cent. In the West Australian section Northern Blocks opened "even," but later were contangoed at 2 to 4 per cent. After being 1 to 3 per cent. the Golden Horseshoe rate hardened to 3 to 6 per cent., whilst other shares were carried over at 6 to 8 per cent. The general rate on West Africans and Egyptians was 7 to 8 per cent.

For the new account, which is of nineteen days' duration, the Kaffir market at once put on a better appearance, the closing prices being the best of the day. A rumour was circulated that a private telegram—quite a chestnut affair—had been received by some individual stating that the labour problem was near solution. It is true the market did not heave a very deep sigh of relief, whilst here and there the rumour was listened to with a cynical smile, but for some reason or other dealers dared to mark many of the speculative favourites a fraction or two higher. Northern Coppers and one or two other Rhodesians also left off slightly better. A reaction, however, quickly followed, and business has been practically at a standstill during the latter part of the week. Chartered have not been helped by the belated report of the directors; on the contrary, the quotation has weakened.

Amongst West Australians Golden Horseshoe shares have been conspicuous throughout the week. At one time the price was depressed, as the result of unfavourable rumours. The latter have been replied to by the directors, and we deal with that reply in a separate note. Since the publication of this official communication, a second interim dividend of 6s. per share has been declared, and a cable issued stating that the borehole has cut a vein which is believed to be the No. 4 lode. The manager adds that the indications are favourable for a well-defined lode. This news, however, was followed by a sharp relapse on profit-taking.

The Jungle market has again been very quiet, with few changes to record. The majority of the shares are stationary at last week's prices. Wassaus have weakened conspicuously, in spite of the efforts made in the press to attract public attention to them.

In the miscelaneous section Nile Valleys have rallied on a report that Mr. J. B. Robinson intends, after all, to take part in the reorganisation scheme, a statement not yet officially confirmed. Indians have been steady on the good returns for June, whilst Rio Tintos have latterly been strong on the improved market for the metal.

The Coronation Syndicate.—The directors of this syndicate have actually gone to the expense of issuing an interim report instead of talking to the public by means of lengthy interviews in the subsidised press. Probably they are deeply concerned at the heavy fall in the shares from the sensational heights to which they have been rigged. "It has been the policy of the board not to issue reports," it is explained, "because in their opinion it would not have been in your interests if the directors had given the information about their prospecting works in detail to the world at large, therefore enabling others to derive benefits at your expense through knowledge they acquired from your syndicate's prospecting operations." What touching solicitude! which we hope the shareholders and the market gamblers will appreciate at its true worth. This policy, however, hardly seems consistent with the columns of information Mr. Carl Hanau gave months ago to the representative of a certain journal, at a time when the price of the shares soared to the altitude of £3,000. Nor is such reticence consistent with the cables sent over from South Africa at opportune moments, though the directors may have been annoyed at this, the cables giving dealers an excuse to mark the price another few hundreds higher. "Detrimental reports," it appears, "have been spread, principally by those against whose interests it would be to have a new outcrop goldfield discovered extending over a length of forty miles. Rumours that the Coronation Syndicate had found nothing payable were so persistently and systematically spread that the board thought it necessary in your interests to ask your consulting engineer to make a report on your properties, so as to once and for all stop these derogatory statements and at the same time put your minds at ease. Mr. J. Hamy Johns has, therefore, made a report, and your directors wish to compliment him on its moderate tone. They look upon it as highly satisfactory, and have decided to publish the whole of it, although it is departing from their policy not to give to the world that information which they think ought to be in their possession alone as the guardians of your interests." Accordingly, Mr. Johns' report is given, and very interesting it is. From this there appears to be little doubt that deep down in the earth there are reefs, but does this fact justify the rigging of the shares to £3,000 each? The property is undeveloped, and there is no man alive who can foretell what profits will be ultimately earned and what the intrinsic value of the share will be. "Didn't we tell you?" the directors shout in triumph. "Can you doubt now that the property is traversed by the Main Reef series?" Let us say we do not doubt it. The series, however, traverses many another property on the Rand, even other Barnato mines, which have failed to earn profits and pay dividends. Here and there even the Main Reef series has been too poor to work profitably, so that the finding of it in the Coronation property means very little at present. A vast amount of development and exploratory work, which will require time and money, has yet to be accomplished before we can measure the success this company may hereafter enjoy.

Associated Gold Mines of Western Australia.—Owing to a greater number of tons milled, and to an appreciable reduction in the working costs—from £2 8s. 3d. per ton to £2 9s. 1d.—this company was able to improve its position during the year ending March 31. The total bullion produced from 58,453 tons of ore milled was 61,897.43 oz., realising £225,402. Dividends on investments yielded £6,323, interest £157, transfer fees £45, whilst £3,087 represents the withdrawal of a claim for income-tax, reserved in the previous accounts. The net profit, after deducting expenditure, is £81,959 against £13,630. Out of this £15,057 has been provided for depreciation on plant, machinery, buildings, and furniture, £2,439 has been written off the expenditure on diamond drilling, together with £5,726, being one-sixth of the outgo on development and shaft sinking, leaving a balance of £58,736. A dividend of 2s. per share is recommended, requiring £49,536, and £9,199 is carried forward. The report says, in order that the accounts may represent as nearly as possible the present actual position the directors requested the manager by cable to give his estimate of the value of the buildings, plant, and machinery at the end of last March, having regard to the present requiremeent of the mines. His figures have been adopted in the accounts. The difference between his estimate and the book values, after charging the estimated depreciation applicable to the year's working, has been met by appropriating £161,714 from the amount standing to the credit of "Premium on shares account." The sum of £212,792 has also been appropriated from the same account to write off the whole of the balance of expenditure upon development and shaft sinking to March 31, 1902. In this manner the premium account has been reduced by £374,506. A very strong balance-sheet is presented. Amongst the liquid assets is £170,000 in Consols, which cost £174,802, and the company is likewise the possessor of 9,813 Associated Northern Blocks.

Golden Horseshoe Estates Company.—During recent weeks the "bears" have made an onslaught on the shares of this company, and have circulated disquieting rumours respecting the mine, especially that the lode has gone into the adjoining Boulder property. In answer to these the directors have sent us a type-written circular, containing an extract from a letter of the general manager, dated June 6, and received on Monday. This is so important that we give it in full:—"No. 4 lode.—The matter has had a close attention for some considerable time past, and I am of opinion from what I can gather so far, both from the Boulder and our own lodes, that there is nothing in the rumour that this lode has gone into the Boulder at 1,300 ft., but to settle the question definitely as to whether the lode we are working at 840 ft. south on No. 8 level is the same as the Boulder have got at 1,000 and 1,200 ft., I decided to lose no time in prospecting to our eastern boundary at No. 10 level, and have installed a diamond drill into the face of the east cross-cut—about 100 ft. east. A start was made on Thursday. Realising the damage that can be done to a mine by such rumours, I considered prompt action necessary, so as to give you the earliest possible information, and trust that my action will meet with your approval. As previously mentioned, as we approach the north boundary in drives at the 6, 7, and 8 levels the No. 4 lode becomes very disturbed, and to all appearances dies out. As we have the electric wires down the main shaft, and the diamond drill in the mine, I think it would be policy, after touching our eastern boundary to bore west at the No. 10 level, right across the property. It would not entail any great expense, as the contract price is 13s. per foot. For that matter, it might be advisable to bore west at some of the higher levels to try and pick up the Nos. 1, 2, and western lodes, which, if met with, would add considerably to our ore reserves. Should you consider it advisable, later on, we might bore from the 10 level, and prospect to the east and west boundaries at 1,200-1,300 ft." The shares immediately recovered 10s. on the publication of the above, though, it will be observed, the rumour is not specifically denied. Reading between the lines, it looks as if all is not well with the mine, the statement that the No. 4 lode "to all appearances dies out," being calculated to create suspense pending the results of further exploratory work. A further cable has come to hand since the issue of the above circular, stating that a vein has been cut in the borehole which the manager considers to be the No. 4 lode. He adds that the indications are favourable for a welll-defined lode.

A Rhodesian Amalgamation.—Some five Rhodesian mining companies, all of them little known, and each one a struggling

conce n, have resolved to fuse themselves into a new company to be called the "Rhodesia Consolidated, Limited." The names of the five are:—Colenbrander's Matabele Development, Holton Consolidated, Sabi (Rhodesia) Gold Mining, Consolidated Belingwe Development, and Nelly and Pioneer Reefs Gold Mining companies. The present issued capitals of these aggregate £794,814, the new capital, in 10s. shares, will amount to £397,407, whilst the working capital to be provided by a call of 3s., will be £119,220. The liabi'ities total about £100,000, of which, it is stated, in the circulars, £80,000 will be accepted in mortgage deben tures of the new concern. The circulars add, "the directors regard the proposal now subm tted as one they strongly recommend to their shareholders," as though they were likely to c ndemn it. By amalgamation it is hoped to curtail expenditure, which may, of course, help towards eventual success. Likewise it may no'. Mortgage debentures on undeveloped mining property usually do mischief.

British American Corporation.—Mr. G. S. Barnes, the official receiver of the British America Corporation, has issued an interim report, in which he says the claims of the latter against the London and Globe in respect of undisclosed profit, and of partnership transactions between the two corporation have been settled by means of a compromise arrived at by counsel representing each. The result of this compromise, which has been sanctioned by the court, is that the British America Corporation is to be admitted as a creditor of the London and Globe for the sum of £220 983. There remains a further question relating to the sa'es of 20,000 Loddon Valley shares and 80,000 Moorlort shares at par by the London and Globe to the British Ame ica Corporation immedi tely before the fa'lure of the former, the question be'ng whether the British America Corpora'ion is en'itled to cancel these purchases and rank as a cred'tor of the London and Globe, or whether the purchases are to hold good. This question h s been referred to the court. The report adds that the proceedings for misfeasance instituted against Mr. Whi'aker Wright, and Mr. R. E. Leman, to recover damages are still pending. A dividend of 1s. in the pound was paid in September, 1902, and a fur'her dividend of 1s. is now declared. The admitted claims of cred'to's of the British America Corporation total £704,125, and the amount of cash in hand, after payment of the second dividend, wi'l be £13,889.

West Nicholson Gold Mining Company.—No crushing was accomplished by this Rhodesian Company during the twelve months to December 31, but development was pushed ahead in view of the erection of the additional stamps. It is hoped to have these ready by August, when crushing with the full 60 stamp battery will commence. Development was confined p incipally to the third and fourth levels, the main shaft having been sunk to the fourth and fifth levels, to which another, the sixth, wi'l be added in the course of the next few weeks. 73,000 tons of ore of from 8 to 12 dwts. in value, besides a large tonnage of lower grade material were estimated by Mr. Huntley to have been developed at the end of the year. The directors have purchased from the Matabele Gold Reefs and Estates Company 60 claims on the East Olympus reef, which adjoin the company's property on the east side of the Umsingwani river. Price to be paid, subject to the rights of the British South Africa Company, is 30,000 fully-paid shares in this undertaking, the vendor company at the same time being reimbursed for its expenditure on development. The financial statement made up to December 31 shows that £12,702 was spent on development, etc., making the total to date £50,485, against which £5 is allowed for development redemption. Expenses during the year were in South Africa £1,242, and in London £2,354, while interest absorbed £4,881, debenture issue expenses £4,035, and depreciation £1,873 making with outlay up to the end of the previous year, £21,881. There is also a debit to profit and loss of £3.454, so the company has much leeway to make up before the shareholders can stand in. The big sum of £34,779 is still owing to the Matabele Gold Reefs, and Estates Company, creditors are heavy, and liquid assets poor in the extreme.

Fraser South Extended Gold Mining Company.—Certain large shareholders of this company arranged for an examination of the prope.ty by the well-known firm of Bewick, Moreing and Co., and their report has just come to hand. The directors are so pleased with it that they have acquired the statement for the benefit of all concerned, and now send it to proprietors big and little. They invite them to note that the main features which have been ceaselessly insisted upon in recent circulars, viz., the great width and payable character of the new ore body now being worked in the 250 ft. level, is amply confirmed, while the sulphide lode which had not been proved payable in the 300 ft. level at the time the mine was inspected by Messrs. Bewick, More'ng's representative, has now taken its place as a fresh ore body some 38 ft. in width, which can be worked profitably. The method of operating the plant is criticised, but several alterations have already taken place and complete effect will be given to the engineers' recommendation. The board thinks that a careful perusal of the report will convince shareholders that they are interested in a mine whose extensive deposits only require additional machinery to treat the ore in large quantities. The provision of these appliances for a greatly increased output is now occupying the directors' attention, and instructions have been cabled to speedily develop the lodes which at the two leve's measure over 60 ft. in width.

Mills' Day Dawn United Gold Mines.—This company's operations continue on a very restricted scale, the quantity of stone crushed during the six months to April 21, being only 1,246 tons. It yielded 1,346 oz., va'ued at £5,998, including sands and sludges, and as the expenditure was £4,813, the debit balance is reduced from £15,616 to £14,431. Besides the profit and loss, the company issues a receip's and expenditure statement, and this shows an income of £6,506, and an outgo of £4,821, the cash balance being advanced from £7,176 to £8,862. Outlook for the future seems a little more encouraging, and during April crushing was commenced with five head of stamps, while it is probable, if present indications are verified, that another 5 head will be shortly continuously employed.

Imani Gold Mining Company.—This undertaking was incorporated in February, 1902, and publishes a report covering little more than a year to Feb.uary 28 last. It gives evidence of considerable progress, and notwithstanding long delays on account of transport difficulties, the reduction plant commenced crushing on March 1. Returns show a yield of over 12 dwts., and are believed to be a fair average of the value of the ore in sight in the Imani mine, and as working costs, based on the result of the first month's crushing, are estimated at about 20s. 6d. per ton. exclusive of mine redemption, and general expenses, a very fair profit is to be anticipated. During the period now being reviewed the development work amounted to 1,876 ft., making a total footage of 6,329 ft., exclusive of 7,640 ft. of trenching. Expenditure was £50,497, of which £11,328 went in mine development and general expenses, and £39,169 on capital account, including machinery, buildings, and permanent works. The company has a fair amoun' of cash, and floating liabilities are not onerous. A good deal of development work has been done on the Ibis mine, the results of which encourage the directors to hope that the property will prove to be a large low grade proposition, with conditions favourable for wo.king at a low cost. The question of augmenting the water supply at the Imani mine is now engaging the attention of the management, no fuel difficulties are to be looked for, and during the past year the supply of native labour has been plentiful. No troubles in this matter are anticipated. Transport has been a problem, but it will probably be solved by the Gwanda Railway.

White Feather Main Reefs.—During the year ended January 31, this company realised £51,506 from bullion and sales of water, to earn which cost £26,175, leaving a profit of £25,330. A few pounds were received for interest and transfer fees, making £25,423, and from this general expenses in Australia and London took £3,467, income-tax £1,523, and depreciation at 10 per cent. on plant, machinery, and buildings, £1,683. Then £8,969 was written off development and £9,781 remains as net profit. It provides two dividends of 6d. each per share, or 5 per cent. in all, wi h an increase in the amount carried forward, from £8,432 to £10,213. In the period under review 17,938 tons were milled for 11,524 oz. of gold, while 15,652 tons of tailings yielded 2,060 oz., and concentrates 200 oz. Practically the entire cost of development was charged to revenue, as it should be, and the estimated ore reserves have been maintained equal to about two years' crushing, although a larger tonnage was put through the battery in the past year. Satisfactory is the reduction in expenditure for raising and milling of 4s. 4d. per ton to 23s. 2d.

Great Boulder Perseverance Gold Mining Company.—This company's capital was reorganised a few months ago in order to create a "freer" market in the shares eight new £1 shares being exchanged for every one of a similar value. The new concern was registered April 17, and the statutory report has just been issued. Under the scheme, 1,400,000 shares were allotted, credited as fully-paid, and up to the present time the certificates for about 1,185,800 shares have been delivered. Good progress is noticeable regarding the transfer of the mining lease, and within the next week or two advice of the vesting of the title in this company may be expected when application will be immediately made for a special settlement in the shares. During the five mon hs ended May 31 54,365 tons of ore have been treated for a yie'd of 87,681 oz. of bullion, estimated to be worth £318,413. Australian expenditure in the same period, including company's duty, development, and equipment, amounts to £134,877, and it is satisfactory to observe that the cost of treatment at the sulphide plant has been reduced since December from 22s. 8½d. to 18s. 6d. per ton.

Komata Reefs Gold Mining Company.—This is another New Zealand company, which, though not anything like so rich as the Hauraki in the latter's early days, promises to last a much longer time, for it still appears to possess much staying power. In 1902 the gross revenue was £27,735, of which £27,244 came from bullion, and when expenditure has been deducted, a credit of £5,838 is carried forward, after wiping out the small debit balance brought in. Liabilities are very moderate, and are amply covered by cash. The report states that the acquisition of the Te Ao Marama section has placed the company in a very satisfactory position, the exploration work carried out proving the existence of very much larger ore bodies than anticipated, the manager reporting that there is a large quantity of ore opened up and ready for the mill.

Broken Hill Proprietary Block 10.—Rather a mournful story is told in the report of this concern for the six months ended March 31. Prices ruling for silver were the lowest on record, whi'st the ave age price of lead was only 2s. 4½d. per ton in excess of that for the previous half year. Although expenses were kept as low as possible, they were in excess of the previous half year, and the outcome of treating 50,279 tons of ore, containing 8,583 tons of concentrates, yielding 281,049 oz. of silver, and 5,497 tons of lead was a profit of £1,508 only. In addition £502 was received for interest, and £17,810 was brought forward, making a total of £19,820, but all this, and £1,487 besides, which has been taken from reserve, has gone into capital account, and nothing can be given to shareholders. Reserve now stands at £38,513, invested in Victorian threes, and the excess of liquid assets over liabilities is £54,356. The board hopes presen'ly to turn the large accumulation of by-products to good account, and observes that the new mi'l and power station are being pushed ahead with all possible speed. When they are completed a considerable saving will be effected, which at present output and prices should permit of good dividends being paid.

The Scottish Equitable Life Assurance Society.

The SEVENTY-SECOND ANNUAL GENERAL MEETING of this SOCIETY was held in the HEAD OFFICE 28, ST. ANDREW SQUARE, EDINBURGH, on 29th June, 1903.

The Right Hon. The EARL of MANSFIELD, Vice-President, in the Chair.

The following is an Abstract of the Report submitted by the Directors:—

BUSINESS OF THE YEAR 1902-3.

2,202 Proposals were received for Assurances of £1,013,164
1,888 Policies were issued, insuring £816,261
The Premiums thereon amounted to £30,269
Annuities of £1,026 were granted, the purchase money being £10,500
The Premium Income of the Year amounted to £374,562

The Interest and Dividends on the Investments were ... £178,934
The Claims (£259,760 by Death, and £22,413 by Survivance) were £282,173
The Assurance Fund, increased by £141,180, amounted to £4,637,966
And the Total Funds of the Society were £4,851,240

QUINQUENNIAL INVESTIGATION.

In terms of the Act of Parliament, an Investigation of the Society's Affairs, with a view to ascertaining the Profits of the past Five Years, fell to be made as at 1st March, 1903.

A Committee of the Board examined afresh the whole Investments and Securities. After writing off loss on investments realised, and all estimated loss on loans considered doubtful, the Committee reported that in their opinion the whole Loans of the Society as appearing in the Balance Sheet were well secured; and that, notwithstanding the recent fall in Stock Exchange values, the net depreciation on the Society's investments was amply covered by the Investments Reserve Fund of £50,000.

The Liabilities under the Society's policies were valued by the new "Om" Table derived from the experience of 60 Life Assurance Offices to 1893, interest being assumed at the rate of 3 per cent.

The Assurance Fund amounted, as above, to	£4,637,966
The Net Liability under Assurance Contracts by the above basis of Valuation was	4,289,750
Showing a SURPLUS of	£348,216

This Surplus admitted of a Bonus being declared at the rate of 25s. per cent. per annum on the Sums Assured and existing Bonus Additions of all Policies entitled to participate. Policies becoming Claims before the next Investigation will further receive an Intermediate Bonus at the rate of 20s. per cent. per annum.

Copies of the Report and Accounts may be had on application.

"THE INVESTORS' REVIEW" Office,
NORFOLK HOUSE, NORFOLK STREET, STRAND, W.C.

The Investors' Review.

The Week's Money Market.

BANK RATE 3 PER CENT. (Reduced from 3½ per cent. on June 18.)

Norfolk House, Friday Evening.

To all appearance the market is now settling down to a period of low rates, if not of ease. This at least is the view of most credit jobbers, and we dare not affirm that it is wholly erroneous. At the same time there can be no sure foundation for a prolonged season of cheap money while the New York market remains in its present straitened condition, and while the Paris cheque is quoted almost at the point that would permit gold to be taken from the Bank for France. The rate has been sinking all week, and is quoted this afternoon at 25.12. Such a figure means that all the bar gold coming into the open market is taken for Paris, and therefore that the Bank of England stock can only be strengthened by the receipt of stray parcels of sovereigns. We think the market would have taken alarm at this position had it not been for the free shipments of the metal from New York to Europe. Altogether about £1,000,000 has been or will be sent from that city to Paris this week, and this supply must be looked upon as a relief to us. Were anything, however, to occur in the States calculated to throw the Continental gold demand upon the open London market the whole situation here might change in an hour. Therefore are we glad to see rates hardening up somewhat.

Early in the week borrowers were able to obtain overnight loans at 1½ to 2 per cent., and seven-day money dipped as low as 1½ per cent. That, however, lasted only until the Bank had been paid back, or nearly, for it was not able on Wednesday to redeem the whole of its pawned securities. Yesterday, accordingly, it was found that supplies of credit were the reverse of abundant, and bankers had no difficulty whatever in getting 2 per cent. for the seven-day advances, while call money touched 3 per cent., and was often 2½ per cent. The Bank return indicated that there was no excess supply of credit in the hands of the joint-stock banks. Within the six days ended on Wednesday, £11,290,000 had been paid off the debt of the market on other securities, and this reduced the other deposits by £8,241,000, in spite of a reduction of £3,421,000 in the public deposits and a slight diminution of £371,000 in the reserve. As the Treasury balances are already lower than they were this time last year the market cannot hope to see its resources increase. At the same time the demands upon it for fresh capital issues are insistent and continuous. We therefore think the prospect by no means an unclouded one, and that cheap money is anything but certain. This morning Stock Exchange payments made credits in sharp demand at any price up to 3 and even 3¼ per cent., but the account was easily completed, and the market escaped the necessity of going to the Bank for further advances, so that in the afternoon there were Stock Exchange balances left over to be lent in the discount market. Call money accordingly closed at 2 per cent., and that was throughout the rate for seven-day advances. The India Council renewed and lent a large sum to the end of July at 2 per cent., and also granted advances into August at 2¼ per cent.

Discount rates followed money to some extent, but three months' remitted bills were never done below 2 3-16 per cent., and there was not very much business at that figure. By the middle of the week the rate tended to become 2 5-16 per cent., and we may call 2¼ per cent. the fair working rate for the first half of the week. On Thursday the market tried to get up to 2⅜ per cent., and succeeded in doing business at 2 5-16 per cent. Six months' paper remains unpopular with the brokers, and the quotation has gradually risen from about 2⅝ to 2⅞ 3 per cent. Uneasiness regarding the position in New York and about Far Eastern politics has had the effect of inducing bill brokers to become cautious, and they quote 2 7-16 and 2½ per cent. this afternoon as their working rate for remitted paper of three months' usance and under. Some of them say the rate for six months' paper is now firm at 3 per cent. and four months' bills are certainly not under 2½ per cent. There is no gold in the open market, and only about £200,000 to arrive in the beginning of the week, so there is just a possibility that the demand may fall upon the Bank, in which case rates of all kinds would rebound upwards with alarming sharpness. This afternoon 5,000 sovereigns were withdrawn for Batavia, and 20,000 for South Africa, but it is the Paris demand we have to fear.

SILVER.

The metal was rather pressed for sale in the end of last week, and prices for bars relapsed ⅛d., to 24 5-16d. per oz. for cash, and 24d. per oz. for delivery two months forward. On Monday the trade demand proved fairly good, and as there was also a little inquiry for the metal on Indian account sellers as usual held back supplies, and quotations recovered to 24 7-16d. and 24 3-16d. per oz., respectively. Dealings, however, were on a very moderate scale, and the attention of the market has been turned to a large extent in the direction of Mexican dollars. There appears to be a considerable shortage of these in the Straits, and a keen demand for immediate shipment sprang up, which eventually drove the price up to 24 5-16d. per oz., or within ⅛d. of the spot value of bar silver. Applications for the Rs.50,00,000 of India Council drafts offered this week amounted to Rs.41,17,15,000, of which Rs.1,51,00,000 were for telegraphic transfers, but only Rs.41,15,000 in bills and Rs.1,00,000 in transfers were allotted, tenders at 1s. 4d. and 1s. 4 1-32d. per rupee, respectively, receiving in full. Next Wednesday another Rs.50,00,000 will be offered.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict., cap. 32, for the Week ending on Wednesday, July 8, 1903.

Stock Market Notes and Comments.

Investment brokers say they have been doing a little more business this week. People who have something to spare from their dividends after writing down their losses and paying their bills have been coming for investment stocks, from Consols and Home Railway debentures and guaranteed stocks downwards. This business always appears after the quarter's dividend disbursements, but it has not been oppressive this time, or so voluminous as in former years by a good deal. Speculation moreover remains dormant in all departments, and, as a whole, the Stock Exchange continues in a very sickly and depressed mood. A keen observer declares that the time has come to buy some of the best American Railroad bonds, as well as to pick up our leading Home Railway ordinary stocks, but we are by no means sure. No doubt American Railroad bonds of the highest class are considerably cheaper than they were, and safe enough investments, but until the oppression of the financial buccaneers has been taken off Wall Street, and a good deal of the rubbish they have piled up there consumed by fire or otherwise, we can have no certain feeling that prices are anywhere near their lowest point. Therefore we can only say to readers—if you are impelled to buy in order to get a fair rate on your money, pick good stocks and pay no regard to immediate market probabilities. These are still unfavourable, but a good security is always worth having, even if it costs a little more than it should, and though the varying fortunes of the market players should drag it down sensibly below the figure at which it may now stand.

It is really vain to labour over the old story. We are in the holiday season, and even in the Kaffir market the manipulating houses are likely to rest on their oars for some time. One or two of them are in no position to do otherwise, being locked up in multitudes of shares which they have manufactured for a public that has refused to be tempted. If readers are wise, therefore, they will only buy where they see a solid foundation for their money, something that yields a dividend, if only a speculative dividend, and refuse altogether to touch fancy articles inflated upon "prospects" and carried high by the vividness of the operator's imagination, or the dodges of the financing syndicate.

Even our own Municipal stocks, excellent though most of them are, will see lower prices before a real and enduring advance can begin again. They will do so because of the enormous amount of unissued loans waiting for placement. Bankers are all anxious to get fresh issues of Corporation stocks sold so that they may release their credits, and if low rates for money continue throughout the summer we shall have a flood of these issues, as well as loans from pretty well every township in South Africa, and from all the colonies. A rough estimate puts the Australasian demand alone at some £12,000,000 for the current colonial financial year, and that figure is quite irrespective of conversion operations, which are important, especially for the Colony of Victoria. It is a great empire, truly, sustained upon credit.

The Week's Stock Markets.

To all the other influences tending to restrict dealing in the Stock Exchange must now be added the circumstances that the holiday season is in full swing, and he would be a sanguine dealer indeed who anticipated any revival in speculative business until the next two or three months have run their course. The visit of President Loubet and the Henley Regatta have proved far more attractive than such prosaic things as stocks and shares, and thin as the attendance was it would probably have been smaller still but for the work involved in adjusting the fortnightly account, completed to-day. It passed off without the least hitch with bankers' charges fully ½ per cent. below the rate exacted for the end of June settlement. The seemingly plentiful supply of credit also brought a little money into the market for investment purposes, and at the commencement of business members assumed a cheerful demeanour, hoisting prices a little here and there. As the week wore on, however, the money market tightened up once more, although finishing easy, and with ominous political rumours filling the air, the close was heavy and quotations inclined to recede in all departments. Both the far and near East supplied causes of alarm, strained relations being reported between Russia and Japan, while the position of affairs in South-Eastern Europe is anything but comforting.

After a momentary hesitation Consols began to creep forward and were helped in their upward march by the reinvestment of a small portion of the Fund dividends fully released on Monday. At one time the quotation for the August account touched 92 15-16 bid, but harder money and the uncertain political outlook drove it back again, and at the end prices are unchanged at 92 5-16 to 92 7-16 for money and 92 7-16 to 92 9-16 for the account. Khaki stock was very steady at 98, and after moving within very narrow limits, Transvaal 3 per cent. finish ¼ lower. Some investment business went on in India sterling loans, maintaining prices as before, but Rupee paper went off a little on the announcement of a new rupee loan. Neither Home County and Corporation stocks nor Colonial Inscribed issues were active enough to call for comment.

In the Foreign Market Japanese issues fell sharply on the disquieting news regarding the relations with Russia, both 5 per cent. loans and the sterling bonds being 1½ to 2 lower. Osaka City Harbour Construction and Yokohama City Waterworks bonds each receded 1. Chinese securities came under the same influence, the 5 per cent. and 6 per cent. gold bonds losing ½ and 1, the 4½ per cent. 1, and the Imperial Railway loan ½. Russian 4 per cent. fell 1. Turks were also affected at first by the warlike attitude of Bulgaria, but recovered before the end. Amongst South Americans the new Northern Central Railway emission had a depressing influence on existing Argentine loans, which fell ½ to 1½, while the new scrip went to ½ discount, after being that much premium. One or two Brazilians were dragged down as well, although to a less extent. Greeks were flat on the disturbances in connection with the currant monopoly and the Cabinet crisis, but other Inter-Bourse things were steady. As usual money in this section was borrowed with the greatest ease, the difficulty being, indeed, to lend it profitably, despite the easier terms on which it was obtained outside. The general rate was no higher than 2 to 4 per cent., while most South American loans were continued at 1 to 3 per cent., with Uruguays running off to "even." Russians were "even" to 2 per cent., and Italians 1 to 2 per cent. Changes in the fortnight were not important, and need not be detailed.

Dealers in Home Railway stocks have been turning their attention to dividend prospects for the past six months, but the forecasts, although favourable in the majority of cases, have not as yet exerted any appreciable effect on prices. Great Northern deferred and Brighton deferred, for instance, on which an increase of over 1 per cent. is looked for, have only improved ¼ and ½, while Great Eastern, where only ¼ per cent. more is expected, is unchanged. On Great Western, North-Western, South-Western deferred, Midland deferred, and North-Eastern it is anticipated that the distribution will be ½ per cent. better than for the corresponding period of 1902, but in other cases a repetition of last year's results is all that is looked for. As usual at the commencement of a half-year there has been some increase of business owing to buying for investment purposes, but this time it is said to have been of a much more vigorous character than for a considerable period, and the market certainly showed a decidedly firmer tendency during the early days of the week. The uneasiness, however, regarding the outlook both in Eastern Europe and the Far East has not been without influence in this section, and the "boom" once more seems in danger of being checked before it has got well under weigh. North-Western heads the list amongst English issues with a gain of 1½, Great Western and Lancashire and Yorkshire are 1 better, and Midland deferred advanced ½. Scotch stocks were once more vigorously supported from the north, Caledonian ordinary being lifted 2, and North British deferred ½. On the other hand, South-Western deferred went back 1, City and South London fell 1, the market being disturbed by the successive traffic decreases caused by the competition of the L.C.C. trams, and District lost ½. The settlement once more provided a good explanation, if any were needed, of the anxiety of the professionals to find some means of enticing the public to relieve them of their burden. Allowing for the cheaper money outside, and for the fact that the current account is a nineteen day one, continuation rates were still stiff at 6 to 7 and even 8 per cent. as a rule, and in the case of Great Northern deferred the charge rose to 10 per cent. Some consolation, however, was afforded to the "bulls" in the making up prices, which showed advances ranging from 3¼ on North-Eastern, down to 3/8 on Chatham ordinary.

Wall Street has been almost deserted by its leaders this week, and in the consequent absence of any initiative from that quarter our market for United States Railroad shares has had an idle and listless time, with small daily fluctuations. The quarterly statement of the Steel Corporation was woefully disappointing to those who still

have faith in the concern, and quotations sagged on its publication. Further gold shipments to Europe were said to have had no effect, but the market rallied very slowly, even with good crop reports to help it, and then once more reacted on ugly rumours of financial difficulties in New York. One of these stories was to the effect that the New York Central was finding difficulty in raising loans and this naturally helped to cause flatness and depression. The shares of this company finished 5 lower, Illinois Central were 1½ down, Wabash preferred also fell 1½ and the income debentures 1. Atchison ordinary fell ½, Milwaukee 1½, Norfolk common, Southern common, and Baltimore ordinary ½, and Union Pacific 1¼. Money for the account was easy enough at 3 to 4 per cent., the lowest rate for years, but this does not of necessity prove that the "bull" account has been liquidated to any appreciable extent, as Wall Street operators are skilful in manipulating the market to suit their requirements. Movements during the account show advances on balance, but they rarely exceeded $1, and more frequently consisted of ½ or ¾.

The Canadian Railway market had a fair sized "bull" account to deal with, and contangos on Grand Trunk stocks were heavier than those on Yankee Rails. Prices hardly moved all week, and at the close the guaranteed stock was ½ better and the third preference ½ down. Canadian Pacific shares, however, went up in the very end of last week, on the increase of $353,000 shown by the traffic return for the last nine days of June, but fell away towards the end, and close ¼ lower.

In the Foreign Railway market the demand for Argentine privileged issues, which sprang up last week, was reflected in the making up prices, which showed gains of 2 and 2½ in Buenos Ayres and Pacific first preference and second debenture stock, 2 in Buenos Ayres Great Southern ordinary and preference, and 1 to 1½ in several others, but Argentine Great Western first and second debenture stock were exceptionally 1½ and 1 down on the fortnight, and Western of Buenos Ayres debenture receded 2½. Central Uruguay and Midland Uruguay, however, fell 3 each, and Rio Claro debentures lost 4. Contangos were fairly stiff at about 5 per cent. as a general thing, and as much as 7 to 8 per cent. on Mexican Railway stocks. The arrangement of the account was made use of as an excuse for the slackness of business on Wednesday, but in reality the market has been in a more or less listless mood all week. A few Argentine securities moved in a spasmodic fashion from day to day, slipping back a little at one time, and then rallying under the lead of Buenos Ayres and Rosario, which was helped by an

increase of £20,600 in its traffic return, said to be due to the free marketing of the maize crops, which had been kept back by rains. Buenos Ayres Great Southern ordinary and Buenos Ayres and Pacific ordinary rose 1, and the same improvement was seen in one or two debenture issues. Argentine Great Western ordinary, on the other hand, declined 1, Cordoba and Rosario preference and 6 per cent. debenture stock also lost 1, and Entre Rios preference stock 1. Of other South American lines Antofagasta ordinary fell and the deferred and debenture stocks advanced 1, Central Uruguay Eastern Extension debenture stock receded 1, Midland Uruguay debenture stock 1, and Uruguay Northern debenture stock 2. San Paulo 5½ and 4 per cent. debenture stocks gained 1 each, and Southern Brazilian debenture stock put on 1. Mexican Railway ordinary and first preference improved ¼ and ½, but the second preference closed ½ lower, and United Railways of the Havana second debenture stock was marked up 2. The two debenture stocks of the Ottoman Railway from Smyrna to Aidin relapsed 1 on the fears of trouble mentioned above.

Miscellaneous markets were almost deserted, and business was almost at a standstill. Everybody wants to sell Meat and Cold Storage shares now, and very little offering quickly depresses quotations. Nelsons were down to 33s. 6d., at one time, but rallied a trifle, and finish at 1¾. Imperial Cold Storage—the De Beers creation—were offered down from 26s. to 22s. 6d., but nobody would buy them even then. Some inside support, however, brought the quotation back to 25s. Linotype and Machinery Trust issues were not at first influenced by the fusion scheme, but subsequently the shares of both companies weakened, while Machinery Trust debenture stock rose 4. "Polly" shares went back on the dividend, the market looking for 6 per cent., and Spiers and Pond were flat for the same reason, a further fall of 2 per cent. taking place in the return, which is now only 5 per cent. per annum. Five years ago it was 10 per cent., and previous to that 11½ per cent. Aerated Breads also continue with a flat tendency, but other Caterers held fairly steady. British Electric Traction ordinary shares fell ½, and look weak, the market recognising that the whole business has been much overdone. Breweries were rather more active, and here and there some investment buying was reported. Textiles securities hardened a few pence in one or two instances, and Iron and Steel things kept steady. Telegraph stocks continue on the up grade, and the recovery from the lowest levels of the year is quite important. Where is Marconi? Milwall Dock stocks rose rapidly, but the preference stock quickly subsided again. The account arranged on Wednesday was of very small dimensions, and rates were normal.

Stock markets were flat in spite of the smooth settlement, and left off in a very sickly mood, partly because of the continued disorganisation visible in New York, but more because the fear increases that Russia and Japan may come to blows over Manchuria. Unquestionably the position of affairs in that distant part of the world is much more serious than people in London have been willing to allow, and there is little doubt that Japan is looking to this country to help her in compelling Russia to withdraw squarely and fully from Manchuria. It takes very little fear, however, to paralyse markets since they are all propped markets, and consequently without outside business except in investment sections.

London and Greenwich Railway.

Rent payable by the working South-Eastern Company to this undertaking for the six months ended June 30 was £22,500, and £74 was received for transfer fees, interest, etc., making a total of £22,574. General charges absorb £382, and £189 was brought forward, the divisible sum being £22,381. After meeting mortgage debenture and general interest the directors are able to propose a dividend of £1 8s. 3d. per cent. on the ordinary stock, leaving £233 to be carried forward. Nothing was spent on capital account during the half-year, and the debit remains at £7,992.

The Permanent Nitrate Committee have telegraphic advice from Iquique that the total exports of nitrate of soda in the twelve months ending March 31, 1904, have been definitely limited to 85 per cent. may be exported in the nine months ending December 31, 1903.

TRADE AND PRODUCE.

Wheat.—Trading in wheat has been noticeably more active this week, and prices have advanced in sympathy with America. English wheat continues in small supply, farmers' deliveries last week being only 32,340 qrs. at an average price of 27s. 9d. per quarter, and the stocks on hand are very small. But the coming harvest in this country is now expected to be good, and though in America the favourable reports of last week have been contradicted to a certain extent, the world's yield generally promises well, and with the arrival of the new grain on the market a fall in prices is anticipated. American markets have been better and prices have gone up almost steadily, the bulls having had it more or less their own way.

Wool.—Once more the interest of wool dealers is centred in the London sales, which commenced on Tuesday. Already crossbreds have gone up from 5 to 10 per cent. on the closing prices, and are in as great favour as ever, the buying on home account being very heavy. Merinos, on the other hand, show a weakening tendency, and Continental buyers who hitherto have kept prices up, appear less eager to bid, except when the wool appears exceptionally attractive. The depression of the other markets in the country seems less severe just at present, and business in home grown wools is increasing in proportion to the rise in Colonial varieties.

Linen.—Until transactions for the next season begin, there will be nothing of interest taking place in the linen market. At present no change is visible in any branch. Business is, if anything, duller than usual for the time of year, but that is owing to stiffening prices rather than to any weakness of the market. Manufacturers are busy and any falling off in union goods is compensated for by the increasing favour of price linens. Yarns have been doing a little better, the high cotton rates helping tow lines which are held at top prices, and spinners have more orders on hand than they can very well deal with. Reports on the flax crop are still favourable. Irish flax promising better than a fortnight ago, the Courtrai crop is said to be very good, and in the whole that of Russia, at any rate in the water-retted districts doing well, though the area under cultivation is considerably less than last year. Business in finished goods across the Channel and to foreign markets remains absolutely unchanged, except that prices are hardening, and merchants who are holding off for easier terms will probably have to pay more in the long run.

Cotton.—Better accounts of the growing crop induced sellers to lower their prices, and once started, a sharp downward movement took place, especially in August and September. Most of the business has, however, been in futures, very little actual cotton changing hands. That the prices will remain at their present level or go lower is still uncertain, for the New Orleans bulls may at any moment make an effort to rally the market, though the bears hope they won't. Egyptians have fallen even more rapidly than American, the holders in Alexandria having become nervous, and in their anxiety to realise sent prices rattling down in spite of the short supply. While raw material has dropped so sharply, yarn has moved down at a much slower pace, and spinners have thus been able to improve their margins. Sir Jacob Behrens and Sons do not, however, expect that manufacturers will reap much benefit from this, as the extra cost of production entailed by short time will no doubt counteract any gain. Home trade buyers have operated more freely at the reduced rate, but so far the large export markets have not yet commenced to purchase, although several limited offers have come from India, which may result in business. The fall in raw material also brought out a fair enquiry for cloth, but it has not yet resulted in anything. Manufactureres are themselves partly to blame for this since it is the outcome of the recent quotations made below the value of cotton, and now that buyers are inclined to deal, sufficient reductions cannot be made to meet them. Still the tone of the market is healthier and business should not be long in coming, as both Calcutta and Bombay are offering. China also is more active, and the offers coming forward are much nearer cost than they have been for a long time back.

In America the battle of the bears and bulls goes on, the victory so far resting with the former. How long they will hold it remains to be seen, for the end of the struggle is yet a long way off. It is rumoured that the New Orleans bulls hold nearly all their recent purchases, although it cost them a heavy sum to take them up. Should rumour for once tell the truth a fresh move in the game may soon be expected, as the leader of the bulls have been talking of cotton at 15c., and both parties at present appear to be only taking a short breathing spell before resuming the fight. Meanwhile spinners and mill hands suffer, as the Fall River and other mills remain on short time in spite of the fall in prices. the fall in prices.

A slight advance in American took place at Liverpool on Friday under the influence of a moderate demand. The tendency both of spot and futures was, however, easier, the closing quotations being 6.50d., middling 6.28d., for July, and 6.25d. August-September.

Iron and Steel.—With warrants scarce and firmly held, the Glasgow pig iron market has been dull all the week, while the smallness of stocks rendered speculation a dangerous game. Consumers' orders are also quieter, due partly to the annual holidays at some of the large Clyde works. For Cleveland warrants the cash price was 46s. 5d., Scotch being quoted at 52s. 6d. to 52s 9d., though but little iron has changed hands at this figure. Makers of pig-iron are, however, very sanguine as to the future, their hopes being based on the general conditions of trade combined with the small stocks. For Scotch hematite the demand continues well maintained at steady prices, the fluctuations for last few months not having varied more than 6d. to 1s. per ton. Makers of finished

iron and steel in the west of Scotland have been fairly busy during the week, with the annual holidays approaching, but trade itself is quiet. The much talked of combination between the malleable iron manufacturers has fallen through, as several owners asked more for their works than the London syndicate, arranging the combine, were prepared to give. We don't blame them. A second order for twenty engines and tenders has been secured by the North British Locomotive Company, against competition with Continental and United States builders, and there is joy in the hearts of the Glasgow engineers in consequence. Although the condition of the iron and steel trades in the North of England was quieter this week, there is no sign of any depression save among shipbuilders and the branches supplying them with material. The steel rail makers are exceptionally active, having recently booked several large orders. Foreign competition in this direction is also less, the Americans for the moment being out of the market, as their mills are full up with home orders. The quarterly statistics just published show that makers of No. 3 Cleveland have on the average realised about 1s. 2d. per ton more than during the first quarter of the year. At Barrow the hematite pig iron trade, though not over brisk, is still fairly good, the increase in stocks of last week having been followed by another this, the total amount now held being 20,909 tons. Mixed Bessemer numbers are still quoted at 59s. 6d. f.o.b., but warrant iron is easier at 56s. 8d. So far as orders are concerned, there are none coming from America and Canada, though good sales are reported on home and colonial accounts. For rails the demand has fallen off and the mills are less busily employed. This is due mainly to the inability of makers to secure present orders as several large contracts for forward delivery have been arranged. The long expected orders war vessels have not yet reached Barrow, and shipbuilders are feeling very down at the mouth at their delay.

Coal.—The season of "lowest summer prices" is naturally a quiet one, and nowhere is the dullness phenomenal, Lancashire always excepted. Steam coals continue in active demand for railways and export alike, and though the weight of all classes of coal shipped from Hull last month was only 156,543 tons, or 18,486 tons less than in the corresponding month of last year, the aggregate for the six months was 721,173 tons, or 94,424 tons more than in the six months of 1902. Russia was the principal market for the month, but the United States more than doubled its demand, taking 2,000 tons against 950, and to Austria, France, Holland, Italy and Turkey shipments increased. Sweden, on the other hand, took 10,000 less, and Denmark, Belgium, Germany and the East Indies, all show heavy decreases. Shipments from the Scottish ports show a marked increase, and the tone of the Welsh steam coal trade continues to improve. It is rumoured, too, that large orders are pending on Government account.

Copper.—On the whole this market has been dull all the week owing to uncertain advices from America. The further cutting of prices by the Calumet and Hecla at the end of last week produced a decided feeling of weakness which was never recovered, and though no startling drop occurred in quotations prices slipped back a little nearly every day. At the close on Friday the market was quiet, with cash at £56 15s., and £56 2s. 6d. for three months.

Tin.—A pessimistic feeling at present prevails in this market, though no one seems to know exactly why it should. The large bull operators have practically left the market alone all the week and the bears have had it all their own way. Each day saw values down, the fall on Thursday being as much as 45s. for cash and 35s. for three months. Part of this was regained on Friday when the market became steadier, the closing prices being £123 15s. for cash, and £120 10s. for three months.

Sugar.—All the week a steady demand by consumers has been in evidence, highly gratifying to holders who look upon it as an indication that the trade is at last nearing the end of its stocks, and must now more freely enter the market to fill its orders. Prices accordingly show an improvement, July having moved from 7s. 9¼d. to 7s. 10½d., October-December from 8s. 6d. to 8s. 7½d., and January-March from 8s. 8d. to 8s. 9d., while granulated has risen about 2¼d. to 3d. The sugar producers from various countries are holding a meeting in Brussels to discuss the chances of allotting to each country a certain percentage of the exports for the world's consumption. To establish such scheme, Mr. Czarnikow thinks, is impossible, and that the whole idea will end in words. So many circumstances may arise every year that no amount of calculation can provide or plan against them. While the producers are puzzling their brains over this theoretical chimera the official delegates on the invitation of Germany have met, discussed the Russian bounties and adjourned without dealing in any way with Austrian sugars, of which large quantities are tenderable only up to August 10, unless certified to be the product of a country free from our countervailing duties. For cane sugar the demand has been a little more active, the low prices of refining grades having attracted buyers. America still shows no sign of a change for the better though, at the low spot quotations ruling, buyers are willing to provide for future requirements if sellers of distant sugar were prepared to deal on this basis. Stocks have gone up again to 328,000 tons, meltings this week being only 30,000 tons, against 40,000 tons landed at the three ports.

Tea.—As shown in Messrs. Gow, Wilson and Stanton's circular, the average price obtained for Indian tea per lb. in 1902-3 is somewhat disappointing compared with former years. The average price per packet was then 7.52d., in 1901-2, 7.62d., and in 1900-1, 7.24d., which was the lowest quotation on record. The three years previous to that all averaging above 8d. per lb. The coming season promises better, if coarse plucking is prevented, as the statistical position of the trade is stronger than it has been for many years. A fair supply of new tea was offered at auction this week and sold for an average of 6.89d. in 5,914 packages compared with 6,045 packages sold at 6.03d. last year, but so far no very choice teas have been produced, and it is too early to judge as to the quality of the new crop. The Ceylon auctions were dull, the quality of the tea not very good and quotations lower.

Freights.—The state of the outward market remains practically the same, chartering being fairly brisk with ample supply of tonnage to meet all present demands, the miserable state of the homeward market as yet having had no effect. To the Baltic owners are still content to fix steamers on the low basis of 3s. 9d. Tyne-Constadt, in spite of the number of charters recorded being smaller. For Bay and neighbouring ports chartering is limited, but although the labour dispute has come to a head at Genoa owners continue to fix vessels for the port as the trouble is not expected to last long. A different state of affairs, however, prevails at Barcelona, where the dock hands still refuse to work, and shippers are finding it hard to get vessels discharged. Outward charterers to South American ports find no difficulty in obtaining the tonnage they require at 8s., Cardiff, Buenos Ayres, to 10s. 9d. Santos, while in the Eastern market there is more life, although no change in quotations. Save for a slight improvement from ports in the East, the position of the homeward market is as gloomy as ever, with no prospect of a change for the better taking place. Rates, it is true, show no alteration, but without business this means nothing. Even in the States, from which so much was looked for a short time ago, operations are limited to timber freights, while in Buenos Ayres several vessels that went out in ballast are lying there idle, because their owners will not accept 15s. San Lorenzo, United Kingdom or Continent. Prompt vessels in the Eastern ports are decidedly firmer, though chiefly at Bombay and Karachi, the former of which is offering 16s. 6d. to picked port United Kingdom or Continent, while the latter might pay 17s.

Company Reports and Balance Sheets.

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

London and South Western Bank.

Gross profits of this institution for the twelve months ended June 30 were £257,928, or £24,204 more than in the first half of 1902, the decline in revenue then shown being much more than recovered. Current expenses, however, took another jump forward, to £120,728, and the advance in interest paid was no less than £15,277 to £46,733. Rebate took an additional £1,097 at £5,984, and although the balance brought in of £40,899 was £3,982 more, the disposable sum is only £4,610 higher, at £122,881. So the directors again propose a dividend at the rate of 16 per cent. per annum, with another £15,000 to premises account, and an increase in the carry forward to £43,381. At the date of the balance sheet the bank's liabilities on current and deposit accounts were £12,887,210, other liabilities being £333,067, or £13,220,277 in all. Cash in hand and at the Bank of England has risen £295,420 to the satisfactory total of £1,926,458, but we dare not hope the balance is always so high. Money at call and short notice shows a small reduction to £621,520, and the investments are up from £3,449,076 to £3,792,873, all these changes being of a very gratifying appearance. Bills discounted come to £728,106, or £205,390 more, and loans and advances are a little higher at £7,103,247.

London and Provincial Bank.

After making provision for bad and doubtful debts the gross profits of this institution for the six months ended June 30 were £288,582, or £21,908 more than in the corresponding half of 1902. Interest, however, required £11,625 extra, at £78,009, current expenses rose £9,935 to £111,619, and rebate £335 to £3,766, so that the additional outgo was within £13 of the improvement in profit. Balance of £38,435 brought forward being smaller, the sum for disposal is rather less at £133,024, and a small reduction to £10,292 is made in the amount carried to reserve. Dividend as usual is at the rate of 18 per cent. per annum, and after placing £10,000 to premises account, and £5,000 to officers' pension and gratuity fund, the balance carried forward is £36,332, against £36,683. The auditors' certificate again tells us that the banks' investments are of a marketable value considerably in excess of the amounts standing in the balance-sheet, premises are worth much more than their entered figure, and provision for bad and doubtful debts largely exceeds the amount estimated to be at present required, all which is excellent. A further addition of £361,861 to £12,849,525 has been made to the current, deposit, and other accounts, but cash in hand is a little smaller at £1,525,401. Money at call and short notice has risen £345,000 to £870,000. Investments are much the same at £3,910,454, and loans, advances, bill's discounted, etc., £32,000 higher, at £8,633,758.

Manchester and Liverpool District Banking.

As usual this institution makes an excellent display. Compared with the corresponding period of last year the profits for the six month ended June 30 improved £447 to £226,663, and with the balance of £32,283 brought forward also somewhat higher, the entire revenue is £258,947. Expenses and provision for income-

tax requiring rather less at £84,735, the sum for appropriation is £174,212, an advance of £2,895. Twelve months ago the directors paid a dividend of 15s., and a bonus of 5s. per share, or 20s. in all, but now the payment of 21s., or 1s. more, is all declared as dividend. This increase involves a further reduction of £5,000 to £10,000 in the amount placed to reserve, but as that fund now reaches £1,775,000 against the paid-up capital of £1,500,000, no objection to this need be taken. At the date of the balance-sheet the bank had cash in hand and in the Bank of England of £1,761,470, or more than £200,000 less than at the same date in 1902. The proportion to the current, deposit, and other accounts, rather less at £15,413,303, was 11.4 per cent. Money at call and short notice has gone up £100,000, to £1,648,450, and investments are a little higher at £3,280,304. Bills of exchange £2,414,553 show a drop of £219,105, while advances are up from £9,375,648 to £9,449,565.

Bank of Liverpool.

This important north country bank slightly increased its profits during the twelve months ended June 30, the total being £282,287 compared with £277,312, in the preceding year. This advance of £4,975, however, was nearly all absorbed in working expenses, which rose £4,697 to £114,511, and the actual net income is very slightly higher. Nevertheless, the directors increase the dividend by 1 per cent. to 10 per cent., and again pay a 4 per cent. bonus, or 14 per cent. in all, because no appropriation is now made to the contingent account, which, a year ago, received £25,000, under circumstances well known. Surplus reserve received £19,777 against £3,498, and now stands at £658,561, as compared with the paid-up capital of £1,000,000. Including acceptances of £517,258, the bank's liabilities to the public amount to £11,480,500, or rather less than at this time last year. Cash in hand and at Bank of England, is also down to £719,450, a drop of £57,694, and the proportion to deposit and current accounts is a poor one. Money at call or short notice, on the other hand, is heavy, and higher at £1,814,946, investments have fallen a little to £1,520,675, and bills of exchange to £1,951,262. Loans and advances are £6,948,615, compared with £7,309,002, and bank premises are a few thousands up, at £277,386.

Crompton and Evans' Union Bank.

This bank's profits for the year ended June 30 were £54,349, say £200 more than in the preceding twelve months, and with the balance of £1,054 brought forward added in, the sum for disposal is £55,403, against £55,229. After again providing dividends and bonus totalling 18¾ per cent., the directors apply £4,300 in writing down Consols to 90, £2,000 to sinking fund for bank premises and furniture, and £1,000 to provident reserve fund, leaving £1,228 to be carried forward. Scarcely any movement occurs in current and deposit accounts, their total being £4,446,477, while cash in hand at London agents and at short notice has advanced a little to £658,589. Investments have also grown by a small sum to £921,243, bills receivable come to £56,208, and loans and over drafts to £3,256,504.

Union Discount Company of London.

Only those very intimately acquainted with the course of the money market can adequately appreciate the immense difficulties attending the conduct of a big discount business during the past three or four years, and the six months ended on June 30 last was a period no less trying than any of its immediate predecessors. Successful operations called for more than ordinary skill and care, and the management of this important house is entitled to congratulation on the outcome of the half-year's business. Gross profits, bad and doubtful debts provided for, came to £174,552, or £11,750 less than in the corresponding six months last year, but of course actual results depend on the amount deducted for rebate on bills not due. This for the period under review was £9,924 smaller at £111,958, so that the net profit was only slightly lower. Including a larger sum of £41,350 brought forward, and after meeting current expenses, £18,151, the disposable sum is £85,793, from which the usual dividend at the rate of 11 per cent. per annum is proposed, leaving £44,543 to be carried to next account. Balance-sheet figures reach a total of £20,657,052, of which £15,473,626 is represented by bills discounted current. Of these £5,108,051 had been rediscounted, while loans raised and deposits held stand at £14,168,728. Loans granted at call and short notice come to £1,885,932, investments to £2,731,243, and cash to £454,944. All items show expansion compared with the same date in 1902.

Spiers and Pond.

The report and accounts of this company for the year ended March 31 just issued are of a kind certain to seriously disturb shareholders' peace of mind. For some years now the position of the undertaking has been growing steadily worse, and during the period mentioned the retrogression made further alarming headway. The business done is still immense, the turnover in the twelve months being £1,495,946, or about £17,500 more than in the preceding year, but the net profits, after providing an increased amount for debenture interest, have dipped some £14,000 to £63,551. Outgo is divided into two items, wines, spirits, provisions, and other goods consumed £808,926, constituting the first, while the other includes working expenses, management bonuses, insurance, maintenance, amortization, and depreciation of buildings, plant, furniture, etc., and accounts for £577,244. This is a very unfair method of stating the position, and the depreciation allowance ought at least to be separately shown. Otherwise we cannot tell whether the plant, furniture, etc., standing in the balance-sheet at £469,603 have been adequately written down or not. Freehold and leasehold properties are valued at £1,773,939, against which the reserve for lease redemption is £65,151, and is, we suppose, sufficient, but it seems almost incredible that a company of this sort whose business is of a highly fluctuating and uncertain character and which possesses a share and debenture capital of £2,206,000 should have a general reserve of no more than £29,380. This, though is by no means the worst of the position, because we find the Blackpool property mortgaged for £40,000, and that against creditors and bills payable of almost £200,000, debts owing come to £57,660 only, while the cash balance is the fine one of £7,388. The report tells us that in April, 1902, almost £300,000 "D" 4 per cent. first mortgage debenture stock was issued at par, the security being new hotels, but we fancy investors would hesitate now before lending money on such terms. Clearly the concern has had its best day, and if shareholders are wise they will call upon the directors to stay their hands and not continue the creation of immense amounts of debenture debt, which are imperiling the slender return now made on the ordinary shares. It must be remembered that additional rentals were exacted for the renewal of contracts with the District Railway, the Manchester South Junction and Altrincham Railway, and at the Zoological Gardens, and that the contract for Waverley Station, Edinburgh, has not been renewed, all incidents tending to diminish revenue. Business may have been increased by the opening of refreshment rooms at Bexhill on the South Eastern Railway, and Hammersmith and Westbourne Park on the Great Western Railway, but that is no guarantee that they even pay their way, let alone return an adequate profit. The worst drag, however, on the company is undoubtedly its hotels, and these should be looked into. To the net balance of £63,551 is added the amount brought forward, making £71,224, which provides directors' and auditors' fees, etc., preference dividend and 5 per cent. on the ordinary shares, with a reduction in the carry forward to £5,421. Last year the dividend was 7 per cent., and seven years ago as much as 11½ per cent.

Niger Company.

Trading in Nigeria seems to be a highly profitable business, and this undertaking, now shorn of its political powers, makes a very satisfactory display for the twelve months ended December 31 last. After providing a much larger sum of £82,823 for Customs dues in Nigeria, and allowing the increased amount of £17,333 for depreciation, the net profits are returned at £98,384, or £39,338 more than in the preceding year. Nevertheless, the dividend is again restricted to 10 per cent., which enables the directors to place £19,367 more to reserve at £35,000, besides setting apart £30,000 to a debenture redemption fund. Balance carried forward is £4,626, against £6,427 brought in. Since the date of the accounts the Government has paid with interest the balance of £8,000 due for the transfer of Nigeria and the administrative assets of the Royal Niger Company, as the undertaking used to be called, so presumably all accounts with the Government are now closed. As was only to be expected, the company will embark in a little mining enterprise, a favourable report having been received upon the mineral resources of certain areas in Northern Nigeria comprised in the company's prospecting concession. These areas have been found to be tin-bearing, and it is proposed in the first instance to verify the report by instituting workings on a moderate scale, which is wise. Something is to be done, too, in the drink business ,and an agreement has been entered into with the Government of Northern Nigeria for the supply and management by the company of the whole of the canteens in that Protectorate. More welcome than this is the news that the construction, at the company's Burutu depot, of an additional and much larger slipway capable of accommodating the largest river steamers was commenced last year, and has now been completed. It is anticipated that this will not only be of great advantage in maintaining the efficiency of the fleet, but will also become a direct source of revenue. The balance-sheet is a strong one. The appropriation for redemption of debentures is a very satisfactory amount considering that the total outstanding is only £175,000, and at this rate the debt will soon be wiped out. To sundry creditors the company owes £190,972, including £102,600, to bankers, against debts of £108,647, but the goods, stores, cash, etc., in Africa, England, and afloat are valued at £540,397. Then there are Consols £41,313, at their market value, other investments of £14,498, and cash and bills £6,685. Capital additions for the year to buildings, plant, etc., were £16,538, and as £17,333 was allowed for depreciation the assets are a little less at £175,753.

Apollinaris and Johannis.

We shall require legislation presently for restricting the sale of mineral water as well as alcoholic stimulants, the public thirst for "polly"—too frequently mixed we fear with Scotch—being really appalling. Every year a million or more bottes is added to the consumption, the total for the twelve months to March 31 reaching 28,543,578, compared with 27,683,249 in 1901-2, and 26,587,196 in the year preceding that. Revenue for the period under review was £178,339, and after deducting various charges amounting to £6,492, including the nice little sum of £2,625 for the directors, and the miserly amount of £360 for the secretarys salary and office expenses, the net balance is £171,842. This is an advance of £2,050, over last year, a fact that gives the directors exceeding joy, because bottles were dearer, and exceptional advertisement expenses have been incurred, principally in the United States, where the occasion was opportune. The results are distinctly beneficial. We must, however, not forget that the profits for 1901-2 were arrived at after writing off £15,000 for unexhausted advertisements of Apenta water, which takes a little of the gilt off last year's performance. The sales of this water, by the way, have increased 10 per cent. Adding £9,375 to the net profits, the sum for disposal is £181,217, from which debenture interest takes £34,000, and preference dividend £59,500. Ordinary shareholders then receive 5 per cent., the reserve is credited with £5,000 more at £20,000, and the balance forward goes down to £8,217. The

balance-sheet is such a meagre production that no useful criticism can be passed upon it. Capital expenditure remains as before at £3,243,724, against which the reserve totals £60,000, all in the business naturally. A smart jump from £16,601 to £17,305 in the cash balance ought to be mentioned.

International Tea Company's Stores.

In the early part of last year this company raised £200,000 by means of an issue of preference shares, of which £119,069 had been received at the date of the balance-sheet, April 26, 1902. During the past year the balance of this money has been gathered in, and while the uses to which it has been put much improve the company's financial position, its effect on revenue was practically nil. As the new capital must be provided with dividend, this means that the ordinary shares are again called upon to suffer. Trading profit, including new items of Consol and bank deposit interest, was £115,752, compared with £115,129, from which are first appropriated various sums aggregating £51,354. They include depreciation allowance £16,000, or £1,000 more, a further addition of £25,000 to reserve, and directors' fees, substantial at £7,287. Preference share dividend then takes an additional £9,645, at £33,645, and only £30,753 remains for the ordinary shares. Therefore another decline of 2 per cent. to 6 per cent. takes place in the dividend paid on them, with a further moderate increase of £753 to £8,479, in the balance carried forward. The company's issued capital is now £1,100,000, compared with £1,019,069 twelve months ago, while the secured loans, with accrued interest, are £10,574 lower at £8,210. The offset in the shape of reserve to the goodwill account of £651,675, is £130,384, including addition from revenue proposed and £8,567 premiums on preference shares. It is none too much. Part of the money received during the period under review, was used in purchasing the freeholds of various properties in the occupation of the company, and we note that the valuation of the freeholds and long leaseholds has advanced from £135,172 to £161,902. Then £23,644 was used in purchasing £25,000 of Consols, and £23,441 has been aded to the cash balance, making it £85,084. Stock is up from £198,480 to £207,284, an immense figure, and despite the £15,000 written off fixtures and fittings, these, together with leaseholds, plant, machinery, and trade marks are £5,581 higher, meaning that £21,581 was laid out under these heads. Debtors are £11,000 up, at £95,781. All the ordinary shares are in the hands of the vendors, so the general public is not affected by the decline in dividend.

Gilroy, Sons and Co.

This business of jute spinners and manufacturers has struggled through another twelve months, but it seems very near the end of its tether, and unless the improbable happens, we fail to see how reorganisation can be much longer delayed. It is now thirteen years since the company was formed, and for the last ten has completely failed to justify the capitalisation placed upon it. Preference dividends have frequently been heavily in arrear, and the properties, machinery, etc., are entered in the last balance-sheet at exactly the same figure as that given in the prospectus. In other words, not a single penny has been allowed for inevitable depreciation, and despite the directors' assertion that the works are maintained in a high state of efficiency out of revenue, we should fear the outcome of an independent valuation of them. They are certainly not worth their present amount, from the standpoint of earning capacity, by tens of thousands of pounds. Stock-in-trade is up once more, this time to the immense figure of £109,873, and although the cash position is more favourable, and nothing is owing to the bank, creditors exceed debtors by a very large sum. Of the reserve fund of £20,000, only £6,017 is invested separately. In the report made up to May 31 the directors tell us that the works have been well employed, a circumstance which makes the position appear quite hopeless, because the business done yielded the slender profit of £9,817, being a drop of £3,733, compared with the preceeding twelve months, and of £11,215 against the year before that. Interest on debentures, etc., less credit interest, alone takes £5,627 and £723 was absorbed in connection with the renewal of the debentures, so only £2,467 is left. Nevertheless the board has decided to pay the dividend on the preference shares, which means a decline of over £4,000, to £2,912 in the carry forward. We fancy this will prove an expiring effort, and the fact that the undertaking cannot stand its capitalisation should be faced without delay.

Manila Railway.

This company's experiences during the year ended December 31 were somewhat unfortunate. Quarantine restrictions on account of cholera caused a severe falling off in revenue, crops were a partial failure, and the military and Government transport were much reduced, owing to the withdrawal of troops from the zone of the railway. Under the circumstances the fall in receipts of $83,141 to $1,238,235 was not excessive, and as $33,709 was saved in expenses, the ratio of expenditure to gross revenue was practically unaltered. In regard to outlay, however, it should be mentioned that the total of $524,844 does not include a big sum of $70,185, demanded for a new land tax, paid under protest, and kept in suspense pending the decision of the United States authorities as to the company's liability for same. All this by no means ended the company's troubles. Converted into sterling the net surplus was £71,339, against £76,282, but whereas last year there was a profit on exchange of £727, the severe fall in the value of the silver dollar now means a loss of £10,246. So after adding other receipts and providing this loss, together with £3,012 charges in Europe, and £4,055 duties and land tax paid in Manila, the net revenue is £54,212, or a fall of £19,325. From it has been paid interest on first mortgage registered stock, and on "A" and "B" prior lien debentures, taking £42,600. Nothing is paid on the 6 per cent. debentures, but their interest must be carried forward for future settlement, so after providing this and the suspense account, there is a debit to be carried to the balance-sheet of £40,425, making the total £432,099. Altogether the outstanding interest on the 6 per cent. debentures comes to £503 700, while the claims against the Philippine Government per the United States are £302,788, and per the Spanish Government £44,628 in each case including expenses. These claims have had the incessant attention of the directors, of Counsel at Washington, and of the company's representative at Manila. Nothing has yet been definitely settled, but it is hoped that so far as the Philippine Government is concerned, some basis of arrangement may at any moment be established. No settlement of the claims on the Spanish Government has yet been arrived at, but part of them are practically admitted, and merely await the resolution of the Government to deal with claims connected with the war. Traffic prospects for 1903, in spite of the reported failure of crops, are good, judging from the present receipts. It is calculated that one-third of the crop has been lost, due to locust and drought, but the high prices ruling may encourage increased cultivation.

Amazon Steam Navigation Company.

During the twelve months ended December 31 this company received Rs.36,97,458 from freights, fares, etc., and Rs.8,78,691 from subventions, making a total of Rs.45,76,149. Total charges took Rs.41,36,871, leaving Rs.43,92,278, which converted into sterling gave £21,964. Compared with the preceding year, this is an improvement of £8,893, but not only were interest and dividends on investments less at £3,650, but exchange difference on remittances and conversions into sterling, this time resulted in a loss of £672, against a profit of £11,842. Therefore the net profit, after meeting home expenses and income-tax, is £3,628 lower at £19,212, and not only must the 1 per cent., so hastily added to the dividend last year, be withdrawn, but the carry forward is reduced £1,000 to £1,175. The return to the shareholders is 4 per cent. With much pleasure the board confirms the announcement communicated at the close of last year that the Brazilian Congress has approved an extension of the company's contract with the Federal Government until July 31, 1910. The extended agreement which came into operation in January of this year, while maintaining the lines of navigation comprised in the previous one, provides for the establishment of a new monthly service with a special subvention to the Rio Oyapock, which forms the boundary between Brazil and French Guaina determined by the arbitration award of the Swiss Government. No additions are made to the insurance or reserve funds, but they reach £160,000, which is a very fair accumulation against a fleet of 33 steamers, valued at £312,919. The company's investments amount to £123,061, chiefly in Local Loans stock, trading accounts are favourable, and cash comes to £3,584.

Lovell and Christmas.

No time is wasted in making up this company's accounts, and those covering the year to June 30 last are already in shareholders' hands. They will be received with satisfaction for the position disclosed is excellent. With the aid of £50,000 from share premiums, and £2,248 from the year's profits, the reserve is raised to £105,000, as against the freehold and leasehold premises and goodwill of £321,608. Part of the fund is kept away from the business, loans and investments amounting to £74,443, while cash is substantial at £57,660. A rather heavy item is the one of book debts, £229,019, against which the directors reserve £9,000. Stock is very moderate at £20,470. The year's trading, with rents, interest, dividends, etc., resulted in a net profit of £56,795, and from this directors' fees and income-tax absorb £9,555, and debenture interest £5,650. Then the preference dividend is met, the ordinary shares receive 11 per cent., and £2,248, as already mentioned, is placed to reserve. The directors propose to make a donation of £500 to St. Bartholomew's Hospital rebuilding fund, and to increase the carry forward from £6,639 to £11,810. In October last 10,000 new ordinary shares were offered and subscribed at £3 10s. per share premium, the expenses of issue being paid out of profits.

Thomas Parker and Co.

If shareholders in this business of electrical engineers and contractors choose to accept the directors' excuses for the miserable display just laid before them, there is no reason why we should worry, but if we were directly interested a much fuller explanation of the rapid collapse in profits would be demanded. The report says that the reason of the reduced income is entirely due to decreased output from the works. This is accounted for by the necessity of accumulating stock parts of new designs which have been devised to meet the rapid changes due to recent developments and the requirements of the markets. Consequently, it has necessitated a large amount of work to accumulate stock, and to design special tools to meet the conditions and to reduce cost of production. This preparatory labour is now said to be completed, and as the works are full of orders the directors look forward to reaping the advantage of this policy during the present year. Maybe so, but to our mind something more than this is required to explain the slump in profits from £9,049 to £4,872, particularly when we remember that this comes on top of two consecutive falls of £2,000 and £3,000, making a decline of over £9,000 in three years. This time the dividend must come down, shareholders receiving 6 per cent. only against 10 per cent., with the £500 guaranteed to the Wolverhampton Exhibition written off, and £148 carried forward. How much was brought in the report does not say, and the allowance for depreciation is carefully hidden. We note though that the freeho'd land and buildings, goodwill, etc., have risen another £2,439, to £84,234. As usual the company possesses no cash, and while the sum owing to bankers is about £1,200 less at £13,782, debtors have gone down £8,139, to £36,281, against

a drop in creditors of £1,484 only to £14,685. Notwithstanding the large accumulations of stock referred to by the directors the item is up little more than £1,000 to £39,924, and altogether the position seems very unsatisfactory.

Greenwood and Batley.

Another big slump occurred in the profits of this business during the year to March 31 last. After providing debenture interest, management expenses, and for bad and doubtful debts, the net income was £19,178, or £12,490 less than in the preceding twelve months, and when it is remembered that this comes immediately on top of a fall of £11,459, the retrogression assumes a serious aspect. The directors, however, reduce the ordinary dividend by 1 per cent. only, to 4 per cent., with the result that £2,500 less at £5,000 is allowed for depreciation, and the reserve which last year was credited with £10,000, gets nothing. A balance of £3,306 remains to be carried forward, against £3,026 brought in. Up to date £26,309 has been expended by the company in developing the manufacture of the De Laval Patent Steam Turbine Company, and so great is the confidence of the managing directors in the success of the undertaking, which they anticipate will soon be in a profit-earning position, that the board has decided to take additional shares in the English branch to represent the expenditure and not to offer any to outside investors. Property account continues to grow, £10,675 being added against £5,000 written off, and the reserve is not very startling at £30,000, particularly as it is represented by investments of uncertain value. Loan from bankers is much the same at £19,576, but cash has further fallen to £507, and it is fortunate that trading accounts continue favourable. Stocks and stores look bigger at £89,053.

Credit Foncier of Mauritius, Limited.

An unhappy state of affairs is revealed by the report for the twelve months ended December 31, and we fear the shareholders will gather little comfort from the statement that the working of the past year would have shown satisfactory results but for the cattle plague. This caused terrible damage all over the Colony, and entailed a severe financial crisis in which the timely assistance of the Local Government alone saved the Colony from disaster. Time had consequently to be granted to most of the debtors for payment of the annuities and interests due by them, and even with the concessions made the directors fear that losses will be inevitable, but until the next crop is realised it will not be possible to ascertain the actual amount. The total income from interest, management fees, etc., amounted to £76,013, or £6,609 less than a year ago, but a large portion of this is due from clients who were previously in arrears, and whose position has been made worse by the way their estates have suffered, so that the actual amount available is probably considerably smaller. Current expenses in London and Mauritius took £7,567, debenture interest and charges £18,467, and income-tax and trustees' fees £2,234. Although Rs.3,04,375, or nominally, £30,437, was remitted, only £20,000 was received in London, owing to difference in exchange, and as it is estimated that the cost of a further remittance of £20,324 to complete home requirements will be £10,607, the net profits only amounted to £26,700, compared with £34,948. Including £4,835 brought in this year gave a total available of £31,535, out of which the dividend on the preference stock, and an interim dividend of 1s. per share on the ordinary shares were paid for the first six months, but in view of the necessity of making provision for the above-mentioned losses, the directors have decided instead of paying any further dividend to transfer £20,000 to a contingent fund, and carry forward £2,645. With a paid up share capital of £352,343 and a debenture debt of £399,998, the company owes £157,489 for sundry accounts, bank and other loans, and £15,000 on bills payable, making total liabilities of £924,730. Against these investments on mortgages and loans in Mauritus have been increased by £51,794 to £858,116, overdue annuities now amount to £96,991, advances on account of various estates, including interest £155,283, and debtors £33,709. The total assets in the balance-sheet are valued at £1,162,686, and show an apparent excess over liabilities of £237,956, but the auditors appear to doubt the correctness of this valuation, and we fear have only too much foundation for their unbelief.

MINING RETURNS.

Abbott's Proprietary Gold.—Crushed 357 tons, yield 250 oz. From cyanide, 54 oz.; total, 304 oz.

Alaska Treadwell.—Crushed 85,636 tons, value $84,015; saved 1,774 tons sulphurets, value $90,860.

Angelo.—Tons crushed 7,734; ounces, 2,379; tons treated by cyanide, 6,151; ounces, 2,557; total ounces, 4,936.

Antenior (Matabele) Gold.—Crushed 1,260 tons, yield 942 oz.

Associated.—Ore milled 3,787 tons; tailings treated 2,200 tons; slimes treated 475 tons; total, 6,156 oz.

Associated Northern Blocks.—Crushed 822 tons for 4,256 oz.

Associated Tamworth.—Crushed 50 tons for 73 oz.

Atlas.—1,025 tons ore, yield 533 oz.; cyanide 17 oz.; value £2,075.

Balaghat.—2,800 tons produced 2,001 oz.; 2,000 tons of tailings (cyanide process), produced 183 oz.; total, 2,184 oz.

Barrett.—506 oz., valued at £1,700.

Beatrice (Rhodesia).—1,155 tons treated by cyanide, yielding 284 oz., value £819.

Bellevue Proprietary.—1,871 tons of ore crushed, 1,442 oz. recovered; value, £4,900.

Bonanza.—Crushed 8,170 tons; obtained 3,623 oz.; cyanide and slimes works: Treated 8,170 tons, yielding 2,928 oz.; total, 6,551 oz.

Bonsor Gold.—Crushed 4,767 tons, gained 1,236 oz.; treated by cyanide 3,325 tons, yielding 396 oz.; total 1,632 oz.

Burma Ruby.—98,000 loads washed, producing rubies value Rs.1,32,000. Royalties, Rs.22,000.

Cape Copper.—Ookiep mine, 1,859 tons of 15 per cent., equal to 259 tons of fine copper. Nababeep mine, 1,776 tons of 6 per cent., equal to 99 tons of fine copper.

Cassel Coal.—10,296 tons.

Champion Proprietary.—1,105 tons of ore crushed, 603 oz. recovered; 750 tons of tailings treated, yielding 48 oz.

Cherokee (Mexican) Proprietary.—200 tons of ore milled, produced £150; 2 tons concentrates, assaying £115 per ton of 2,000 lb., £230; cyanide and tailings tanks, £560.

Clutha.—Mill, 1,450 tons, value, £1,000; tailings £240; concentrates £64. Total expenses, £1,250.

Coetzeestroom Estate.—269 oz.

Copiapo Mining.—1,100 tons copper ores, averaging 16 per cent.

Craiggiemore Proprietary.—Crushed 1,200 tons, cyanided 780 tons, total yield 505 oz., value £1,670.

Crown Deep.—Tons crushed, 21,448; yield, 4,471 oz.; tons of sands and concentrates treated by cyanide, 16,440; yield, 3,210 oz.; tons of slimes treated, 4,839; yield 445 oz. Total, 8,127 oz.

Crown Reef.—Yield from mill, 7,575 oz.; from cyanide works, 3,588 oz.; from slimes works, 319 oz.; total, 11,482 oz.; 18,585 tons milled.

Cumberland Niagara.—1,185 tons Crushed produced 256 oz.; tailings works recovered 189 oz. from 1,600 tons.

Day Dawn Block and Wyndham.—2,860 tons crushed, yield 1,442 oz., value £5,000. 4,310 tons of tailings, value £2,900; total value, £7,900.

De Lamar.—Crushed 3,050 tons, yielding $25,220.

Dolcoath.—Tons crushed, 9,915 tons 5 cwts. 3 qrs.; black tin sold, 190 tons 9 cwts. 3 qrs. 8 lb.; slimes, 10 tons 19 cwts. 2 qrs. 7 lb.; amount, £15,267 4s. 8d.; average prices, £76 10s. 4d.; slimes, £63 7s. 3d.

Driefontein Consolidated.—Tons crushed, 13,755; ounces, 3,690; tons treated by cyanide, 10,449; ounces, 3,262; total ounces, 6,952.

Durban-Roodepoort.—Milled 5,250 tons for 2,608 oz.; tailings treated, 3,550 tons for 646 oz.; total, 3,254 oz.

Durban-Roodepoort Deep.—Crushed 7,455 tons; yield, 2,616 oz.; tons of sands and concentrates treated by cyanide, 5,320; yield, 1,038 oz.; tons of slimes treated, 2,070; yield 189 oz.; total 3,843 oz.

Eagle-Vulture.—Crushed 1,535 tons for 702 oz.

Eaglehawk Consolidated.—700 tons crushed, 343 oz. realised; 102 oz. obtained from cyanide.

East Murchison United.—Tons treated, 4,408; ounces 1,316; tons of tailings by cyanide, 1,977; ounces, 250; total ounces, 1,566; value £6,653.

Elands'aagte Collieries.—9,763 tons.

Ferreira Deep.—Tons crushed 8,843; yield 4,089 oz.; tons of sands and concentrates treated by cyanide, 6,800; yield 1,447 oz.; tons of slimes treated 2,380; yield 231 oz.; total 5,769 oz.

Ferreira Gold.—Crushed 11,337 tons, yielding 5,043 oz.; concentrates caught, 295 tons, yielding 649 oz.; sand treated, 8,680 tons, yielding 1,705 oz.; slime treated, 4,071 tons, yielding 556 oz.; total 7,953 oz.

Fraser South Extended.—502 oz. from 1,550 tons, value £1,700; from cyaniding 560 tons of sands, 128 oz.; value £480.

French Rand.—Tons crushed 6,363, yielding 1,637 oz.; tons tailings treated 4,810, yielding 1,038 oz.; estimated profit £2,675.

Geelong.—Crushed 3,348 tons, winning 1,444 oz.

Geldenhuis Deep.—Tons crushed, 23,160; yield 5,447 oz.; tons of sands and concentrates treated, 15,583; yield 3,110 oz.; tons of slimes treated, 7,023; yield 522 oz.; total 9,080 oz.

Geldenhuis Estate.—Crushed 10,353 tons; obtained 3,120 oz. from tailings by cyanide, 1,303 oz.; from slimes 550 oz.; from bye-products, 14 oz.; total 4,987 oz.; value £21,183.

Glen Deep.—Tons crushed 12,400; yield 3,018 oz.; tons of sands and concentrates treated 8,460; yield 1,375 oz.; tons of slimes treated 3,850; yield 318 oz.; total 4,707 oz.

Glencairn Main Reef.—3,561 oz.

Globe and Phœnix.—Crushed 6,400 tons for 3,604 oz.; by cyanide: tons treated 3,500, yield 483 oz.; total 4,087 oz.

Glynn's Lydenburg.—Crushed 1,900 tons yielding 559 oz.; cyanide works treated 1,400 tons, yielding 544 oz.; slimes works, treated 485 tons, yielding 181 oz.; total 1,284 oz.; value £5,360.

Golden Horseshoe.—Crushed 11,688 tons, yielding 2,031 oz.; tailings treated 2,220 tons, yielding 1,028 oz.; slimes treated, 8,907 tons, yielding 3,765 oz.; shipped to smelters: sulphide ores 860 tons, yielding 6,856 oz.; concentrates 527 tons, yielding 2,008 oz.; total 12,548 tons, yielding 17,588 oz., value £65,106.

Golden Links.—Battery 1,540 oz.; cyanide 98 oz.; total 1,638 oz.; value £6,678.

Great Boulder Main Reef.—1,655 tons crushed yielded 1,284 oz.

Great Boulder Proprietary.—9,100 tons of ore crushed, yield 13,685 oz.; tailings (old), tons treated 1,855, yield 649 oz.; total yield 14,334 oz.; value £46,586.

Great Fingall.—Tons treated 8,193; ounces 9,023; tons of tailings treated by cyanide, 5,760; ounces 1,434; tons of concentrates shipped 77; ounces 572; total ounces 11,029; value £46,856.

Half-Mile Reef.—1,010 tons for 717 oz. of gold.

Hannan's Reward.—200 tons, yielding 170 oz.; value £655; tailings £160.

Hyderabad Deccan.—Output of coal 29,609 tons.

Ida H. Gold.—1,080 tons, yielding 991 oz.; 880 tons cyanide, yielding 181 oz.; value £4,612.

Imani.—Crushed 1,340 tons, yielding 809 oz. retorted gold, equivalent to 12 dwts. per ton.

Ivanhoe.—12,238 tons crushed, yielded 4,410 oz.; 6,446 tons of sands treated yielded 1,850 oz.; 5,199 tons of slimes treated yielded 1,853 oz.; 593 tons of concentrates treated yielded 2,290 oz.; 150 tons of telluride ore treated yielded 139 oz.; 10,542 oz., value £44,750.

Jumpers Deep.—Tons crushed 15,332; yield 2,870 oz.; tons of sands and concentrates treated by cyanide 9,950; yield 1,844 oz.; tons of slimes treated 5,217; yield 335 oz.; total 5,050 oz.

Jumpers Gold.—Crushed 1,970 tons; obtained 296 oz.; from tailings by cyanide 169 oz.; total 465 oz.

Lady Loch.—Crushed 375 tons of ore, yield 410 oz.; average value of tailings 48 grs.

Lake View Consols.—7,418 tons treated, yielded 4,905 oz.; value £20,321.

Lake View South.—Robinson: Crushed 288 tons, yielding 279 oz.; cyanide plant, treated 900 tons for 118 oz.; L.V. South slimes, treated, 1,375 tons for 219 oz.

Lancaster Gold.—Crushed 11,297 tons, yielding 2,076 oz.; cyanide works 6,034 tons, yielding 989 oz.; total £13,020.

Lancaster West.—Crushed 6,643 tons, yielding 2,074 oz.; cyanide works 4,454 tons, yielding 620 oz.; total value £11,444.

Langlaagte Deep.—Tons crushed 13,131; yield 2,995 oz.; tons of sands and concentrates treated by cyanide 10,002; yield 1,179 oz.; tons of slimes treated 2,946; yield 147 oz.; total 4,321 oz.

Langlaagte Estate.—Crushed 22,158 tons, yielding 5,572 oz.; tailings, tons treated 15,750, yielding 1,712 oz.; concentrates, tons treated 640, yielding 1,051 oz.

Le Roi.—Shipped to the Northport smelter 11,289 tons containing 4,500 oz., 4,480 oz. silver, and 227,700 lb. copper. Shipped from the Dump to the Northport smelter 51 tons containing 26 oz. gold, 36 oz. silver, and 927 lb. copper; profit, $8,000.

Mesquital Mines.—Crushed 1,300 tons for 475 oz.

Meyer and Charlton.—2,223 oz. from 7,564 tons crushed; 1,424 oz. from cyanide; 3,647 oz. from all sources.

Morven (Rhodesia).—Crushed 1,196 tons, producing 783 oz.; value, £2,994.

Mount Boppy Gold.—2,374 tons, 766 oz.; 1,772 tons of tailings, 833 oz.; 762 tons of slimes, 553 oz.; total, 2,152 oz.

Mungana (Chillagoe).—1,671 tons containing 70¾ tons of copper, 10,654 oz. of silver, and 247 tons of lead, shipped to the Chillagoe Company's smelting works.

Mysore.—13,520 tons produced 14,284 oz.; 9,635 tons of tailings (cyanide process) produced 1,203 oz.; basebar, 205 oz. Total, 15,692 oz.

Mysore West and Mysore-Weynaad Gold.—853 oz. from 1,800 tons crushed.

Natal Steam Coal.—Output 2,800 tons.

New Chillagoe.—treated 3,978 tons copper ore and 2,195 tons lead ore, producing 426 tons copper matte and 533 tons lead bullion, containing 219 tons copper, 533 tons lead, and 46,616 oz. silver.

New Goch.—2,306 oz. from 8,118 tons; 759 oz. from cyanide; 781 oz. fine gold from concentrates; profit, £2,613.

New Primrose—6,635 oz.

New Queen.—176 tons crushed for 42 oz.

New Unified Main Reef.—2,641 oz.

New Zealand Crown.—Crushed 3,150 tons, yielding £6,879.

Nile Valley.—15 tons milled from ore on dump, yielded 200 oz.; also 15 cwt. first class ore, yielded 370 oz.

Nourse Deep.—Tons crushed 13,500; yield, 3,390 oz.; tons of sands and concentrates treated by cyanide, 10,001; yield, 1,856 oz.; tons of slimes treated, 3,483; yield 280 oz.; total, 5,528 oz.

Nundydroog.—5,550 tons produced 5,281 oz.; 5,018 tons of tailings (cyanide process), produced 541 oz.; total, 5,822 oz.

Oroya Brownhill.—Crushing 3,944 tons for 8,041 oz.; value, £29,833.

Queensland Copper.—1,100 tons ore treated, production 220 tons matte; value, £3,200.

Red and White Rose.—1,109 oz. from 2,986 tons crushed; recovered by cyanide, 195 oz. from 2,221 tons treated; total, 1,304 oz.

Rezende.—Crushed 3,250 tons; recovered 1,152 oz.; from tailings by cyanide, 152 oz.; total, 1,304 oz.; total, 1,304 oz.; value, £5,542.

Rietfontein "A."—2,796 oz.

Robinson Deep.—Crushed, 20,145 tons; obtained 6,562 oz.; 2,935 oz. from tailings by cyanide, and 546 oz. from slimes.

Roodepoort Central Deep.—Crushed 6,024 tons, yielding 2,506 oz.; cyanide, 4,145 tons treated, yielding 904 oz.; total, £14,484.

Roodepoort United Main Reef.—2,646 oz. from 6,400 tons; 734 oz. from cyanide; profit, £4,575.

Rose Deep.—Tons crushed, 18,353; yield, 3,899 oz.; tons of sands and concentrates treated by cyanide, 12,800; yield, 2,674 oz.; tons of slimes treated, 5,875; yield, 370 oz.; total, 6,943 oz.

St. John Del Rey.—£24,000; yield per ton, .60 of a noz. troy.

San Ramon (Chihuahua, Mexico).—Six bars, containing 8,324 oz. silver, 77 oz. gold, realised £876.

Santa Rosa.—Production from leased properties, $2,500; Company's properties, $12,500.

Simmer and Jack Proprietary.—Crushed, 21,894 tons; obtained 5,564 oz.; 2,564 oz. from tailings by cyanide, and 347 oz. from slimes.

Sons of Gwalia.—Ore crushed, 7,982 tons, 4,103 oz.; tailings treated by cyanide, 4,500 tons, 1,304 oz.

Surprise.—Crushed 2,195 tons, gained 761 oz.

Taitapu Gold.—275 oz. from 715 tons crushed.

Talisman Consolidated.—Tons treated, 3,850; value, £7,518.

Tomboy Gold.—Crushed 8,000 tons; yielding $53,500; concentrates shipped, 750 tons, $17,000.

Transvaal Gold.—Crushed 5,422 tons, yielding 2,156 oz.; cyanide works, treated 3,470 tons, yielding 1,134 oz.; slimes works, treated 1,870 tons, yielding 446 oz.; total, 3,736 oz.; value, £15,868.

Transvaal and Delagoa Bay Investment.—Output of coal, 33,720 tons.

Treasury.—Crushed 8,100 tons for 3,887 oz.

Twin Lakes Placers.—Cubic yards of gravel washed, 170,000; value, $3,550.

Tyee Copper.—Smelted, 2,246 tons; mattee produced, 293 tons; gross value, $31,879.

Vale of Coolgardie Gold.—Crushed 915 tons, yielding 218 oz.; cyanide, treated, 1,025 tons, yielding 86 oz.; total, 304 oz.; value, £1,110.

Village Main.—6,400 oz.

Vivien Gold.—525 tons milled, yield, 319 oz.; value, £1,353.

Vogelstruis.—4,400 tons for 1,812 oz.; tailings treated, 3,300 tons for 507 oz.

Wanderer (Selukwe).—Crushing 9,147 tons, yielding 1,886 oz.; value, £6,658.

Waterson Gold (Chihuahua, Mexico).—17 bars containing 316 oz. gold, 17,211 oz. silver, realised £3,114.

Westralia and East Extension Mines.—Crushed 2,000 tons, yield, 1,492 oz.; cyanide return, 1,200 tons tailings treated, 258 oz.

White Feather "Reward."—340 tons of ore milled; total, 339 oz., namely 186 oz. from mill, cyanide process 66 oz., slag concentrates 87 oz.; value, £1,100.

Witwatersrand Gold.—Crushed 8,200 tons, yielding 2,075 oz.; cyanide treated, 6,290 tons, yielding 1,663 oz.; total, £15,881.

Witwatersrand Deep.—Tons crushed, 5,969; yielding 1,359 oz.; tons of sands and concentrates treated by cyanide works, 3,941; yielding 1,009 oz.; profit, £1,355.

Richmond Gas Stove.—Interim dividend for six months ending June 30 at the rate of 6 per cent. per annum on the £5 cumulative preference, and at the rate of 10 per cent., on the £1 ordinary.

Rosario Nitrate.—Interim dividend of 3 per cent. on account of the year ending September 30, 1903, payable 15th inst.

St. James' and Pall-Mall Electric Light.—Interim dividend for half-year ended June 30 at the rate of 10 per cent. per annum on the ordinary shares.

Scottish American Mortgage.—Dividend for year ended May 31 of 7 per cent., half of which has already been paid on account.

Short's.—An interim dividend of 5s. per share upon the deferred ordinary.

Spiers and Pond.—Dividend of 5 per cent. for year ending March 31, carrying forward £5,420.

Telegraph Construction.—Interim dividend of 12s. per share.

United States Steel—Quarterly dividend of 1¾ per cent. on the preferred stock, payable August 15, and a quarterly dividend of 1 per cent. on the common, payable September 30.

The Act of Parliament giving effect to the amalgamation of the "Pelican" and "British Empire" Companies has now come into operation, and the directors have appointed Mr. E. R. Straker, F.I.A., to be actuary, Mr. A. E. White to be agency manager, and Mr. J. R. Turner and Mr. J. H. Barnes, F.I.A., to be secretaries of the Company.

COMPANY MEETINGS.

GEELONG GOLD MINING.

The fifth ordinary general meeting of the Geelong Gold Mining Co., Limited, was held on Monday, July 6, at Cannon Street Hotel, E.C.,, Mr. Henry Partridge presiding.

The Secretary having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—On reference to the balance-sheet, you will see that, during the past year, the capital account was increased from £201,000 to £221,000 by the issue of 20,000 shares at par to the parent company, the Matabele Reefs, in part payment of advances. During the present year a further 4,000 shares have been taken in a similar way at 30s. In December £31,790 was received on account of the issue of 50,000 debentures. £3,980 was owing to creditors, as against £9,487 in the previous year, and £29,916 remained due to the Matabele Reefs on account of the £46,510 shown in the previous account. The balance of calls on debenture issue has since been received, reducing the debt still remaining due to the Matabele Reefs to £9,000 odd, which is covered by the amounts shown on the other side of the account under the heading of debtors, cash and bullion in hand. Property account remains practically at the same figure as previously. £3,700 has been spent on permanent works at the Valley Mine, increasing that item from £16,000 to £20,000. You will notice that the reserve, shown in the last account as £38,969, has been utilised to wipe off the balance of £14,617 at profit and loss account, and to reduce the amount standing at development account from £66,000 to £42,997. In view of the ascertained fact that much of the development done in the old Geelong Mine may now be regarded as unproductive, your directors believe that this account should now be reduced to reasonable figures, and that, having now begun to crush for profit at the Valley Mine, it was equally desirable to re-open our profit and loss with a clean slate by writing off the debit balance which had accrued during the troubles and disappointments attaching to the old Geelong Mine. Of these transactions I think every shareholder will approve. The boreholes I referred to last year were abandoned at various depths without having located the ore chute in depth. Enormous bodies of low grade ore, running to 20 ft. in thickness, remain in sight in the old stopes, but Mr. Huntley states that they are seemingly mostly of too low grade to be profitably mined under present conditions. He goes on to state that the reef has never been crosscut nor driven upon at the 828 ft. level—that is, at the bottom of the main shaft. Continued working has frequently discovered other payable ore bodies behind faces of low grade material, and, in view of this, prospecting work in the eleventh level was commenced in December and continued for several weeks, until the crushing of the Geelong surface débris discontinued, when the whole of the labour was, for the present, transferred to the Valley Mine, it apparently being the intention of Mr. Huntley to defer any further prospecting and development in the old Geelong until the work can be done more economically than under existing conditions. At the Valley a large amount of work was done during the past year, transforming this property from what Mr. Huntley described as "an unpretentious prospect two years ago," into what he now refers to as "a mine with a large tonnage or ore." During the year the main shaft was sunk 201 ft. —that is, down to 537 ft.—and the total footage of the mine was increased from 2,197 ft. to 4,438 ft. Most of this work was confined to the south reef. With depth, the copper contents have decreased; otherwise the character of the ore has not changed, its former good average grade being maintained. The second level, at 210 ft. depth, extends 900 ft., about 600 ft. of which show pay ore. No. 3 level, at 343 ft. depth, extends 595 ft., 500 ft. of which show pay ore. The fourth level, 208 ft. in length either side of the main shaft at the beginning of May, is all in pay ore, and the faces of the drives average 4 ft. of 15 dwts. ore. The mill ran for the last five months of 1902; 8,660 tons of ore were takekn from the Geelong stopes and 15,497 tons from ancient dump and débris on the surface. From this 24,157 tons of mixed ore 5,971 oz. of smelted gold were recovered on the plates. During January and February of the present year the mill ran on similar but poorer ore, 9,017 tons being crushed for 1,865 oz. The result of these two months' crushing barely covered expenses, but had the advantage of keeping the mill running until the Valley Mine was ready to supply ore to the mill. During the month of March, the tram line to the Valley Mine being available, some ore was brought to the mill from that source; during the month 2,019 tons of ore were taken from the old Geelong, and 1,783 tons from the dumps at the Valley, and crushed for a mill extraction of 1,360 oz. of bullion, the average yield being nearly double that of the previous month. The latest reports on development—namely, for April and May—are as follows:—The drive west from the main incline shaft was expected shortly to connect with the drive east from No. 2 shaft west, and, at the point reached at the end of April, continued to show the same fine body of ore as in the previous months, averaging in value 33.6 dwts. over a width of 40 in. At the beginning of May preparations were being made for stoping ore on the second and third levels, where the reef exposed continued invariably to show good average widths and values. In the report which has arrived by the mail, opened this morning, giving the assay value for the month of May, the average width of the reef is 35 in., and the assay value 29.9, and the cable announcing the crushing for June, which also arrived this morning, is as follows:—"Forty stamps ran 26 days 2 hours, crushing 3,348 tons, winning 1,444 oz., average value 8.61 dwts. per ton; 788 tons from Valley dump, and 2,560 from stopes." This is an improvement as regards the average value. From

what I have told you, and what is in the report, it will be seen that we have in the Valley a mine of great promise, which, under the able management of our consulting engineer, Mr. Huntley, is likely to compensate us for the great disappointments we experienced in connection with the old Geelong, and will repay the patience and loyalty of those shareholders who have held to their shares during the bad times through which we have passed. I now beg to move: "That the report of the directors, together with the annexed statement of the company's accounts to December 31, 1902, be received and adopted."

Colonel the Hon. C. G. Gathorne-Hardy seconded the motion.

After the Chairman had replied to several questions, the motion was put and carried unanimously.

Mr. Henry Partridge was then re-elected a director, and Messrs. Fuller, Wise and Fisher reappointed auditors to the company, a vote of thanks to the Chairman and directors terminating the proceedings.

WEST NICHOLSON GOLD.

The fourth ordinary general meeting of the West Nicholson Gold Mining Co., Limited, was held on Monday, July 7, at the Cannon Street Hotel, E.C., under the presidency of Mr. Henry Partridge.

The Secretary having read the notice convening the meeting and also the report of the auditors,

The Chairman said: Gentlemen,—With your permission, I will first refer to the balance-sheet, which deals with the whole of the company's financial affairs, no profit and loss account having been prepared in consequence of there having been no crushing operations during the year. You will notice that the capital issued has been increased from £210,000 to £235,000 by the issue of 25,000 shares to the parent company, the Matabele Reefs, in part repayment of advances made previous to December, 1901, which was referred to last year. The next item refers to the issue of £75,000 debentures, on which £46,865 had been paid up before the end of the year, leaving a final call of £28,135, not then due. Taking the last three items on the liabilities side of the account, you will see that the total indebtedness of your company was £48,315, against which there has since been received £28,000 odd on debentures. The total advances of the Matabele Reefs to this company now amount to £40,300, as against £83,000 which was owing at the date of our last meeting. In this amount are included the heavy expenses incurred in connection with the transport of machinery and the erection of the mill, which, as you will have read, is approaching completion. On the assets side you will see that property account remains as in the balance-sheet of the previous year. About £13,000 was spent in development during the year, making a total of £62,983 expended in the mine. About £1,250 was spent on buildings, permanent works, and the item of live stock, wagons and stores, including cost in transit, was increased by about £11,000—principally in consequence of the increased population to be provided for at the mine. Expenditure in London and South Africa was increased from £7,496 to £21,881, including interest £4,881, depreciation £1,872, and the expenses of the debenture issue amounting to £4,034, while the profit and loss account remains at £3,453, as in the previous account. The expenses of the debenture issue, which included an underwriting commission of 5 per cent., amounting to £3,750, is an exceptional item, while the item of interest, which last year amounted to £4,881, will, we hope, be next year covered by milling profits. When I referred to the proposed debenture issue at our last meeting I referred to a possible issue of £100,000, which, after paying off our debts, would leave about £60,000 available for the erection of the new mill and development expenses to date of crushing. On receipt of further estimates we were advised that an issue of £75,000 would meet our requirements, and while this did not provide for contingencies, your directors being anxious to keep the debenture issue as low as possible, it was determined to restrict the issue to £75,000. Unfortunately, the estimates were considerably exceeded, principally in consequence of the enormously increased cost of transport owing to the prevailing cattle sickness in the country, hence our indebtedness to the extent of £40,000. In view of this extra cost it might have been desirable to delay the transport of the machinery and the erection of the mill, but having carefully considered the matter, in view of the long delay and disappointments caused by the war, your directors believed the shareholders would prefer to incur this debt and spend this extra money for the erection of the mill rather than wait another year or more for the fulfilment of the hopes of a return from the mine on which our reports led us to rely. The new battery which was exported in September last year, was not received at the mine until the middle of December, when the work of erection was at once started. It is hoped that the works will be completed and crushing commenced in August, but, although we have not been warned to expect any delay, the difficulties of transport have been so great that we shall not be greatly surprised if the stamps do not fall until some weeks later. Since Mr. Huntley took charge of the mine in February, 1902, development work has steadily progressed. The main shaft was sunk, to the fifth level, at over 500 it. The fact that the total footage accomplished at the West Nicholson now amounts to about 13,000 ft., distributed over five levels, mostly in payable ore, is very satisfactory evidence of the probable life of the mine, and while the average value of the ore is not high grade, it must not be forgotten that the West Nicholson is situated in a peculiarly advantageous position for economic working. Labour is always abundant at the mine, while the Umsingwani River, providing an unlimited and continuous supply of water, runs through the property, and the company owns a sufficient supply of wood fuel to last for many years, which latter will, I trust, not be much longer drawn upon. With the coal from the Wankie coalfields, which will be ready for sale as soon as the railway reaches the pits in August, and the advantages of railway transit by the Gwanda Railway, which is now practically at the door of the West Nicholson mine, the working costs should, as soon as the mine is fairly started, be very low. Acting upon the recommendations alluded to in last year's report, and to which I referred at the meeting, your directors have purchased from the Matabele Reefs 60 claims on the East Olympus reef, which joins this property on the east side of the Umsingwani River. The price to be paid for these claims is 30,000 fully-paid shares in this company, out of which the rights of the British South Africa Company have to be satisfied, this company undertaking to reimburse the vendor company for its expenditure on the development, which has been continued under Mr. Huntley, amounting to about £15,000. On these claims some 3,500 ft. of development has been done, providing reserves of about 30,000 tons of from 8 to 10 dwts. ore, of a value far more than the cash paid for the development. I will now move the adoption of the reports and accounts.

Colonel the Hon. C. G. Gathorne-Hardy seconded the motion.

Several questions were then put to the chairman, and he having replied to them, the motion was put and carried unanimously.

Mr. Partridge having been re-elected to the board, and Messrs. Fuller Wise, and Fisher reappointed auditors, the proceedings then terminated.

EAGLE-VULTURE MINES.

The fifth ordinary general meeting of the Eagle-Vulture Mines, Limited, was held Tuesday, July 7, at the Cannon Street Hotel, E.C., under the presidency of Mr. Henry Partridge.

The Secretary having read the notice convening the meeting, and also the report of the auditors,

The Chairman said: Gentlemen,—I have much pleasure in asking you to approve the report in your hands, which, after the many difficulties we have passed through, and particularly our exceptionally bad luck in the breakage of the dam, I think you will have found very satisfactory reading. Referring first to the balance-sheet, you will note that the capital issued has been increased from 152,000 to 172,000 shares by the issue of 20,000 shares at par in part payment of advances made by the parent company, the Matabele Reefs. The liabilities of the company on open account and bank overdrafts amount to £2,400, as against £4,000 in the previous year. The amount due at the end of the year to the Matabele Reefs was £23,000, as against £29,600 in the previous year. In consideration of these advances the Reefs have an option on shares at par to the extent of 5,000 shares, which will probably soon be exercised, and the balance may be covered by an issue of reserve shares or repaid out of profits, which are at present quite satisfactory, and which will probably considerably increase later on, when the costs of transport are reduced by the aid of the Gwanda Railway and the traction engines belonging to the parent company, which are now available for haulage. Since the beginning of the year the debt of £23,000 has been reduced by about £4,000 out of profits. On the assets side the property account, at £102,700, is unaltered, and the outlay on mine development has only been increased by some £500, in consequence of the work having been suspended during the uncertainty of the supply of water to the mill, which, as you are aware, is now happily removed. The other items on this side of the account are practically unaltered, and the financial position of the company is that, while we have spent all our available capital, and owe some £19,000, we have 28,000 reserve shares, which at par would more than cover the whole of our liabilities, which practically, and happily, are due to one creditor, and that the parent company and largest shareholder. In the report of our consulting engineer, Mr. Huntley, the occurrences of note during the year are summed up in a concise and workmanlike manner. The 15-stamp battery was completed in February, the No. 3 dam—the dam on which we relied for water—was finished in March, too late to catch the water of the 1901-2 rainy season. In December 14 ft. of water was caught in the dam, and at the date of the report—January 23—Mr. Huntley was of opinion that there was an abundance of water secured for milling purposes throughout the year. Only four days after that report was written, during furious rain, 45 ft. of the embankment in the centre of the dam were washed away and the water was lost. Although it was estimated that the dam might be repaired in two months, we knew that it would be too late to catch sufficient water for the year's operations, and our prospects of running during this year were very black indeed. However, Mr. Huntley, while by no means sanguine of success, intimated that there was the possibility of obtaining water from other sources, and that everything that was possible to enable the mill to run would be done. Although by no means very hopeful, we knew from experience that we might place perfect reliance on the energy and ability of our engineer before whom all difficulties seem to disappear, and, as you have been informed, the mill ran for three days in February, seventeen in March, nineteen in April, and twenty-eight in May, since which date it has been running steadily and satisfactorily on ore of an average value of over 15 dwts. The water is obtained from a series of shallow wells on low ground, while a system of pumps and sand and water tanks for storing and re-using the water from the mine and shafts has been completed. As regards the much-discussed question of labour, I should like to say a few words. Generally speaking, the group to which this company belongs is particularly fortunate in a supply of labour of all descriptions. It is pretty well known, both in Rhodesia and to those who are most interested in Rhodesia at home, that this group has the best hospital down in Gwanda outside of Bulawayo, that the natives are thoroughly well cared for and well fed, and that, while they are treated in a firm manner, they are at the same time treated kindly and considerately. In a well-informed paper, I read yesterday an article on Rhodesia, in which reference was made to labour at the Eagle-Vulture mine. I confess I did not understand

the reference, which was that the manager of this mine was not paying the ordinary tariff wages. The only explanation I can conceive is that at this and other mines belonging to this group the drill boys are paid for piece work instead of being paid daily wages. I have been to this and the other mines in this district, and I happened to be there when the system of piece-work was instituted. Before I left I was absolutely satisfied that the boys were not only much better pleased with the system of being paid for piece-work, but they did their work much better and in much less time. It is the drill boys with whom we have the greatest difficulty when we have labour troubles. At the present moment there is far more native labour offering in Rhodesia than is required for all the mines; the only scarcity is with the drill boys. You will understand that they have to be taught; they do not very readily learn their work, and, in many cases, having once obtained the higher wages payable to drill boys, they never go back to the mines. In our case, happily, we practically always have the same boys back again, and we have now boys working for us who have been there for six or seven years. I mention this because during the last two or three days many people have asked me how we are getting over the labour difficulty. At present we have no labour difficulty; the only sign of any difficulty is the fact that we have been occasionally short of drill boys, and that happens more particularly at this time of the year. I mention this particularly, as the cable giving the output for the last month is just in, and shows a reduction of 200 oz. on the previous month in consequence of the want of more drill boys to carry on the increased development which is being done at the mine. I beg now to move—"That the report of the directors, together with the annexed statement of the company's accounts to December 31, 1902, be received and adopted."

Colonel the Hon. C. G. Gathorne-Hardy seconded the motion, which was carried unanimously.

On the motion of Colonel the Hon. C. G. Gathorne-Hardy, seconded by Mr. William Rhodes, Mr. Partridge, the retiring director, was unanimously re-elected.

Messrs. Fuller, Wise and Fisher were reappointed auditors; and a vote of thanks having been accorded to the Chairman and directors, on the motion of Mr. Harvey, seconded by Mr. Skeel, the proceedings terminated.

JESSIE GOLD MINING.

The fifth ordinary general meeting of the Jessie Gold Mining Co., Limited, was held on Tuesday, July 7, at the Cannon Street Hotel, E.C., under the presidency of Mr. Henry Partridge.

The Secretary having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—The report in your hands not only gives a very full account of the work done on your properties during the past year, but brings that account up to the end of April—two months ago—and shows a very considerable improvement in the position and prospects of your company at that date, all of which, I trust, you have found satisfactory reading. Dealing first with the balance-sheet, the capital issued remains as at the end of 1901. Arrears of calls, which at that date amounted to £10,000, have now been reduced to £3,790. The amount due to creditors is practically unaltered. The property account stands as in last account, while £4,844 was laid out on permanent works, as against £852 the previous year, and £10,482 in development and mine expenses, as against £7,041 in the previous year. Buildings, machinery and other similar accounts remain at the same figures, less depreciation written off. Debtors in London figure as £8,248, as against £18,414 in the previous year. Notwithstanding the delays and difficulties, owing to the war and cattle sickness, good progress was made in the development of your mine during the year, with very satisfactory results. The footage was increased from 3,350 ft. at the end of 1901 to 5,198 ft., and during the first months of the present year some 700 ft. have been added to the total, with increasingly satisfactory results. When I had the honour of addressing you last year, I told you that our consulting engineer, Mr. Huntley, would not express any definite opinion on the value of prospects of your mine until the main shaft, then down 290 ft., had been sunk another 100 ft., and the fourth level opened up. The driving on this level was commenced in November last, and has been attended with very satisfactory results, the average width of the reef being 34 in. and giving a value of over 19 dwts., while Mr. Huntley estimates that fully 25,000 tons of ore of 10 dwts. value and upwards will be developed above this level. At the end of the year the main shaft was down to 413 ft., and recent reports show that the west drive has been carried to 123 ft., the reef showing an average width of 35 in. of an average value of over 21¼ dwts.; while the east drive, at the same date, had been carried to 131 ft., and showed an average width and value of 33 in. and 16 dwts. On this satisfactory showing Mr. Huntley, in his report, expresses the hope that milling will be started some time during the present year, either at the company's own battery or at a larger mill in the district, as suggested in his report of the previous year, and in a cablegram received a few days ago he states positively that the mill will crush this year. While the Jessie is not at present a very large proposition, the assay results from recent developments, appended to the report in your hands, show very satisfactory values throughout the mine, and that the prospects have not only improved very materially during the past twelve months, but may now be accepted as most satisfactorily. You are aware that a 15-stamp battery, with the necessary accessory machinery, is already at the mine. If Mr. Huntley has decided to crush the Jessie ore at a central mill this machinery will probably be disposed of to form a part of a larger battery to be erected in the district, and the proceeds will be used for development purposes up to date of crushing. If the battery be erected on your ground the money required for its erection, and for the continuance of development up to date of crushing will either be provided by the parent company, the Matabele Reefs, or, if markets improve, by a further small issue of shares. Our position to-day shows a small balance of cash assets over cash liabilities. The management in Rhodesia are to be congratulated upon having overcome the many difficulties with which they have been opposed in the development of the mine, and we, as shareholders, have grounds for very great satisfaction in the improved showing and assured position of the mine. The Gwanda Railway is now practically finished to within a few miles of your property, and, when open, with railway facilities and the employment of traction engines, which have been exported by the Matabele Reefs for use in the Gwanda district, we shall be practically independent of the difficulties arising from the cattle sickness amongst trek oxen, which is the most recent trouble that has overcome the country, and, we hope, the last with which we may have to contend for a long time to come. You will observe, in the report of the managing director, that he states that native labour on this property continued throughout the year, and is at this date abundant, both surface and underground boys being always easily obtainable at ordinary wages in any number required. This abundance of labour, as you are aware, is almost confined to the district in which your mine is situated, and the remark I have quoted does not, unfortunately, apply throughout the year to the whole of the districts of Rhodesia, although at the present time surface labour is very plentiful all over the country. We hear from every district that the ordinary surface boys are plying for work in larger numbers than are required. At present the only coloured workman on the mine who is wanted is the drill boy, in the supply of which we always have more or less trouble at this time of the year, seeing that every raw native has to be taught, and a good many of them take some teaching before they are fit to be trusted with the drilling tools. I now move: "That the report of the directors, together with the annexed statement of the company's accounts to December 31, 1902, be received and adopted."

Colonel C. G. Gathorne Hardy seconded the motion.

Mr. Galbraith Horn suggested that an improvement should be made in the maps issued with the report, and additional information.

The Chairman said he would ask Mr. Huntley, their consulting engineer, to supply the measurements and assays in the map next year, so that non-experts would be better able to understand the position. As complete, a map would be provided in future years, which, if not published, would at any rate be available to the shareholders at the offices of the company.

The motion was then unanimously agreed to.

Colonel Gathorne Hardy proposed the re-election of the retiring director, Mr. Henry Partridge, which was seconded by Mr. Wm. Rhodes, and carried unanimously, and, on the motion of Mr. W. H. Skeel, seconded by Mr. Meiszner, the retiring auditors, Messrs. Fuller, Wise and Fisher were also reappointed.

A vote of thanks to the Chairman and directors having been passed the proceedings then terminated.

INTERNATIONAL TEA COMPANQ.

The ordinary general meeting of the International Tea Company's Stores was held on Friday, July 9, at Winchester House, Old Broad Street, under the presidency of Mr. H. E. Kearley, M.P.

The secretary having read the notice calling the meeting,

The Chairman, in moving the adoption of the report said the profit which they had to deal with was £123,000, which are in excess of last year by £650. The volume of trade was much larger than that of the previous year, despite the fact that the markets had been more adverse during the past twelve months than they had been in any other period. At present the outlook of the markets was in the other direction, that was to say as far as they could judge, instead of being confronted as they were during the whole of the past twelve months with adverse markets, there was a general decline in food products coming in from all sources, so that if they continued to increase the trade during the next twelve months as they had in the past year, they ought to show at the next meeting a very considerable increase in the profits. They had written off for depreciation £16,000, which was £1,000 more than last year, and they had placed to reserve account the considerable sum of £25,00, bringing the account up to £130,383. Their clear and defined policy was to continue to increase the reserve, and considering this was only the eighteenth meeting since the company was established, he thought they had reason to congratulate themselves on having built up such a substantial reserve. In a business like theirs, which was always extending, it was necessary to bear in mind the necessity of having a solid foundation on which to work, and the strongest foundation was that of a substantial reserve fund. The dividend on the ordinary shares was 2 per cent. less than last year, but that did not arise from the fact that the profits compelled them to declare a lower dividend, but simply in pursuance of their policy. It would easily be possible to declare a dividend of 10 per cent., but there were only two ordinary shareholders, Mr. Tonge and himself, and they might take it as evidence of self-abnegation on their part that they preferred to allow some of these handsome profits to go towards the establishment of a reserve instead of being placed in their pockets. The extensive additions to their warehouses in Durward Street were approaching completion, and if any shareholders happened to be in

the neighbourhood, he would advise them to call and see what a splendid investment they had there, both from a commercial opint of view, and from the point of view of freehold ownership. He hoped the new warehouses would be ready for occupation in a few weeks, and would give them improved methods in the conduct of their business, both in regard to machinery and labour-saving appliances. They would thus be able to effect many economies. With the enlargements they hoped to have within their control, it would be possible to carry on and improve their large business with ease and comfort as a well organised business ought to have. In conclusion he paid a tribute to the good services rendered by the staff generally during the past twelve months.

Mr. H. Evans seconded the resolution, and there being no questions, it was unanimously adopted.

The auditors, Messrs. Deloitte, Dever, Griffiths and Co., were reappointed, and the proceedings terminated with a vote of thanks to the chairman.

WHITE FEATHER MAIN REEFS

The sixth ordinary general meeting of the White Feather Main Reefs, Limited, was held on Thursday, July 9, at the Cannon Street Hotel, E.C., under the presidency of Mr. R. J. Hoffman.

The notice convening the meeting and the auditors' reports having been read,

The Chairman said: The accounts are very similar to what they were last year, the only difference being that we have considerably reduced certain expenses. Our hope of reducing them still further lies in our being able to mine and get our stuff to the surface at a lower cost. The cost of stoping and bringing the ore up the shaft is still very heavy, being 17s. 10d. per ton, which is as much at some mines are able to do the whole of the work upon, including mining, milling, and cyaniding; but you must not forget that in our case—and I have referred to the matter almost every time I have addressed you—we have very narrow reefs to work, in some cases only a foot wide, and that gives us a tremendous lot of work to do to get up a certain amount of tonnage. Our milling has also been slightly reduced, and our cyaniding expenses are still, I think, the lowest in the colony. I pointed out last year that looking at the map of the mine it seemed as though the reefs were coming to a point at the bottom; but that is not so, explanation being that you have two reefs—the main reef and the east reef. The east reef dips south, and consequently as the two reefs come together they look like coming into a point at the bottom. This east reef, however, is apparently taking a dip to the north, and we fancy that in the future it will go more to the north than it has done up to date. For the first time you have been told of a slide or cross-course being encountered in your mine. This was discovered between the 600 and the 750 ft. levels. It has not cut off the reef, but it has given us some worry as it has pushed things a bit out of shope; but we know we have ore to the south and consequently, it does not worry us so much as if we thought everything was cut off through that slide. For many years I have been telling you that we hoped to work our southern leases. We continued to work at the 200 ft. level south, and that has almost gone through the whole of the leases, and, consequently, we have now got a drive from the north to the south end of the property—a distance of 3,500 ft. That is the position of our mine. We have one point at the north end, where we have a broader reef. We did not have it at the top, but right at the back of the east reef we have a reef which is not very long, about 140 ft. It is running up to 8 ft. or 9 ft. wide, and that is the broadest ore we have yet discovered. If this goes down, as we hope and expect it will, it will considerably add to our ore reserves. I do not want to raise any false hopes that we are going to become a Bonanza mine. That we no longer expect. We only hope, by economy and general efficiency, both in London and on the other side, to so reduce expenses that we may squeeze you out one, if not two, additional sixpenny dividends in the year. I should tell you that the Council of West Australian Mine Owners, of which I have the honour to be a member, is using every endeavour to help reduce costs. One matter which gives us a great deal of trouble is the Employers' Liability Act. For every £100 we pay in wages we have to pay 30s. for insurance under that Act. The Council of West Australian Mine Owners, in their report, which has just been issued, state that every effort is being made to obtain a substantial reduction in the existing rate. The idea is that we shall all club together and pay according to the rate of wages. I have now to move: "That the directors' report and accounts for the year ended January 31, 1903, be received and adopted, and that the payment of dividends Nos. 13 and 14 out of the profits for the year, be confirmed."

Mr. B. Seimert seconded the motion, which, after the chairman had replied to several question, was unanimously agreed to.

Mr. Magnus having then been re-elected a director, and the auditors reappointed, the proceedings closed with a vote of thanks to the chairman.

Belgravia Dairy Company.

In the year to May 30 this company made a profit at the dairies of £13,707, and received £144 from other sources, or £13,851 in all. Head office charges and debenture interest take £4,913, leaving £8,938, to which is added £1,855 brought forward, making £10,793. This provides directors' fees and a dividend of 6 per cent., with £3,000 to reserve, £25 to employees' benefit fund, and £2,170 carried forward. The company is fairly well supplied with liquid assets, but no separate investments are held against the reserve fund of £9,000.

NEXT WEEK'S MEETINGS.

Monday, July 13.

Beira Railway.—Winchester House, noon.
Era Incandescent Oil Lamp.—Winchester House, noon.
Measures Brothers.—Winchester House, 2.30 p.m.
Matabele Central Estate.—Cannon Street Hotel, 2 p.m.
Mashonaland Consolidated.—Cannon Street Hotel, 2 p.m.
Spies Petroleum.—Cannon Street Hotel, noon.
Spiers and Pond.—Freemasons' Tavern, W.C., noon.

Tuesday, July 14.

Chicago Gaika Gold Mining.—Cannon Street Hotel, noon.
European Gas.—Finsbury House, 2.30 p.m.
Foster and Gregory.—Cannon Street Hotel, 2 p.m.
Linotype.—Cannon Street Hotel, noon.
Machinery Trust.—Cannon Street Hotel, 3 p.m.
Natal Steam Coal.—6, Old Jewry, noon.
New Zealand Loan and Mercantile Agency.—Winchester House, noon.
Road Block Gold Mining of India.—6, Queen Street Place, 12.30 p.m.
Union of London and Smiths' Bank.—Cannon Street Hotel, noon.

Wednesday, July 15.

Associated Gold Mines of Western Australia.—Cannon Street Hotel, noon.
Bank of Roumania.—7, Great Winchester Street, 3.30 p.m.
Coetzeestroom Estate and Gold Mining.—Winchester House, 12.30 p.m.
Consolidated Gold Fields of New Zealand.—11, Cornhill, 12.10 p.m.
Frontino and Bolivia Gold Mining.—Winchester House, 2 p.m.
Humphrey's Hydraulic Sluicing.—11, Cornhill, 11.25 a.m.
Jokai Assam Tea.—Winchester House, 2.30 p.m.
Moabund Tea.—138, Leadenhall Street, noon.
Progress Mines of New Zealand.—11, Cornhill, 11.55 a.m.
Welcome Gold Mining.—11, Cornhill, 11.40 a.m.

Thursday, July 16.

Anglo-Ceylon and General Estates.—20, Eastcheap, 2.30 p.m.
Apollinaris and Johannis.—Holborn Restaurant, 3 p.m.
Bank of Liverpool.—Liverpool, 12.30 p.m.
Colenbranders Matabeleland.—Cannon Street Hotel, noon.
Chili Telephone.—Winchester House, 12.30 p.m.
Davy Brothers.—Sheffield, 3 p.m.
Distillers Company.—Edinburgh, 1 p.m.
De Lamar Company.—Winchester House, noon.
India Rubber, Gutta Percha.—106, Cannon Street, 11 a.m.
Linotype.—Cannon Street Hotel, noon.
London Joint Stock Bank.—5, Princes Street, noon.
Machinery Trust.—Cannon Street Hotel, 3 p.m.
North Mount Lyell Copper.—Winchester House, 3 p.m.
Seville Waterworks.—Cannon Street Hotel, 12.30 p.m.
Tuck, Raphael.—Salisbury House, noon.
UnUion Discount Company.—Cannon Street Hotel, noon.

Friday, July 17.

American Automatic Weighing Machine.—Winchester House, noon.
Brandon Brothers.—Winchester House, 11.30 a.m.
London Improved Cab.—Pakenham Street, noon.

The Newnes Magazines.—Not much of outstanding merit appears in the Newnes magazines for July, and although there is the usual plentiful supply of light reading for leisure hours, fiction throughout is very mediocre. The *Strand* contains an instructive paper on "Tunnels" by Hilary Beckles, and an article on the Government's Newspaper *London Gazette*, by Arthur Hill. Madame Vacaresco gossips pleasantly about the visit of Edward VII. to the Court of Roumania, and Mrs. Fred Maturin contributes an exaggerated and would-be humorous story, "Our Animated Flat." "Giblets," by Gertrude Thomson, is quaintly told and well illustrated. Mrs. L. T. Meade begins a new serial in the *Sunday Strand*, entitled "Roland Trevor's Secret," a tale of Irish life, which promises well, while from the pen of Mr. John K. Leys we have a rather good Scotch story, "By Banks and Braes." Mr. W. Llewellyn Williams writes of the Rev. F. S. Webster, M.A., as the "Coming Man," and the philanthropic section of the magazine deals with "Homes of Hope." Some parts of the *Wide World* introduce us to a veritable Chamber of Horrors, but there are pleasant things, too, such as the prettily illustrated article on "The Narcissus Festival at Montreux." In the *Captain* one finds a smattering of everything—school stories—tales of adventure—articles on cycling—photography—philately—athletics, etc. It is as good as any of the magazines, and must be highly appreciated by the "Boys and Old Boys" for whom it is written..

The gold yield of New South Wales for the month of June amounted to 34,622 oz., valued at £129,859. The yield for the half-year amounted to 119,718 oz., valued at £441,416.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended June 5, $11,847; decrease, $843. Aggregate from January 1, $288,356; increase, $24,147.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended June 6, Rs. 29,340; increase, Rs. 1,553. Aggregate from January 1, Rs. 7,21,326; increase, Rs. 25,724.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended June 6, Rs. 8,033; increase, Rs. 1,139. Aggregate from July 1, Rs. 1,87,670; increase, Rs. 20,441.

Bengal Central Railway. — Traffic receipts for week ending June 13, Rs. 20,097; decrease, Rs. 3,043. Aggregate from January 1, Rs. 559,461; increase, Rs. 8,138.

Canadian Northern Railway.—Traffic receipts for week ended June 30, $84,400; increase, $46,300. Total, from January 1, $1,180,325; increase, $488,014.

Lucknow Bareilly Railway. — Traffic receipts for week ended June 6, Rs. 32,927; decrease, Rs. 1,811. Aggregate from January 1, Rs. 6,97,921; decrease, Rs. 35,356.

Quebec Central Railway.—Traffic receipts for the 2nd week of June, $13,190; increase, $1,395. Aggregate from January 1, $270,738; increase, $18,133.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended June 6, Rs. 12,142; decrease, Rs. 417. Aggregate from January 1, Rs. 2,39,299; increase, Rs. 6,030.

Salvador Railway. — Traffic receipts for week ended July 4, $13,000; increase, $5,750.

Uruguay Northern.—Traffic receipts for April, £2,130; increase, £718. Aggegate from July 1, £15,647, increase, £3,915.

White Pass and Yukon Railway.—Traffic receipts for the week ended June 21 amounted to $76,593.

English.

Cleator and Workington.—Gross receipts for the four days ending July 4, £609; decrease, £313. Total receipts from July 1, £609; decrease, £313.

Cockermouth and Keswick Railway.—Receipts for week ending July 4, £746; decrease, £88. Aggregate from July 1, £746; decrease, £88.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending July 4, £361; increase £30. Aggregate from July 1, £361; increase, £30.

Liverpool Overhead Railway.—Traffic receipts for week ending June 21, £1,620; increase, £103. Aggregate from January 1, £39,517; increase, £3,719.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending July 4 £555, increase £62; aggregate from July 1, £555 increase £62.

Belfast Street.—Traffic receipts for week ending July 4, £2,863, increase £167; aggregate from July 1, £2,863, increase £167.

Birmingham and Midland.—Traffic receipts for week ending July 3, £839, increase £74; aggregate from July 1, £839, increase £74.

Birmingham City.—Traffic receipts for week ending July 4, £5,395, increase £562; aggregate from July 1, £5,395, increase £562.

Blessington and Poulaphouca.—Traffic receipts for five days ending July 5, £24, increase £5; aggregate from July 1, £24, increase £5.

Bristol Tramways and Carriage.—Traffic receipts for week ending July 3, £5,375, increase £310; aggregate from July 1, £5,375, increase £310.

Burnley Corporation.—Traffic receipts for week ending July 4, £795, increase for week £65; aggregate from July 1, £795, increase £65.

Dublin and Blessington.—Traffic receipts for five days ending July 5, £140, increase £1; aggregate from July 1, £140, increase £1.

Dublin and Lucan.—Traffic receipts for week ending July 5, £94, decrease £26; aggregate from July 1, £94, decrease £26.

Dublin United.—Traffic receipts for three days ending July 3, £2,212, increase £141; aggregate from July 1, £2,212, increase £141.

Edinburgh and District. — Traffic receipts for week ending July 4, £5,002, increase £258; aggregate from January 1, £113,643, increase £15,682.

Edinburgh Street.—Traffic receipts for week ending July 4, £557.

Harrow Road and Paddington.—Traffic receipts for week ending, July 3, £325, increase £9; aggregate from July 1, £325, increase £9.

Isle of Thanet.—Traffic receipts for week ending July 4, £1,098; increase, £205; aggregate from July 1, £1,098, increase £205.

London General Omnibus.—Traffic receipts for week ending July 4, £28,828, decrease £23; aggregate from July 1, £28,828 decrease £23.

London Road Car.—Traffic receipts for week ending July 4, £9,625, decrease £390; aggregate from July 1, £9,625, decrease £390.

Rossendale Valley.—Traffic receipts for week ending July 3, £221, increase £18; aggregate from July 1, £221, increase 18.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending June 8, £6,276, increase £1,610; aggregate from January 1, £131,734, increase £27,912.

Barcelona.—Traffic receipts for week ending July 4, £2,645, decrease £8; aggregate from January 1, £59,344, decrease £307.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending July 4, £309, increase £207; aggregate from January 1, £7,440, increase £4,008.

Brazilian Street. — Traffic receipts for the month of March, Rs. 42,144; increase Rs. 936.

Brisbane.—Traffic receipts for the month of April, £10,309, decrease £407.

British Columbia Electric.—Traffic receipts from July 1 to May 31, £615,445, increase £82,892. Net earnings £203,054, increase £31,357.

Buenos Ayres and Belgrano.—Traffic receipts for the month of June, £12,834, increase £605.

Buenos Ayres Grand National.—Traffic receipts for week ending June 6, $44,664, increase $675; aggregate increase from April, 1903, $97.

Calais.—Traffic receipts for week ending July 4, £364; increase £41; aggregate from July 1, £364, increase £41.

Calcutta.—Traffic receipts for week ending July 4, Rs. 30,883, increase Rs.6,354; aggregate from July 1, Rs. 30,883, increase Rs. 6,354.

Carthagena and Herrerias.—Traffic receipts for the month of June, £3,798, increase £865; aggregate to June 30, £22,947; increase £3,461.

Lombardy Road.—Traffic receipts for the month of June, £1,285, increase £39; aggregate from January 1, £7,439, increase £128.

Twin City Rapid.—Traffic receipts for the month of May $339,735, increase $42,744; aggregate from January 1, $1,570,908; increase $214,353. Net traffic receipts $180,407, increase $20,380; aggregate from January 1, $817,281, increase $109,729.

LOAN.

INDIA 3½ PER CENT. LOAN FOR 200 LAKHS OF RUPEES.

The Secretary of State for India in Council hereby gives notice that the Government of India have issued a notification dated this day inviting Tenders for a Loan of Two Hundred lakhs of Rupees (Rs. 2,00,00,000), bearing interest at the rate of Three and a Half per cent. per annum, and not liable to be discharged before the 31st of December, 1920.

Tenders will be received in Calcutta until noon, and at Madras, Bombay, Allahabad. and Lahore, until the local time, corresponding to noon Calcutta time, of the 22nd of July.

The Governor General in Council reserves the right to declare on or before the 15th of July the minimum rate at which tenders will be accepted.

The instalments will be payable on the 4th of August, 3rd of September and 23rd of September, 1903.

Copies of the Notification published by the Government of India can be obtained on application to the Financial Secretary, India Office, Whitehall, S.W.

India Office,
7th July, 1903.

NEW ISSUE.

ABRIDGED PROSPECTUS.

List of Applications will be closed on or before Tuesday 14th July. 1903.

BOURNEMOUTH CORPORATION

3 PER CENT. REDEEMABLE STOCK.

ISSUE of £500,000,

Under the provisions of the Public Health Acts Amendment Act, 1890 *and the Regulations made thereunder by the Local Government Board.*

FREE OF STAMP DUTY.

The Stock is one in which Trustees may legally inveat, unless expressly forbidden by the instrument (if any) creating the Trust (vide Judgment of Court of Appeal in re Druitt; Druitt v. Dehler L.R. (1903) 1 Ch. 446; 67 J.P. Rep. 99).

Interest at 3 per cent. per annum payable half-yearly, on 1st April and 1st October, by the National Provincial Bank of England, Limited, 112, Bishopsgate Street, London.

A full six months' interest w ll be paid on 1st October, 1903.

Price of Issue, £92 for every £100 of Stock.

THE NATIONAL PROVINCIAL BANK OF ENGLAND, LIMITED, is authorised by Resolutions passed by the Corporation of Bournemouth on 3rd July, 1903, to receive applications for £500,000 Bournemouth Corporation Redeemable Stock.

This Stock is redeemable at par on 1st April, 1933, or at the same price at the option of the Corporation on or after 1st April, 1913, unless previously cancelled by purchase either in the open market or by agreement with the Stockholders.

The Stock will be charged on the District Fund, General District Rate, the Borough Fund and Borough Rate, and all other Funds and Rates established and leviable by the Corporation as a Municipal Body for Municipal purposes, or as a Sanitary Authority for Sanitary purposes, and ranks pari passu with the existing 3 per Cent. Stock.

The present issue of Stock is for the purpose of repaying certain existing Loans and for defraying the cost of certain public works.

The Electric Tramways, which serve all parts of the Borough, have already proved a great success, and although they have only been in full working order for a few months, the result has proved that they will be a remunerative undertaking.

Notwithstanding the expenditure the Council have incurred, the rates are low, totalling (including a 4d. rate for Education purposes under the new Act, and taking no credit for the profit to be derived from the Tramways) only 5s. in the £.

£395,511 of the present issue of Stock is to be applied towards paying off loans and temporary advances. The total debt existing on March 31, 1903, including such loans and temporary advances, was £584,468.

The Books of the Stock will ke kept at the National Provincial Bank of England, Limited, 112, Bishopsgate Street, London, E.C., where transfers of Stock will be registered free of stamp duty.

Payment will be required as follows, viz.:—

£5 per cent. on Application.
£17 per cent. on Allotment.
£35 per cent. on 14th August, 1903.
£35 per cent. on 25th September, 1903.

The Instalments may be paid in ful on or after 21st July, 1903, under discount at the rate of £3 per cent. pet annum.

Full Prospectuses and Forms of Application may be obtained of the National Provincial Bank of England, Limited, 112, Bishopsgate Street, London, E.C., or any of its Branches; of Mr. G. W. Bailey, Town Clerk, Bournemouth; of Mr. C. R. Haley, Borough Accountant, Bournemouth; and at the Offices of Messrs. J. and A. Scrimgeour, Stockbrokers, South Sea House, Threadneedle Street, London, E.C.

8th July, 1903.

Investment Inquiries.

It ought to be unnecessary to put private queries regarding new issues. These are always fully and faithfully dealt with week by week in our Critical Index. No one at a distance from markets or in doubt should ever respond to the invitation of prospectuses without consulting that Index. Had this rule been generally adhered to by the public during the past four years, it would not to-day be lamenting over the loss of many millions—gone never to return.

Questions about public securities, and on all points in company law, as well as on the position of life insurance offices and their promises, will be answered week by week in the REVIEW on the following terms and conditions:—

A fee of FIVE shillings must be remitted for each question put, provided they are questions about separate securities. Should a private letter be required, then an extra fee of FIVE shillings must be sent to cover the cost of such letter, the fee then being TEN shillings for one query only, and FIVE shillings for every subsequent one in the same letter.

Questions will be answered by quoting the numbers 1, 2, 3, and so on. The EDITOR has a rooted objection to such forms of reply as—"I think your Timbuctoo Consols will go up," or "Sell your Slowcoach and Draggem Bonds," because this kind of thing is open to all sorts of abuses. By using a fancy name each query can be kept absolutely private to the inquirer. Detached syllables of the inquirer's name, or initials reversed are best.

Correspondents should *number* the questions, keeping a copy for reference.

Inquiries should reach the office of the INVESTORS' REVIEW, Norfolk House, Norfolk Street, W.C., not later than Thursday morning if reply is required in same week's issue.

Printed for the Proprietor by RIPLEY & Co., 12-14, Verulam Street, London, E.C., and Published by JOHN PATERSON, at Norfolk House, Norfolk Street Strand, W.C.—JULY 11, 1903.

The Investors' Review.

Jingo Protectionist Drolleries.

It must be an interesting diversion to the intelligent working man to take stock of his new friends. Hitherto the popular conception of "organs of public opinion," as they call themselves, like the *Daily Mail*, the *Daily Telegraph*, the *Financial News*, the *Pall Mall Gazette*, the *St. James' Gazette*, the *Saturday Review*, the *Statist*, and other daily or weekly papers has not been that of ardent supporters of the claims of the working man. The *Times* has always been a frank out and out exponent of the desires and aims of the selfish plutocratic class, and newspapers owned or controlled by the Levi family, by Messrs. Astor, Steinkopff, Harmsworth, H. H. Marks, the Borthwick family, Lord Hardwicke, Mr. Wyndham, Herr Alfred Beit, and other distinguished citizens, have generally been more or less strenuous imitators of the Anglo-American fulminator or fog-horn of Printing House Square, but now they all assume a new part, and are eager to protect the British working man from the "loss" of his labour through the competition of the foreigner, and especially the German foreigner. Apparently the *Daily Telegraph* has been, in the opinion of the Stock Exchange, taking a leading share in this missionary work on behalf of the British handicraftsman, and some of the figures it has got together have quite stunned the minds of that, at present, rather hunger-stricken body. Taking summary figures, lumped together without explanation or analysis, one of its contributors on Monday last pointed out that there has been an increase of 340 per cent. in the imports of German and Dutch "manufactures" into England, comparing 1875 with 1902, against a decline of 30 per cent. in the export of British manufactures to these countries. With Belgium our trade shows an increase of 23 per cent. in the exports of British manufactures, but we have imported 120 per cent. more of manufactured goods from Belgium in the past year than in 1875. With France the story is much the same, save that we have increased our imports in the interval of the same twenty-seven years by only 26 per cent. Against this, however, there has been a decline of 22 per cent. in the exports of British manufactures to France. Worst of all is the United States, from whom we took last year 585 per cent. more of manufactured articles than we did in 1875, while our exports of British manufactures thither actually fell off 5 per cent. Price movements are not worth thinking about and this kind of thing spells ruin, we are told; means that the British working man will soon have nothing to do whatever. His means of labour will be stolen from him and England will become a mere dumping ground for the cheap manufacturers of all the world unless we stem the deluge by tariff barriers.

Yes, but how are we to continue to pay for these manufactures if this is the true presentment of the case? Obviously, should the working population of this country be brought down to a state of hopeless inactivity there would be no longer any domestic production of wealth, and the goods of the foreigner would be poured into a country totally unable to pay for them. Presumably these goods come here because the senders hope that they will be able to advantageously sell them and get good money in exchange, money which they can either take home or expend in other commodities somewhere; but if our industries are really going to rack and ruin in the manner such writers as this *Daily Telegraph* Solon would have us believe, it will very soon be impossible for us to pay for anything imported from abroad, and the foreigner will have all his labour of producing and forwarding goods to us for nothing. There will be a liquidation in bankruptcy, and the foreigner will be ruined by the very excess of his triumph. Something seems to be wrong in an argument which drives us to this conclusion, and a glance at the details of our imports from any of the foreign countries dealt with by this *Daily Telegraphist* will at once reveal where the fallacy comes in, by showing that the bulk of the commodities imported from these countries and classed as "manufactured," come here to be further utilised and perfected by means of British labour. They are, apart perhaps from some pure luxuries, auxiliaries, raw materials, tools, or other helps to British industry.

Take Germany and Holland as examples. It is against Germany that the main brunt of the Brummagem protectionist campaign is now being directed. Germany is for the moment the bugbear of the Jingo, just as Canada is the favourite British dependency of the hour, because the conjunction favours "patriotic" outbursts. Now when we look through the long lists of imports from Germany duly recorded in "the Annual Statement of the Trade of the United Kingdom," we find that the bulk of the articles described as "manufactured," are much in the condition those German iron and steel goods, which, to borrow from the delicious persiflage of Mr. Robson, the Sir Thomas Wrightson of politics, described as being "dumped" on this country to the injury of the British working man. This is one of the funniest episodes hitherto encountered in this hollow and drummy protectionist agitation. When writing as a supporter of the Brummagem lightning-changing political artist, Sir Thomas Wrightson ponderously fulminated against a terrible crime against the British workman—steel billets, etc., from Germany, "dumped" here—but when it was a question of raising fresh borrowed money for the North-Eastern Steel Company, of which Sir Thomas Wrightson is a director, another story was told, the story of the man of business. It was explained that the unfavourable results shown for 1900 and 1901 were exceptional, both these years, especially the

latter, having been affected by the low prices obtainable for the company's products compared with the abnormal advance in wages and prices of materials, particularly fuel. Put the two statements together, consider the uses to which these imports were devoted, and it will be found that the imports of German iron and steel in those years really helped to save the buyers, like this Sir Thomas's companies, from the still greater losses they stood to endure, had no such help come, through the abnormal advance in the price of coal and the sluggishness of the trade in finished commodities due to the reactive influence of the war outlay. Cheaper German iron and steel, wrought or part wrought metals of all kinds, proved of the greatest advantage possible to our manufacturers at a time of difficulty.

It is the same throughout, and there is no article of a manufactured description brought here from Germany which does not directly contribute to the employment of British labour. The labour is not identical in kind with that employed in Germany in the production of the commodity, but it is probably always labour of a much better paid description, at least, and now and then of a higher grade of skill. We imported last year, for instance, about £1,500,000 of German woollen manufactures for the use of the tailor, upholsterer, and the dressmaker—or for re-export, our protectionists having given German goods the best advertisement any nation ever had by the Merchandise Marks Acts—but our imports neither of woollen or cotton tissues were of the slightest importance compared with the great volume of our own manufacture and export of articles of the same description. These two classes of commodities may be described as "competing" with home labour, though that by no means follows; but put all tissues in that category, and yet there is scarcely a single article classed as manufactured that does not obviously come here to be utilised as material for the British wage-earner to expend his more or less skilled labour upon. We imported last year nearly £1,200,000 worth of German glass, much of it probably made with the aid of British alkalis, of which over £300,000 represented the value of bottles imported. Perhaps we could make the bottles ourselves, perhaps not, but it is a well-known fact that certain classes of German glass have peculiarities in toughness and in the capacity to endure great heat not to be found in glass made in this country, and even the bottles by their cheapness probably facilitate the trade of the British druggist and the mineral water manufacturer—we hope, by the bye, that the *Daily Telegraph* and the *St. James' Gazette*, not to mention the *Pall Mall* or the Harmsworth papers, do not buy German paper upon which to impress their highly patriotic ha'penny or penny sentiments. No less than £53,547 worth of reels of such paper came from Germany last year, together with about £343,000 worth of other printing paper not on reels. This is a very serious matter which must be looked into. We trust some one will ask a question in the House as to the extent to which our Jingo newspaper literature is furnished to the British public upon cheap German paper. With the paper, though, it is consoling to know, came a considerable amount of raw material in the shape of rags and wood pulp, the aggregate of such commodities being worth more than £80,000, and obviously the British workman utilises these materials as well as the paper. Our imports of iron and steel, again, nearly all came here for the purpose of being handled by the British working man. Even the nails, screws and rivets, objects in which the Colonial Secretary may be supposed to have still at least a sentimental interest, were of no use to anybody unless the British working man handled them, and applied them to the purposes for which they were made. Presumably refined sugar is a manufactured article, and it is sad for the argument of the *Daily Telegraphist*, that our imports of that commodity should have actually fallen off last year by upwards of £1,000,000 in value. Doubtlesst hey will soon fall off still further, to the great delight of housewives throughout the United Kingdom, who will be compelled to pay a penny, twopence, or threepence per lb. more for this necessary article of food than they do now.

We have been at pains to instance some of the commodities bought from Germany which might be thought to have a detrimental effect upon certain groups of British workmen, but the exceptions prove the rule, and it is true throughout that nothing whatever comes to this country from either Germany or Holland, or from the United States or anywhere, which is not conducive to the employment of some class of worker in this country, and therefore to the increase not the diminution of our wealth. We should have no use for these commodities were it otherwise. Even the sewing machines, of which we receive a few from Germany—a pitifully small number compared with the enormous production of these machines in this country—are presumably of value to some people in spite of their often inferior quality, and the small quantity of hardware and cutlery which we receive, or of the lace which comes in to supplement our own magnificent output, helps large classes of wage-earners to obtain a living. There is something inexpressibly, not to say loathsomely, false, therefore, in such presentment of the gross facts as that of the *Daily Telegraph*.

Would the people who are now so glibly reeling off trash of the description read by them in the various organs of the decadent Jingos have the goodness to pause and ask themselves what "protection" means? The word has a comforting sound, conjures up in the mind a vision of helpless men and women being preyed upon by lawless untaxed enemies from abroad, exposed to all the blasts of adverse fortune and ruthless competition, in need therefore of a shelter or shield to be put up so as to prevent them from being swept away by the onset of the redoubtable foes. But is it really this? Does not the use of the word in the present Jingo babel of falsehoods beg the whole question? Does there not lie underneath this clamour for preferential tariffs in favour of the colonies, and for brutalising devices intended to injure the people of countries not under the British flag, an element of savagery? Are not the Jingos harking back to the red Indian stage of trade, and hunting around in quest of the enemy's scalp as the principal trophy amongst the plunder? How can the friendly interchange of commodities, at prices presumably fair and remunerative to those engaged in the business, by any possibility impoverish a country or any section of the people thereof? Were poverty to be the result of our large purchases of foreign manufactured and half manufactured goods, all such trade must inevitably come to an end. But as a matter of fact the more commodities are interchanged the greater does the prosperity become. Protection means taxation, and how can the imposition of a tax increase the wealth of a community? Most Englishmen, presumably, have tested the consequences of a fifteenpenny income tax. Were they able to spend more in other directions while that tax was drawing money out of them? No. How, then, are they to be put in a position to spend more if commodities in daily use are made dearer by taxation? Who gets this extra money? One part of it goes into the Treasury to swell the revenue, to be expended on armies and navies, on public works, and public jobs. Does this kind of expenditure enlarge the wealth of the nation as a whole or the reverse? Surely the reverse. The more money taxation draws away from a people the poorer that people becomes. How, then, is a "protective" duty, so called, on wheat or on any other imported commodity to increase the wealth, the spending capacity of the great bulk of the people? It quite likely will add to the wealth of a few, it may help the monopolists. Conceivably some of the multitudinous over-capitalised joint-stock companies now strugging to avert the consequences of their own recklessness might get a brief period of revived prosperity at the expense of the consuming masses, but that would not raise wages nor in any way assist the man who struggles along with a small fixed income to grow into a position of greater comfortableness. No, a protective tax is an impoverishing tax, just as much as the income tax or the death duties or any other impost levied by the State or the local authority. It is impoverishing for the great bulk of the people because they get no benefit whatever in return for the money paid. On the contrary, life becomes harder to them because the cost of the commodities protected by a tax is always increased much beyond the amount levied by authority.

Perhaps the most diverting episode of the week has been the letter of the Agent-General of New South Wales laying down the fine round proposition that it is the "right" of the British citizen the world over to feed himself. The British farmer, he says, whether located in the United Kingdom, in Canada, or in Australasia, ought to be secured in "the indubitable right which ought to be his" of feeding the British people, no matter where resident, if within the parts of the empire named, and assuming those parts to have entered into a compact of reciprocity. Here is a fine fury of incoherence for you, but 4s. upon foreign wheat, with a rebate of 2s. 6d. in favour of the colonies, will not do the trick, Mr. Copeland. Before that enthusiast wrote this letter he should have first found out whether the Australasian farmers are in a position to feed themselves. And does he really imagine that such a paltry difference as 4s. a quarter is going to stimulate wheat growing in that part of the world to an extent that will enable the Australasian farmer to supply us with food. The average yield of wheat per acre in the United Kingdom of Great Britain and Ireland is over 31 bushels, good year and bad, but the latest figures we have for the mainland of Australasia shows an average of less than 11 bushels per acre in New South Wales, of less than 5 bushels in South Australia, and of about 7 bushels in Victoria. It is to be feared that no protective duty we can impose would enable the farmers in Australia, thus limited, to compete effectually with the home wheat grower. We are even in a much better position than the farmers of the virgin land of the Canadian North-West, and every year that passes will increase our advantage, because that land is being cropped to exhaustion after the American manner. Even at its best, however, this land yields an average of little more than 22 bushels to the acre, as against upwards of 31 bushels for the United Kingdom. Is any other "protection" required against anybody if our home farmer is in other respects treated to fair play? Remove the feudal restrictions upon the cultivation of soil in this country, and probably the British farmer would raise the output of wheat to an average of upwards of 40 bushels per acre. Where would the colonial with his 5 to 15 or 20 bushels be then?

That is the direction in which to look for economic reform, not in the direction now so zealously pointed out by the Jingo imperialists. However, they are succeeding for the time being in diverting the minds of the people from their own miseries, and in deluding them into the hope that they can be saved from the consequences of their own folly and recklessness by some trick of the tax collector, some device of the political mountebank. So the fun is not wholly wasted.

The Chartered Meeting.

Duke and Earl both were in great form at the meeting of the British South Africa Company, otherwise the Chartered Company, held in the Cannon Street Hotel on Wednesday last. When we remember that the entire white, or mottled white, population of Rhodesia, south, north, east, and west, only numbers about 15,000, the fine flowing periods of these two noblemen excite the highest admiration for their histrionic capacity. We know of no parallel to their dignity more apposite than that parish bull in "Tristram Shandy." Of the two speeches that of the Earl pleased us most, because thin though the intelligence it displays is the speaker was obviously sincere. He believes all he says and is quite Exeter-Hallish in his unctuous advocacy of the importation of Asiatic labour to work the mines. "The wilfully idle man is out of place in a Christian community," he quoted, especially in a gold digging Christian community, and he expressed his absolute concurrence with the utterances of the American negro Booker Washington, who told his fellow blacks that their pathway to salvation lay along the road of honest work. "Sweat and be saved," Lord Grey remarked, was the summary of this wise man's teaching, but he said nothing about the position of the sweater. That is another story. It must have been a little sad though to the listening shareholders to be told that although Rhodesia is a country of limitless possibilities, with immense deposits of coal, Wankie and other, holding vast quantities of iron, containing gold of indefinite valuation, a waterfall giving the finest water power in the world, a soil and climate "singularly adapted" to the growth of everything from cotton and tobacco to the humblest cereal, it only stands "on the threshold" of its career. It has been a pretty expensive threshold.

Some readers have told us that we did not fully exhibit the financial position of the company in last week's article. The criticism is apposite, but then it was not our intention to exhibit everything in strict order of accountancy, but only to enjoy a pleasant spectacle of human credulity and sanctimoniously "patriotic" bluff. It may, however, be useful to supplement last week's figures by a few others, just to show how terribly costly the thresholding of this magnificent territory is. It was the sad duty of the Duke of Abercorn not merely to lament over again the death of Mr. Rhodes and to celebrate the peregrinations of Messrs. Beit, Jameson and Michel, but to acknowledge deficits. Deficits follow each other with sad regularity, and the only hope he was able to hold out was that by and bye, soon, perhaps, some day sure, the company would enter into the enjoyment of a "substantial revenue" from their large holdings in producing mining companies. Well, the gold output last month did increase some 30 oz. over the total for May, and was between 6,000 and 7,000 oz. more than in the same month of last year. Wankie coal, too, is going to be tried by the fleet which thus has its uses after all, so there is progress of sorts, notwithstanding the scarcity of labour and the inoperative feebleness of the hut tax. It does not follow, though, that even dirt cheap Asiatic slave labour, bishop and earl blessed, is going to make the bulk of the mines, of whose shares the Chartered Company possesses such a magnificent selection dividend paying. But even a Duke must say something.

Before dealing with the balance-sheet figures it may be well to glance back at the argument of Earl Grey with regard to labour and the taxation of the blacks. He proclaimed that the Chartered Company "is not going to encourage idleness amongst its subjects, the idle wantonness of a nation who waxed fat on the labour of their slave wives, and he should tremble before the evil which they in their cowardice would be raising up to confront the generation that would succeed them." It is a sweet sentiment, and the practical outcome of it all is that the hut tax is gradually to be raised to the level set by Lord Milner in the neighbouring Transvaal. At present, on the calculation of that wonderful statistical romancist, Sir William Milton, it is demonstrated that the native black only pays 4s. 6d. per head per annum, man, woman, and child, to the cost of carrying on this great government. By-and-bye he is to be asked to pay 40s. per head, which on the present population would give £2,000,000 per annum, in round figures, towards meeting the deficit—£2 per head, £6 per man and two wives, and how much per child? We do not quite know how the thing works out, but the Transvaal taxation is £2 per head and £2 more per extra wife, so the outcome might be at least two millions per annum—or a new rebellion. It is there to take as you please, and we are lost in speechless admiration at the unctuosity of it all, at the spectacle of the good, pious, humanitarian, mineral-mad earl vigilantly taking care that the blacks are kept in "sweat."

Looking at the practical figures of the company as they stand, though, we are unable to arrive at the happy conclusion—peace, prosperity, much Christian gold and more treasures on earth than are ever likely to be in heaven, all so daintily set forth by Earl Grey. As a mere hard matter of figures the Chartered Company seems to us to be quite insolvent, and ripe for reconstruction or "federation" at a price. Its actual assets of a realisable sort do not come to more than £1,500,000, and its direct debenture obligations amount to £1,250,000, in addition to which it owes about £670,000 to creditors of various descriptions, and lies under contingent liabilities for railway debts to the amount of at least £9,000,000. If the capitalisation of the guaranteed annuities be added, the total will exceed £10,000,000, against which, as just stated, the assets of a fingerable, and perhaps in part saleable, description, come to no more than £1,500,000. Here are the details

of these assets:—Cash £49,876, money out on loan (probably in Stock Exchange contango business) £134,750, shares in companies sold but not delivered £59,726, money due to the company by its creatures, viz., Cape to Cairo Telegraph £99,475, Mashonaland Railway £168,473, Rhodesia Railways' Trust £4,997, sundry debtors £91,737, total £364,682; debtor balances thus, Cape to Cairo Railway (subject to adjustment) £10,101, Beira and Mashonaland Railway (joint account) £3,404, Mashonaland Railway solus £8,335, Rhodesia Railways £14,588, sundries £291,872, total £328,301. The first of these two groups of Chartered assets is estimated to produce £358,000, and the second £295,000, so that there is an acknowledged loss or depreciation on the two of £40,000. Yet are both taken into the account at the full figures. Next follows the entry "Buildings, roads, public works, farms and land, and expenditure in connection therewith" £257,808, and "movable assets" £243,295, after which come "stock of goods in general stores" (before adjustments) £6,298, and "Leases of London office premises, alterations and expenses in connection therewith, expenses of removals, office furniture and fittings, and stock of Rhodesian exhibits," a funny mixture, £31,287.

The aggregate, however, of the thresholding comes to about £8,500,000. That is to say this amount of money, or of shares taken as money, has disappeared in the Chartered Company's own job of opening up and developing the country. The above inventory will show how little it has spent upon roads out of its own purse, the railway capital having been found principally by the creature companies, but as pointed out last week, it has spent upwards of £2,700,000 in making war, in killing off the population, which it now wants to replace with slave labour from Asia, and £1,312,000 has disappeared in payment of concessions, probably more than £1,000,000 of it in nominal capital handed to concessionnaires, and the mere "deficit on the administration" of the country since it was conquered by the Rhodes-Beit bands of freebooters amounts in all to about £3,500,000. We never came across an enterprise whose thresholding was so costly, but there it is for the nation to admire and covet. Living, alas! is high in Rhodesia, and so the population is we fear diminishing rather than increasing, but it will be all right when Asiatic labour is available, and Lord Grey will doubtless see to it that proper provision is made for the decent Christian burial of those who die in the mines, or through the effects of transplantation. Pious mining is precious.

Notes from New York.

New York, July 6.

There are many signs that we are entering on a period of depression over here. To-day one of the members of a large law firm told me that the collection of money on debts, interest on loans and mortgages, and other things, was becoming increasingly difficult. This is due to a certain extent to political causes, the circumstances surrounding the early, I might say, premature agitation of the Presidential campaign, and to the uncertainty of the season. Kansas is reported to be favoured with a phenomenal wheat crop, and a Nebraska correspondent writes that there is promise there of an enormous harvest; but from other of the wheat States the accounts are less bright. Then for some reason or other certain of the newspapers are doing their best to create apprehensions of political troubles and foreign complications in regard to Manchuria, the Jewish question, and other matters which we should be better for letting alone. There are, however, certain of our politicians and others who are itching to put their fingers in other people's pies, in order to show that we are "a world power," and have to be "reckoned with." It is all very silly and mischievous, but the Spanish war and the Venezuela affair have puffed them up with importance, and the strenuous disposition of the President lends itself to their schemes. It might be a good thing for the country if some of the great Powers would call the bluff which is undoubtedly being played at Washington, for the danger is that it may be carried too far, and end in trouble. There is absolutely no disposition on the part of the American people to quarrel with Russia over Manchuria, the Kishineff affair, or the rejection of the petition from the American Jews to the Czar. With a depression coming on, an uncertain political situation at home, and the money question unsettled, they are not hankering to have heavy war taxes imposed on them such as would be necessitated by a distant foreign war, however profitable it might be to the horde that would rush patriotically to contract for supplies, to the government. The recollection of what they did during the insignificant skirmish with the Spaniards is still fresh in the public memory.

Then there is the great race feud that is becoming more embittered every day, and is assuming such proportions that many apprehend serious trouble. The lynchings of negroes is no longer confined to the perpetrators of the one crime which might justify them; simple assault on a white man, resistance to a police official, or mere suspicion of having committed some crime, are sufficient to cause white mobs to murder coloured men with every circumstance of beast cruelty that can be devised. All yesterday a large town in the State of Indiana containing some 70,000 inhabitants, was terrorised by armed white mobs threatening to wipe out the coloured people, who in their turn armed in self defence. The Federal Government is powerless in such cases, the maintenance of order being the duty of the State authorities, who either connive at or sympathise with the white mobs. Added to these displays of lawlessness and the anarchistic spirit, are the strikes and labour disputes that are seriously injuring business in a number of ways, and the settlement of which seems as far off as ever. The import of these things is probably not understood as fully abroad as here, but they will be in time.

Some estimate has at last been made of the amount of American securities held abroad, and the result is rather startling. It seems that the semi-annual disbursements made by this country in the payment of coupons during a number of years previous to the return movement of American stocks from Europe, amounted on an average to fully $35,000,000. The sum remitted last Wednesday in settlement of interest due foreign holders of American bonds was less than 5 per cent. of what it was ten years ago. The amount of American bonds held in Europe now, is said by the manager of the foreign exchange department of a large banking establishment here, to be hardly worth notice compared with former years. It is evidently the mass of returned securities that is accountable for the continued dullness in the stock market, and that keeps prices down. Some are of opinion that the liquidation has been concluded, but that is not quite certain yet. The condition of the cotton trade is seriously damaging the textile industry both at home and abroad, and the reports of the next crop are decidedly pessimistic. The change in the presidency of the Steel Trust and the causes that led up to it, have also caused a shock in the business world that will not be got over for some time. It is one of the circumstances that are helping to destroy confidence. Our Mr. Morgan having gone up like the proverbial rocket, has come down in his turn, and the world seeking financial counsel no longer hangs on his utterances as was its wont. In fact, his judgment is rather mistrusted than otherwise, and a good many who followed it a year or two ago are now wishing they had not.

The railway mania in Canada is attracting a good deal of attention here. Like King Victor Emmanuel I., who used to say that there were two things he never refused anybody, a cigar or the order of St. Maurice and St. Lazarus, the Canadian legislatures and Parliament are always ready to grant railway charters or other concessions that can be promoted by foreign money. Especially so is this the case with the present government at Ottawa, which has kept up its prestige on borrowed money, and will go on doing so as long as there are people willing to lend. The rate at which they are mortgaging the future of Canada to prop themselves up in office should give holders of Canadian stocks and bonds something to think about. The Montreal *Gazette* speaks of the latest chartered and subsidised line as a fad of theorists and the hope of grafters, and it is about right. I propose saying something on the subject later.

Economic and Financial Notes and Correspondence.

Tariff Debate? Oh, Dear No.

Mr. A. J. Balfour, the Prime Minister, is chief despiser. He looks upon the House in which he is supposed to work with the most undisguised contempt, and treats its desires and wishes with a scorn that is more than aristocratic. No small wrath has been excited amongst free traders of all shades of politics by his refusal on Wednesday to grant an opportunity for a debate in the House upon the prefential, protective, German-hating, or whatever you like to call it, tariff vagaries of the Colonial Secretary. In vain was he plied by Sir Michael Hicks-Beach, by his cousin Lord Hugh Cecil, by the Leader of the Opposition, by members of his own party, of all parties; he remained obdurate, and was apparently quite indifferent to the ridiculous figure he was made to cut. Hence much wrath, and strong language, denunciatory, derisory, hortatory, minatory, and other. Is not all this rather a waste of breath? What is Mr. Joseph Chamberlain's object in stirring up this protectionist mud? To bring back dear food to the British people, to disorganise our industries, and bring on general bankruptcy? That might be the aim if we could suppose him still the red-rag republican of his early Birmingham days, intent upon pulling all the sacred institutions of the country down about our ears. Perhaps that is the real explanation. He may see this to be the only way in which he can attain to the position of dictator in a "truly democratic" republic, become a sort of communist president of a British federal and fight-the-world empire. There are, however, less terrifying suppositions that may quite account both for his action and for his nominal chief's obstinacy. Plainly the Babylonian hubbub set agoing by our Colonial Secretary and the floods of of hollow argumentation, sham statistics, false assumptions and wholesale lying attending it, serve the excellent purpose of diverting the minds of the people not only from their own miseries, from the losses that the Rhodes-Beit-Chamberlain South African war have involved us in, but from consideration of the frightful prospect opened up to the country by our insane and in great measure corrupt and corrupting naval and military outlay in time of peace. Also, and perhaps here is the actual prosaic cause of the whole escapade, we have ceased to pay much attention to the affairs of South Africa and may, by our heedlessness, allow the mine bosses to get their way about Asiatic labour as it were unbeknown to us. They are just, as Commandant General Louis Botha points out, the over-ingeniously stupid kind of beings who may be trusted to fall upon a trick of this kind in order to draw the public mind away from contemplation of their actions. Now that the din over tariffs has become fast and furious, and that opposing factions are raging and storming and arguing, the bosses can easily persuade themselves that their opportunity has come, and we may open our newspapers some fine morning to discover that ships chartered on the quiet have dumped 30,000 or 50,000 Chinese at Delagoa Bay or Durban eager for their mission of preserving and elevating the civilisation of the whites at the mines. There are endless possibilities of playing false with the best interests of the country and of the empire behind this capitalist-subsidised and perfectly dishonest ferment against free trade. We may even have another South African war with the blacks to pay for before we are aware what is on foot. One day this week the *Manchester Guardian's* Cape Town correspondent sent a warning telegram to that paper informing it that a "mobile column of constabulary" has been formed in the Orange River Colony for the purpose of "watching" the Basutos. Those mine bosses have long cast hungry looks towards the Basuto territory, known to be rich in metals as well as in agricultural resources, and they are just now angry because the Basuto chiefs have withdrawn their labourers from the mines owing to the miserable wage paid to them. So we may soon hear that the Basuto territory had been invaded, and have a new war on our hands that would give employment and something more to the idle garrison we maintain in South Africa at such ruinous cost to ourselves. The debate started by Joseph of Birmingham has been by no means useless to him and his friends, of that you may rest assured. At the worst his failure will provide cere-cloths of rhetoric for numberless excessively capitalised businesses now contemplating an early departure from this life, and intent on dying decently without scandal of restitution, refunding, jailing or any oddities of the sort.

Another Meanness to India.

It may be thought by hasty readers that there is a discrepancy between Mr. Brodrick's statement in the House of Commons on Thursday and our note on Mr. Robertson's question asked earlier in the week. We, under "Passing Events," take the African boss' garrison at 30,000, and Mr. Brodrick talked on Thursday about a permanent garrison of 25,000. That is mere War Office rhetorical slush. The actual garrison, he admitted, is 32,000 men, and when the black war now being fomented breaks out the total might soon rise to 100,000 men. But the point is a minor one at present. Of infinitely more importance to the empire is Mr. Brodrick's announcemnt that some part of the cost of the Beit-Eckstein garrison is to be borne by India. Well might the Leader of the Opposition object. It is an infamous proposal, and as fatuous as wicked. We therefore hope that Sir Henry Campbell Bannerman will lose no time in moving a vote of censure on this mine-millionaire ridden ministry of empire destroyers, in order to emphasise the turpitude of its conduct towards the voiceless people of India, who have no interest whatever in the territories we have annexed for Herr Beit and party, and for them alone. The army the people of India have to pay for is already far too large and too expensive, a generator of famine in India, and a permanent menace to the peace of Asia, ever itching for wars, and at frequent intervals bringing them about. To add to the dead weight of this already crushingly burdensome military organisation, part of the cost of our mine boss' garrison in Africa is not merely an act of disgusting cruelty to the overloaded Indian people, but an indescribable political folly as well. Sane men could not for a moment contemplate such a step, and all who value the stability of their Indian investments ought to unite in insistent protest against it. Have not the people of India enough grievances against us already? What war has the dominant military faction in contemplation out there that it should require extra troops to be held as it were on the leash in South Africa for service therein? And could we spare any of this 25,000 African garrison of the future in the event of our professional blood-shedders in India ploughing into a conquest of Tibet? Would not the troops withdrawn from Africa have to be instantly replaced at the cost of a double transport service? Here, surely, is a subject upon which the Opposition can unite and speak out.

India and Free Trade.

It is interesting to watch the attitude of the Government towards India in regard to this protectionist agitation. The people of India would prefer to have a protective tariff, that being the natural instinct of the overburdened inhabitants of a debtor country. They think that were they able to protect their manufactures by putting up a tariff against British goods, just as the Australian colonies and Canada have done, many of their now perishing handicrafts might be restored, and prosperity be brought back to their mills and weaving shops, established after the Lancashire manner. Our Government, however, which controls the whole affairs of India, dare not listen to this demand on the part of the India people, and consequently we hear that Lord George Hamilton is one of the most strenuous opponents of the Colonial Secretary, and even Lord Lansdowne as an ex-Viceroy had to assume a "free trade" attitude in the debate raised by Lord Northbrooke and others in the House of Lords. Would it be better for India to have a protectionist tariff? Ask Mr. Chamberlain; find out what he thinks about it, let us have one of his deliverances wherein ignorance and assurance are about equally blended. Were we a native of India we should

probably be on the high tariff side through "patriotic" motives different from Joseph's, and yet nothing can be more true than that a change of the kind would in the long run increase the misery of the Indian people, and it might furthermore be fatal for all time to reforms in the administration of the country and in abatements in its taxation. That is the point that natives of India who lean to protectionism should not lose sight of. Rent collecting by and on behalf of the State keeps the grievances of overtaxation before the whole country always, and indirect taxes levied at the ports and concealed in the price of commodities hide the pressure of extortion, the consequences of waste, and prevent the people from comprehending whence their afflictions arise. A protective tariff would be a Godsend to militarism in India, but in the long run a curse to a people desiring to rise in the scale of civilisation. The Colonial Secretary's performances, however, are only too likely to breed mischief in India, especially as Lord Curzon is nothing if not an "imperialist."

Mr. Gokhale on Military Extravagance in India.

We have received from India a reprint of the speech of Mr. G. K. Gokhale, delivered on the Budget in his capacity as member of the Viceregal Council. It is full of instruction on many points, not least upon the scandalous neglect of education by the British rulers of India, but at present we can only notice some of the facts set forth by the speaker about the plague of militarism. Starting from the Russian scare in 1885 he points out that during the succeeding fourteen years, the Government of India took about 1,200 million rupees from the people of India over and above the level of 1882-85, the land revenue contributing the heaviest portion of this enormous increase, of which nearly 800 millions of rupees, or fully two-thirds was swallowed up by the army services. The speaker then goes on to point out that the expenditure upon the army is now upwards of 50 per cent. larger than it was in 1882-85, and contends that there is really no necessity for any such outlay. While expenditure has risen in this fashion, the revenue has only increased by about 35 per cent. Our military expenditure, he says, absorbs practically the whole of our land revenue, and exceeds the entire civil expenditure of the country by about 25 millions of rupees. This surely demonstrates the excessive preponderance of the military factor in Indian finance. Not even in Russia is the military expenditure more than one-fourth of the total revenue, and Mr. Gokhale's argument is that there is really no necessity for this, that the country is not well treated which is compelled to stand such a burden. Every sensible man will agree with this view, one, moreover, that is constantly being put forward in these columns because it constitutes danger to the stability of Indian finance and to the durability of our dominion. The army of India is kept upon a war footing in time of peace, and for all its cost is an altogether inexpansive force. The benefit of short service for the British garrison to India is reaped by England not by India. Mr. Gokhale points out that Japan, which spends on her army in times of peace about one-fourth of what is spent by us in India, can mobilise in times of war nearly double the number of men that India can. It is the old story, militarism has become so predominant in India, and is becoming so predominant in England, that the resources of the people are exhausted in time of peace so as to cripple them in time of war, and render a conflict fertile in ruin. There is absolutely no necessity for the military expenditure now going on in India, nor for half of it. Peace could be maintained within the Peninsula by a smaller white garrison, and above all by a much reduced native army. When will our rulers begin to recognise this truth, and to relieve the people of that ground-down dependency from a burden that has only to continue long enough on the present scale to produce a harvest of affliction for rulers and ruled alike?

Lucky Linlithgow.

"Penny wise, pound foolish," is a crystal motto of our great spending departments. Only their pence wisdom savours of meanness, and their pound folly of jobbery. This is well shown by their action in paying a fancy price for the land on which to build the new "naval base" in Scotland, while refusing to spend a small sum in surveying the Firth of Clyde Canal. No one, except the Admiralty officials and the Navy League, is yet convinced of the necessity for the new naval base. But nearly everyone is agreed that the canal should at least be surveyed to see whether it can be made navigable for ocean-going vessels. The officials having decided to create this new Portsmouth or Pembroke in Scotland, propose to buy a few acres of poor land and foreshore from the Marquis of Linlithgow at a price equal to 75½ years' purchase, the real value of the land being about 22s. 2d. per acre. Possibly in making the contract with the noble Marquis, the Admiralty remembered his refusal, as Lord Hopetoun, to accept the first Governor-Generalship of the Austrian Commonwealth because he was poor. But should he sell many more of his ancestral acres at the same price, no post, however expensive to keep up, will be beyond his reach. Making the canal navigable for ships of deep draught, apart from its commercial value, we should think, would be of use in naval warfare, as our battleships could pass through it from east to west, and so avoid the long voyage round the north of Scotland. However, the mere fact of the scheme having a commercial side is sufficient to render it distasteful to this ministry of theorists and faddists. But whether the canal is surveyed or not, the price for the land at Rosyth should be reconsidered and settled without taking into consideration such intangible accessories as "amenities of view." For as the business now stands it is, as Mr. W. Redmond described, "a job," and a monstrous one at that. Who gets the commissions earned on the sale?

The Transvaal Budget.

A fine money-consuming affair it is, and it was duly introduced into that Milnerite body, the Transvaal legislature, by Mr. Duncan, the Colonial Treasurer, on Monday last. This eminent statesman informed the other automatons in his presence that the deficit for the year ended June 30, 1902, was £541,000, that being the sum met out of an imperial grant in aid. Expenditure included £181,000 for interest on the debt of the former government, and £407,000 for public works. In the year ended June 30 last the revenue from ordinary sources was £4,682,000, and the expenditure £4,578,000, so that there would seem to be a surplus of £4,000. Take note of the imposing fact and puzzle out if you can where the money came from in a country confessedly so devastated and hungry. No less than £969,000 of the money went on public works and £1,250,000 on the constabulary, exclusive of £285,000 on town police. A paltry £259,000 was spent upon education, and posts and telegraphs took £315,000. In the current year, ending June 30 next, the revenue is estimated at £4,500,000, and the expenditure at £3,590,000, so that there is a prospective surplus of over £900,000, but the balance of revenue over expenditure will be required, Mr. Duncan was careful to point out, as a contribution to the intercolonial budget to meet the interest on the first instalment of the war debt. So that £30,000,000 contribution is coming to us after all, is it? We shall see. The underwriting commission has not been arranged yet.

The Cape Budget.

Look first at the account of the trade of the colony as set forth by Sir J. Gordon Sprigg in introducing his financial statement. The exports for the year ended June 30 last amounted, he said, to £15,800,000, or £5,666,000 more than in the preceding year, but the value of goods imported was £34,220,500, or £10,228,469 more than in 1901. Remember in looking at these figures that Cape Colony is a debtor colony, that it owes between £40,000,000 and £50,000,000, almost wholly in this country, exclusive of joint-stock capital, and then try to imagine what the consequences of this trade position must be should it continue. At the very best, exports and imports ought to almost balance each other in amount, and here we have the imports exceeding the exports by

nearly £20,000,000. That can only mean an enormous outlay of borrowed money, or of money the proceeds of British war loans, and what intelligent citizens of Cape Colony should look at is the end of this expenditure. Plainly a revenue which now swells to such an extent cannot be expected to keep up at anything like its present amount when the flush of loan money of all descriptions has passed away. Now look at the figures of income and expenditure. In the fiscal year just closed, the revenue was £11,767,166, or £2,717,000 more than in the preceding year, and the total ordinary expenditure was £10,738,484. Add in extraordinary expenditure to the amount of £527,000, and we get a total outgo of £11,265,000, leaving the surplus for the year at upwards of £500,000. Exclusive of the extraordinary expenditure the surplus is £1,029,000. Upon the strength of these figures Sir Gordon Sprigg proceeded to estimate a revenue of £11,724,000 for the current year ending June 30 next, and an expenditure of £11,585,233. We hope he will get this enormous income, but it cannot be produced naturally from the labour of a population black, white, and piebald of less than 3,000,000, all told. However, the only loan spoken of at present is one of £280,000 to provide compensation for war losses, an amount not equal to one-tenth of the actual total of these losses. If the state, however, is not going to borrow much, Cape Town and Port Elizabeth, and Kimberley and numbers of other places all want loans, and unless they get loans the colony will be unable to continue long its present rate of outgo.

Johannesburg's Ambition.

This mining camp in the Transvaal has a population of about 60,000, a considerable proportion of which at the present time endures more or less hunger, but its ambition is great, and proposals are now being hawked about the City having for object the creation of a debt of £4,000,000 for its so called municipality. By a gracious act of consideration for the British investor's pocket only £3,000,000 of the £4,000,000 will be asked for in the current year, the fourth million may be left until 1904. So far we do not gather that much success has attended the effort to place this loan, but that may be because the South African mine bosses, in whose hands it naturally is, are not offering sufficiently high underwriting commissions. If they cannot get it done at 10 per cent. they might possibly be venturesome enough to do it at 20 per cent. We may be sure they will persevere, and at the last resort the mining magnates themselves, for a handsome consideration in the way of discount and commission, might perhaps find the money. It is indeed their business to do so, for their's is the faith in the future of Johannesburg. And look at the fine round fortunes—in a modest way—they and their aristocratic West End pals used to net out of Chartered shares and debenture issues. The way is again open.

Louis Botha's Letter.

"A dismal failure, and has left South Africa, so far, at least, as the Transvaal is concerned, worse than he found it." This is General Botha's opinion of the result of Mr. Chamberlain's visit to the South African Colonies, an opinion coinciding with that expressed by us at the time the great functionary was starring round the country, haranguing and collecting diamonds. How could it be otherwise, when the only views he listened to were magnate or bureaucratic. Those voices that could have given him, had he been willing to hear them, true impressions of the present and future wants of the country, were zealously excluded, and the results of this wilful deafness are now rapidly thrusting themselves forward. An idea of the harm we are doing in the Transvaal and the Orange River Colony is given a long letter written by General Botha to a friend in this country, and sent to the *Times* by Mr. Leonard Courtney, a letter, we regret to say, too long for us to reprint. In this the General points out that we have practically reduced the civil rights of white aliens and the blacks to the same level by refusing the franchise to both. And the chief cause of the late war, it was drummed into us, lay in the disabilities of the uitlander under the Boer government. This, however, is a minor point, serving only to advertise our inconsistency, the question of education is in some ways far more serious. We are doing our utmost to estrange all classes of the Dutch by trying to force down their throats our religion, language and history, and pretend at the same time to think such treatment will promote better feelings between vanquished and victor. On the labour question General Botha says little that we have not repeated time and again in these columns about the utter selfishness of the mine bosses. To them the sole aim in life is gold, no matter how won, gold for share marketing purposes. If the blacks won't work on starvation wages then try Asiatics, who may do so for a time. That such imported labour would be a degradation and a danger to South Africa, tending to reduce it again to a black man's country in the end, is nothing to these greedy harpies. Why should it be? When in the choice phrase of Rhodes they have "made their pile," the country will see them no more, and may go to the devil for all they care. These are the men who carry everything as they will in the government of the unhappy annexed Republics, and for whose benefit ordinances are passed that are repugnant to British and Dutch alike. For the feeling of dissatisfaction among the former is, if anything, greater than among their late adversaries, and a common discontent is gradually welding the two together. Ere long it will come to a struggle between capitalists and non-capitalists, the results of which may surprise Chamberlain, "conciliator of South Africa," and his string-puller Milner.

More About Sugar.

We are too old to be tempted into a wordy war with good Mr. Martineau. It would be worse than trying to entice a weasel into a trap by saying "shoo." It did occur to us that prices in England were in question, and we have always thought "cost price" variable, high with the sluggish and unenterprising, low with the other sort, variable through endless influences. But Mr. Martineau says —something else, and we dare not presume to contradict:

To the Editor of the Investors' Review.

Sir,—The statement I ventured to make, that the rise in the price of sugar was caused by a reduction of 1,250,000 tons in the production, and not by the prospect of bounties being abolished, is so well known by everyone acquainted with the sugar market, that it is quite unnecessary for me to insist on it further in reply to your correspondent. I may, however, quote the following from the *Journal des Fabricants de Sucre*, of the 8th inst. Speaking of the recent rise, the writer says:—"Elle avait pour cause un déficit cultural tout à fait inattendu. Hasard providentiel sur lequel il ne nous est pas permis de compter deux fois. Ne voyons nous pas d'ailleurs les prix baisser anjourd'hui, alors que deux mois à peine nous separent de l'écheance fatale."

Your correspondent would, no doubt, like to see sugar at a price permanently 2s. to 3s. per cwt. below the cost of production. This, however, he ought to know is impossible. Such an artificial fall brings its own remedy—a remedy very detrimental to the interests of the consumer. Producers decline to produce below cost price, production is forcibly reduced, prices rise violently, and the consumer finds himself with insufficient supplies and dependent on the smaller area of the bounty-fed sources. This is why the confectioners, some years ago, very wisely declared in favour of the abolition of bounties because then "this Kingdom would be provided with a larger, a better, a cheaper, and a more reliable supply of sugar than it has ever yet had."

I am, Sir, yours faithfully,

George Martineau.

Gomshall, July 15, 1903.

Linotype and Machinery, Limited.

After the results of the various meetings of debenture and shareholders held during the past week, the directors of the Linotype Company and the Machinery Trust can, we think, safely consider the two businesses fused under the above chosen title, and will doubtless reflect upon their labours with no small satisfaction. The financial mismanagement which has characterised the conduct of affairs did not entitle the board to the overwhelming support accorded it, and the amalgamation scheme put forward was not without grave blemish; but proprietors were faced by a position which, had it been allowed to continue, must have led to still greater troubles, and almost unanimously

decided to accept the inevitable. In this they are, perhaps, wise, and as, according to the newspaper reports of the shareholders' meetings, an offer on the part of Sir Joseph Lawrence to resign was met with universal cries of dissent, there is little more to be said. We will, indeed, only indulge the hope that the leniency displayed by shareholders will induce the directors to make an honest endeavour to redeem the blunders of the past and to show by their acts and deeds that the confidence reposed in them is not, after all, misplaced. The first meeting held was that of the Linotype debenture holders, and although the chairman handled the position with considerable skill, interference with debenture holders' rights is a delicate matter, and he was subsequently called upon to face criticisms of the scheme of a rather strong order. However, the heat died down and the proposals were carried both on a show of hands and at a poll demanded by one or two holders who refused to be appeased. One gentleman threatened to apply to the Courts for an injunction to quash the amalgamation, but we hope calmer reflection will impress him with the necessity of leaving well alone, as no possible good can come of upsetting a scheme which, while a long way from perfect, is accepted by the great majority. As to the Machinery Trust debenture holders, they agreed to the creation of an additional £500,000 first charge debenture stock, to rank alongside them, almost without a murmur, and the way was paved for the shareholders' meetings held later in the week. These were protracted and at times excitement ran a little high, but at both gatherings the amalgamation resolutions were carried without the great proxy majority which the chairman had at his command, and the companies enter upon a new era, one of progress and prosperity let us hope. The subjoined lists will be found interesting at the present juncture:—

Natural Gas.

Our attention has been drawn to a curious incident in the career of the Heathfield Natural Gas Syndicate, a concern which made a splutter a short time back with newspaper and magazine articles descriptive of its gas-field. Whether by reason of this flourish of trumpets or not the shares were unofficially quoted in the *Financial News*, the *Financier*, and the *Financial Times* at prices ranging from £2 to £3, until the day of the special settlement on the Stock Exchange. Then a mighty change came o'er the scene, and holders, instead of being able to dispose of their shares at a comfortable profit, found there was no market for them. What they now would like to know is, "Why this sudden change?" Surely the fact of the company being recognised by the House was not sufficient to knock the price down to such an extent, yet there must be some reason. Is it because the contract which the Syndicate in December last was just on the point of entering into with the Eastbourne Gas Company to supply it with gas has fallen through, because the Eastbourne people up to January last had no absolute data to work on? Or is it because the pipe line along the railway is not commenced, or if so only recently? Or was the "market" a snare, of whose existence the Stock Exchange committee ought to have taken note before it granted a settlement involving innocent people in losses as clean as if pockets had been picked? Whatever the reasons for the sharp fall in prices, and no doubt the syndicate can furnish satisfactory ones, ought not the Stock Exchange Committee to enquire habitually more closely into the position of a company

before granting a settlement? Incidents such as this do incalculable harm, not only to speculative but also investment business and the "House" in its own interests might find it pay to see that they did not occur.

Portman Estate Mansion.

No information can be obtained regarding this company's affairs, as the directors take good care that the annual accounts are not circulated to the Press. They also refuse, we believe, to allow the proceedings at the annual meetings to be publicly reported, and use every possible endeavour to prevent enquiry into the position of the undertaking. We know, however, that matters could not well be worse, as the final preference dividend for the last financial year could not be met, and the £10 preference shares are practically unsaleable, the quotation being quite nominal at 4-6. Will some shareholder favour us with a few particulars? Subjoined is a list of the principal shareholdings, both preference and ordinary. Is the Mr. Arthur F. Pennell, who effected such important transfers during the past year, the chairman of the company? :—

Critical Index to New Investments.

*** To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Page and Overton's Brewery, Limited.

This is an amalgamation of Page and Overton's Brewery Co., Limited, of Shirley Brewery, Croydon, Bradley's Brewery, Epsom, and Youell and Elkin's Brewery, Horley, with the licensed and other properties attached thereto. The capital of the new company is £250,000 in 15,000 5 per cent. cumulative preference and 10,000 ordinary shares of £10 each, and £250,000 in 4½ per cent. first mortgage debenture stock, but only £170,000 of the latter is offered for subscription. Of the assets taken over, the properties of Page and Overton's Company are valued at £272,894, those of the Epsom and Horley Breweries at £85,624, and the casks, horses, rolling stock, book debts and stock-in-trade of the three concerns at £70,742, to which is added £84,123 for goodwill, making a total of £513,382. The purchase price for the old company is fixed at £290,000, payable as to £80,000 in debenture stock, £120,000 in preference shares, and £90,000 in ordinary shares, and in addition the new company takes over the contracts for the purchase of the other two breweries at an estimated cost of £96,624, and also undertakes to pay off £97,800 of existing mortgages, and to take over current trade liabilities and customers' deposits of £28,959. Profits for the five years to 1902 of the combined businesses ranged from £23,505 to £25,860, and in the last twelve months were £25,132, but it is estimated that the closing of the Epsom and Horley breweries and the concentration of their trades at Croydon will lead to economies calculated at £1,500 a year, and to an increase in the profits to approximately £27,000, while the debenture interest will require £11,250 per annum. These figures are said to have been arrived at after making full provision for depreciation and bad debts, but a glance at the history of the principal business reveals the fact that depreciation allowances have always been decidedly inadequate, and that in other ways the company has been far from flourishing, although it has paid dividends of 12 per cent. on the ordinary shares. The taking in of other businesses, therefore, looks like a desperate attempt to keep afloat.

Havana Electricity Co., Limited.

A concession having been granted for the supply in the City of Havana of electric current for lighting and power purposes, a company called La Compania de Electricidad de Cuba was incorporated with a nominal share capital of $2,000,000 United States gold, and a similar amount in bonds, but apparently did not choose to do the work itself. This undertaking has consequently been formed for the purpose of making a contract whereby the construction of the works will be arranged for, and has promptly sub-let the job to a German concern, the Allgemeine Elektricitaets Gesellschaft. The company has a capital of £300,000 in £10 shares, of which 15,000 are offered for subscription, and it is proposed to raise a further £100,000 by the issue of debentures. In consideration for thus acting as go between and finding the necessary cash, the company is to acquire $1,500,000 in 6 per cent. bonds and $1,025,000 in shares. It seems a peculiar way of doing business, but the directors are men who should know what they are about, so we suppose it is all right. Only where does patriotism a la Joseph the gyrating come in?

Charing Cross and Strand Electricity Supply Corporation, Limited.

This company is making good progress with its City undertaking, which is worked as a separate branch of its business, and now has its generating station at Bow and the sub-stations at Fenchurch Street, Upper Thames Street, and Ludgate Hill equipped with plant in full working order sufficient to give supply to 350,000 8 candle-power lamps. Supply is actually being given to 194,000 lamps, and the number is steadily increasing, so that a fourth sub-station in Beech Street, E.C., is being proceeded with. How rapid has been the advance is shown by the statement that the B.T. units sold in 1902 amounted to 1,987,640, against 589,957 in the previous year, and during the three months ended March 31, 1903, the number sold rose to 1,067,538. For this branch the company has an authorised capital of £800,000 in 4½ per cent. cumulative preference and ordinary shares of £10 each, of which 40,000 preference and 70,000 ordinary shares have been issued, together with £320,000 in debenture bonds, and it now offers the balance of the preference shares at par. The dividends are payable exclusively out of the net profits of the City undertaking, and the present issue will, until July 1, 1906, rank after the shares already in existence, but in the event of these profits proving insufficient to provide the dividends on the new

shares, any deficiency will be made up out of the surplus profits of the general undertaking, after meeting the other preference charges. A contract has been entered into for underwriting the issue at a commission of 5 per cent., and a further sum, equivalent to 2½ per cent., is paid to the brokers of the company for services rendered, but the reputation of the company is such that such precautions would hardly seem to be necessary.

Frederick Gorringe, Limited.

This company acquires the business of silk mercer, outfitter, lace merchant, and general draper of the same name founded upwards of forty-six years ago, and possessing assets valued at £206,492, inclusive of £116,406 for goodwill and a four years' lease of certain of the premises. In addition to the payment of this sum to the vendor, the company is to pay a premium of £50,000 to the ground landlord and undertake to remodel part of the premises at a cost of another £50,000, in return for a new lease for sixty-three years from March 25, 1903. The capital is fixed at £400,000, divided into 5 per cent participating cumulative preference and ordinary shares, of which the vendor takes one-third with £73,160 in cash, and 133,334 shares of each class are offered for subscription at par. Profits, after providing £750 for depreciation of fixtures and plant in each year are certified to have been £32,516 for the year ended February 28, 1898, £34,107 for 1899, £35,111 for 1900, and £38,838 for 1901, but they fell off to £27,440 in 1902, and £33,696 in 1903, the average for the six years being £33,618. Preference dividend and 7 per cent. on the ordinary shares would require £24,000, leaving on this basis £9,618 available for directors' and managers' remuneration, reserve and sinking funds, and further dividends on both classes, etc., a balance which is none too large if the item of depreciation is to receive more adequate recognition than it has done in the past. The company is undoubtedly over-capitalised, and for that reason alone the ordinary shares must be regarded as speculative, although the preferences may prove good enough to hold.

Isle of Wight Electric Light and Power Co., Limited.

This company, which was formed in 1897, and has now acquired powers under provisional orders for supplying electricity in all the principal towns in the Isle of Wight, has a capital of £100,000 in ordinary and 5 per cent. cumulative preference shares of £5 each, and £50,000 in 4½ per cent. debenture stock. Of these the ordinary shares have already been issued, 9,993 of them to Edmundson's Electricity Corporation, Limited, and seven to the signatories, and the company now offers the preference shares at par and the debenture stock at 102 per cent. Three out of the four proposed stations have been opened, and the company on June 1 had the equivalent of 34,705 8 candle-power lamps connected, compared with 7,199 on January 1, 1901. Profits for the three years ended December 31 were £1,117, £1,323, and £3,184, but by some process of reasoning which they do not condescend to explain, the directors prophesy that the profits for 1903 and 1904 should not be less than £5,000 and £7,000 respectively —a flight of fancy for which there does not seem to be much justification. Up to December 31 a sum of £125,738 had been spent on the undertakings, of which £75,738 has either been met by temporary loans or is still outstanding and will be paid off out of the proceeds of the present issue. The prospectus is silent as regards any provision for depreciation having been made, yet a large proportion of the above outlay has been on assets requiring frequent renewal, and altogether the opportunity offered is not one to grow enthusiastic over.

Consolidated Nickel Mines, Limited.

Undismayed by the non-success which has attended the operations of other ventures in nickel mining in New Caledonia, this company has been formed to acquire the exclusive mining rights in fifty-five properties, covering about 57,250 acres, and a partial interest in twenty-one others. The purchase price is £241,000, payable as to £24,000 in cash, £118,500 in shares, and £98,500 in cash or shares, and the capital has been fixed at £400,000 in £1 shares, of which 150,000 are offered for subscription. Although the company owns such a large area, it is intended to restrict operations for some time to come to a block of claims comprising about 19,062 acres, and estimated to be capable of producing an annual output of at least 50,000 tons averaging 6½ per cent. ore for many years to come. Further, in order to avoid the cost of erecting and equipping its own smelting and refining works a contract has been entered into with the Smelting and Refining Company of Australia (1901), Limited, under which that company smelts and refines all ore produced, and sells the nickel and other metals on joint account, receiving half the profits left after payment of all costs of production and treatment. From the results of a trial shipment of ore, together with the estimates as to the costs of mining and haulage of an average 7 per cent. ore, the directors estimate that at present selling prices the revenue from an output of 3,000 tons of refined nickel would give this company £100,000 as its share of the net profits. The principal report upon which the directors appear to rely was made to Messrs. H. H. Vivian and Co., Limited, the well-known smelters of Swansea, as far back as 1899, and if the properties are as valuable as the prospectus would have us believe, it would be interesting to know why they have been left alone since that time, and why Messrs. Vivian do not think it worth while to take a substantial interest in them.

Manchester and Liverpool Electric Express Railway Company.

After hammering away for some years, the inventor of the mono-rail system of electric railways succeeded in August, 1901, in getting authority to construct a line between Manchester and Liverpool, and this company was formed for the purpose of carrying out the work. The capital has been fixed at £2,100,000 in £10 shares, all of which are offered for subscription, and the company has powers to borrow a further £700,000 on debentures, while the cost of construction is estimated at £2,298,515. A ten minute service of trains running 110 miles an hour is projected, at an annual expense of working calculated at £65,554, or about 7½d. per train mile, and on this basis it is reckoned that an average of twenty third class passengers per train, or 2,000 per day in each direction would provide sufficient to pay 5 per cent. on all the capital, and every additional 2½ passengers per train would provide another 1 per cent. The venture is of necessity a speculative one, but the system has met with the approval of eminent scientific men, and there seems no reason to doubt its commercial success, once people get used to the novelty.

Brighton Corporation 3 per cent. Redeemable Stock.

Applications will be received by the London and Westminster Bank for an issue of £600,000 of the above stock, at the price of 93½, which is made to meet the cost of constructing tramways in the borough, and extending the waterworks and electricity works. The stock is redeemable at par on July 1, 1953, but may be repaid on or after July 1, 1933, at the option of the Corporation, and is, of course, a trustee security. Of the price fixed 5 per cent. must be paid on application, 18½ per cent. on July 30, and two instalments of 35 per cent. each on September 22 and October 22, but a full six months' interest is payable on January 1. But a few years ago the corporation issued a 2½ per cent. stock at 97, and yet there are good citizens who think war a blessing.

Passing Events.

On Monday Mr. Edmund Robertson succeeded in extracting from Mr. Brodrick the interesting information that the weekly expenditure upon our garrison in South Africa is about £110,000, or about £45,000 per week more than the same number of troops would cost at home. This excess therefore amounts to, say, £2,400,000 per annum, and the total cost of the garrison in South Africa is nearly £6,000,000 per annum. Where does the counterpart of this expenditure figure in the revenues received by the

British taxpayer from this great conquest? Would not England have been happier and stronger to-day, more capable of meeting a great crisis should it arrive in Europe, if she had neither a garrison in South Africa nor the expenses of the extra troops set to rot anywhere? It is all very well to say less than half the outlay upon this garrison of 30,000 or whatever the number is, is "excess" outlay. Had we pursued a pacific policy and acted with moderation and wisdom, we need not have had these troops in existence at all. The whole cost of the 30,000 could have been saved to the Exchequer. That would have been a good deal better for the unemployed in this country, for the underpaid, even for the over-capitalised, than the present waste.

Here is what Sir John Brunner says in a letter to the *Times*, published last Tuesday. One concrete group of facts is worth ten thousand theorisings, honest or dishonest:

I am a manufacturer of alkali by what is called the ammonia process, a raw material in the manufacture of soap, of glass, and of paper, and the total make of alkali by this process in the world is over a million tons a year. The average daily wage paid to the workmen employed in this trade is in Germany 78 per cent. of the English rate, in France 77 per cent., in Austria 56 per cent., and in Hungary 43 per cent. To earn these wages in Germany, in France, in Austria, and in Hungary the men have to work twelve hours a day, whilst in England the men work only eight hours a day. We give our men a week's holiday annually without stoppage of pay. The German, therefore, has to work 52 weeks twelve hours a day to get 78 per cent. of the wage of the Englishman working 51 weeks eight hours a day; and the others get less in the proportion shown. No; the taxation of food does not produce high wages.

If you want to measure the depth of Mr. Joseph Chamberlain's "loyalty" to his colleagues, to take the measure of Brummagem "chivalry," to gauge the standard of gentlemanliness aimed at by the retired screw monopolist, whose care and solicitude over full employment for his workmen prompted him once on a time to take his share of £10,000 per annum contributed to his firm's profits by the rival monopolies in the States, giving nothing back, to start "old age pensions" for the workmen, to the extent of this sop condemned to idleness, then read the circular signed "C. A. Vince" sent out to all Liberal Unionist Associations from the Central Unionist Office in Birmingham, and printed in Thursday's *Westminster Gazette*. Vince wants to know for his master how the "proposed fiscal policy," not formulated, has been received, and whether it has met with favourable or unfavourable criticism in the local press, with notes of the arguments used with most effect against the policy with a view to retorts. This is Joseph's way of conducting an enquiry. Who is finding the money for this sort of thing, Sir Ernest Cassell, Herr Alfred Beit, or who? Never mind, the Tory-Whig coalition staked its all on "Joe," and is now getting fit reward.

It was rather cruel of the Master of Elibank to draw attention to the superior quality of British locomotives, as testified to by engineers in the service of the Egyptian Government, and we wonder that the *Times* printed his letter. It is bad for preferential tariffs, and everything that is unfair. Yet Mr. Murray only told the truth in pointing out that contracts for engines had ceased to go to the United States from Egypt, because British made engines worked 40 per cent. longer, did 40 per cent. more work, cost 24 per cent. less in repairs, and consumed 5.6 per cent. less coal than Belgian engines. Engines from the United States, so far as we recollect the substance of the report, did a little better than Belgian, but not nearly so well as British. No wonder then that Glasgow engine makers got some orders from the Canadian Pacific Railway. By-the-bye some wits are twitting Mr. Chamberlain for having spoken of the Canadian Government as given the orders, not the railway company. But was not that a quite natural mistake on his part? Are not railway and government one and the same thing in his mind?

The United States are reported as having succeeded, along with Japan, in persuading Russia to open two ports in Manchuria, probably Mukden and Ta-tung-Kau, and much good will the concession do them. It does not alter the fact that Russia's absorption of Manchuria and her menacing advances on the independence of Korea involve the risk of an early war between her and Japan, into which we may be dragged neck and crop. But, doubtless, we could put the expense upon India, and borrow it in her name. Much better that than another issue or series of issues of Consols.

Advance Australia! especially Western. For the year ended June 30 the revenue was £363,238, of which the Commonwealth contributed £1,255,732, and the State £2,129,047. This, with a population of about 180,000, works out at over £13 per head, which is much better than in the previous year, when income was not quite £12. When shall we have the next loan?

So good Mr. Ritchie cannot afford to pay off the £10,000,000 of War Exchequer bonds due on the 7th of next month. Lord Milner wants all that and as much more as he can get to beautify the land annexed for the profit of his masters, and to keep up the prosperity—"coming, coming"—deception. All, therefore, that is left for our Chancellor of the Exchequer is to renew £6,000,000 of the ten due for another year, and he has wisely decided to do this in the form of one year bonds not, as the market would have preferred, in "yearling Treasuries." His decision ought anyway to commend him to the good graces of the fickle and ever-ratting Joseph, for it tends to exclude "the foreigner," who, having stamps to pay at home on bonds, cannot buy ours, although he will take Treasury bills to almost any extent, the trustful soul. The renewal bonds are to be put up for tender and the patriotic market means to get as much out of the taxpayer as it can.

With its usual enterprise the North-Eastern Railway has decided to start a service of motor cars along country roads in connection with its railway service. The scheme is to be tried first in the neighbourhood of Beverley, and if successful there will be extended to other portions of the system. As a feeder for passenger and light goods traffic in country districts, we imagine the idea should prove highly remunerative, and the Company deserves all praise for its foresight and initiative.

What a cynically happy-go-lucky crowd they are in the services. Last week they wanted to let off the new 9.2 guns at Southsea Castle just to see how they worked, and whether half the windows in the town would be smashed. Contrary to expectations the latter did not come off, but it appears that the day chosen was foggy, and only a view of five miles across the Spithead could be obtained. As the guns were tested at an elevation of 15 degrees, which means a range of nearly seven miles, there was (we quote from the *Engineer*), "plenty of pleasing uncertainty as to what was going on at the other end." Luckily no damage was done, though would it have mattered if there had been so long as the guns and their fittings were all right?

The Westminster Corporation got nicely snubbed for attempting to interfere with the County Council's proposed trams. It wanted a clause put in the Bill now before Parliament giving its surveyor some control over the laying of wires, etc., but the Lords' Committee would have none of it. If the Borough Councils are generally dissatisfied, as Westminster's representative stated they were, let them come in a body to Parliament and get the law amended. Till then the Committee thought the general law should not be whittled away on behalf of one particular council. Well done, Lords!

TRADE AND PRODUCE.

Wheat.—The somewhat violent fluctuations on the American market enlivened the markets over here for a day or so. Spot parcels were more firmly held, and speculative positions improved, but very little business was done through it all, and the market still remains dull and listless. English wheat becomes more and more scarce, and therefore dearer, farmers' deliveries last week being only 19,775 quarters, obtaining an average price of 28s. 1d., against 32,340 last week at 27s. 9d., and since then the price has advanced still further. Imports have lately been liberal, last week 542,083 quarters coming in, against 297,315 quarters the week before, making the total for 45 weeks 16,563,900 quarters, against 14,600,262 last season. As we said, the American markets have fluctuated considerably, each day opening fairly steady, and generally a reaction in the afternoon, every little breath of news, adverse or otherwise, seeming to upset the market. Bradstreet estimates the quantities in sight east of the Rockies at 22,082,000 bushels, against 24,142,000 in the previous week, and 27,713,000 bushels in corresponding week last year.

Wool.—Attendance from all parts at the sales continues very large, and a most spirited buying has so far been kept up. It would be difficult to say who are the keenest buyers, Yorkshire

and American, perhaps, for crossbreds, and the Continent for merinos, though really all compete keenly for all classes of wood. Prices have not altered much, the medium and finer crossbreds are rather dearer than last week, and merinos, after the drop at the commencement of the sales, have remained steady, except for faulty kinds, which have sold in buyers' favour. Apart from the sales here, little is doing, but the tone of home grown wool continues good, and at Leicester, their principal market, transactions have been on a large scale. Prices are going higher, and stocks in the hands of growers and country dealers have been greatly reduced. They are now smaller than at any time during the last five years. Our export trade for the moment is quiet, Canada and South Africa are doing a fair share, the latter principally in ready-made articles, but there is little new business in yarns.

Linen.—Last week's remarks might very well apply to this, so little change has taken place in the market. Each week yarns become more difficult to obtain, stocks are very low, in many sorts there are no stocks, and production is engaged for some months ahead. Naturally prices are going higher. Different descriptions of brown linens are selling in quantities sufficient to keep up with production. Dress goods are in great demand still, and contracts for housekeeping varieties will keep producers busy until the next season commences. Unions are for the present at a standstill, the state of the cotton market making business in them very difficult to transact. The Home and Foreign trade in finished goods is also without change, but an average amount is doing, and the outlook for the autumn hopeful. It is expected that buying will commence earlier than usual in the United States. Colonial demand is better. Cuba is still uncertain, but South American orders generally are promising better, the Argentine in particular doing a substantial increase. During the six months ended June 30 the total value of linens shipped from the United Kingdom to all markets show a falling off of 1.1 per cent. as compared with the first half of last year.

Cotton.—Quotations for American fluctuated considerably during the week, the bears being encouraged by more favourable crop reports in the States to operate for a fall. But no sooner did prices shown signs of going below 6d. per lb. for old crop months than considerable buying orders from consumers came in and values quickly rose. The movements of the bull clique in New Orleans are still a considerable source of anxiety to operators, as any move in this quarter has a tendency to raise values rapidly. Though this does not affect Liverpool to such an extent as the American markets, yet it does influence it, as was shown one day this week. Egyptians are decidedly easier values during the week being 3/8d. per lb. lower. Sir Jacob Behrens and Sons, however, point out that these rapid changes in price are of no assistance to the yarn market, and if anything tend to shake the confidence of buyers. Even with the production of the mills reduced, it is difficult to do business, and all that is done is practically a small day to day trade in miscellaneous lines. A steady market, it is thought, would give the necessary fillip to Eastern buyers, as the monsoon reports from India are favourable, and the China exchanges better, but so long as staple continues erratic these markets refuse to offer freely. For cloth there has been a moderate enquiry, the irregularity in the ideas of manufacturers assisting buyers to book a few orders, in spite of the low limits. The result of these offers, however, is more disastrous as a rule to the manufacturer than stopping his machinery, and the policy most in favour is "When in doubt, stop." Of the business transacted the bulk has come from India, Bombay in particular showing more activity. China is also offering a little more freely under the influence of the better exchange, and a few orders have been placed there.

The fluctuations at Liverpool have been small compared with those on the New York and New Orleans, where unsteadiness and nervousness have reigned all the week, both in spot and future. For a time unfavourable advices from this country, bear pressure, and sales to realise would send prices steadily, but a demand to cover contracts would immediately after rally the markets. Moreover, the question of supply has undergone no change, and any moment may see the New Orleans once more supporting the market, sending prices soaring up again.

A good business was done on Friday at Liverpool in spot, the prices at the close being 6.44d. for middling American or slightly in advance of the opening, Egyptians also being higher at 7 7-16d. fair. Futures were easy at 5.63d. to 6.18d. near positions, and 5.10d. to 5.27d. for the more distant.

Iron and Steel.—Next week will see a general stoppage of work in Glasgow and the district, on account of general holidays. This, combined with less favourable advices from America, has had the effect of keeping the Glasgow market quiet and steady for the past few days. Of speculative business there was practically none, and consumers' demands were down to the lowest point. For Scotch warrants the price quoted was 52s. 4½d., while in Cleveland a few transactions took place at 46s. 1½d. cash. Foundries until the close of the annual holidays will do nothing, though until recently they were busy, the malleable ironworks also showing more signs of activity this week. In the North of England there has been a lull in the booking of orders, possibly because makers of pig-iron have already got their books well filled and are waiting to see how prices move. All the iron now produced goes straight to the consumer, and with demand exceeding output there is no necessity for the works to accumulate stocks. The steel rail mills continue busy, and the prospects are on the whole considered excellent. Messrs. Dorman, Long and Co. have secured a large order for rails for the Siamese Railways, against keen continental competition. It is reported that the price at which the contract was quoted was below £5 10s., the syndicate's official figure. Possibly this was the case, as the firm, like the North-Eastern Steel Company, are not members of the ring, and are therefore free to accept as low a price as they like. Shipbuilders, and the works supplying them with their material, are still miserable, and the freight market as yet holds out no hopes of better times. Though there was a fair amount of business in hematite done at Barrow during the week, neither the demand nor the position of manufacturers is so firm as they have been. This is shown by the reduction in the price of mixed Bessemer numbers, from 59s. 6d. to 58s. 6d. per ton, f.o.b. The Vickers Maxim Yard have decided to launch H.M.S. *Dominion* an August 28, but hope before then to get a few more orders to fill up the gaps in their slips.

The *Iron Age*, in its review of the American iron trade, states that the halt in the buying movement, commenced last week, has continued. Independent Southern producers are selling pig-iron on the basis of $13 a ton laid down in Birmingham, while steel is easier in all position.

Coal.—Generally speaking trade remains without alteration, and is on the whole in a satisfactory condition, more particularly in shipments, which are ever increasing. The Scottish ports, it is true, show a considerable decrease on last week, but Yorkshire is well to the fore, and at the Welsh ports the supply cannot meet the demand. Steam coals, of course, are the principal feature, but a good deal is being done in railway fuel, the contract from the Italian railways for the supply of between 100,000 and 120,000 tons Monmouthshire semi-bituminous coal having been secured by Messrs. Watts, Watts and Co., Newport and Cardiff, and gas coal contracts show more progress. Lancashire still remains depressed.

Copper.—Very little was required this week to cause quotations on this market to fluctuate, though the tendency on the whole was downward. Every now and again prices would be lifted 7s. 6d. or 10s., only to slip back within the next few hours to possibly a lower position than before the rise. America is dull and content to watch the fight between the big producers and consumers, the agents of the former having made a further concession this week for electrolytic. The point at issue between the two parties is the fixing of a price which will lead to a larger consumption, and until this is arranged dealings will be but few. On Friday the London was steady and asking £56 15s. cash and £55 17s. 6d. for three months.

Tin.—Business on the Eastern markets has been disorganised by the course of exchange, exporters for a time selling freely to reap the benefit of the favourable dollar exchange before the fixed rate of 2s. per dollar came into force. This for a time made the London market active, though never very strong, and prices during the week declined on the whole. At the close on Friday the tone was quiet, the quotation for cash being £122 15s., and for three months £120 5s.

Tea.—The Indian auctions have been very small. This week only 7,589 packages were offered, but it was nearly all new season's tea, and sold readily at last week's rates, 4,087 packages being taken at an average price of 7.12d., against 7,823 packages sold at 5.85d. in the corresponding week of last year. For the first half of the month, shipments from Calcutta and Chittagong were 9,530,000 lb., making the total exported to the United Kingdom from April 1 to July 15 19,472,000 lb., against 20,590,000 last season. At this time of the year Ceylon teas fall off very much in quality, but the demand for them at the auctions was very fair, and prices on the whole steady for the commoner sorts, the better being rather irregular. Average price for the week was 6.91d., against 5.99d. last year. In China and Java teas little is doing, particularly in the former, but prices remain steady, and all teas offered are generally taken readily enough. From the figures which we take from Messrs. Wm., Jas. and Hy. Thompson's circular, it will be seen that the quantities of Indian and Ceylon tea re-exported from the United Kingdom for the first half of the year were considerably less than in 1902, being 4,811,000 lb. of Indian and 7,807,000 of Ceylon this year, against 6,434,000 and 7,955,000 last. But Messrs. Gow, Wilson, and Stanton give also the transhipments to North America and other countries, principally Russia, which alter the position considerably.

Sugar.—Further realisations of speculative accounts caused slight fluctuations in price during the week, though, on the whole, the tone of the market was steady. On America cabling an improvement of 3d. per cwt., prices here at once hardened 1d., which seems absurd, considering our best values are still 1s. 3d. above the American parity. However, it is hoped the rise will check the sales of cane from the States to the United Kingdom, of which there is a good deal offering. Apart from this reason for the advance, the moment was decidedly favourable to such a step, prices being low and the trade bare of stocks. Vague rumours of a European combine may also have had some influence, though its formation without the assistance of the Government is impossible, and such could not be given as schemes of this kind are barred by the Brussels Convention. Our imports this week show a falling off compared with last year, and Mr. Czarnikow points out that it is rather remarkable that during June Germany should only have sent us 28,000 tons of refined, against 48,000 tons last year, while of raw the exports amounted to 48,000 tons, against 32,000. Beet prices during the week have moved from 7s. 10½d. to 7s. 11½d. for July, and from 8s. 7¼d. to 8s. 8¼d. for October-December. In cane there has been more activity this week, and refiners have paid 1½d. to 3d. advance on parcels to arrive. America is firmer, as sellers calculate that the home requirements between now and the end of the year will force buyers to take all available cane supplies at hardening rates. In view of the wide discrepancy between the prices now ruling in the States and those of Europe, it is more than probable this forecast will prove true. Stocks are down to 324,000 tons, the meltings for the week having amounted to 37,000 tons, while only 33,000 were landed at the three ports.

Freights.—An easier tone prevails in the outward freight market, though there were appreciable changes in the quotation.

except to Mediterranean ports, for which lower rates were quoted. Baltic freights were on an equal basis to last week, and the same may be said of the nearer home ports to the South of Europe. But to the Mediterranean an active business has sprung up, especially to Genoa, now that for the moment all fears of labour troubles have vanished, 5s. 9d. being the rate from Cardiff. Barcelona is the solitary exception to this activity, as there the strike, or rather lock-out, continues. Charterers to the Western Islands are indifferent, even with the low rates offered, while to South American ports shippers can obtain all the tonnage they require at the same rates as last week. In the homeward market owners are at last beginning to hope that the gloom of the past months is about to lift, though the market as yet gives no positive indication of any improvement, save from the Black Sea. From the ports there a considerable firmness had developed in all positions, though chiefly for backward positions. As yet this improvement has not effected either the Danube or Azoff markets, though a change here is expected soon in sympathy with their neighbours. For the tramp owner, the North America holds out but little hope in the coming season, enquiries for any position being scarce. South America is at the moment even worse than the North, the fixture of an August steamer at 10s. 7½d. Rio-Baltimore being a considerable decrease on previous quotations, yet even at this rate charterers are easy. The Plate is perhaps a little better, but only for distant positions. In the East the market shows a firmer position, but only in India and Burmah, Java remaining practically at a standstill.

MINING NOTES AND NEWS.

Business in the South African market gets no brisker, consequently there is little or nothing for us to chronicle. The market is becoming more deserted each day, dealers and brokers taking advantage of the fine weather, and the lack of business to go for their holidays. No startling rumours have been circulated to disturb the serenity of the poor, out-o'-a-job market punter, so we have had no amusement. On Monday a sensational cablegram was published announcing the discovery of "a diamond" on the Transvaal Development company's property, which adjoins the farm on which the Premier mine is situated. The natural surmise was that some careless individual must have dropped it, but the cable added that the find related to prospecting operations, that the prospector's reports "had previously mentioned the presence of carbon and other customary indications of diamonds, and his advices for some time past have been of a very encouraging character." It gave sufficient excuse to hoist the shares a fraction. News is to hand, too, that Mr. Carl Hanau, of Coronation reef notoriety, has been converted to the opinions held by those who favour the importation of Chinese; likewise that Mr. Skinner, the Chamber of Mines Commissioner, who has been on tour to investigate the labour question in other countries, is reported to have expressed his conviction that yellow is the best kind of unskilled labour that can be obtained. General Botha, in an interview with Reuter's representative, referring to the labour problem pointed out that the monthly output of the Transvaal before the war amounted to 480,000 oz., the labourers numbering 90,000. At present 68,000 natives are employed, therefore, proportionately, the output should be 380,000 oz. It is, however, over 100,000 oz. short of this. He concludes that the object of the mine magnates is not to increase the output, but rather the reverse. By these tactics they are "endeavouring to secure an aggregation of mining interests to the exclusion of small holders. . . . If they reduced the cost of labour by the importation of Asiatics the profits would be increased by a large turnover, and the whole profits would virtually go into their own hands." One dividend has been declared in the shape of a 10 per cent. distribution to the shareholders of the Robinson Deep, but it no more stimulated the market than did the dividends of a week or two ago.

Rhodesians have likewise been dull, being braced up neither by the Chartered meeting, nor the output for June, which is a "record" for the "colony," bless it.

The only other section of the mining market in which there has been any interesting development is the Egyptian. Last week a rumour was current that Mr. J. B. Robinson had made up his mind to interest himself in the Nile Valley Company. This has now been officially confirmed, and we are promised an early Egyptian boom by the optimists as a consequence. Strange to say, however, instead of strengthening, the price of Nile Valleys did not change on the momentous announcement.

Whilst West Australians and West Africans have not been exactly depressed they have been anything but cheerful, and there has likewise been no change of any importance in the miscellaneous section. The directors of the Ooregum Company have declared a dividend of 1s. per share on the preference shares, and an interim dividend of 9d. on both preference or ordinary shares, and the price advanced on the announcement. Amongst coppers, Rio Tintos have moved downwards, and Etruscans slightly upwards.

Consolidated Mines Selection Company.—During the twelve months to the end of June a net profit of £28,879 was realised from sales of paper, of which the company holds a varied assortment, interest, and dividends brought in £12,242, with share dividends to receive of £715, and transfer fees, £115. Adding the balance of £16,287 brought in, and deducting outgo, a profit of £41,923 is shown. Out of this the directors declare a dividend of 12½ per cent., against 15 per cent. in July of last year, when the profit was £64,587. In spite, however, of this apparent decline in business, owing to the stagnation of markets, the directors—sanguine men!—think the time has arrived when the capital of the company should be increased, accordingly, on March 10 last, a meeting of shareholders unanimously decided to raise it from £300,000 to £600,000, the shares to participate in any dividends declared subsequently to the annual meeting held this year. Of the above amount 200,000 shares were offered to the shareholders at a premium of 2s. 6d., the remaining 100,000 being held in reserve. The premiums have been placed to reserve, increasing that fund to £60,000. The directors have taken advantage, the report informs us, "of the recent low prices to invest a large proportion of the new capital in South African propositions of future promise." Shares are held, besides, in Australian, American, and British Columbian companies, their aggregate book values being placed at £492,040. A footnote states there is a contingent liability on some of the shareholdings in respect of uncalled capital, but the precise amount is withheld. The principal liability is £115,349, part representing loans in anticipation of the instalment of 10s. per share on the new shares falling due July 1, the rest, including unclaimed dividends and interest. Cash totals £34,003, and debtors owe £9,378. Other assets include unfloated Witwatersrand Deep Level claims, farms, etc., valued at £25,144, and debentures in South African mining companies of a book value of £16,197.

Fanti Consolidated Mines.—The directors of this Jungle concern have very little to tell the shareholders in their report to the end of December, 1902, a document that might have been issued earlier without risking tragic consequences. The company's principal assets consist of holdings in other West African companies, which have not yet, unfortunately, reached the dividend paying stage, but from which, the directors "are pleased to state they have received reports showing that very satisfactory progress has been made during the year in the development of the properties owned by these companies." Well, it is something to have reports in times such as these, for many directors are afraid to publish information of any kind, preferring to leave a great deal to conjecture and imagination. Outgo and income are capitalised. The latter, during the twelve months, amounted to £2,075, of which £1,911 came from interest on contango loans, £130 from transfer fees, whilst £33 represents the difference on realising investments. Expenditure totalled £3,224, leaving a balance of £1,149 on the wrong side. Shares in other companies are valued at £151,572, and on these is a contingent liability of £19,872. Cash stands at £13,811, loans at £26,069, and sundry debtors at £20,285, against liabilities of £4,278.

New Jagersfontein Mining and Exploration Company.—A brief report is issued by the directors for the twelve months to the end of March. The story cannot be read without weepy sensations, for it reminds one of the misfortunes the company suffered from the dreadful war, and the sacrifices thereby enforced upon the directors and shareholders. Though the sensitive and compassionate may be inclined to shed a tear over such undeserved suffering, still the situation is not one of unrelieved woe. A source of comfort may be discerned if vigilantly sought for. The profit and loss account, for instance, has been swollen by the nice little sum of £37,958, which represents the "profit realised on the sale of 2,260 De Beers deferred shares." It is explained that the company received in exchange for the 2,125 De Beers shares which appeared in the previous balance-sheet, an equal number of preference and deferred shares, together with 135 deferred bonus shares. The whole of the 2,260 deferred shares were promptly sold "at a substantial profit," and with the proceeds preference shares were bought, of which the company now holds 9,000. It has been customary in past years to publish a tabulated statement of work done, but the directors felt that, "owing to the enormous amount of mud and sediment that had accumulated in the mine caused by the inflow of water, and which it was found necessary to treat, the result conveyed would not have been a fair one." Dear, dear! However, for the information of the inquisitive they "wish to state" that during the year 313,015 loads were hauled, comprising 103,426 loads of blue; 108,580 loads of fine ground; and 101,009 loads of reef and stones. There were washed 365,624 loads, comprising 168,030 loads of blue from floors deposited previous to the evacuation; 108,580 loads of fine ground; and 89,014 loads of hopperings and cylinder lumps. These produced 29,302½ carats, realising £79,439, an average of 54s. 2.65d. per carat. Dividends on De Beers preference gave £8,437, on Consols, £2,994, on the German Imperial loan, £1,804, on the Jagersfontein Mine and Estate Company, £2,955, and on the National War Loan, £232. From sundry sources £296 was received. On the other side £33,661 was allowed for depreciation, £14,808 for general restoration, £6,604 for machinery restoration, £16,160 for mine unwatering, and £357 for war expenses, the entire outgo amounting to £136,026, and leaving a debit of £1,910. This is deducted from the credit brought in, so that a balance of £59,630 is carried forward. The company's investments have a book value of £428,242, diamond stock is put at £26,548, stores stand at £26,637, and debtors owe £4,780, against current liabilities of £94,299, and a reserve fund of £141,329. Evidently, by the omission of the item, the concern has no hard cash.

Surprise Gold Mining Company.—This has proved another disappointing Rhodesian company. During 1902 the mill ran continuously from January to July 11, during which time 17,385 tons were crushed, yielding 9,242 oz., equivalent to 10.63 dwts. per ton, with an average assay value of the tailings of 3.3 dwts. In the latter month the mill had to be shut down in consequence of the serious faulting of the reef, and to enable the manager to push on development and exploratory work with a view to re-locating it. As the results of development still continued unsatisfactory, it was decided to obtain the opinion of a geologist, and Mr. Mennell, the curator of the Rhodesian Museum, expressed his opinion that the faulting of the reef is due to a considerable down-throw, and that the best way to find the reef again is by boring. In accordance with his recommendation, boreholes have been started at the third level, to be continued, if necessary, to a depth of 400 ft. below that

level. The profit on the twelve months was only £859. This has been added to the profit brought forward, and the total, £4,538, has been deducted from the development and outlay account. Reconstruction seems probable, if the company is to continue to exist, for against liabilities to sundry creditors, of £7,604, there is only £3,050 in cash, with debtors owing £587. A reserve fund of £27,328, consisting of premiums, has gone in the mine, and £199,000 out of a capital of £200,000, is issued.

Millionaire, Limited.—This Westralian company commenced crushing on April 29 last year, and up to the end of 1902 sufficient gold was won to realise £1,726. The report says that the payable ore available for treatment at and above the 100 ft. level may be estimated at 14,810 tons, with an assay value of 26.75 dwts. per ton, which should produce an approximate profit over stoping, milling, and cyanide expenses of £55,000. Under more favourable financial conditions, the directors say they would advise the energetic development of the mine at and below the 150 ft. level, so as to exhibit more rapidly the value of the property, and, if the estimates of the management are confirmed, to offer the prospect of dividends at no distant date. Owing, however, to the continued depression in the West Australian market, they have so far felt unable to authorise extended operations. Eight thousand shares were issued after the last general meeting, and were taken up at par by a few of the directors and shareholders. Also a further portion of the company's holding in the British Exploration of Australia, Limited, was realised for £3,183, yielding a profit of £1,924. The company is not yet in a position to publish a profit and loss account. There are no liabilities to speak of, and at the end of December the company had £3,757 cash in hand. In estimating the ore in sight nothing has been taken into consideration below the 100 ft level, but at the latter and the 50 ft. levels it is computed there are in sight 19,814 oz. of fine gold, valued at £4 4s. 11½d. per oz., or a total of £84,166.

Tarkwa Consols.—Trouble is brewing between the shareholders and directors of this Jungle company, which may probably lead to interesting developments. A circular has been issued by the committee of shareholders, in which they say:—"The affairs of the Tarkwa Consols, Limited, have, from the inception of the company, been conducted to the detriment of the interests of the bona-fide subscription shareholders. The report and accounts, after a long and illegal delay, were submitted to the general meeting held on May 20, 1903, and were rejected on a show of hands by a large majority. The chairman, who represents other interests, demanded a poll, and stated that the report and accounts were adopted. A conference of subscription shareholders was held on June 8, 1903, and a committee was unanimously appointed to take steps to protect the interests of all the subscription shareholders. After due inquiry the committee have caused a writ to be issued in the name of Mr. W. J. Lyne (one of the number), on behalf of all the shareholders, for the recovery of the major portion of the money paid away under the guise of preliminary expenses. A writ has also been issued in connection with the agreement referred to in the balance-sheet between Harkwa Consols, Limited, the Continental Gold Trusts, Limited, and the Tarkwa Banket Mining Syndicate, Limited, and a summons has been issued for an injunction to prevent the payment of further moneys by the Tarkwa Consols, Limited, to the Tarkwa Banket Mining Syndicate, Limited, and to restrain the directors of the Tarkwa Consols, Limited, from enforcing the most improperly made further call of 5s., payable on the 31st inst." The committee add, they have ascertained that an action is now pending against the Tarkwa Banket Mining Syndicate for the rescission of the contract by which that syndicate acquired its properties, which are said to be valuable; "it is, therefore, of the utmost importance that no further moneys should be handed over to the Tarkwa Banket Mining Syndicate, Limited. The question of an amalgamation between the Tarkwa Consols, Limited, and the Tarkwa Banket Mining Syndicate, Limited, cannot be considered until the action pending against the latter has been disposed of, and only then if fair and equitable terms can be obtained for the Tarkwa Consols, Limited, subscription shareholders." The committee invite subscriptions for carrying on the actions, and the shareholders are asked to communicate with them at 20, Copthall Avenue, E.C., c/o Mr. W. J. Lyne.

Smelting and Refining Company of Australia.—A sensation of the past week has been some spirited gambling in the shares of this company, with the result that they have been advanced to a high figure. This outburst of buying has been as sudden as it is inexplicable, and is enveloped with quite an air of mystery. The company, since its original flotation in 1895, has had an exciting career, and a painful one for those who put their money into it, for it was anything but a successful undertaking. It subsequently went into liquidation. In 1901 a Mr. A. A. Blow was engaged to report on the position and prospects, and he estimated that with certain additions and improvements to the smelting plant the capacity would be increased to 400 tons of ore per day, and should yield a profit of over £100,000 per annum. A new company was accordingly registered in October, 1901, the old shareholders receiving nine new shares for every twenty held in the original company. The authorised capital is £650,000 in 150,000 7 per cent. preference and 500,000 ordinary shares, and there is £100,000 five per cent. first mortgage debenture stock. Some months ago a syndicate of mine owners came forward, and guaranteed a dividend of 20 per cent. per annum for five years in return for three-fourths of the net profits. Nothing startling has transpired to account for the sensational rise in the shares, unless the excuse be that the company has recently entered into a contract with the Consolidated Nickel Mines to treat the whole of the latter's output on the basis of half profits. According to the gossip of the market the shares are being bought up for control by a rival American concern—the American Smelting and Refining Company—and the report is not lacking in plausibility.

Nile Valley Reorganisation.—The official circular issued by the directors of this company explains the new agreement made with Mr. J. B. Robinson. The old company will sell to the new company all its assets for 162,400 shares out of a total capital of 250,000 shares of £1 each, the ordinary shareholders of the old company receiving four shares in the new for each share held in the old company, the deferred shareholders receiving eighteen shares in the new company for each share in the old company, and the directors receiving 6,800 shares in commutation of the 5 per cent. of profits and assets to which they are entitled under the articles of Association, and which has been independently valued by the auditors to the company, Messrs. Jackson, Pixley, Browning, Husey, and Co. The amount of shares available for working capital is therefore 87,600, and of these Mr. J. B. Robinson subscribes for 20,300 at £1; the United African Explorations, Limited, the parent concern, also subscribes for 20,300 at £1, Mr. Robinson receiving a call at 30s. per share over the remaining 47,000 shares for two years. It is felt by the directors, the circular adds, that Mr. Robinson's co-operation is so valuable that they are prepared to recommend this scheme to the shareholders. The Egyptian Government, who have already been approached, have signified their agreement.

Dunraven Gold Mining Company.—Those who have followed the history of this Rhodesian company know that the mine has proved a disappointing one, the reefs having become very poor in the lower levels, causing the mill to be closed down, and compelling the directors to look esewhere for another property. The present report covers two years, to the end of December last. The 20-stamp battery ran continuously during the whole of 1901 up to January 22, 1902, during which period 32,856 tons were crushed for a yield of 15,568 oz., equal to 9.17 dwts. per ton, whilst the tailings gave an additional 2.6 dwts. No mine development has been undertaken since the shutting down of the mill, but under an agreement with Willoughby's Consolidated Company, the latter recently completed a considerable amount of work on the Umcima claims, with a view to the Dunraven taking them over should they prove of value. Unfortunately the results of this work have not been encouraging. The gold won realised £56,163, and transfer fees brought in £125, making a gross income to the end of 1902 of £56,288. After deducting expenditure and £3,452 written off machinery, buildings, etc., a profit of £19,383 is shown, and adding to this the amount brought in, there is a total credit balance of £32,878. In view of the present condition of the mine it is proposed to write off the whole of the above against loss of stores on realisation, development, and other expenditure. The company owes little, but, on the other hand, its liquid cash and other resources are limited, the outlook accordingly is somewhat clouded.

Chicago-Gaika Development Company.—During the twelve months to the end of 1902 no further work was undertaken on the Chicago and Gaika, nor on any other claims, pending the flotation of the former into a separate company. The latter was effected in December, after which prospecting work on a small scale has been carried out on the Primrose claims, from which, it is said, good pannings have been obtained from the ancient dumps. No profit and loss account is issued. The capitalised expenditure, less transfer fee, interest, etc. (£202), amounted to £2,210. The company has only £112 in cash, and debtors owe £13, against a bank overdraft of £1,073, and creditors, £704.

Matabele Central Estates Company.—This Rhodesian company's income during the year 1902 consisted of £1,047 from cattle increases and sales, £268 from the sale of produce, £140 from hut taxes, and half a guinea from sundry receipts and transfer fees. The outgo exceeded this by the sum of £1,605, the latter being the debit shown in the profit and loss account. Brevity is the characteristic of the report of the directors, from which we learn that great progress has been made in the company's farming operations. A water-race has been cut for 16½ miles, and as it is now available for irrigation purposes, the manager has been enabled to put a considerable acreage under cultivation for winter crops. It is proposed to start tobacco planting. At the end of the year the total number of cattle on the estate amounted to 690 head, with a valuation of £10,959. No work was done on the mining claims during the twelve months, but, it is added, "extensive development has been commenced on the adjacent Falcon and Athens properties, with satisfactory results, which should be the means of proving the value of this company's claims." The financial position is weak. Cash tots up to £52, and debtors owe £88. Some "investments" are down at £6,511, a note adding that their market value at the end of December last was £4,200. A sum of £4,728 represents initial expenses, and revenue and general expenditure to December 31, 1900, to be written off over a period. Current liabilities consist of a bank overdraft of £6,334, and creditors £964, an aggregate of £7,298. The authorised capital is £150,000, of which £100,000 is issued.

Oceana Minerals.—Shareholders of this company are favoured with news of a gratifying character from the leader of the prospecting expendition sent to report on the farms Artonvilla and Uitenpas. The intelligence comes by mail, and runs as follows:—"I beg to report that we have located an extensive copper lode running through your farm Artonvilla, crossing the Limpopo into Rhodesia to the east, and running through the course of Uitenpas into farms Nos. 1,424, 5, and 6, to the west. This lode bears east and west, dips south, and on the surface has a width of from 50 to 150 ft. near the outcrop." It all reads very pleasantly, and the company can do with a smile from fortune.

Hauraki Gold Mining Company.—The glory of this New Zealand company, which created so much excitement a few years ago, has long since departed, accompanied by many others, with their short, but disastrous days. Of late this one has been piling

up debit balances, increased by a further loss of £3,107 last year. Operations at the mine have been practically suspended, and the property placed on tribute, but since the closing of the accounts, December 31 last, the mine has been sold for £3,000 in cash and 10,000 shares of 2s. 6d. each in a local company of 100,000 shares, so that the company still retains an interest in it. In 1902 the capital was increased to £75,000 in order to complete the purchase of the North Lachlan mine, at Forbes, New South Wales. It yet remains to be seen what kind of a mine this will turn out to be.

Consolidated Gold Fields of New Zealand.—This is one of the limited list of New Zealand companies that distributes modest dividends. During 1902 sufficient gold was won to realise £53,029, in addition to which it received £23,473 from dividends on investments—the latter being mainly shares in subsidiaries—£254 from interest on loans, and £143 from rents, etc., making a gross income of £76,899. The directors allowed £14,854 for depreciation on plant, machinery, buildings, and investments, and in writing off development expenditure, being less than five per cent.; interest on debentures took £3,000, and after allowing for other outgo, the profit is £25,746, whilst £9,328 was brought forward. Out of the aggregate a 10 per cent. dividend was paid on November 1 last, requiring £22,500, and the rest is carried forward. A good balance-sheet is published, but it is a pity the directors do not separate the item "shares in subsidiary and other companies, mining properties, and development thereof, and real estate in New Zealand," now standing at £286,639, after deducting the above provision for depreciation. This company has floated three subsidiaries, viz., the Progress Mines of New Zealand, Limited, the Humphrey's Hydraulic Sluicing Co., Limited, and the We come Gold Mining Co., Limited, and it is now proposed to amalgamate the two last-mentioned with the parent concern. The latter originally subscribed the working capital, and it holds the majority of their shares. The terms are one Consolidated share for every eight Welcome shares, and one for every four Humphrey's Hydraulic. This will involve the issue of 17,378 shares out of the 25,000 unissued capital, raising the issued capital to 242,378 shares. In addition to the two properties and plant, the parent company will receive about £24,000 in cash.

Progress Mines of New Zealand.—A very good report is published by the premier subsidiary of the Consolidated Gold Fields of New Zealand, which last year recovered bullion to the value of £106,858, the gross revenue, with sundry receipts (£205) and rents (£74), being £107,137. The sum of £10,000 was again written off development, and shaft sinking, covering the whole of the expenditure during the twelve months, and reducing by £3,257 the amount standing at the debit of development and shaft sinking account in the previous balance-sheet, bringing it down to £20,908, as against £24,164. After further debiting the profit and loss account with income-tax and £2,273 for depreciation of plant, machinery, and buildings, there remains a credit of £41,479, which, added to £15,514 brought in, gives an available balance of £56,994. A dividend of 1s. per share was paid on April 14, 1902, and another of 1s. 6d. per share on October 1, absorbing £34,375, leaving a balance of £22,619 to be carried forward. A further dividend of 1s. per share was paid on May 1 last. The company had only £743 in cash at the end of 1902, but £7,000 was out on loan. Bullion in transit was valued at £26,492, against liabilities of £13,835. The profit per ton compared favourably with that for 1901, being 19s. 5d., against 17s. 4d., exclusive of the profit derived from the cyanide works. Ore reserves are estimated at 118,000 tons.

Welcome Gold Mining Company.—The balance-sheet of this New Zealand company for 1902—no profit and loss account being published—shows that expenditure on development and general expenses amounted to £3,368. Against this gold was recovered to the value of £4,606, whilst £291 was received for interest, etc., making a total income of £4,897, and leaving the amount standing at the debit of expenditure account on December 31 last, £1,139, against £2,668 in the previous balance-sheet. This company is to be amalgamated with the Consolidated Gold Fields of New Zealand. It has £6,741 in cash, and bullion of a value of £1,836, against current liabilities of £1,514.

Humphrey's Hydraulic Sluicing Company.—According to the balance-sheet for the twelve months ending December 31, the sum of £4,420 was spent on the development of the property, and general expenses in New Zealand, whilst the London outgo was £575. Of this total £1,443 represented capital expenditure, the remainder being the actual working costs. Receipts from gold won, interest on loans, etc., amounted to £3,841, leaving a profit of £289. Sundry creditors are owed only £55. On the other side cash and short loans aggregate £15,335, and there are investments valued at cost at £3,555.

Bellevue Proprietary.—The directors of this Westralian company issue a copy of Messrs. Bewick, Moreing, and Co.'s report for the first five months of their management, to the end of 1902. The annual report and accounts are promised about the end of August, as it has been decided to close the books on June 30. It appears, from the report of the general managers that development has been seriously hampered owing to the bad condition of the boiler and compressed air plant, and it was with great difficulty three drills could be kept going. During the five months 8,130 tons were milled, for 7,237 oz. of bullion, of a value of £24,804. At the end of December the ore reserves totalled 51,000 tons, averaging over 1 oz. to the ton. The directors report that since that date a further 4,000 tons of high grade ore have been developed. With the present old 20-stamp mill there were crushed during the five months to the end of May 8,765 tons for a yield of 7,724 oz. The new mill, which is designed to crush 6,000 tons per month, is expected to be ready early next year.

De Lamar Company.—During the twelve months ending March 31 sufficient bullion was won to realise £58,570, in addition to which there was a revenue of £3,389 from interest on loans, deposits, and investments, £1,326 from the sale of obsolete stores, hotel profits, rents, etc., the gross income, after adding smaller sums, being £63,517, and the net profit £9,539. An undivided balance of £11,874 was brought forward, against which a dividend of 10 per cent. was paid in October last, absorbing £8,000, the balance of £13,414 being carried forward. The ores treated during the year show a decrease in quantity, and a diminution in value. Several properties have been inquired into by the directors, with a view to acquisition, but nothing has resulted. The accounts show a good financial position, with a sum of £66,000 lent to the market and £6,089 in cash.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1903, and July 11, 1903:—

Revenue and Other Receipts.

—	Estimate for the year 1903-1904.	Total Receipts into the Exchequer from April 1, 1903, to July 11, 1903.	Total Receipts into the Exchequer from April 1, 1902, to July 12, 1902.

The Investors' Review.

The Week's Money Market.

BANK RATE 3 PER CENT. (Reduced from 3½ per cent. on June 18.)

Norfolk House, Friday Evening.

All is dead calm in the Money Market, and will apparently remain so for weeks to come. It is not a comfortable market, not the ease of abundance and an assured future, but ease of clogged speculation, hampered trade, and doubt about the future. Also it is ease produced by skilful Treasury manipulation. Money is being released by the Government in a way that has enabled the market to find enough credit outside to pay off its debt to the Bank and to meet the £3,000,000 instalment on the Transvaal loan paid last Tuesday without fresh borrowing. That this feat should have been accomplished speaks well for the skill with which Mr. Ritchie is managing the Treasury, but whether it is good for the market to have its course thus smoothed is quite another matter. All week seven day loans have never risen much above 2 per cent., and only touched 2¼ per cent. on the day when the loan instalment was paid. Call money then fetched 3 per cent., but most other days it could be had at 2 per cent. or less. This morning, so easy was the position, some bankers could only get 1¾ per cent. for seven day loans, although others succeeded in holding on to 2 per cent. as their minimum rate. Day money was often lent at 1½ per cent.

In such a slushy condition of the short credit market, it was to be expected that discount rates would not be very strong in spite of the depression of the French and Dutch exchanges, which was great enough to threaten withdrawals of gold from the Bank for export. Brokers struggled hard to keep the rate for three months bank bills at 2⅜ per cent. as a minimum, but business was done 1-16 per cent. below that figure, and only in the middle of the week were they able to bet 2 7-16 per cent., and sometimes perhaps 2½ per cent. Long dated bills were more difficult to place, and some houses were disinclined to take them even at 3 per cent., but the market has no real strength, and cannot have as long as floating balances are so abundant and cheap. The coming sale of £6,000,000 of yearling Exchequer bonds to replace part of the £10,000,000 falling due on August 7 will no doubt tend to keep discount rates up, otherwise we see nothing except a large withdrawal of gold from the Bank to give the brokers any assistance; but when the Treasury has to be made to pay for its accommodation there will be a combined effort made to prevent discounts from going lower, if not to put them sensibly higher between now and the end of the month. It cannot, however, be said that the market was firm to-day, for some discount houses quoted 2 5-16 to 7-16 per cent. as the range of working rates for three months' remitted paper, and this in face of a renewed drop in the Paris cheque to 25.11½, and to a quotation of 20.38 per cent. for the German rate. So keen is the demand for gold in the open market that the £500,000 or so about to arrive, which includes some sovereigns, will all go to Paris, and obviously if supplies from abroad are insufficient, the metal will be taken from the Bank. The risk of such withdrawals is sensibly increased by the decline in the New York rate, which has for the moment stopped American export of the metal. It was possible to do six months' bills to-day at 2 15-16 per cent., and four months' bank bills were taken at 2 7-16 per cent. instead of 2½ per cent.

Nothing requires to be noted in this week's Bank return, for the changes in it were nearly all insignificant. Thanks to a reduction of £750,000 in the Treasury balances and to an increase of £241,000 in the banking reserve, the market was able to pay off a small balance of £236,000 due by it to the Bank, and to increase the other deposits by £806,000. The total of these deposits does not indicate wealth, neither is the market in present circumstances strikingly poor.

SILVER.

The revival in trade of all kinds, but more particularly in silk, reported from China, brought about a revival of activity in the market for bars, and a fairly large business was done for that quarter. India also bought with some freedom, and as "bears" were at the same time endeavouring to cover their commitments for the current month while the market is kept somewhat short of supplies, prices improved to 24⅞d. per oz. for cash and 24 9-16d. per oz. for delivery two months' forward, closing strong. The demand for Mexican dollars became rather easier after the sailing of the North German Lloyd boat on Tuesday morning, and the quotation gradually relapsed to 24½d. per oz. Tenders for the Rs.50,00,000 India Council drafts on Wednesday amounted to Rs.50,01,50,000 all in bills, and applications at 1s. 4 1-32d. per rupee received about 0.834 per cent. Next week another Rs.50,00,000 will be offered.

TREASURY BILLS OUTSTANDING.

Tenders will be received at the Bank of England on Friday next, the 24th inst., at One o'clock, for Treasury bills to the amount of £2,000,000, in replacement of bills falling due on the 30th inst. The Bills will be in amounts of £1,000, £5.000, or £10,000, will be dated the 30th July, 1903, and mature six months after date, viz., on the 30th January, 1904. The tenders must specify the net amount per cent., which will be given for the amounts applied for, and the Tenders of private individuals must be made through a London Banker.

Stock Market Notes and Comments.

For one more week the position on Wall Street has completely dominated our markets here. It has done so not only because of the excitement produced by the Titanic struggle going on between rival financiers and their captive banks and trusts over there, but quite as much because our own markets have really nothing to do. The *Financial Times* says that there are a full thousand members of the Stock Exchange in what may be described as a poverty-stricken condition, and we should think the estimate short of the mark. More than half the membership exists in ordinary times upon the speculative business brought by the unnumbered hosts of dabblers all over the world, and for years the business coming from that description of client has been getting smaller and smaller until now in some departments there is hardly a trace of it left. We thus have nothing to do except to look on at the lunging and plunging on Wall Street, and to wonder when the excitement there is going to end in the universal smash. We try to assume the attitude of disinterested spectators, and if you ask a banker in the City what he thinks the consequences of a big credit cataclysm in the United States would be to us, it is a hundred to one he will say, "Oh! it won't affect us much. There is no trace here of dangerous commitments in Yankee securities, and a burst up over the water might do good by clearing the air."

This is a very nice view to hold, and also a most dangerous one. So far from there being no serious commitments upon our money market linking us to those of the United States, it is probable that at the present time something between £50,000,000 and £100,000,000 of American securities are pawned here. Including Continental markets, it would not surprise us if the total amount of European credit enlisted to support the Wall Street gamblers was nearer £200,000,000 than £150,000,000. Our bankers and Lombard Street credit-jobbers are misled by the way in which the business is now done. There is no longer a huge "account" on the Stock Exchange, carried openly in the sight of all men from fortnight to fortnight by the contangoing money brokers, but every bank in the country has stuffed into its safes more or less heavy amounts of American Railroad stocks, pawned either on account of the Yankee finance houses here or on account of underwriters, members of syndicates, and private speculators of all classes. Not only have the Yankees never taken home all the securities they bought with such ostentation towards the end of the last decade, but they have had to reship some of the stuff they did take back to Europe in order to raise credit. Therefore if the giants on Wall Street really slay each other, and men like Morgan, Rockefeller, Gould, or others of the newer order of financial potentates come to grief, every credit structure in Europe would be threatened with eclipse. Will they come to grief? Greater wonders have happened, and paper structures—even wooden ones—are rather inflammable, as our fire offices know.

As long as an open break is prevented, let us again insist, we shall remain in the slough of despond—now and again cheered a little by a pause in the storm, by some advance in quotations, the product of "bear" repurchases, by consoling assurances sent from interested quarters over the cables to tell us that the worst is over, and a recovery about to begin, but sunk in misery all the time, and certain to be plunged into deeper and deeper perplexity by the continuance of liquidations. It is our increasing conviction that no inconsiderable number of the financial trusts in the United States, and a sensible proportion of the banks there, are at the present time in a position of irretrievable insolvency. Were it otherwise the Wall Street market would not grind its vitals out day after day, week after week. Cargoes of reputedly good securities would not be jettisoned in order to try and weather the storm by holding on to securities admittedly illusory or rotten. We, therefore, have to see before firm ground is reached again, the collapse, not merely of Morgan's shipping combination, and of the United States Steel Trust, but of many railroad combinations and no small number of monopoly concoctions of every description within the American Union. It may be years before that natural and inevitable conclusion is reached; and it might be upon us any week. The one thing certain is that until finance in the United States has ceased to consist, as it now so largely does, of organised lying, and dodgery and chicane of every description, and until the realised falsehoods embodied in many a towering corporation have been swept away, the markets for public securities must everywhere remain without stability.

And we have plenty of troubles of our own. It only requires a little more strain to be put upon our credit system to reveal plenty of weak spots—in the Kaffir Circus, in the industrial markets, among railroad securities and corporation stocks. But why dwell upon these things? It is better to be silent and wait events; only we confess to a feeling of hope that the fates will yet be even with the gentry who have swept tens of millions out of the pockets of the British public by corrupt share dealing and capital inflations of all descriptions, and we watch the ongoings of the Kaffir Circus magnate with undying interest.

The Week's Stock Markets.

Business in the Stock Exchange during the past week has been feebler than ever, and with not a single penny of public money available for the support of any speculative section they all quickly came under the influence of the New York demoralisation. Apart from spasmodic rallies when the "bears" took their constantly accumulating profits the slump in Yankee Railroad shares continued unabated, and we ought soon to see how long loss can be piled upon loss without bringing about a smash such as has not been witnessed for a generation. We have been told that this is a rich man's panic, with the losses borne by those well able to face them, but as most of the American magnates' "riches" depend upon bank and trust ability to finance them, and the often worthless securities they bring into existence, we profoundly dread the effect upon all classes, rich and poor alike, should some of these credit institutions find themselves unable to bear the strain.

Consols resisted the prevailing misery better than might have been expected, and were doubtless helped by the announcement that, of the £10,000,000 Exchequer bonds falling due on August 7 next, the Government intends to renew £6,000,000 for a period of one year. Dealers at once came to the conclusion that all sinking fund monies would be available for Consol purchases throughout the year, and held prices steady. Except on Saturday last, when quotations slipped back 3-16 on some rather disturbing Manchurian news, the daily fluctuation never exceeded 1-16, and at the end prices were unchanged at 92 5-16, 92 7-16 for money, and 92 7-16, 92 9-16 for the

account. Khaki stock declines to move from its old price of 98, and Transvaal threes can be called steady, as the fall on the week is only 1-16 to 1 1-16 pm. Childers 2½ per cent. dropped ½, but other British funds were unaltered, the business in India Sterling loans, although fair, being insufficient to disturb them. In the Home County and Corporation list, Ipswich 3 per cents. went up 1 and Metropolitan 3 per cent. ½, but Stockton, West Sussex County, and Weston-super-Mare 3 per cent. were all 1 lower. Colonial Inscribed stocks were terribly neglected, and movements in prices proved more than ordinarily rare. We hear that the City of Johannesburg is anxious to raise a little money, about £4,000,000, but will be satisfied with £3,000,000 this year and the balance next. Some leading finance houses connected with the Rand have the affair in hand, and will doubtless do their best to obtain the cash. Underwriters, however, are a bit shy. South Africa has bitten them before.

Dealings here in Foreign Government bonds are never very important nowadays, and they were more than ever restricted during the first two days of the week by the holidays in Paris in connection with the National fete. Jobbers on this side do not play without a lead. Chief attention has again been directed to Japanese issues, which moved according to the character of the news from the East. At first the tendency was again weak, but the latest intelligence was interpreted favourably, although it did not seem very cheering, and a moderate recovery set in. Final figures are unaltered. Chinese loans followed in the wake of Japanese, and at the end we find the 1898 gold loan up 1 and the 1896 and Imperial Railway issues ½ better. Russian 4 per cent. put on ½, but lost it again, and as Turkey and Bulgaria have not yet come to blows, the issues of the last named country rallied 1. French Rentes put on as much, and the lower Turkish groups advanced a fraction. Other inter-bourse issues also pulled up a little as the week advanced, and Italians, Germans, Greeks, Spanish, and Egyptian preferred finished steady, and sometimes higher. In the South American division Argentines and Brazilians hesitated at the outset, and after recovering some lost ground moved irregularly, finishing with small movements either way. Chilians were steady, and Uruguays rather depressed. Not much went on in defaulters, but Venezuelan Consolidated Debt fell back 1.

Business in Home Railway ordinary stocks was of very insignificant proportions, but the market has been governed more by events in the Yankee section than anything else, and quotations have consequently sagged. Whenever the pressure in New York was relaxed in the slightest degree dealers have become hopeful, and talked of the "boom" starting in Home Railways, but the cloud has never lifted long enough for these dreams to be realised. The first dividend for the half-year was declared on Tuesday, when the City and South London announced a distribution at the rate of 2¾ per cent. per annum, or ¼ per cent. per annum less than for the corresponding period of last year. At first this result was accepted with equanimity as being much what had been looked for, but further consideration appeared to create dissatisfaction, and threats were heard of an agitation to turn out the directors if they persist in carrying out the proposed extensions to Brixton and Euston. The latter, it is claimed, can under no circumstances be made profitable, while the former would be badly handicapped by having to compete with the L.C.C. electric trams which will soon run right out to Streatham, Whether there is any real justification for this opposition or not the mere mention of it has sufficed to put the price down 3. The Tilbury and Southend line was the next to announce its results for the past half-year, at the same

rate as last year, which was better than the market expected, seeing that the company now has to provide its share of the interest on the Whitechapel and Bow extension stock, guaranteed jointly with the District Company. Although no change took place in the price of the stock, the declaration helped to make the general tone more cheerful, and Great Eastern especially was lifted in anticipation of to-day's dividend announcement. When it came, though, it was a little disappointing to the most sanguine "bulls," the rate being 1¾ per cent. per annum, compared with 1½ per cent., with an increase in the carry forward of over £3,000. Some people had expected 2 per cent. South-Western ordinary fell 2 and the deferred 1, Lancashire and Yorkshire lost 1, Great Northern deferred ½, Great Western ½, North-Eastern ¾, and South-Eastern deferred ¼. North-Western, however, exceptionally put on ½. The Metropolitan dividend is not expected before Tuesday, when it is anticipated that the rate will be the same as a year ago, with a larger balance carried forward, to provide against the costs of the recent accident at King's Cross, but the quotation was marked ½ down. Of the other companies the Brighton dividend and the South-Eastern and Chatham preliminary statement are looked for on Monday, the Lancashire and Yorkshire and South-Eastern dividends on Wednesday, the South-Western and North-Eastern on Thursday, and the Midland on Friday, after which the market will probably have to wait until the 30th for the Great Northern, the 31st for the Hull and Barnsley, and until August 6 for the North-Western and Great Western.

Heavy liquidation has gone on in Wall Street throughout the week, and although the downward course of prices was now and again checked by the "bears" taking their profits any effort to produce even the semblance of a rally has merely proved the signal for the further throwing out of large masses of stock. The demoralisation of the market has been described as a "rich man's panic," due to the necessity under which the paper millionaires find themselves of having to part with their own securities in order to find funds to bolster up the rubbish they created so merrily, and then failed to plant on the public. This catch phrase has been eagerly adopted by those who are only too anxious to persuade themselves and others that there is no real danger to credit involved in the uncomfortable slump of prices, but such an argument is hardly worth discussion. Falls such as those noted below must hit some one severely, and it is rather surprising that we have not already heard of acute difficulties. Thanks to the buying back above mentioned, prices did not close altogether at the worst, but even so the losses on the week are substantial enough. Milwaukee heads the list with a drop of 8. Wabash income debentures declined 7, and the preferred 3½. Illinois Central fell 4½, and New York Central were 5 down, in spite of the reassuring announcement that no effort would be made to raise the funds required for terminal improvements until the autumn. Louisville receded 2½, Union Pacific common 3⅓ and preferred 2¼ and 4½, and Baltimore ordinary, Chesapeake, Denver ordinary and preferred, Norfolk common, Ontario, Pennsylvania, and Southern Pacific relapsed from 2 to 3.

Canadian Pacific shares have as usual followed the fortunes of the American market, being sold freely from New York, but they recovered with the rest, and close only ¾ lower. Grand Trunk stocks, however, were comparatively neglected, and at the end are practically unaltered. Among Indian Railway issues, Bombay and Baroda stock improved 2, and several others were marked up 1 to 1½.

Foreign Railway stocks have been quite overlooked during the excitement over American securities, and the Argentine section, especially, has been practically deserted, with the result that prices are for the most part unaltered. Buenos Ayres and Rosario ordinary, deferred and preference stock, as well as Buenos Ayres, Ensenada, etc., debenture stock improved 1 to 2, and Cordoba and Rosario preference fell 1, but beyond that there was not much of interest. San Paulo (Brazilian) stock, however, came into favour, and on a moderate amount of buying advanced 3, but North-Western of Uruguay first preference and debenture stock and Central Uruguay 6 per cent. debenture stock receded 1 each. Mexican Railway ordinary and preference issues were all ½ lower, and Interoceanic "B" debenture stock declined 1, but Mexican Southern ordinary gained 1 and Guayaquil and Quito Railway bonds were also 1 higher.

Naturally the Miscellaneous section did nothing to redeem the reputation of the Stock Exchange, and nowhere is the prevailing idleness more acutely felt than there. Aerated Bread shares have been very flat this week, and doubtless the company is beginning to feel the ever increasing competition, also it is said the system of issuing new shares at par is to be discontinued. Should it be, the shares must inevitably go lower, but the change of tactics would certainly be of benefit in the long run. Spiers and

Pond continue rather miserable, but other Caterers held their ground, because nothing was done in them. The tendency, however, was dull. The gambling Meat shares move within sixpenny limits, but no one takes much notice of them now. Apart from Vickers and Robert Stephenson's, which continue flat, home Iron and Steel descriptions were inclined to improve. Hudson's Bays fell away with Canadian Railway shares, but Canada North-West Lands were sent higher on talk of a great irrigation scheme in the north-west. British Electric Tractions gave way again, still looking very weak, and Welsbach stocks have lost a point or so. Linotype and Machinery Trust debenture stocks were further marked down, but towards the close the shares of both companies picked up a fraction on the adoption of the amalgamation scheme. Brewery stocks were generally flat, and Allsopps again gave way. United States Steel issues moved with Yankees, the common at one time almost touching 26. At the last the common is down 2¼ and the preferred 3. Textiles were steady. Sweetmeats have now fallen to 2¼, and do not seem like recovering. Telegraph stocks continue in request at improving prices.

Stock markets have been better to-day, because a rally occurred in the Yankee market, where we are once more assured the worst is now over. It has been so at least twenty-six times during the past two years, and after the present "bear" closing has ended there will doubtless be a further opportunity for yet other "worst overs." Some people in the market were rather disappointed with the Great Eastern Company's dividend, which, although better by ¼ per cent. per annum than last year's, is that fraction below the most sanguine estimate. The most expert calculators, however, looked for no more than the actual rate announced, viz., 1¾ per cent. per annum, and it may be interesting to append here the best estimates for all the dividends to come. Other sections of the market were just as idle as usual.

We find a kindly feeling in Stock Exchange circles towards the mono-rail enterprise, but that is all. "People have neither money nor pluck."

Company Reports and Balance Sheets.

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Union of London and Smith's Bank.

Thanks to the amalgamation effected rather more than a year ago between the Union Bank of London and Messrs. Smith, Payne and Smith, and more recently with Messrs. Wigan, Mercer, Tasker and Co., Kentish Bank, and the London and Yorkshire Bank, no useful comparison can be made between the figures of the balance-sheet of this rapidly growing institution for the half-year just closed and those of the corresponding period of 1902. Naturally they show great expansion, and will be more important still when the fusion with Prescott's Bank, unanimously approved by the shareholders this week, is completed. It is instructive to note, however, that the rise in the liabilities to the public is no less than £10,852,719, to a total of £28,000,708, against which the cash actually in hand comes to £2,873,199, while that deposited with the Bank of England reaches £2,807,977, together £5,681,177, or about 20.3 per cent. of the total deposits. This is an increase of £1,689,688, and we note that the call and notice money is more than £2,000,000 higher at £5,168,060. Then the investments come to £4,837,964, against £2,984,272, and include the reserve of

£1,150,000, consisting of Consols, Local Loans, and Transvaal Government 3 per cent. Bills discounted are very little altered at £3,563,762, but the loans and advances are up by £6,653,356 to £12,543,907. The cross entry of acceptances comes to £2,698,327, and bank premises, chiefly freehold, are now valued at £910,596, or £343,795 more. As to profits, they were £[illegible]9,816 gross for the six months, being almost £300,000 more than for the corresponding period. After adding £59,003 brought forward, and deducting interest, rebate, and all other charges, including contribution to pension fund, the sum for appropriation is £279,166, compared with £169,559, and the same return can be made on the increased capital, viz., 15s. 6d. per share dividend, and 3s. per share bonus. Then a further £5,000 is applied to pension fund, and the same amount to the widows' and orphans' fund, £67,696 goes to write off the balance of the bank purchase and goodwill accounts, and all incidental expenses connected with the recent amalgamation with Messrs. Wigan, Mercer, Tasker and Co., Kentish Bank, and the London and Yorkshire Bank, and £21,635 is carried forward.

London City and Midland Bank.

For the half year ended June 30 last this joint stock bank, now one of the giants, earned a net profit of £306,047, or £4,268 more than in the first six months of 1902. It also brought forward the big sum of £262,179, so that the amount at the directors' disposal is £568,226, and the appropriations are on the same lines as a year ago. The dividend, which is called the interim payment, is at the rate of 18 per cent. per annum, £25,000 is placed to bank premises redemption fund, and £5,000 to officers' pension fund, and £268,226 is carried forward. Compared with the corresponding period the growth in current deposit and other accounts is £153,597 to a total of £44,165,050, and on the credit side we find the actual cash held, that is, money in hand and at the Bank of England, £427,805 higher, at £8,067,744. Then money at call and short notice amounts to £5,660,178, the items together reaching £13,727,922, while investments total £7,070,600, a decline of £473,316. Of these securities Consols and other British Government loans account for £2,868,418. Bills of exchange are likewise lower, the bank's holding being £3,897,956, compared with £4,044,953, but advances on current accounts, etc., are up half a million to £24,814,484. Acceptances reach a sum of £1,778,044, and bank premises are £50,375 larger at £1,192,315, notwithstanding the sum written off. This is due to the opening of new branches, six being added during the period under review, viz., Clapham Junction and Stratford (London), Moseley (Birmingham), Hove, Norwich, and Port Talbot.

Parr's Bank.

This important bank earned a gross profit of £365,101 in the half-year ended June 30 last, and £102,373 was brought forward from the December half of 1902, making a total of £467,474. Total charges were £158,340, and rebate on bills not due at 5 per cent. absorbed £14,065, so that the disposable balance is £295,068 against £287,695. To pay the regular dividend at the rate of 19 per cent. per annum takes £162,307, a sum of £20,000 is transferred to premises account, and £5,000 to officers' pension and provident fund, and £107,760 is carried forward. The bank's reserve equals the paid up capital of £1,708,500. A big increase to £27,340,522 is seen in the current, deposit, and other accounts, but the cash in hand and at Bank of England is only a trifling amount higher at £4,355,670. This is because over £1,700,000 more, at £5,733,597 is now lent at call and short notice, a movement that leads to a decline of £812,954 in the loans and advances, the total being £14,879,354. Then bills discounted are £255,146 smaller, at £2,223,926, rather a minute proportion of the assets, but investments have advanced from £3,051,695 to £3,298,949. In this amount is included £1,000,000 of Consols, taken at 90. Bank premises and furniture stand at £830,916 against £761,526. One branch has been opened at Aigburth, Liverpool, and one will shortly be opened in Fleet Street, London.

London Joint Stock Bank.

On June 30 last this bank's liabilities on current, deposit, and other accounts were £18,284,369, or £488,756 less than on the same day last year. Nevertheless the cash in hand and at the Bank of England shows the splendid advance of £590,497 to £2,877,343, an increase we should like better but for the knowledge that many millions of pounds were borrowed from the Bank of England by the various joint stock banks for their own balance-sheet purposes or for those of their customers. We are not at all displeased though to note a decline of £583,440 to £4,971,630 in the money lent at call and short notice. Bills discounted, loans, and other securities are £533,074 down to £9,383,314, offsetting the reduction in deposits, while investments have risen a little to £3,819,745. Freehold and leasehold premises are valued at £406,392. Business was profitable enough during the half year to June 30, and including a rather smaller sum of £31,635 brought forward, the gross profit was £300,040, against £291,724, in the corresponding period of 1902. General charges absorbed nearly £3,000 more at £110,984, and rebate also an additional £3,000 at £27,933. Balance remaining comes to £161,123, and after providing the usual dividend at the rate of 12 per cent. per annum, £10,000 is placed to premises account, and £5,000 to superannuation allowance fund, and £38,123 is carried forward, altogether a nice comfortable and comforting display by a fine old business.

Bank of Ireland.

Notwithstanding a recovery in profits this bank makes no appropriation to premises account for the half year ended June 30, but this matters little, because the offices have already been written down from their original cost of £479,912 to £103,464. Gross revenue is returned at £250,011, or £8,578 more than in the same period of 1902, and the balance brought forward was £3,565 up at £13,248. Thus the total credit was £263,259, against £251,116, and as the expenditure was only slightly larger at £82,699, the directors are able to restore the ¼ per cent. deducted from the dividend a year ago, making it once more 6 per cent., besides increasing the carry forward to £14,406. At the date of the balance-sheet the Government and other public accounts stood at £2,569,110, an advance of £138,875 against last year, while notes and post bills in circulation rose £153,501 to £2,642,937. Deposit, current, and other accounts reach £8,686,345. Cash in hand, and at the Bank of England shows a small decline to £1,036,117, and money at call and short notice is down £85,489 at £403,769. Government debt remains at £2,630,769, and with this included the investments total £8,739,484, against £8,575,727. Bills discounted, advances, etc., have risen £236,943 to £7,599,348.

Union Bank of Australia.

Future reports of this institution will cease to recall the Australian banking crisis of 1893, when the directors found it necessary to set aside a large sum as a contingent reserve against doubtful debts. Since the collapse this fund has been steadily reduced out of profits, the sums realised being restored to the general reserve, from which they were taken, and the latest report tells us that a final £50,000 can now be applied to extinguishing this contingent reserve, the general fund being increased to its original figure of £1,000,000. After making provision for bad and doubtful debts the gross profits for the half year ended February 28 were £238,513, or £20,727 more than in the corresponding period of the preceding year, from which total expenses in the Colonies and London and income-tax, etc., altogether drew away £124,863, leaving £113,649. Deducting the £50,000 already mentioned, and £4,000 appropriated in aid of the bank's guarantee and provident funds, the sum left is £59,649, to which is added £20,144 brought forward, making £79,793. Out of this the directors propose to again pay a dividend at the rate of 8 per cent. per annum, equal to £1 per share, and to carry forward £19,793. A further expansion of over £500,000 to £15,949,227 has taken place in the deposits, circulation, for which the shareholders are liable, is rather higher at £497,589, and bills payable and other liabilities have increased £200,000 to £1,966,092. Against all this and the capital and reserve, aggregating £2,500,000, there are cash assets, £8,477,077, bills discounted, loans, and other securities, £11,798,914, and premises in the Colonies and London, £716,710. In the first named total are included specie on hand and cash balances £3,335,014, bullion on hand and in transit, £251,509, money at call and notice, £860,000, investments £1,458,239, and balance of remittances and drafts in transit and bills receivable at London office, £2,572,315. Most of these items show an increase, particularly specie and cash balances and money at call and short notice, but the bills discounted and loans have fallen £423,657.

National Discount Company.

This fine old discount house, which we are sure is conducted on the safest lines, produces excellent results from a very difficult working period. The half year to June 30 last was profitable enough for bankers, but the margin on which bill brokers were forced to work was often exceedingly slender, and not infrequently on the wrong side. Therefore, this company did not do badly in earning a gross profit of £91,222, or £9,315 less than in the corresponding six months in 1902, against which decline we can place a reduction of £5,835, at £37,069 in the amount required for rebate on bills not due. After providing current expenses, income-tax, and directors' and auditors' remuneration, and adding the increased sum of £7,445 brought forward, the amount for disposal is £48,588, which permits of the now usual dividend at the rate of 10 per cent. per annum, with £6,254, against £7,347 carried forward. On June 30 the bills discounted current amounted to £8,815,007, of which £2,040,634 had been rediscounted, while the deposits and loans raised came to £9,421,815. Loans granted at call, short and fixed dates, were down for £1,952,993, the holding of high-class securities was £301,612 up at £1,875,633, and cash stood at £147,691 against £155,298.

Child and Co.

This firm of private bankers issues an excellent statement of assets and liabilities. On July 8 current and deposit accounts were £2,345,002, or £109,349 more than on the same date last year. Cash in hand and at Bank of England has been strengthened by £26,094, and now stands at £381,172, while the call and notice money continues at £350,000. Investments are a few hundreds higher at £1,088,651, and loans to custmers are £80,892 up, at £1,058,786.

National Bank.

A trifling drop of about £1,000 to £194,155 took place in the profits of this Irish bank during the six months to June 30, compared with the first half of 1902. Balance of £27,897 brought forward, though, was considerably larger, and the total revenue is £222,052 against £217,782. Expenditure again crept up, this time by £1,839, to £89,506, rebate absorbed a little more at £11,996, and £120,550 remains. It is not now necessary to make an appropriation to investments fluctuation account, so the directors add ½ per cent. bonus to the regular 5 per cent. dividend, making 5½ per cent. for the six months, £5,000 again goes in reduction of bank premises and £10,000 to rest or undivided profits, and £23,050 is carried forward. Deposit and current accounts show a fairly large increase to £11,211,404, and the notes in circulation have advanced £105,994 to £1,260,810. We are glad to see a substantial increase in the cash in hand and at Bank

of England of £312,828 to £1,642,063, because the liability for notes is an important one. Money at call and short notice is £2,065,946, against £1,774,165, investments come to £1,451,459, advances to £5,197,459, and bills discounted to £3,788,778, the last three items exhibiting very little change.

Charles Hoare and Co.

This firm of private bankers makes up its balance-sheet to July 7, and on that day owed £2,753,864 on current and deposit accounts, mostly the former. The total is rather less than on the same date last year, but yet the cash in hand and at bankers has improved £15,466, to £454,449. Money at call and notice remains at £500,000, and so does the holding of Consols and War Loan, the amount being £300,000, taken at 90. Other investments are a trifle higher at £740,035, and loans, overdrafts, and bills discounted have declined £33,553 to £1,174,380, a very good exhibit.

Halifax Commercial Banking Company.

The profits of this institution for the year ended June 30, 1903, were £19,156, against £18,670 in the preceding twelve months, and a larger sum was brought forward, making the total for appropriation £25,233. Nevertheless the dividend is again restricted to 8 per cent., as it is necessary to provide £3,068 for depreciation in Consols and other investments. Income-tax absorbs a further sum of £1,061, and £5,103 is carried forward. At the date of the balance-sheet the bank owed rather more at £1,405,590 on deposit and current accounts, etc., but the bills discounted and advances were smaller at £1,183,578. As a result the investments are increased £42,568 to £203,527, and the cash in hand at bankers and at short notice is £30,841 up at £289,705, excellent movements all.

Munster and Leinster Bank.

This modest bank did really well during the first six months of this year, the net profit being £18,887, compared with £17,981 in the corresponding half of 1902. Balance brought in was much the same, at £5,245, and the directors have £24,132 to deal with. They first of all raise the dividend from 11 to 12 per cent. per annum, and add £1,000 more, at £3,500, to reserve, but this means a reduction of £1,500, to £3,500, in the amount placed to premises account. Balance carried forward is £5,132. Reserve now exceeds the paid-up capital by £23,500 to £223,590. A considerable advance of £318,521 to £4,138,392, has taken place in the deposit and current accounts, etc., and the cash in hand and with bankers is £51,952 up, at £401,011. Money at call and short notice has increased £156,660 to £627,988, investments total £1,014,892 against £874,648, bills receivable are a little lower at £849,805, and advances £14,321 larger at £1,629,447.

Jokai (Assam) Tea Co., Limited.

Not only was the crop for the year ended December 31 271,802 lb. below that of the previous year, but it fell short of the estimate by 371,995 lb., at a total of 3,834,6[illegible] lb., the decrease being due to the unfavourable weather, and the early closing of the season. The latter reason is also put forward for the reduction in the average price obtained from 8.95d. to 8.71d. per lb., as it caused the outturn to be deficient in the autumn flavoured teas, which command higher values. Working expenses, however, were again a little smaller, the cost of production laid down in London, inclusive of all home charges, working out at 7.62d., compared with 8.02d. per lb., and the profits were consequently 1.08d. per lb. against 1.05d. Including £390 b ought in, and £2,471 for interest on investments, etc., and deducting £198 for subscription to Indian Tea Market development fund, and £420 for loss on sawmill written off the available balance was £17,828, or £188 more, and after meeting preference dividends, the ordinary shares again received a distribution of 4½ per cent., leaving £578 to be carried forward. Further borrowing has had to be resorted to, and advances against securities show an increase of £8,000, at £23,500, while bills payable are £1,000 up, at £53,000, and the amount due to sundry creditors has risen from £5,048 to £5,153, but on the other hand stocks of tea, including £153,248 lb. taken at broker's valuations, and sundry debtors stand at £82,581, or an increase of £13,579. Cash, however, is £639 lower, at £3,029.

Borelli Tea Co., Limited.

For the year ended December 31, the crop amounted to 618,967 lb., or 6,652 lb. less than that of the preceding year, the deficiency in this case also being ascribed to the shortness of the season. One of the factories was able to turn out a fair quality of tea, and obtained an average price of 8.39d. per lb., compared with 8.04d., but the results from the other establishment were disappointing, and a reduction of 0.11d. per lb. brought the average on the whole output down to 8.24d., or an increase of only 0.22d. The proceeds amounted to £21,227, or £358 more, and as at the same time there was a slight saving in expenses, the season's working produced a net profit, after paying manager's commission, of £211. Interest on debentures and loans, however, took £579, so that the debit balance was increased from £737 to £1,105. The company is relying very largely on borrowing to help it along, and owes no less than £11,617 to sundry creditors, including £10,692 to G. Williamson and Co., and in addition has overdrawn its account at the bank by £2,298, while £8,150 is due on bills payable and £864 for wages. Against this heavy indebtedness tea unsold is valued at £10,762, cash amounts to £330, and there is an investment of £1,890 in Tezpore Tramways' shares at cost, so that the position is far from a happy one.

Jetinga Valley Tea Co., Limited.

The crop for the year ended December 31 was 1,038,380 lb., or 254,054 lb. more than in 1901, and 31,487 lb. above the yield for 1900, which was the heaviest in the company's history. By what seems a curious coincidence the average price which in 1901 rose to 6.56d. per lb., fell back to 5.82d., or exactly the same as in 1900, while the cost of production worked out at 4.79d. per lb. Including £221 received from tea seed sold, and £915 brought forward, the amount available, after deducting managers' commissions and preference dividend to June 30, 1900, was £4,019, out of which further dividends were paid on the preference shares for the half-year to December 31, 1900, and June 30, 1901, leaving £951 to be carried forward. The company was registered in July, 1897, and its record has been anything but brilliant. Except for the period to December 31, 1897, when they received a dividend at the rate of 6 per cent. per annum, the ordinary shares have seen no return on their money, while the preference dividends have been met in a very irregular fashion, and are still three half-years in arrear. Nor does the outlook appear much more promising, as the estimated outturn for the current season is only 996,000 lb., at an increased cost of 5¼d. per lb.

Bargang Tea Co., Limited.

The outturn of tea for the year ended December 31 amounted to 391,837 lb., compared with 436,076 lb. in the previous twelve months, and although the quality was slightly better, the improvement in price from 7.93d. to 8.14d. per lb. was insufficient to compensate for the smaller production. A saving, however, was effected in the working expenses, these working ou ta 7.85d., which helped matters a little, and the net profits amounted to £438. Including £74 brought forward, the total available was £512, but the interim dividend of 3 per cent. on the preference shares absorbed £300 of this, and in order to make up the full dividend for the year, £100 had to be taken from reserve, reducing it to £4,000. The balance-sheet, too, shows only a moderately favourable state of affairs. A sum of £2,429 has been borrowed from the bank, and in addition the company owes £5,200 on bills payable, £1,036 to sundry creditors, and £425 for unpaid wages, to meet which there are stocks of tea valued at £6,905, sundry debtors owe £1,152, advances outstanding amount to £393, and cash in hand and in transit to £219, while £1,109 has been spent on stores, tea boxes, and manures on account of the current season. No investments of any sort are held, and the reserve is consequently being used in place of working capital.

Chardwar Tea Co., Limited.

This company not only experienced a reduction of 15,481 lb. to 280,361 lb. in its yield for the twelve months ended December 31, but the quality from one of the factories was disappointing and yielded no more than 7.40d. per lb., compared with 7.61d. The other estate, however, did better, returning 8.01d. per lb. against 7.56d., and the average of the two was consequently 0.07d. higher at 7.66. Owing to the short crop, the outlay was under the estimate at 7.25d. per lb., and out of a total revenue of £8,952, there was a balance of £427 as net profit. A sum of £18 was received from returns of income-tax, and £2 came in from adjustment of the 1901 accounts, making a total of £447, but against this there was a debit balance of £20, and after payment of the preference dividend, £127 was left to be carried forward. Bad luck appears to have been the portion of the company for a considerable time, as the preference dividend is four years in arrears, and an extraordinary general meeting has been called to cancel this liability of £1,200, although in what manner it is to be done the report does not say. The company is in debt to its bankers to the extent of £1,932, and owes £4,668 in other directions to meet which it has £145 in cash, £5,340 in tea, £431 owing by sundry debtors, and £175 nominal, in shares of the Tezpur-Balipara Tramway Company.

Majuli Tea Co., Limited.

For the year ended December 31 the outturn of tea was 103,577 lb. more than for the previous season, but 48,000 below the estimate, at 1,156,274 lb. The quality, however, was better, and an improvement of 0.16d. to 8.35d. per lb., was secured, resulting in an increase in crop proceeds of £4,346, while at the same time £1,632 was saved on the expenditure, bringing the cost per lb. down to 6.95d., compared with 8.01d. a year ago. After deducting commissions, the net profits were £6,109, against £699, and with £588 brought in, the total available was £6,697, out of which the reference dividend was paid, the ordinary shares received 4 per cent., and £1,000 was added to reserve, leaving £1,047 to be carried forward. A year ago only the preference dividend was paid and nothing was added to reserve, so that the company would appear to have turned the corner.

Singlo Tea Co., Limited.

After a long period of depression and disappointment this company not only managed to make ends meet in the year ended December 31, but actually showed a small profit, although the yield was 87,549 lb. less, at 1,823,400 lb., and the average prices realised were 0.29d., and 0.28d. lower respectively, at 7.76d. per lb. for the Assam gardens and 6.28d. per lb. for the Dooars. With £393 received from tea seed, £94 from tea sweepings, and £196 from miscellaneous sources the total receipts were £49,358, but a saving of nearly £10,000 was effected in the expenditure, and after deducting a loss of £1,342 on the Dooars estates, there was a net profit on working of £2,422, which was increased by £7 from transfer fees to £2,429. Of this sum directors' fees and other London expenses absorbed £1,112, discount and interest took £731 and after meeting debenture interest and trustees' fees there was a balance of £284, which was applied in reduction of the debit balance brought in, making the loss to date £10,485. An issue of £50,000 6 per cent. first mortgage debentures was made during the year at a cost of £1,347, and out of this the loan from Messrs.

Gillanders, Arbuthnot and Co., was evidently paid off, but the debt to the bankers was increased to £20,000, and £12,188 was due to other creditors, against which tea was held valued at £30,677, cash amounted to £5,527, and sundry debtors owed £1,875. The block account remains at £239,165, representing rather more than £43 per acre, and of course there is no such thing as a reserve fund, so that in spite of the profit and of the forecast that the manufacture of tea will be better in the current year, the position is far from healthy.

Moabund Tea Co., Limited.

The season of 1902 began well for this company, and up to the end of September the crop showed a substantial increase over that of the previous year, but in the end the outturn was 21,255 lb. lower at 1,318,612 lb. Fortunately, however, the quality was good, and the average price realised improved from 8.20d. to 8.61d. per lb., while at the same time the cost was reduced by 0.52d. to 7d. per lb. An improvement of £1,367 in receipts was consequently expanded into an increase in the profits of £2,142, making them £6,095, out of which managers' commission took £393. Including £1,035 brought in, and deducting £222 for loss on writing down Indian assets from 1s. 6d. to 1s. 4d. per rupee, debenture interest, and preference dividend, there was a balance available of £3,278, out of which the ordinary shares received 2½ per cent., or the same as in 1899, and 1900 and £778 was carried forward. This modest return is not very encouraging, and the position of the company as shown by the balance-sheet, is still less cheerful. Bills payable and sundry creditors have risen £1,629 to a total of £25,780, and the advance from the bankers is £1,372 more at £4,667, against which cash amounted to £1,866, stocks of tea to £25,445, stores, etc., to £3,443, and sundry debtors only owed £19.

Kelly's Directories, Limited.

Business in the year ended March 31 was a shade less prosperous than in the preceeding twelve months, as gross profits earned fell off by £1,399 to £43,214, and even with the larger balance of £6,408 brought forward, the total available only came to £49,622, compared with £50,606. Depreciation, bad and doubtful debts, debenture interest, preference dividend, and interim dividend on the ordinary shares having been provided for, a sum of £22,956, or £5,879 less, was left, and the directors in order to pay the same dividend of 10 per cent., and a bonus of 3s. per share have been obliged to cut down the allocation to reserve from £9,000 to £4,000 and reduce the balance carried forward to £6,279. The item of books in progress, copyrights, and goodwill, which constitutes the principal asset, was apparently overlooked when the allowance for depreciation was made, and stands in the balance-sheet at the very high figure of £345,194, while stocks of directories, paper, etc., which last year were included, represent another £4,531. It is, however, proposed to take £20,000 from reserve, and write that amount off goodwill. Depreciation on printing and publishing plants was only £3,998, or rather less than 4 per cent., leaving them at £101,255. Trading balances are well in favour of the company, as although the sum due to sundry creditors is £3,086 higher, at £16,043, and that owing to Slater's Directory, Ltd., is £442 up, at £6,075. Sundry debtors owe £5,126 more, at £33,418, and cash and bills receivable have been reduced by £4,109 to £23,738.

Spratts Patent (America).

Although the famous products of Spratts are probably never destined to find such favour with Yankee canines as with their English brethren, this concern is gradually working itself into a better position. In the year to May 31, the trading profit was £8,161, while the actual sum available, including £957 brought forward, was £9,142. Deducting £1,457 for debenture interest, a modest £72 for bad debts, £1,500 for depreciation, and £325 for directors' fees, and the net balance is £5,787. It permits in an increase in the dividend of 1¼ per cent., to 6¼ per cent., with £2,000 to reserve, and £808 carried forward. We are glad to note that part of the mortgage on the Newark freehold property has been paid off, the debt being now only £2,000, against £3,093. With the addition from revenue, reserve reaches £5,500, trading accounts are a lot in favour of the company, and cash reaches £3,095. Properties were increased during the twelve months by £2,210. So, allowing for £1,500 written off, the item has increased £710, to £76,375. Stock in trade, horses, and waggons are valued at £6,590.

National Telephone Company.

Secure in its great monopoly, this undertaking is going ahead in fine style, and the latest figures displayed are really bewildering. In the six months to June 30, the revenue was £894,047, or an increase of £70,804. This sum was obtained at an additional cost of £38,020 only, at £516,052, and the net result, after deducting £5,706 more, at £81,930, for Post Office royalties, is better by £26,619, at a total of £296,064. Rentals carried forward for unexpired terms of running contracts are £52,985 up at £874,383. Including balance brought forward and other revenue, the total credit is £317,633, from which £47,543 is absorbed by debenture interest. Interest on reserve, £21,224 is credited to the fund, and income tax, pension fund, parliamentary expenses and legal charges take £9,118, leaving £239,748 for disposal. The various preference dividends are met from this, the preferred stock gets its usual 6 per cent. per annum, and the deferred stock 5 per cent. per annum, or ½ per cent. more. Then £15,000 extra, at £85,000 goes to reserve, and £5,831 is carried forward. Few will find fault with this exhibit, and, as we have said before, the only menace to the company's stability is the ever swelling capital account. In the half-year the sum laid out was £334,116, making the total expenditure, including land and buildings, £9,589,003. As the capital raised is £8,138,053, the account is overdrawn £1,450,950, and it follows that the entire reserve, now amounting to £1,319,057, is used in the business. Most of the subscriptions paid in advance have gone the same way, and even then the floating debts exceed the sums owing to the company. Cash looks pretty substantial, at £270,936, but is not greatly in excess of the credit balance, and it looks as though the undertaking must soon appeal for a lot of fresh money.

Dundee Loch Line Steam Shipping Co., Limited.

After the directors' expression of opinion a year ago, no surprise will be occasioned by the announcement that the gross profits for the twelve months ended May 31 showed a further small shrinkage of £630, at £9,330. A much smaller balance of £82 was brought in, and to make up the deficiency, £3,500 has been drawn from the dividend equalisation fund, reducing it to £3,500. With this help the amount available comes to £12,912, or £1,541 more, and by setting aside £6,000 for depreciation, against £7,000, the directors manage to pay the same dividend of 2¾ per cent., and carry forward £1,416, subject to directors' and auditors' fees, which last year came to £1,371. The financial position, however, in spite of these two unfortunate years, is still a very substantial one, as apart from £15,050 due on debentures, the liabilities only amount to £4,772, while £4,047 is owing by sundry debtors, and £40,605 is held in cash.

MINING RETURNS.

Associated Gold Mines of Western Australia.—Ore milled 3,787 tons; tailings treated 2,200 tons; slimes treated 2,475 tons; total 6,156 oz.

Australasian Gold.—217 tons of quartz, yield 134 oz., value £480.

Bonsor Gold.—Crushed 4,767 tons for 1,236 oz.; treated by cyanide 3,325 tons, yielding 396 oz.; total 1,632 oz.

Brilliant and St. George.—Crushed 3,386 tons for 2,414 oz.; cyanide, £6,025.

Brilliant Gold.—320 tons of stone crushed, produced 342 oz.

British Broken Hill Proprietary Co., Limited.—2,146 tons crude ore produced 409 tons, concentrates which contain 233 tons lead and 10,225 oz. silver. In the past half-year 107 tons concentrates containing 61 tons lead and 2,675 oz. silver were produced in addition to what has been reported.

Broken Hill Proprietary.—From smelters 860 tons of pig lead, and 76,000 oz. of fine silver.

Caylloma Silver.—26,000 oz. fine silver in export ores, 14,250 oz. fine silver in bullion.

Chinese Engineering.—Output of coal, 10,000 tons; sales 14,500 tons.

City and Suburban.—Ounces, 7,563; tons crushed, 14,000.

Clitters United.—Ore stamped and treated, 2,540 tons; mineral recovered valued at £1,672.

Cobar Gold.—Value of bullion, £7,852.

Consolidated Gold Fields of New Zealand.—Progress Mines of New Zealand crushed 4,852 tons, yielding bullion (including tailings cyanided and sulphurets, value £9,320. Golden Fleece: Crushed 1,230 tons, yielding bullion (including tailings cyanided and sulphurets/ value £2,307. Wealth of Nations: Crushed 1,014 tons, yielding bullion including tailings cyanided and sulphurets value £1,420.

El Oro Mining and Railway.—Crushed 8,247 tons, producing from the new mill $107,880, and from the old cyanide plant $9,223. Annual clean up produced $28,988; total $146,091.

French Rand.—Tons crushed, 6,363, yielding 1,637 oz.; tons tailings treated, 4,810, yielding 1,038 oz.; total, 2,675 oz.

Geldenhuis Main Reef.—From mill, 461 oz.; gold, cyanide works, 233 oz.; ore milled 1,789 tons; tailings treated 1,615 tons.

Gibraltar Consolidated.—Tributers crushed 212 tons for 423 oz.; 15 tons of concentrates produced, containing 115 oz.; extracted from tailings, 18 oz. New Mines: Tributers crushed 48 tons for 70 oz.; 5 tons of concentrates produced, containing 17 oz.

Henry Nourse.—9,167 mill tons, 3,940 oz.; 6,280 cyanide tons, 1,306 oz.; 2,887 slimes tons, 242 oz.; 5,483 total oz., £10,153.

Jubilee.—1,063 oz. from 4,000 tons crushed; cyanide, 519 oz. from 2,644 tons treated.

Lace Diamond.—Loads hauled and washed, yellow ground, 26,355; blue ground, 4,572; yielding 3,115 carats.

Langlaagte Estate.—Ore crushed, 22,158 tons; retorted, 5,572 oz.; tailings, cyanide process, tons treated, 15,750; recovered 1,712 oz.; concentrates, cyanide process, tons treated, 640; recovered 1,051 oz.; total 8,335 oz.

May Consolidated.—Crushed 9,412 tons, yielding 2,902 oz.; cyanide works 6,640 tons treated, yielding 1,302 oz.; slimes works 2,280 tons treated, yielding 200 oz.; total value, £18,707.

Montana.—Drumlummon mine produced 810 oz. gold and 8,170 oz. silver; Lucky Girl Group produced 443 oz. gold and 290 oz. silver.

Mount Morgan (Queensland).—Tons chlorinated 22,023; returned 9,681 oz.

Mount Zeehan (Tasmania) Silver-lead.—380 tons of silver-lead ore, containing about 228 tons of lead and 38,000 of silver.

New Goch.—8,306 oz. from 8,118 tons crushed; 750 oz. from cyanide; 781 oz. from concentrates; 3,846 oz. from all sources.

New Options.—Victory mine, 400 tons, 90 oz. Lady Jane, 400

tons, 56 oz. gold. Pyrites 25 tons, 60 oz.; Crescent C.P., 250 tons, 17 oz. bullion.

New Queen Gold.—Public crushing, £125; tributers, £185.

Palmarejo and Mexican.—Zapote Works: Crushed 3,400 tons, treated 2,500 tons, producing $14,800 gold and $36,200 silver.

Paringa Mines.—Cassidy Hill: Tributers have crushed 125 tons for 116 oz. 13 dwts. 6 grs.

Queen Cross Reef Gold.—Crushed 2,245 tons for 6,873 oz.

Robinson Gold.—18,047 tons; yield 8,473 oz.; from tailings by cyanide, 2,908 oz.; from own concentrates (by chlorination), 703 oz.; from purchased concentrates, 1,103 oz.; total yield 13,187 oz.

Roger's Golden Gate.—725 tons, yielding 1,219 oz.

Roodepoort United Main Reef.—2,646 oz. from 6,400 tons crushed; 734 oz. from cyanide; 3,380 oz. from all sources.

St. John del Rey.—Gold produce, £7,500; yield per ton, .56 of an oz. troy.

Salisbury.—Output 1,525 oz.

Sao Bento Gold Estates.—4,028 tons of ore treated, produced 1,000 oz., value £4,200.

Sulphide Corporation.—19,115 tons of ore milled, producing 3,813 tons of leady concentrates and 4,255 tons of middlings treated, producing 2,183 tons of zinc concentrates. At Cockle Creek 2,663 tons of leady concentrates, 990 tons of residues, and 3,911 tons of purchased ores smelted, yielding 1,714 tons of lead, containing 143,976 oz. silver, and 15,426 oz. gold.

Victoria and Queen Gold.—Crushed 640 tons for 2,091 oz.

Wemmer.—6,410 tons crushed yielding 2,366 oz.; 4,250 tons tailings treated cyanide yielding 483 oz.; 170 tons concentrates caught with an average assay value of 84 dwt.; total from all sources, 3,563 oz. fine gold.

West Rand Central.—Ore milled and tailings treated 4,175 tons, producing 909 oz.

Windsor Diamond Mine, Barkly West, Cape Colony.—Yield 500 loads, 58 carats; value £174.

Witbank Colliery.—Output 26,307 tons.

Ymir Gold.—Crushed 4,950 tons, producing 1,163 oz.; 300 tons of concentrates shipped; cyanide plant treated 3,050 tons of tailings.

Zeehan-Montana Mine.—275 tons of silver-lead ore, containing about 200 tons of lead and 24,750 oz. of silver.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Belfast and Northern Counties.—Dividend on the ordinary stock at the rate of 4½ per cent. per annum for the half-year ended June 30 last, carrying forward £4,000.

City and South London.—Dividend on the consolidated ordinary stock for the half-year at the rate of 2¾ per cent. per annum, carrying forward £1,500. The dividend for the corresponding period last year was at the rate of 3 per cent. per annum, carrying forward £1,749.

Great Eastern.—A dividend for the half year ended June 30 on the ordinary stock at the rate of 1¾ per cent. per annum, carrying forward £16,000. For the corresponding period of 1902 the distribution was at the rate of 1½ per cent., with £11,844 carried forward.

Isle of Wight.—Dividend for the past half-year at 2½ per cent. per annum on the deferred converted ordinary stock.

London, Tilbury, and Southend.—Dividend on the ordinary stock for the past half-year of 4 per cent. per annum, carrying forward £8,093. The dividend for the corresponding period of 1902 was at the same rate, carrying forward £11,027.

Midland Great Western of Ireland.—Dividend of 3½ per cent. per annum on the consolidated stock for the half-year ended June 30, carrying forward £4,500. This compares with 3 per cent. and a carry forward of £3,013.

BANKS.

Bank of Ireland.—Dividend of 6 per cent. for the half-year, carrying forward £14,406.

Commercial Bank of Australia.—Dividend at the rate of 3 per cent. per annum on the preference shares, £5,000 to special assets trust reserve account, £29,330 transferred to Special Assets Trust Co., Limited, and £30,412 forward.

Craven.—Dividend at the rate of 15 per cent. per annum, carrying forward £5,755.

London City and Midland.—Interim dividend at the rate of 18 per cent. per annum for the half-year, placing to bank premises redemption fund £25,000, to officers' pension fund £5,000, carrying forward £268,226.

London Joint Stock.—Dividend at the rate of 12 per cent. per annum, placing £10,000 to reduction of premises account, £5,000 to the credit of superannuation allowance fund, carrying forward £38,123. The guarantee fund account stands at £1,200,000.

Manchester and County.—Dividend at the rate of 15 per cent. per annum, carrying forward £12,790.

National.—A dividend for the past half-year at the rate of 10 per cent. per annum, or 10s. per share; also a bonus at the rate of 1 per cent. per annum, placing £5,000 to bank premises account.

BREWERIES.

Bristol, Georges and Co.—Interim dividend at the rate of 15 per cent. per annum, together with a bonus of 2 per cent. per annum for the half-year ended June 30, 1903, on the ordinary shares.

Cannon Brewery.—Interim dividend on the ordinary shares at the rate of 10 per cent. per annum, for the half-year to June 30, with £14,243 carried forward.

Lion.—Interim dividend for the half-year ended June 30 last at the rate of 6 per cent. per annum, upon the ordinary shares.

San Francisco.—Dividend at the rate of 2s. per share on the preference shares, payable on August 10.

MINES.

Brilliant and St. George United Gold.—Dividend of 6d. per share, payable on the 22nd inst.

Great Boulder Perseverance Gold.—Quarterly dividend to June 30 of 1s. 3d. per share, payable August 17.

Ooregum Gold of India, Limited.—Dividend of 1s. per share on the preference shares, and an interim dividend of 9d. per share on both preference and ordinary shares, payable August 12.

Queen Cross Reef Gold.—Dividend (No. 31) of 1s. per share, with a bonus of 6d. per share, payable August 7.

Robinson Deep Gold.—Dividend of 10 per cent.

Smelting and Refining of Australia (1901).—Interim preference dividend for the year ended October 31, 1902, at the rate of 7 per cent. per annum.

Victoria and Queen Gold.—Dividend (No. 10) of 1s. per share, payable August 1.

MISCELLANEOUS.

Anglo-American Telegraph.—Interim dividend of 15s. per cent. on ordinary, and 30s. per cent. on preferred stock, with £6,000 to renewal, and £1,468 carried forward.

United States Debenture.—Interim divident on ordinary shares at the rate of 5 per cent. per annum for half-year ending the 31st inst.

Welford and Sons.—Interim dividend of 8 per cent. per annum for half-year ended June 27.

Westralian Jarrah Forests.—A second and final dividend of 8.36d. per share is now payable to the shareholders of the Westralian Jarrah Forests, Limited, in liquidation, at the offices of the liquidators, Messrs. Gordon and Co., chartered accountants, 3, King Street, Cheapside, E.C. With interim dividend of 3s. per share this makes a total distribution of 3s. 8.36d. per share.

SOUTH AFRICAN MINE RETURNS.

The figures for June are decidedly disappointing, and give another blow to "professionals," waiting so patiently for some event to attract the outside public to gamble. For the Rand itself the output was 228,167 oz., against 224,409 oz. for May, an increase, therefore, of only 3,758 oz., despite the fact that some 200 more stamps were running, and that two more companies had entered the milling list. The latter were the Lancaster—of the A. Goerz group of companies—and the New Unified—a Barnato bantling. The Lancaster really started in May, the production

December	419,504	68,525	—	52,897	196,023	—
Total	4,295,602	4,065,180	348,760	238,992	1,704,410	1,313,373

partly for that month, and for June totalling 3,065 oz., whilst the New Unified yielded 2,641 oz. If, therefore, we deduct these figures from the published increase it will be seen that the other mines really lost ground during the past month. From the outside districts the return was 10,153 oz., compared with 0,716 oz., giving an aggregate return of 238,320 oz., in comparison with 224,125 oz., an addition of only 4,195 oz. The total value was £1,012,322, against £994,505 for May. Labour statistics were published simultaneously, these likewise showing a diminution in the rate of increase. There were distributed to the mine by the Labour Association 7,009 natives, whilst the number of those who left by reason of time expiry and other wastage was 5,057, so that the net gain was only 1,952, making the total number employed 64,454. Of the individual returns the Bonanza is again conspicuous, with a lesser output of 114 oz., and a diminished profit of £1,000. Although the Jumpers Deep had five more stamps at work, there was a fall in the output of 266 oz., and in the profit of £1,500. It will be seen from an examination of our table that the figures of a number of other companies are likewise very poor.

RHODESIAN MINING RETURNS.

The output for June constitutes a record for the colony, the total production being 22,166 oz., against 22,137 oz. for May, an increase of only 29 oz. Matabeleland contributed 19,494 oz., and Mashonaland 2,672 oz. As to individual figures, there are big declines in the returns of the Red and White Rose and the Rezende, with smaller decreases in those of the Eagle Vulture, Beatrice, Globe and Phœnix, Imani, and Wanderer. On the other hand, there are good increases in the cases of the Selukwe, Surprise, Geelong, and Bonsor.

INDIAN GOLD MINES.

The output of the Indian gold mines for June is the highest of any month during the present year, but is much below the figures of August and September of last year. Compared with May, the increase is 352 oz., and is 11,514 oz. more than the return of the corresponding month a year ago. Of the individual returns there is a striking difference between those of the Mysore and Champion Reef. The former crushed a less tonnage, but gave a much larger yield, whilst the latter, notwithstanding 55 more tons were milled, shows an increase of only 3 oz. The Ooregum and Nundydroog figures are good.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Argentine North-Eastern.—Traffic receipts for the week ended June 5, $11,847; decrease, $843. Aggregate from January 1, $288,356; increase, $24,147.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended June 13, Rs. 27,599; decrease, Rs. 1,373. Aggregate from January 1, Rs. 7,49,929; increase, Rs. 25,356.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended June 13, Rs. 7,425; increase, Rs. 753. Aggregate from July 1, Rs. 1,94,805; increase, Rs. 20,903.

Bengal Central Railway.—Traffic receipts for week ending June 20, Rs. 18,182; decrease, Rs. 4,933. Aggregate from January 1, Rs. 578,623; increase, Rs. 4,215.

Canadian Northern Railway.—Traffic receipts for week ended July 7, $51,200; increase, $25,700. Total, from January 1, $1,085,425; increase, $432,214.

Lucknow Bareilly Railway.—Traffic receipts for week ended June 13, Rs. 29,120; increase, Rs. 725. Aggregate from January 1, Rs. 7,27,960; decrease, Rs. 33,712.

Quebec Central Railway.—Traffic receipts for the 2nd week of June, $13,190; increase, $1,395. Aggregate from January 1, $270,738; increase, $18,133.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended June 13, Rs. 13,048; increase, Rs. 2,497. Aggregate from January 1, Rs. 2,52,539; increase, Rs. 8,719.

Salvador Railway.—Traffic receipts for week ended July 11, $15,000; increase, $8,250.

Uruguay Northern.—Traffic receipts for April, £2,130; increase, £718. Aggegate from July 1, £15,647, increase, £3,915.

White Pass and Yukon Railway.—Traffic receipts for the week ended June 21 amounted to $76,593.

ENGLISH.

Cleator and Workington.—Gross receipts for the four days ending July 11, £1,056; decrease, £44. Total receipts from July 1, £1,665; decrease, £357.

Cockermouth and Keswick Railway.—Receipts for week ending July 11, £1,077; decrease, £134. Aggregate from July 1, £1,823; decrease, £222.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending July 11, £312; increase £7. Aggregate from July 1, £673; increase, £37.

Liverpool Overhead Railway.—Traffic receipts for week ending July 12, £1,718; increase, £134. Aggregate from July 1, £3,390; increase, £21.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Aston Manor Urban.—Traffic receipts for week ending July 11 £527, decrease £20; aggregate from July 1, £1,083 increase £42.

Belfast Street.—Traffic receipts for week ending July 11, £2,727, decrease £87; aggregate from July 1, £5,590, increase £80.

Birmingham and Midland.—Traffic receipts for week ending July 10, £816, increase £24; aggregate from July 1, £1,655, increase £2.

Birmingham City.—Traffic receipts for week ending July 11, £5,125, decrease £115; aggregate from July 1, £10,520, increase £466.

Blessington and Poulaphouca.—Traffic receipts for the week ending July 12, £23, decrease £4; aggregate from July 1, £46, increase £1.

Bristol Tramways and Carriage.—Traffic receipts for week ending July 10, £5,086, decrease £65; aggregate from July 1, £10,461 increase £245.

Burnley Corporation.—Traffic receipts for week ending July 11, £852, increase for week £68; aggregate from July 1, £1,647 increase £133.

Dublin and Blessington.—Traffic receipts for week ending July 12, £157, decrease £27; aggregate from July 1, £297, decrease £26.

Dublin and Lucan.—Traffic receipts for week ending July 12, £125, increase £5; aggregate from July 1, £220, decrease £20.

Dublin United.—Traffic receipts for three days ending July 10, £5,575, increase £373; aggregate from July 1, £7,788, increase £402.

Edinburgh and District.—Traffic receipts for week ending July 11, £4,875, increase £781; aggregate from January 1, £118,518, increase £16,463.

Edinburgh Street.—Traffic receipts for week ending July 11, £571.

Harrow Road and Paddington.—Traffic receipts for week ending, July 10, £311, increase £10; aggregate from July 1, £636, increase £18.

Isle of Thanet.—Traffic receipts for week ending July 11, £1,175; increase, £78; aggregate from July 1, £2,273, increase £283.

London General Omnibus.—Traffic receipts for week ending July 11, £28,774, increase £828; aggregate from July 1, £57,602 increase £805.

London Road Car.—Traffic receipts for week ending July 11, £9,723, increase £112; aggregate from July 1, £15,346, increase £279.

Rossendale Valley.—Traffic receipts for week ending July 10, £186, increase £3; aggregate from July 1, £407, increase £21.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending June 15, £5,889, increase £1,372; aggregate from January 1, £137,623, increase £29,284.

Barcelona.—Traffic receipts for week ending July 11, £2,509, decrease £278; aggregate from January 1, £61,853, decrease £585.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending July 11, £307, increase £210; aggregate from January 1, £7,747, increase £4,218.

Brazilian Street.—Traffic receipts for the month of March, Rs. 42,144; increase Rs. 936.

Brisbane.—Traffic receipts for the month of April, £10,309, decrease £407.

British Columbia Electric.—Traffic receipts from July 1 to May 31, £615,445, increase £82,892. Net earnings £203,054, increase £31,357.

Buenos Ayres and Belgrano.—Traffic receipts for the month of June, £12,834, increase £605.

Buenos Ayres Grand National.—Traffic receipts for week ending June 13, $43,889, increase $1,140; aggregate increase from April 1903, $1,237.

Calais.—Traffic receipts for week ending July 11, £171; decrease £10; aggregate from July 1, £535, increase £31.

Calcutta.—Traffic receipts for week ending July 11, Rs. 33,711, increase Rs. 9,463; aggregate from July 1, Rs. 64,594, increase Rs. 15,817.

Carthagena and Herrerias.—Traffic receipts for the month of June, £3,798, increase £865; aggregate to June 30, £22,947; increase £3,461.

Lombardy Road.—Traffic receipts for the month of June, £1,285, increase £39; aggregate from January 1, £7,439, increase £128.

Twin City Rapid.—Traffic receipts for the month of May $339,735, increase $42,744; aggregate from January 1, $1,570,908; increase $214,353. Net traffic receipts $180,407, increase $20,380; aggregate from January 1, $817,281, increase $109,729.

COMPANY MEETINGS.

THE UNION OF LONDON AND SMITHS BANK, LIMITED.

A special general meeting of the proprietors of The Union of London and Smiths Bank, Limited, was held at the Cannon Street Hotel, London, E.C., on Tuesday, July 14, 1903, for the purpose of considering the following resolution:—

"That the capital of the company be increased by the creation of 50,000 new shares of £100 each, and that the capital of the company to the extent of £50 in respect of each of the said new shares (as in the case of the existing shares) shall not be capable of being called up, except in the event and for the purposes of the company being wound up."

Felix Schuster, Esq., the Governor, presided.

The Governor: The Secretary will now read the notice convening this meeting.

The Secretary (Mr. F. V. Hornby) read the notice accordingly.

The Governor (who was received with applause) then said: Gentlemen, in the statement accompanying the notice which has just been read, we have given a few words of explanation setting out the purpose for which this meeting has been called, and to these I have but little to add, for they speak for themselves; and I can only say that, in bringing these proposals before you, your directors are confident that they cannot fail to be of very great benefit to our institution. It has been with real pleasure that we have made the announcement that our negotiations with the old established firm of Messrs. Prescott and Co. had been brought to a conclusion which we consider satisfactory in every way, and a fitting compliment to the policy initiated—and, we believe, successively initiated—just a year ago. When on that occasion we asked for your authority to increase the capital of the Bank, we hardly thought that we should have to come to you so soon with a similar request. A certain number of shares were held in reserve to meet developments which we then thought were likely to arise in the immediate future, but we had not contemplated so large an accession to our business in so short a time. Yet when the opportunity arose your directors thought they ought not to shrink from availing themselves of it; and, although the development of our policy has been more rapid than we, perhaps, anticipated, I can assure you that the step has had our fullest and most careful consideration from every point of view, and the negotiations which have just been brought to a successful issue have been carried on for nearly six months, so that we have had every opportunity, not only of carefully examining the nature of the business acquired, but also of satisfying ourselves that the lines on which it has been conducted are similar to our own. Messrs. Prescott are so well known as one of the oldest and most respected of private banking firms in the City of London that it is hardly necessary for me to refer to their high standing, and to the importance of their connections. I have alluded to them as private bankers, for, although a limited company since 1891, all the best elements of a private bank managed by the partners themselves have been retained, and are, I am glad to say, to be retained in the future. The firm of Messrs. Prescott, Grote and Co. dates back to 1766, that of Messrs. Dimsdale, Fowler, Barnard and Dimsdales to 1762, Messrs. Miles, Cave, Baillie and Co., of Bristol, were established in 1750, and Messrs. Tugwell, Brymer, and Co., of Bath, in 1819. These four private banks amalgamated in 1891 under the title of Prescott, Dimsdale, Cave, Tugwell, and Co., Limited, and since that date the following firms have joined the Bank: Messrs. Deane and Co., of Winchester, established in 1790; Messrs. Harwood and Co., Thornbury, established in 1808; Messrs. Sanders, Snow and Co., Exeter, established in 1769; Messrs. Butcher and Co., Tring, and Messrs. Hilton, Rigden, and Rigden, Faversham. We are thus acquiring old and well-established businesses, not only in the City of London, but also in important centres where it will be of great benefit to us to be directly represented, and in some of which, I may say, we have of recent years lost our own intimate correspondents and their connections through their amalgamation with other banks. The localities in which we found Messrs. Prescott established were, indeed, a great attraction to us, for, as in the case of the London and Yorkshire Bank—to which I shall allude hereafter—we feel we shall find these branches not only profitable to ourselves, but useful also to our customers, without entering into competition with any of our numerous banking connections in the country, for the last thing we should wish to do would be to take any steps that might interfere with the business of our friends for whom we act as agents. As to management, we are glad to state that six of the directors of Prescott's Bank are going to join our board, and to give their time and attention to the supervision of the businesses in the same manner as heretofore; the other directors who have taken an active part will continue to act as local directors for us, so that continuity of management will be preserved, and the customers of the Bank may be certain that their interests will be looked after in the same way as before. Our own board will be strengthened by this accession of trained bankers, and, if somewhat numerous, will certainly not be too numerous, considering the additional duties imposed upon us, and our intention to continue the same careful personal supervision and close attention to our business in all its branches as we have always given. (Applause.) Perhaps you will expect me to say one word as to the other banks which have amalgamated with us. Messrs. Wigan, Mercer, Tasker, and Co., of Maidstone, for whom Messrs. Smith, Payne, and Smiths had acted as London agents for a great number of years, were established in 1818, and have long held a leading position in the County of Kent, where their influence and connections cannot fail to be of great advantage to us. Two of the partners have consented to act as local directors for the bank, and are taking an active part in its management. We look upon this acquisition as a very valuable one, and in these days, when the number of small banks is so rapidly decreasing, we have thought it essential that this connection should not be lost to us. The same remark applies to our other friends, the London and Yorkshire Bank. This institution is of much more recent origin, having been established in 1872. From its foundation the Union Bank of London have been its clearing agents, and we have been able from experience to judge of its rapid progress and of its prudent and careful management. It is true that in its early days the London and Yorkshire Bank, like many other young institutions, had great difficulties to contend with, but under the careful supervision of their managing director, Mr. Clutton-Brock, whom we are now glad to number amongst our own directors, these difficulties were successfully overcome, and the progress of the Bank during the last twenty years has been continuous and remarkable. In 1882 the paid-up capital of the Bank was £144,450, the reserve £3,000, and the deposits £453,000. Ten years after, in 1892, the capital was £225,000, the reserve £75,000, and the deposits £1,637,000. Taking a further period of ten years, in 1902 the capital was £325,000, the reserve £235,000, and the deposits upwards of £3,000,000. (Applause.) I need hardly say that every opportunity has been given us of thoroughly investigating all the accounts and of satisfying ourselves as to the nature of the business taken over. The published accounts of this bank have afforded ample proof of the large proportion of liquid resources it kept in hand, of which we, indeed, as the London agents, already had sufficient evidence, and the district which the London and Yorkshire Bank has served fits in well with our other branches in the north, and our being directly represented in Yorkshire should prove valuable not only to ourselves, but also to our customers, both in England and abroad. Mr. John Mews, and the Right Honourable C. B. Stuart-Wortley, as well as Mr. Clutton-Brock, have joined our board, and will continue to give their assistance in watching over this business. As you have been informed by our notice in order to effect the arrangements with Messrs. Wigan, Mercer, Tasker, and Co., and the London and Yorkshire Bank, 24,417 shares have been issued, thereby increasing the paid-up capital of the bank by £378,463 10s. 0d., and we have been able to increase the reserve fund by £150,000. As these businesses have been taken over as from January 1, the newly issued shares are entitled to the dividend for the half-year which has just closed, and we are already enabled to judge of the results of these amalgamations for the last six months, as well as of that with Messrs. Smith's firms for the econd half-year of our working together, and I may say at once that they fully come up to our expectations. (Applause.) It would be anticipating the business of our general meeting, which is to be held on the 29th inst., if I were to go into the figures in detail, but you have, no doubt, seen our dividend announcement, and you will have noticed that our net profits have amounted to £220,164, a sum which exceeds our net profits of a year ago by upwards of £102,000—(applause)—and that in a half-year which in some respects was by no means so favourable to banking. The dividend and bonus which we have declared will absorb £179,835, so that we have a surplus of net profit in hand of £40,328, or over 2½ per cent. on the paid-up capital, not reckoning the amount brought forward from the previous half-year. The purchase of the Bank at Maidstone has, of course, involved a considerable payment for goodwill, whereas the transaction with the London and Yorkshire Bank has consisted principally in an exchange of our shares for theirs, but has also necessitated a fairly large outlay for stamp duty and other expenses. We have thought it well to write off the whole of this goodwill account and all the incidental expenses of both these purchases, and shall, therefore, start the new half-year with no goodwill or purchase account in our books at all. (Applause.) To effect the arrangement with Messrs. Prescott, 34,924 shares will be allotted to the shareholders of that bank, thus raising our paid-up capital to £3,554,785, and the reserve fund to £1,350,000. This capital is certainly large, but we consider it only right that it should be so, for, as I told you a year ago, we think that the capital of a bank should always be in proportion to the extent of its business. Our authorised capital will amount to £25,000,000, our subscribed capital to £22,934,000, and according to the figures of June 30, our deposit and current accounts to upwards of £33,000,000. As to our earning power, I think the figures we have given you for the past half-year will have convinced you that our anticipations of a year ago have been fully realised. We have a surplus of £40,000, equal to 2½ per cent. beyond the dividend and bonus of 12 per cent., and this surplus exceeds by £8,000 the dividend that would have been payable on the shares issued to Messrs. Prescott, if these had been entitled to the dividend for the current half-year; or, in other words, without any of the profits to be derived from Messrs. Prescott's business, our net earnings last half-year amounted to more than 12 per cent. on our capital as it will be when the amalgamation is completed. (Applause.) We may thus look forward to the future with every feeling of confidence, but as men of business you will not expect me to prophesy, and I can only repeat what I said on a similar occasion a year ago, that we have gone carefully over these accounts, that we know what the profits of these businesses have been for a number of years, and that, even after allowing for some diminution which is possible in such circumstances, we should have a considerable margin of profit over the dividends which we have been paying for the last few years, provided that the conditions of the money market generally remain fairly satisfactory for banking business. This is, of course, a factor which is entirely beyond our control, and which no one can foretell, but if, as is not improbable, in the course of the next few years a period of cheap money should return, then I am confident that we shall not be affected to the same extent as we should have been, had we remained a purely

London institution. (Hear, hear.) Moreover, it is not in the immediate future that we expect to reap the full benefit of the steps we have taken during the last twelve months, but we believe that they will tend to the ultimate good of our institution, and that in enlarging the field of our operations, and considerably increasing the number of influential connections of the highest standing, as well as adding to the number of our shareholders, we are acting in the best interests of the Bank and all its constituents. One word in conclusion. Our policy is not one of extension merely for the sake of extension, or of showing larger figures in our balance-sheet, but we have thought it our duty not to lose opportunities for the development of our business in a direction and in a manner consistent with the principles which have hitherto guided us. The one aim we have in view is to maintain and further increase the prosperity of our institution, and to uphold its high position. (Applause.) I have now to move the resolution which has been read out to you by the Secretary.

The Right Hon. Sir Algernon West, G.C.B.: I have pleasure in seconding that.

The Chairman: The resolution is: "That the capital of the company be increased by the creation of 50,000 new shares of £100 each, and that the capital of the company to the extent of £50 in respect of each of the said new shares (as in the case of the eixsting shares) shall not be capable of being called up, except in the event and for the purposes of the company being wound up." The resolution has been seconded by Sir Algernon West; if any proprietor would like to address the meeting, or to ask any questions before I put it, I shall be very glad to hear him now.

After a short discussion, the resolution was put and carried unanimouscly, and the proceedings terminated with a vote of thanks to the Chairman.

LINOTYPE COMPANY.

A general meeting of the debenture stockholders was held on Tuesday, July 14, at the Cannon Street Hotel, Sir J. Lawrence, M.P., in the chair, to consider a scheme of amalgamation with the Machinery Trust, Limited, by means of the sale of both undertakings to a company to be called Linotype and Machinery, Limited.

The Chairman stated that the proposed combination in its aims, made for strength, efficiency, and increased financial credit, as against growing weakness, loss, inefficiency, and decreasing divergency of interest between the two concerns. When the Machinery Trust came into being, in 1893, its shares were subscribed for exclusively by leading shareholders in the Linotype Company to the number of about 230. Now only 7 per cent. of the shareholders were shareholders in both companies, and only 9.6 per cent. of the debenture stockholders. The scheme had not been rendered necessary by reason of any losses which had been sustained. No losses had been incurred in the ordinary trade sense of the term, and the business was in no sense lacking in vitality. The two concerns had a weekly income of £8,000, or £400,000 per annum. In addition, they had an income of £70,000 yearly from quarterly rentals, £600,000 of good book debts, and £2,500,000 of other good assets. The position of the debenture stockholders under the new régime would be in no way worse than under the old one. The trust deed proved that the votes of half of those present would be sufficient to carry the resolutions. As to the amendment to the resolution, the board were advised that nothing of the kind was legally possible. The issue must be decided yes or no on the resolutions submitted. The board were conscious that they were asking from the debenture stockholders what seemed at first sight, to be a great concession, but he did not think that, substantially, it would be of the injury which some might suppose. He and his colleagues had the fullest respect for the sanctity of contract, and they would not do anything to undermine what they believed to be the foundations of public confidence in respect of property. In making these proposals they considered that they were acting in the best interests of those concerned. No alternative plan had been put forward. They were of opinion that the scheme was a good one, otherwise they would not recommend it. In the event of its going through, Sir Vincent Caillard would join the board and become chairman of their finance committee. He concluded by moving the formal resolutions, which were seconded by Mr. J. Greig.

A discussion followed, in the course of which a number of objections were raised to the scheme.

Mr. Lea Smith said that it was a new thing to interfere with rights of debenture stockholders, although several attempts had been made to do so in the case of preference shareholders. He did not believe, if there was any fair minority against the proposals, that the board would be able to carry them. So far as he was concerned, he should do all he could to "sit tight" on his debenture rights.

Lieutenant-General Young protested against the proposed arrangement for converting the present stock into "B" debenture stock, as he believed that the result would be materially to depreciate the value of the security which he held. If the company were put into liquidation he should claim to be repaid his capital under the terms of the trust deed.

Mr. Hunt considered that the scheme meant confiscation, and he did not believe that the Courts would sanction it.

Mr. Culshaw, Mr. Paterson, and other debenture stockholders spoke against the resolutions.

The Chairman, in reply, said that the board in preparing the scheme had had regard to the claims of all classes. As to the threatened appeal to the Courts, he might state that the whole position of the debenture stockholders was safeguarded by the terms of the trust deed, which provided that if a majority of the stockholders agreed to a certain proposal it was binding on the remainder. The directors had taken legal advice, and they felt that they were on safe ground in that respect.

On a show of hands the resolution was declared lost. A poll was demanded, which resulted as follows:—For the resolution, 4,000 votes, in respect of £414,205 of stock, represented by 924 persons or proxies; against the resolutions, 329 votes, in respect of £33,215 stock, represented by 23 persons or proxies.

The Chairman thereupon declared the resolutions carried.

MACHINERY TRUST.

A general meeting of the holders of debenture stock was held on Tuesday, July 14, at the Cannon Street Hotel, to consider resolutions for the amalgamation of this company with the Linotype Co., Limited.

Sir Joseph Lawrence, M.P., who presided, pointed out that the debenture stockholders were to get first debentures in the new company, while the Linotype debenture stockholders would receive, in exchange for their present stock, only second debentures. The redemption of the first debentures would, moreover, be secured by a policy to be taken out in a leading insurance company. There was every reason to believe that better results would be obtained by an amalgamation of the two undertakings than by going on separately. As a united company they would be in a stronger position to deal with any proposals which might be put forward in the future by outsiders. The assets of the two companies had been reduced to a bed-rock condition, and therefore they might hope that no occasion would hereafter arise for coming before the stockholders or shareholders with any reconstruction scheme, involving the writing down of capital. Several of the directors were large shareholders, and they were satisfied that the course now proposed would be advantageous to all concerned. Proxies in favour of the scheme had been received from a considerable majority of the debenture stockholders, and he trusted that it would be accepted with unanimity. He concluded by moving the resolutions, which were seconded by Sir H. Bemrose. On a show of hands, the requisite majority was not obtained. A poll was taken, when the resolutions were carried 1,601 votes for £164,490 stock, against 44 votes for £4,500 stock.

LINOTYPE COMPANY.

An extraordinary general meeting was held on Thursday, July 16, at the Cannon Street Hotel to consider resolutions approving a scheme of amalgamation with the Machinery Trust, Limited.

Sir Joseph Lawrence, M.P., presided, and, in moving the resolutions, said that the issue which they had to discuss—the advantages of amalgamation being obvious—was narrowed down to this—Was the scheme in its entirety fair, and equitable to all classes of proprietors? By an overwhelming consensus of opinion that question had been answered in the affirmative. The board felt grateful to the debenture stockholders for having consented to take second debentures in the proposed new company, and thereby enabling £500,000 to be raised for discharging existing obligations and providing the requisite working capital for the furtherance of the business. There were no losses to write off in the trade sense of the term. All bad debts had been dealt with out of profits. What the board wished to do was to write down the goodwill, which was represented by nothing but "water," and also the book value of machines. Why were shareholders in the Machinery Trust, it was asked, to receive more shares in the new company than Linotype shareholders? The answer was that their capital account did not contain any item of goodwill. Very little cash was received in respect of the £2,000,000 of Linotype ordinary shares. Included in that sum were the bonus shares, representing £1,000,000, and also the shares transferred to the vendors in America for the original patents. On the other hand, the whole of the share capital in the Machinery Trust was represented by cash, and many of the shareholders paid £2 for their £1 shares. Broadly speaking, the scheme would place them in a strong position at the smallest cost to the shareholders. On the board of the new company they wanted the best talent obtainable. Their mechanical department alone was becoming of such an important character that they wanted to liberate the energies of some of the directors to attend more closely to it, and generally to decentralise the work, as was done in some of the larger undertakings in the country. With that end in view they had secured the consent of Sir Vincent Caillard to become chairman of the finance committee of the new company.

Lord Kelvin, in seconding the resolutions, said that the claims of the different classes of shareholders had been carefully considered, and to the best of their powers the board had done justice in each case. He did not wish to appear too optimistic with regard to the future, but he considered that the combination would lead to increased profits. There were good prospects of carrying on the business successfully, notwithstanding the falling in of the patents. A long discussion followed, in the course of which opinions were expressed for and against the scheme. Eventually the resolutions were passed with two dissentients.

MACHINERY TRUST.

An extraordinary general meeting was held on Thursday, July 16, at the Cannon Street Hotel, to take into consideration the proposed scheme of amalgamation with the Linotype Co., Limited.

Sir Joseph Lawrence, M.P., who presided, expressed a hope that the scheme would be approved with practical unanimity. It had

been said that the Machinery Trust shareholders had less to complain of than any other class of proprietors in the two companies. The Linotype debenture stockholders had passed resolutions in favour of the scheme by a majority equal to twelve to one, while the voting of the Machinery Trust debenture stockholders for the scheme was in the proportion of thirty-six to one. Had he used the proxies received at the meeting that morning of the Linotype Company, the resolutions would have been passed by £1,250,000 of shares, as compared with £200 of shares against them. If competitors were to come forward—and attempts of the sort had been made—with the object of acquiring the business, they would first try to buy the Linotype undertaking in order to use it, as an engine of competition, against the Machinery Trust. There was no intention on the part of the board, however, to see the concerns killed singly. If they were to have a fight of a serious nature with rivals, their position of defence would be stronger by being united. It might be asked what was the particular state of affairs which made necessary the proposed union of interests. Probably the shareholders had not kept themselves so well informed as to the condition of affairs as they might have done. The balance-sheets showed an average indebtedness to the Linotype Company, during the past few years, of from £100,000 to £160,000, and, in addition, debentures for a large sum had been given to their bankers as collateral security in respect of advances. Liberal banking facilities had been granted to them, but with the shrinkage in the value of their securities, owing to the bad times through which the newspaper and printing trades had been passing, those facilities had become restricted. The trust was not in a bad way, as there were tangible assets amounting to £594,000; and, after paying off all creditors except the debenture stockholders, there would remain a surplus of about £250,000. In conclusion he moved resolutions in favour of the scheme and for winding up the trust voluntarily, with Mr. E. L. Booty as liquidator.

Mr. E. J. Halsey seconded the resolutions, and, as a director who was not on the board of the Linotype Company, he urged the shareholders to approve the scheme.

Mr. Threlfall, speaking as a trustee, stated that he could not do otherwise than vote against the proposals. His trust consisted of preference shares, which were preferential as to capital, and he must claim to be paid out, as he found that the £250,000 of preference shares had assets behind them exceeding £750,000.

Mr. Pollen (a director) observed that Mr. Threlfall's position was that of any other dissenter from the scheme, for which there was a proper legal remedy.

Mr. Beaumont opposed the scheme on various grounds, but, after some further discussion, the resolutions were carried w.... a few dissentients.

CHICAGO-GAIKA DEVELOPMENT.

The fifth ordinary general meeting of the Chicago-Gaika Development Co., Limited, was held on Tuesday, July 14, at the Cannon Street Hotel, E.C., under the presidency of Sir John Willoughby.

The Secretary having read the notice convening the meeting and the auditors' report,

The Chairman said: With regard to the accounts, I think they scarcely need comment, as, for reasons explained at the last shareholders' meeting, held in December last, no fresh expenditure on the development of the properties of the company was incurred during the period under review, pending the completion of the sale and transfer of the Gaika claims to a gold mining company. The amount under creditors, £1,072 13s. 1d., has been liquidated, as also the amount of £131 10s. 10d. under debtors. The amount of £1,697 5s. 7d. under outlay during the year, inclusive of engineer's fee, was expended on the general maintenance and caretaking of the Gaika claims and in measuring up and sampling the surface ore left by the ancients. With regard to the position of the company, I think that may be considered entirely satisfactory. The sale of 100 claims to the Gaika Gold Mining Company, announced at the last shareholders' meeting, has been completed, and transfer of the same duly executed. Including everything, we receive £110,834 Gaika fully-paid shares and £30,843 in cash, or a total of £141,677 in cash and shares. Thus by the sale of less than one-fourth of our total claim holdings, we receive an amount in cash and shares equal to about 70 per cent. of the total issued capital of this company. Most of the purchase consideration has now been paid, with the exception of a portion of the cash amount, which, for the present, to meet the convenience of the Gaika Company, stands on loan at 5 per cent. interest per annum, pending the completion of the calls on the issued shares of that company in the course of the present year. All those connected with the Gaika property have a very high opinion of its prospects, and it is to be hoped that our large shareholding will materially appreciate above par value, but this, of course, will depend on the results of the development now being undertaken. It may be as well to recall the fact that this company started with only a working capital of £50,000; it spent upwards of £40,000 on the development of the Gaika claims, and in return it now has 110,834 shares and some £27,000 in cash or on loan available for the development of some of its other numerous properties comprising some 357 claims yet to be dealt with. It should also be noted that this company has no debts or liabilities. With regard to future work, contracts were given out last February for the development of the Primrose Block. By latest advices two shafts have been sunk to a depth of 74 and 75 ft., respectively, and a total footage of 302 ft. has been completed. The reef has been struck below the old workings in both shafts, and driving on it has been commenced. The surface indications are considered good, as also the character of the old workings, and all I can say at present is that I hope the further development during the next few months will continue to be satisfactory. It is probable that development work will next be started on the Moss property of twenty-seven claims, which also show good indications on the surface. Now that the main railway line connecting Bulawayo and Salisbury runs within a few miles of the majority of our claim holdings work can be carried on at a far cheaper rate and with much greater facility than was possible in former days. I now beg to move:—"That the report of the directors, together with the annexed statement of the company's accounts to December 31, 1902, be received and adopted."

Lieut.-Colonel A. Weston Jarvis seconded the motion.

Mr. Percy Lindley said there was one question he would like to ask in connection with the properties now in course of development, which was whether the engineer in charge of the present work was the same engineer in chief who was in charge of the Gaika properties. He put that question because at the last meeting, from the directors' side of the table, it was pointed out that, in the opinion of the gentlemen who addressed them and the consulting engineer, the property had never had a fair chance, owing to the fact that the engineer in charge had not understood the proposition. He ventured to ask whether it was wise that the new development should be carried out possibly on the lines indicated by Dr. Sauer at the last meeting.

The Chairman said, in reference to Dr. Sauer's remarks, he looked upon them as being made, perhaps, as a sort of puff of the management of his own companies. The Gaika was a peculiar proposition in many ways, and the several experts who had visited the property had various ideas about it. It remains to be seen who was correct. Mr. Currie was in charge of the development of the properties of this company.

Mr. Rutter asked the Chairman if he could give an opinion as to the reason of the continued fall in the price of the shares on the market.

The Chairman said he considered the statement he had made certainly gave considerable hope for the future. As to the price of the shares, that was a matter the directors could not control; it was not their business to make markets. He fully agreed, however, that the price at which they were quoted by no means represented the intrinsic value of the properties. He thought it was due to the general depression which had prevailed since the declaration of peace in South Africa. He should think that when people realised how this company was progressing, and when there were more active markets, there would be a decided appreciation.

Mr. Rutter: Can you give us any information as to the holdings of the directors? Have they been increased or decreased?

The Chairman: Neither, I think.

The motion was then put, and unanimously agreed to.

The retiring director, Mr. H. E. M. Bourke, having been re-elected, and the auditors re-appointed, a vote of thanks to the chairman and directors terminated the proceedings.

MASHONALAND CONSOLIDATED.

An extraordinary general meeting of the Mashonaland Consolidated was held on Monday, July 13, at the Cannon Street Hotel. Mr. C. E. Hogg presided, and explained that the only business which could be transacted was the election of a director, in order to comply with the articles, which required that the minimum number should be three. At present there were only Major Johnson and himself, and the former was, for the time being, incapacitated owing to an accident. The only person nominated for the vacancy was Mr. W. H. Parker, whose election he moved. Mr. Tyler seconded the motion. Replying to a question, the chairman said that Mr. Parker was the registered holder of 275 shares, but he had a large additional interest in the company. The chairman afterwards made a statement with regard to his recent visit to Rhodesia, and said that in his opinion this company had not received what they agreed to purchase from the old company—the Mashonaland Consolidated Development Co., Limited. The general manager, whom he met at Bulawayo, informed him that development work had only been carried out on two or three of their 1,300 claims, and also committed to writing his opinion that of the £100,000 spent on the claims only about £14,000 was represented by work of any value. When his unfavourable reports reached London the board, as he had since ascertained, consulted the solicitor with the object of getting rid of him, but they were unable to accomplish that purpose. On his return to this country he found that several thousand pounds of their capital—subscribed for the acquisition and development of properties in Mashonaland—had been invested in some Klondike debentures. Had the money been sent out to Rhodesia they might have been crushing at the Glendarra mine. As a matter of fact, there had not been any useful operations carried on at the mines since the formation of this company, and they had been paying £2,400 a year to a staff of men who had not been allowed to do any work. He then explained that Mr. C. T. Holland had ceased to be a director as he did not hold the qualification required by the articles, and added that Mr. Percy Inskip had also ceased to be a member of the board. Sir James Sivewright resigned about twelve months ago, although he (the chairman) had done what he could to induce him to retain his seat. They would be justified, he thought, in proceeding with the business under proper control. Past neglect and, perhaps, want of skill did not affect the intrinsic value of many of the properties. In the circumstances, however, he desired to see a committee of business men appointed to inquire into the manner in which the company's affairs had been conducted. Mr. Holland stated that he joined the board at the request of several large shareholders, and

he contended that in spite of the legal quibble raised by the chairman, he was still a director. The Klondike investment was arranged prior to his joining the directorate, but it was at his instigation that the board agreed to take from the company that investment if the majority of the shareholders disapproved of it. There was no wish on his part, or on the part of those he represented, to burke an inquiry; on the contrary, they desired the most thorough and open inquiry, because charges tantamount to fraud had been made against them. He protested, however, against the hole-and-corner way in which the chairman had secured Mr. Parker's nomination. Mr. Tarbutt, a director of the old company, denied that only £14,000 had been expended usefully on the claims. That was untrue on the chairman's own showing. They had been told that the Glendarra Mine was ready to start crushing, that the Hepworth Mine was in an advanced stage, and that in the Golden Valley there were two miles of reef exposed. That work could not have been done for £14,000. Mr. Mellor said that Sir James Sivewright was perfectly prepared to vote in favour of a committee of inquiry directly specific allegations were made.

Several shareholders supported the chairman, and it was stated that the objections to his action came from the holders of vendors' shares. It was eventually agreed, as the only way out of the existing deadlock, that Mr. Holland and Mr. Parker should act as directors until the forthcoming annual meeting, when further steps will, it is expected, be taken with regard to the suggested inquiry.

APOLLINARIS AND JOHANNIS.

The sixth ordinary general meeting of the shareholders of the Apollinaris and Johannis, Limited, was held at the Holborn Restaurant, High Holborn, W.C., Mr. Frederick Gordon in the chair.

The Secretary read the notice convening the meeting and also the auditors' report.

The Chairman: I beg formally to move:—"That the balance-sheet and accounts for the year ending 31st March, 1903, and the report of the directors, dated July 3, 1903, be received, approved and adopted, and that the dividend on the ordinary shares therein recommended be and is hereby sanctioned and declared, and that the dividend on the 5 per cent. preference shares paid on 15th June last, in accordance with the notice printed on the preference share certificates, be and is hereby confirmed.'

Mr. Julius C. Prince (Vice-President and Managing director) seconded the resolution.

The Chairman: Before putting the resolution to the meeting I would like to say a word or two. I must certainly to-day congratulate the shareholders on the still progressive character of your business. I venture to say that there are few companies that could give such figures as you have before you to-day. During the year ending March, 1898, you sold 21,825,449 bottles of Apollinaris Water, and during the year ending March last you sold 28,543,578 bottles. Well, figures like those speak for themselves, and they need no gilding. We have also had a very satisfactory increase in the sale of Apenta Water, which, as you know, is one of our important waters, and we are looking to still continued improvement in the sale of that water in the future. With regard to the accounts, some shareholders perhaps might say: "Well, you give us a very large increase in your sales, but why have you not larger profits to distribute?" Now, I think I can give a very good answer to that question. During the past year we have spent a very considerable sum in advance of previous years in our advertisements. We have spent money in America. You will recollect that on the last occasion when we met I told you that one of our trusted representatives had been to America, that he was well received, and what advantages we expected would be realised from his visit. I am in a position now to tell you that those statements which I then made have been almost more than realised. Our sales of water in the United States at this moment, notwithstanding the enormous competition there, very much exceed those of previous years, and I think we can certainly justify our additional expenditure when we can show you the results attendant on the outlay in that particular instance. You must bear in mind that the expenditure on advertisements is not ephemeral, and what you spend to-day you may get the advantage of in twelve months' time. Unfortunately, we have had other additional charges. You may recollect that the cost of bottles was mentioned last year by one or two important shareholders, and it was suggested that, in view of the large additional cost, it might be advisable for us to manufacture our own bottles in Germany. Well, we considered that question, and I am bound to say that the decision of the directors was the correct one, because at the present moment we are paying considerably less for our bottles than when we met a year ago.

The Chairman then dealt with certain questions asked by a shareholder in letter to him. These questions referred to the income tax and reserve fund, and after they were dealt with fully, the Chairman said he would be pleased to answer any further ones.

Mr. Crewe said he thought the shareholders would like to know more about what he considered was the extremely satisfactory result of the litigation.

The Chairman said he would prefer to ask the managing director, Mr. Prince, to answer that question.

Mr. Prince then gave the history of the recent action before the Lord Chief Justice; a copy of whose decision had been sent to the shareholders.

Mr. A. R. Holland, one of the directors, on the conclusion of the managing directors remarks, informed the meeting that he had recently visited the Apenta Springs and his impression of them.

The resolution was then put to the meeting, and carried unanimously. Viscount Duncannon having been re-elected a director, and the auditors re-appointed, the proceedings terminated with votes of thanks to the staff and diredtors.

NEXT WEEK'S MEETINGS.

Monday, July 20.

Bradford Old Bank.—Bradford, noon.
Compagnie Generale des Asphaltes de France.—Winchester House, 2.30 p.m.
London and Provincial Bank.—Cannon Street Hotel, 12.30 p.m.
Mid-Suffolk Light.—Ipswich, 2 p.m.
Surprise Gold Mining.—Cannon Street Hotel, noon.
Union Jack Consolidated Mines.—Winchester House, 3 p.m.
Union Bank of Australia.—71, Cornhill, 1 p.m.

Tuesday, July 21.

Asbestos and Asbestic Company.—Cannon Street Hotel, 3 p.m.
Australian Agricultural.—Winchester House, 1 p.m.
British North Borneo Company.—Cannon Street Hotel, 2.30 p.m.
Bayleys Gold Mines.—Winchester House, noon.
Clergy Mutual Association.—2-3, The Sanctuary, W.C., 2 p.m.
East London Railway.—Cannon Street Hotel, 3 p.m.
Millionaire, Limited.—Winchester House, noon.
Munster and Leinster Bank.—Cork, 1 p.m.
Stretton's Independence.—Cannon Street Hotel, 12.30 p.m.
Wharfingers' Association.—Cannon Street Hotel, noon.

Wednesday, July 22.

Bonsor Mines.—Winchester House, 12.30 p.m.
Capital and Counties Bank.—Cannon Street Hotel, noon.
Fanti Consolidated Mines.—Cannon Street Hotel, noon.
Horley District Gas.—Cannon Street Hotel, 3 p.m.
Halifax Commercial Banking.—Halifax, noon.
London and Westminster Bank.—41, Lothbury, 1 p.m.
National Discount Company.—Cannon Street Hotel, 11.30 a.m.
Nimrod Syndicate.—Winchester House, 12.30 p.m.
Provincial Bank of Ireland.—Dublin,
Singlo Tea.—Winchester House, 2 p.m.

Thursday, July 23.

Dooars Tea.—Winchester House, 2 p.m.
C. Arthur Pearson.—Winchester House, 2 p.m.
Empire of India and Ceylon Tea.—Winchester House, noon.
Howard and Bullough.—Accrington, noon.
Ohlsson's Cape Brewery.—Cannon Street Hotel, 3 p.m.
Nile Valley Company.—Winchester House, 2.30 p.m.
National Telephone.—Hamilton House, noon.
National Bank.—Dublin, 1 p.m.
Perseverance Gold Mines.—Winchester House, noon.
Parr's Bank.—Warrington, noon.
Spratt's Patent.—Winchester House, noon.
South Kalgurli Gold Mines.—Winchester House, 2 p.m.

Friday, July 24.

General Electric Company.—71, Queen Victoria Street, 12.30 p.m.
Lagos Goldfields.—Winchester House, 4 p.m.
North-Eastern Banking.—Newcastle-on-Tyne, noon.
United States Brewing.—Winchester House, 11 a.m.
Woolley Sanders.—129, Wood Street, 3 p.m.

The World's Work Special Summer Number ir eally very interesting. Its articles, over twenty in number, are on subjects various enough to please all tastes, and though three of them are devoted to the motor, even the non-enthusiast will enjoy the pictures in them. Of the other papers, "French Frocks and Their Makers," which ladies might read with profit. A short sketch of the life of Solen Boylum, the Wild West Sculptor. Back to the Land, which may somewhat damp the ardour of a would-be amateur farmer, and the World's Play articles, on open air life and camping out, are all specially good. The illustrations as usual are excellent.

TRADE.

King of Nibs. **RYTEESI.**
Sample dozen box, post Three Stamps; letter writing a pleasure.
T.B.L. Stationery House, King's Premises, Savoy Corner, Strand, London.

Alta Pura. **QUEEN OF NOTES.**

The Investors' Review.

A Warning to Investors.

Why does not some leading politician with a gift of lucid exposition, such as the Leader of the Opposition undoubtedly has, take up this tariff subject from the point of view of the British investor in foreign securities? We have already alluded in an incidental way to this subject, and it is one that deserves to be returned to again and again, until people of means in this country are induced to look at the dangers threatening the stability of their incomes from foreign sources. Under free trade we have extended the tentacles of our capital into all the ends of the earth, and it is shown by the income tax returns that our revenue from investments abroad now amounts to at least £60,000,000 per annum. The probability is that the reality is far in excess of this sum, because there are an infinity of ways, of which the income tax collector can take no account, by which we profit through our capitalised interests abroad. No small portion of the earnings of our unrivalled mercantile marine arises, directly or indirectly, through the interest of our capitalists in the industries of other countries, and the earnings of the carrying trade between foreign ports thus arising and sustained are mostly outside the ken of the Somerset House authorities. Even direct income from the interest on money placed abroad must amount to a much larger sum than is shown in the annual report of the Commissioners of Inland Revenue. What is going to be the fate of this income, of these investments, if we set up a barrier to British imports from the countries that are our debtors? In asking this question on a previous occasion we instanced Argentina, almost the whole of whose railways have been provided by the British capitalist, and much of whose banking and carrying trade is in the hands of British banks and shipowners. But that is only one striking example. Turn where we may, English capital is engaged in the industries and in the development of foreign countries. The interest upon that capital, the dividends it earns, can only come to us in the products of the soil and the mine, or in such articles of luxury as the population of this country is still in a position to consume. Block the free import of such commodities, whether it be Argentine wool or Brazilian coffee and indiarubber, or Peruvian wool and Chilian copper and nitrate, or tea and silk from China, and would it not follow that the British investor must at once begin to suffer? He might not exactly know what caused the diminution in the amount of dividend received on his investments, or what drove the foreign State debtor into a condition of insolvency, partial or complete, but that he would suffer is certain. Let those gentlemen of the Stock Exchange who are now chattering away in their ignorant and haphazard fashion upon the advantages likely to accrue to us by "downing" the foreigner and shutting out his products, try to realise what a magnificent opportunity for the "bear" success in the Chamberlain policy implies. Put it merely on that vulgar footing, and then try further to grasp what the present uncertainty leads to in the way of paralysing markets, in driving investors away, in terrifying those who have new enterprises ready to launch. After having done this sum, our Stock Exchange wise ones can support the Colonial Secretary if seems to them good, but they had better sell "bears" first.

As our neighbours—and we may call all the world our neighbours in a trade sense—advance in civilisation they all necessarily increase their industrial capacity, but that does not imply that they are doing us an injury. The real consequence of their progress is very much the reverse. The more other countries prosper, the more we, under our present trade policy, must prosper, because with each advance in the wealth of our foreign customers comes an expansion in the consuming power of the people, and in the demand for all the adjuncts of civilisation, of which we are still the best and surest source of supply. Shut the products of our best and steadiest customers out, and we must necessarily stimulate their productiveness at home. They will fall back upon their own resources rather than suffer at our hands, rather than buy from us, and the result will be a diminution in their consumption of the articles we produce for sale, and such a revolution may mean incalculable loss to the British manufacturers. How pitiful, therefore, it is to read such fly-blown balderdash, mildewed in its antiquity, as that contained in a letter published by the *Times* on Monday last, and signed by the Duke of Sutherland, Mr. T. A. Brassey, Mr. Benjamin Kidd, and a number of other eminent nobodies totally unacquainted with business, or decadents of the ape class, who think in "empires" and dream of domination with a fervour proportionate to their impotence. "We look forward to such an organisation of the food supplies within the empire as would effect a considerable reduction in the cost of living in this country." Indeed, oh, wise men of Gotham, and where within the "empire" can we get this food? It does not exist now, either in drought-smitten Australia or starving India; and it cannot be depended upon in the Canadian North-West, where an early frost might, and sometimes does, destroy an entire harvest. Why shut out other sources of food supply when we know that the inter-action of these sources must on the average ensure us cheap food? Were the harvest bad in the Canadian North-West, it is certain to be good in some other part of the world whence we now draw our grain, and prices therefore do not rise, as they would in an inter-imperial famine. How can we possibly have cheap food from a country whose soil yields five bushels to the acre? "Many of the British colonies are beyond doubt great and undeveloped estates," say these solemn dawdlers, "the pro-

duction of which might be multiplied many times over in the near future under the stimulus of an intelligently directed fiscal policy of the states comprising the British Empire." Well, let these states begin, let them try by knocking their own tariffs off, and then we can talk to them. Why should we put fetters upon our hands and feet in order that they might develop their resources, or that Mr. Henry Chaplin might once more finger high rents and cut a dash at Newmarket and Epsom? The colonies are their people's, the chance is before them, and if they have faith such as language of this kind seems to imply, what right have they to come to us and say, "starve that we may flourish?" That is what an agitation of this selfish, vain, and addlepated description implies, that and the loss of countless millions of British capital invested abroad.

Two Yankee Finance Puzzles.

Nothing has recently so much shocked the mind of the average British investor about Yankee railroad finance as the sudden poverty disclosed by so many of the great railroad corporations. They seem to be all wanting money in millions upon millions, from the New York Central and the Pennsylvania downwards, and that fact has proved a great damper on the faith of the most robust in what is called the recuperative power of that class of security. What is the meaning of it? Why should one big railroad company after another rush into the Wall Street market and demand $10,000,000 or $20,000,000 on the instant, paying 6 per cent. or any demanded rate for the accommodation so as they only get it. Have the managers of these corporations been speculating for the rise with the corporate funds on Wall Street? We hardly think them so madly dishonest as that. How, then, is the excruciating poverty to be accounted for? Probably the origin of the mischief lies in sham book-keeping. Accounts are duly made up every twelve months, and in times of what are called great prosperity splendid revenues are set forth, leaving large "surpluses" after every interest has been met, and a more or less comfortable dividend paid on the common stock, which stock may at bottom represent for the most part mere "swag," or promoter's inflation. Surplus is piled upon surplus, until the great companies seem to be perfectly independent of any money market fluctuation or sudden call for funds. In all probability these accounts are hollow, and we are inclined to think that railroad gross receipts have for a long time back been systematically exaggerated, that a considerable percentage of the total, in other words, is not, and never has been, represented by cash. The railways are paid by the great industrial and trading trusts, their chief customers, partly in paper. They themselves also pay at least partly in paper for the materials hauled over each other's lines for construction purposes, the result being that they accumulate in what they call their treasuries a mass of securities, more or less convertible until troubled times in credit supervene, when convertibility ceases. This might be all right if the companies did not pay away cash, but their accounts are made up every year as if the whole of the receipts had been cash, and dividends are distributed which require cash, so that when the paper market on Wall Street catches fire, and gossamer values begin to consume there like tinder and vanish like smoke, the railway corporations have probably to rush to their bankers in order to raise money to make good margins upon the paper they have pawned in order to raise the cash with which to pay wages and dividends—outgoing imperatively payable in that form. On some such supposition as this, we can understand the curious action of the Wall Street crisis upon railroad finance, and on no other. But is not this to say that the whole system of account keeping and of revenue and expenditure reckoning on these properties is false and misleading? It is, and we shall be delighted to insert a believable explanation that will relieve these corporations from such a gross imputation. After all, they are an imaginative people the Yankees, and have so got into the habit of treating figures stamped upon bits of paper as realities that they may be pardoned for looking upon railroad revenue in the same light as they do issues of bogus stock.

The other startler of the hour is the slump in United States Steel Corporation stocks. On Tuesday the $100 common share, which has just received a dividend at the rate of 4 per cent. per annum, tumbled to 22, and nobody appears to have the slightest faith in the actual state of this trust's finances or in its future. It publishes glowing figures from time to time, figures hot from the furnace one may say, and they altogether fail to dazzle or to excite belief. The latest of these summary statements is before us, covering the six months to June 30 last, and the figures are quite stupendous. Net profits, after deducting "expenditure for ordinary repairs, renewals and maintenance of plants, also of interest on bonds and fixed charges of the subsidiary companies" come out at $61,568,235, or at the rate of nearly £25,000,000 per annum. Nothing could exceed this magnificence were the figures real, but we do not believe them to be so. The same confusion unquestionably enters into the account keeping of this trust, that we suspect to underlie the fair surface of railroad finance. Orders? Yes, to any amount. The company had 4,666,578 tons of its products on order at the beginning of this month, or within some 75,000 tons as many as a year back, and during the time of its existence it has always had more to do than it could compass. But how much cash has it received in payment for goods delivered, and how much paper? Have the railroads handed over bonds to it, or promissory notes redeemable in series at future dates, and have these bales of paper become so depreciated that the trust is in a smothered condition likely to gasp its life out beneath the weight of its floating debt? Probably that is the fact. The trust, like railroad companies, has to find cash for the dividends it distributes, and its wages bill is enormous, and cannot be paid in notes of hand. Therefore it has in all likelihood been pledging the paper it got from the jerry, or sky-scraper, builders all over the Union, from the railway constructors, and from the great and small corporate users of iron of every description, in order to get cash to go on with, and now we may infer that its bankers are clamorous to have the pawned stuff redeemed. Will the trust be able to do this, to find the money? We think not. Its latest capital juggle, involving a fresh issue of bonds to the amount of at least £10,000,000, was a miserable fiasco, and we do not think that at the present hour it could raise £500,000 on reasonable terms in any money market of the world. Therefore it will have to go under, that is the conclusion we come to, and when it goes under the probability is that gross neglect of depreciation will be also discovered. How much has been allowed under that head we cannot of course say, but $7,385,299 appears in the summary accounts for the past six months as assigned to "sinking funds on bonds of subsidiary companies and depreciation and reserve funds." That sum represents less than one-half of 1 per cent. upon the trust's present capitalisation, and we may be quite sure that the other allowances alluded to but not revealed do not bring the aggregate up to 5 per cent., perhaps not up to 2 per cent. of the gross capitalisation. To be safe an organisation of this description ought to have written off 10 per cent. of its capital every year, and would not have been excessively strong had the amount been 15 per cent. Whatever the facts to be in the end laid bare, we may be quite sure that prices are not rushing down to vanishing point upon Wall Street without very substantial reason.

Notes from New York.

New York, July 13.

The cable no doubt is keeping you most accurately informed of the movements in prices of stocks, bonds, and shares, over here, but it does not, because it cannot, tell you the why and wherefore of the steady downward tendency of everything. Papers here, as far asunder in general matters, as the *Evening Post*, the *Tribune*, and the *Sun*, to name no others, are agreed that the Stock Market is "not an easy thing to read," that "another unsatisfactory week has been experienced," and that "the sudden and rapid decline which began on Thursday threw Wall Street into a state of bewilderment." When such authorities cannot read or will not interpret the signs of the times, it

may seem presumptuous on my part to hazard an opinion, but I, nevertheless, venture to say that what is at the bottom of all the trouble is the complete and utter loss of confidence by the public in the men who conduct the financial affairs of the country, in the banks, the exchanges, and government. Reports of industrial companies, railway companies and all kinds of financial institutions are beautifully drawn up with symmetrical arrays of figures and plausible statements, yet strange to say there are numbers of people who do not hesitate to say that tney are faked, like Bret Harte's Chinaman's cards up his sleeves, "with intent to deceive." The greater part of these reports which are so gravely discussed and commented upon in papers on your side, are literally without value, are misleading, and untrue. Much of what I have written you on the condition of things over here has no doubt been considered unduly pessimistic, overdrawn, or prejudiced. I can only say that if I had ventured to put some of the things I have written in their full nakedness, it would have been difficult for me to have found the necessary language wherewith to describe the utter rottenness and turpitude of everything around one. All those who have got rid of their American holdings of stocks, bonds, and shares on your side have done well, and they will be, as I have said before this, well-advised to let everything here alone until after the presidential election next year. The struggle is going to be unprecedentedly severe, perhaps the precursor of trouble. Mr. Roosevelt who, some are beginning to think, is not strong enough to win, has incurred the bitter animosity of the great industrial and financial trusts, not that he is to be feared while he is surrounded by those who are his present advisers. A shrewd writer on the subject said the other day:—

"Why does Wall Street dislike Roosevelt? Not because he is boyish, immature, half-civilised, and shallow; not because he glorifies war, brute force, animal courage, and the instincts of savagery; not because he is destitute of moral courage; but simply because he has *talked* about the enforcement of anti-trust laws."

Therein lies the whole truth. Mr. Roosevelt gave monopoly a great scare; and monopoly does not forget or forgive. Through his special organ Mr. J. P. Morgan has presented the American people and the Republican party with two candidates from whom to choose for their next presidential nomination. They are Mr. John Hay, the present Secretary of State, and Mr. Elihu Root, the Secretary for War. Apart from Mr. Morgan's recommendation neither would seem to be in the running; with it they are fatally handicapped. As against either of these two, Mr. Roosevelt would appear to have the better chance.

Although the subject is carefully avoided by the monopolist press, Senator Aldrich, with the approval of Mr. J. D. Rockefeller, to whom he is connected by his daughter's marriage with the latter's son, has, so it is currently understood, prepared, after consultation with Senator Lodge and the Secretary of the Treasury, a Currency Bill for presentation at the next sitting of Congress. As I understand, it provides for the issue of an Asset Currency. The New York *Journal* took the matter up the other day and pointed out how Mr. Rockefeller had only to go to the Treasury whenever he felt so disposed and demand on the strength of his assets, say $500,000,000 in the new currency. With this sum he could purchase fresh properties and again demand on the security of them a fresh issue of currency, and go on in this way *ad infinitum* until he had bought up the whole country and everything in it. As the *Journal* put it:—

"There seem to be really prosperous times ahead for Mr. Rockefeller. As things now stand he has millions upon millions of the coined money, he owns the nation's oil, he controls the banks, terrorises financiers, who are nothing but office boys when he is around. He owns tons of securities that represent the public wealth, and now he is arranging to print money which shall represent these securities."

In other words, if the thing can be accomplished, we shall soon have the "poker-chip currency," about which I wrote a few months ago. With this currency it would be possible to take up great blocks of our securities that are returning from Europe, or that have already returned but have not yet been absorbed. Also some of Mr. Morgan's undigested securities may be had at a low, perhaps very low, figure in exchange for the Aldrich poker chips, to be later, by proper manipulation, turned into "assets" for further currency issues. In this great and "prosperous" country everything is possible, even that.

What is astonishing with such brilliant prospects as this Aldrich-Lodge scheme seems to offer is, that there are actually people over here who are converting everything they can into ready money, gold certificates, and other immediately realisable assets, with the intention of running to cover when the storm breaks.

In my last Investors' Review, to hand to-day, you deal somewhat severely with Mr. Roosevelt in connection with the Kischineff affair. The reason why Mr. Roosevelt's interest in the matter is so vivid is that there are some 600,000 Jews here in New York alone, and in the coming election the votes among them will count. When the Armenians were being slaughtered by tens of thousands, there were no protests over here nor meetings, nor petitions in their favour. There were no Armenians here with votes to turn an election, and more than that, hundreds of poor wretches flying from the knife of the Turk were refused admission to the country, and sent back to from whence they came. At this moment there are Armenian American-naturalised citizens who ventured to return to Turkey for business purposes or to visit their families, who are immured in Turkish prisons, yet neither the Jewish-owned papers here nor any other that I know of, are calling for the punishment of the Turk for this outrage and insult to the American government.

Australian and New Zealand Notes.

Melbourne, June 17.

State Governors and Federal Politics.

If Mr. Chamberlain supposed that Australians did not see through his device of appointing naval and military men to fill the vacancies in Australian State Governorships, he must have imagined them to be inordinately gullible and green. They saw quite as well as he that it was only a dodge to forward his schemes of militarism and imperialism, which people out here want to have nothing to do with; but the tactics of the right honourable gentleman, overt and underhand, are doing more than anything else to irritate the minds of Australians, and to make them thoroughly sick of the sentimental balderdash dinned into their ears about "the dear old motherland," "the greatness and grandeur of the empire," "what she has done for us," and "how helpless we should be but for her motherly protection." There are agents of Mr. Chamberlain's here, from State Governors downwards, constantly mouthing clap-trap of this kind. They forget that people came out to Australia, not because the mother country killed them with kindness, but in order that they might better their condition by opportunities denied them at home. Consequently they are under no obligations to that "dear old mother," and are determined—that is the mass of the people, not the few imperialistic sycophants amongst us—to go on carving out their own destiny, as they were doing before Mr. Chamberlain obtruded himself, with his schemes to make the great continent of Australia the mere vassal of a little island 14,000 miles away.

Preferential Trade and Ministerial Shilly-Shallying.

Even the friends of the Barton Cabinet do not attempt to excuse their conduct in connection with the preferential trade issue raised by Mr. Chamberlain. In the speech opening Parliament which they put into the mouth of Lord Tennyson, Ministers considered the question so far out of the range of practical politics as to make only the most cursory reference to it, excusing themselves for not dealing with it on the ground that there were other more urgent matters which required to be discussed and legislated upon during the session. Mr. Chamberlain had just launched his alarming policy, and Ministers could form no opinion as to how it would be received by Parliament and people of England on the day when the Commonwealth Parliament was opened. Then the cablegrams to Australia

—never reliable, let me say again, either way—gave colour to the belief that Mr. Chamberlain's scheme was creating a favourable impression, and Mr. Deakin, the Commonwealth Attorney-General, entered into the controversy by cabling to a London newspaper the opportunist information that "the Commonwealth Ministry supported Mr. Chamberlain's plan, and that he personally strongly supported it, believing that some such scheme as had been outlined was indispensable." He added "that he believed all the State Ministries also approved of the proposals." Only a few days previously Ministers got Lord Tennyson to tell Parliament that other questions of more urgent necessity required to be dealt with during the session. What will English statesmen think of Ministers who can act in this fashion? It is only another example of that opportunism which characterises colonial political life, and makes people almost despair of getting a cabinet which will represent the true interests of the Commonwealth. Parliament was sitting, and Mr. Deakin had no right to send such cablegrams to London, even if they did represent the opinions of Parliament and the people of Australia. It was the function of Parliament to deal with the question, but Ministers did not bring it before the House. Mr. Deakin and his colleagues have taken upon themselves more than they had a right to do, especially as it is well known that the cablegrams which the Attorney-General forwarded to London do not express the opinion of Parliament or the country on the subject of Mr. Chamberlain's preferential trade scheme —quite the reverse. Australia is not quite so stupid as to endorse a scheme which would ruin her trade with the outside world, by the adoption of a fiscal policy which will not stand the test of even the most cursory analysis. Dr. Deakin has been very properly condemned by the newspapers for misleading people in England into the belief that the people of the Australian Commonwealth approved of Mr. Chamberlain's scheme, when the very opposite is the fact. Some of the more radical journals have not hesitated to say of the Barton Cabinet that they are "traitors to Australia." There has been altogether far too much of this sort of thing going on, and English readers would do well to remember that these ill-timed Ministerial utterances do not represent Australian public opinion; they are mere individual assumptions; all the more mischievous and misleading because they are baseless.

Economic and Financial Notes and Correspondence.

French Senators and Deputies in England.

All things are not evil in the days wherein we live. Some of the nobler aspirations of mankind do make their way towards general recognition at least, and we trust towards realisation. Who would have thought, or if they had thought, ventured to express the hope in the days when Fashoda was in everybody's mouth, that a large body of French senators and deputies would come over to London to hold friendly intercourse with English members of Parliament, and to meet at a dinner in the House of Commons, given by the Commercial Committee, leaders of all parties in English political life? But a few years ago our navy was straining at the leash to get a "smack" at the Frenchman, and now we welcome these visitors, as we welcomed the President of the Republic, and rejoice that the minds of important statesmen in both countries are bent upon finding some means of attaining closer accord and heartier friendship between the two countries. The least satisfactory speech delivered after the dinner was naturally that of the Colonial Secretary, who had to rake up the Crimean war and things of that kind, he being of the old order, dreaming ever of force and bloody strife, but he did not disturb the harmony or goodwill, and all the other speeches as reported were excellent in temper and admirable in expression. The leader of the French group of senators and deputies, Baron d'Estournelles de Constant, made an excellent speech in English, in advocacy of international arbitration, and he was well seconded both by the Prime Minister and by the Leader of the Opposition. Sir H. Campbell-Bannerman's speech, indeed, was perfect in form and spirit, full of good feeling, wit and happy phrasing. We trust this first meeting is only the beginning of such friendly interchanges of ideas and hopes, and that the end will be such a treaty of arbitration between the two countries as will not only ensure lasting peace and goodwill between them but be an example to the other military-ridden nations of Europe, and usher in a happier age. Should that come about ere long, no small part of the thanks will be due to Mr. Thomas Barclay, whose unwearied labours in the cause of international arbitration, and specially of a treaty of amity between England and France, have not received anything like the recognition they deserve.

India's Reserve Army Corps.

Poor India! The sympathies of the Commons are seldom excited on your behalf. The Government's latest meanness in proposing to place part of the cost of the army of occupation in South Africa on your shoulders because it will form a theoretical reserve to your already extravagant military system, has raised little more than a ripple of mild surprise in the Lower House. Yet it afforded the Opposition a great chance to move a vote of censure upon the Government. That the question is not a party one, is shown by the able speeches of the Marquis of Ripon and the Earl of Northbrook when the subject came before the Lords. Both these peers have a practical knowledge of Indian affairs, and both condemned the Government scheme, though Lord Northbrook is one of its supporters. In his opinion, if we saddle India with this burden of undisclosed amount, we are doing her the gravest act of injustice we have done for the last fifty years. Lord Hardwicke and the Duke of Devonshire were the principal speakers in defence of the proposal, but their words were feeble. "Were it not for India we should not be interested in Somaliland at all," was one of Lord Hardwicke's brilliant remarks, but he did not explain the connection between the Mullah and the Indian Empire, and we can only conclude the Indian Office imagines that dusky potentate has designs on the throne of the Moghuls. To His Grace of Devonshire was left the honour of resuscitating the Russian bogey, which, poor thing, everybody thought had retired to its well-earned rest years ago. It is not too late yet for the Opposition to vigorously protest against this iniquitous proposal, and if they are wise they will eagerly seize their next opportunity, and do something to awaken the conscience, or if not the conscience at least the self-interested fears of the investing classes. Never mind the apathy of Parliament, fight this shortsighted fraud on India to the uttermost.

United States Revenue and Expenditure.

We are still without full details about the fiscal year of the Federal Government at Washington, closed on June 30 last. A summary, however, is contained, as usual, in the New York *Commercial Chronicle*, and offers enough material to enable us to set forth a few facts. In the twelve months closed on June 30 last the entire revenue of the Republic came to £111,770,000 in round figures, not an excessive looking amount, taking the population into account, if it stood by itself, but when we remember that every state and municipality in the Union also has revenues and expenditures, and that the Federal income is only as it were the top skimmings, the aggregate will be found quite sufficiently burdensome to raise thoughts. Of this income about £58,000,000 came from customs, £45,000,000 from the internal revenue, and some £9,000,000 in round figures from miscellaneous sources. And it is interesting to note that in the year ended June 30, 1901, the customs revenue was only about £47,700,000, while the internal revenue came to about £61,500,000. In the interval internal war taxes have been knocked off, and upon the customs revenue has been thrown the burden of the increasing naval and military outgoings of the Republic. Last year the tariff responded nobly to the call, so that in spite of rapidly augmenting extravagance the fiscal year closed with a surplus of fully £10,500,000, but how will it be when the capacity of the people to import

goods from abroad is crippled and the customs revenue dips back to the figure, say of 1899, when the total did not much exceed £41,000,000?

This question is rendered all the more interesting, although we cannot attempt to solve it, by the figures relating to expenditure. These we have not got in detail in the tables before us, internal or civil service administration and war and marine outgoings being all lumped together there. As they stand, however, the aggregates are striking enough. Down to the year closed, June 30, 1890, the total cost of the administration and of the fighting forces of the Federal Government never exceeded £31,000,000 all told, and in the seven years ended with June 30, 1897, the average annual outlay under these heads was only about £36,000,000. In the twelve months closed June 30, 1898, however, the figures rose to nearly £52,000,000, and in the following year to £85,000,000, thanks to Cuba and the Philippines. In the fiscal year 1901-2 the total was little more than £60,000,000, but in the past year, thanks to the imperialism of Mr. Roosevelt and his Cabinet, the total rose again to about £68,000,000. Of this last named figure fully £16,500,000 disappeared in the navy, or about £3,000,000 more than in the previous year, and the army took nearly £24,000,000, against £22,500,000. That is how the money goes, but not all the ways in which it goes, for pensions still show magnificent liberality towards the supporters of the Republican party. We often hear that millionaires and trust bosses in the United States subscribe very largely to political campaign funds, to the bribery of legislators, and other petty infamies of the twentieth century, but we need not believe half these stories, because as long as the Government of Washington spends about £28,000,000 in pensions to survivors of the Civil war there is not much need for any other bribery fund. It is always worth while to look back. As recently as 1878-79, some fourteen or fifteen years after the Civil war closed, the outlay upon pensions was little more than £7,000,000 per annum, and the total never touched £20,000,000 until 1889-90, when it attained £21,500,000, the highest figure of all having been £32,000,000 for the year 1892-93. Since then there has been some reduction but in the twelve months just closed, the disbursements under the head of pensions came to quite £27,700,000, and we are astonished at the moderation of the Washington politicians in allowing the figure to get so low with Cuban and Philippine wars to give the excuse for increasing the corruption fund. Only one thing is pleasing about the summary before us, debt interest continues to decline. It was only £5,700,000 for the past year, and unless imperialism has its way that burden will be rapidly extinguished.

Our Hateful "Foreign" Trade.

What does the Chamberlainite empire-smashing faction, with its satellite hungry landlords whose extravagance compels them to wail for rent and yet more rent, expect to gain by the tables of our foreign commerce just issued by the Board of Trade? These tables separate the total imports from and exports to foreign countries from our colonial trade and from the trade of India. They also give an indefinite column called "other," the origin or destination of which is not disclosed. Therefore an element of doubt, if not of confusion is provided, over which the quidnuncs may wrangle. Let us confine the attention to two columns this week, trade with foreign countries and trade with self-governing colonies, and just call to mind a fact or two. The main fact is the feebleness of our colonies in supplying us with commodities which they are at liberty to send into our ports on precisely the same terms as foreign nations. In the year ended December 31 last our imports from self-governing colonies amounted in value to less than 15 per cent. of the value of our imports from foreign nations, and was actually smaller than in the five years ended December 31, 1897, when the average of the colonial portion of our import was nearly 15½ per cent. of the trade of purely foreign origin. This does not say much for colonial enterprise and capacity to compete, and certainly fails to establish any claim on the part of the colonies to be treated with special favour in the shape of taxation imposed upon our 40,000,000 at home in order to give a fillip to these stick-in-the-mud or trading-elsewhere dependencies.

Still more significant are the figures of exports of British and Irish produce to the colonies. In the past year these make a brave show, rising in value to upwards of 34½ per cent. of the value of foreign purchases. That, however, is the high watermark, and the average for the five years closed with December 31 last is barely 28 per cent. That is to say, the colonies did not buy one-third as much of our home-made manufactures and raw products, if any, as foreign countries did. If we go back and take the average of the five years ended with 1890 we find the colonies taking less than 24 per cent. of the amounts purchased by nations not under the British flag, and, in fact, the average for a long period of years is barely 25 per cent., or one-fourth as much as these foreign countries buy. To get, however, at the full significance of figures like these, it has to be borne in mind that the purchases of our self-governing colonies, as of India, are stimulated to an extent unprecedented in the world's history by the continuous issue of loans, and by additional capital furnished by and to British companies trading in them. How much money the self-governing colonies have borrowed in the past five years under all heads we do not know, but they have within that time issued state loans in London to a total of £40,000,000, and in addition about £5,000,000 of municipal and public works loans have also come upon the London market. The two great railway companies in Canada have likewise been diligent raisers of additional capital in all sorts of ways difficult to trace, but the aggregate of which cannot be much less than £10,000,000 in the past five years.

What has the Chamberlainite faction got to say to this sort of stimulant? Could these self-governing settlements of ours continue to purchase goods from us on the scale they are now doing were it not for this continual help from borrowed money? Another question may be put—shall we be able to lend these settlements money when our own finances are thrown into utter confusion by the success of Chamberlain's trade-blighting crusade, apparently undertaken in the interests of his friends the Dukes, if not in the interests of the South African magnates anxious to divert our thoughts from the irretrievable mess they have made in that quarter of the empire? Take away also the war expenditure of the last four years, and what value would the exports of British and Irish produce to the "self-governing" settlements have shown? The total never reached £42,000,000 before 1899, but in 1901 it rose to £52,254,000, and last year to £60,365,000, the greater part of the increase being attributable to South Africa, where war loan money has been spent in wanton profusion. "We have had several Godsends in recent years to stave off the inevitable smash," said an ex-New Zealand M.P. to us the other day, "and one of the finest of these has been the British war outlay. We got £2,000,000 of your money for purchases sent to South Africa alone, and you may be sure we took care to get excellent prices for what we sold." Such is colonial loyalty all over, and we are called upon to sacrifice ourselves for these selfish people and to supply our earnings to bolster up their rickety finances. It is a little too much.

How the New Zealand Deficits are Hidden.

All the ways in which the trick is performed may not be disclosed in the pamphlet sent to us by Mr. Samuel Vaile, of Auckland, but a good deal of the truth emerges there. This pamphlet consists of an essay entitled "The True Position of our New Zealand Railway Investment," and is in part an argument in support of Mr. Vaile's "stage" or zone system of railway administration, full details of which we do not profess to know, nor are we concerned with that part of the subject. What is plain enough, and of the highest interest to investors on this side, is the manner in which the accounts of the New Zealand Government Railways are manipulated and arranged so as to bring out a show of profit when no such profit really exists. It may be that this lack of profit is due to a stupid method of regulating affairs, the favouritism shown towards the south island, and to the systematic use of the railway service as a means of giving

employment to an excessive number of unnecessary hands in order to keep down the out-of-work population, but we do not wish to enter into that part of the subject now or here. What is of much more importance, to British investors at any rate, in the immediate future, is Mr. Vaile's declaration, supported by a formidable array of statistics to the effect that capital is systematically employed to supplement revenue in the administration of these New Zealand railways. We have often dealt with this subject, and drawn attention to the probable character of the account cooking, but it may be well to go over the figures again with the help of Mr. Vaile's tables, carefully compiled from the official records.

One table shows that no less than £1,722,757 has been wrongly charged to capital in the six years ended March 31, 1902. The malversation thus charged has been becoming greater every year, and amounted in the last year of the six to £778,000. Nor is that the whole story. Revenue is supplemented by entries described as "payment for work done for other government departments," clearly not genuine revenue of any sort. In most years, apparently, there is no separate amount entered under this head, but in the twelve months closed March 31, 1902, the amount thus credited to income was £71,593. Add the misuse of capital to the actual working cost shown or admitted, and remove the sham entry of revenue under the heading just named, and it comes out that for the final year dealt with by Mr. Vaile the deficiency was actually £1,007,095. That is to say, the gross income of the railways was put at £1,874,586, and instead of this producing any net balance the actual outgoings for the year, exclusive of capital spent, it may be legitimately, upon new works, was £2,881,681, leaving the deficit as above. This total is made up of interest at 4 per cent. on the railway debt, a quite moderate average estimate, at £726,829, working expenses acknowledged £1,252,237, capital utilised for renewals and repairs £777,989, and finally the fictitious entry of £71,593 for services said to be rendered to other departments. This is a sufficiently formidable story, but that it is in the main true—one may say exactly and completely true—no student of the figures can doubt. Nor is the hiding of the expenditure and the unprofitableness of the railways a matter of yesterday. It has been becoming worse year after year, with every increase in the mileage, and necessarily with every increase in the capital account. So great is the extravagance, so excessive the manning of the line, that we may say these vaunted properties that we are asked to look upon as the most valuable asset New Zealand possesses, "held in trust for her creditors," are a dead weight upon the country, and gives no return in interest or real net revenue whatever. This is not to be wondered at when we find capital utilised in such directions as the following under "additions to lines open for traffic":—

Additions and improvements to station buildings, platforms, and signals; replacing sleepers, bridge-strengthening, land, additional works, water services, etc., for locomotive department; sidings, loading banks, stockyards, approaches, and crossings; additions to dwellings, relaying, fencing, reclamation works; interlocking appliances; additions to workshops, telegraph and telephone facilities, creosoting plant, improvements to recreation grounds, Upper Hutt; block working, Departmental offices, Wellington; protective works, stonecrusher, weighbridges, replacing sleepers, footbridge, stockyards, filling in mud flat, Nelson; viaducts, clearing slopes, etc.; store office, diving plant, flood openings, alteration of grades, crane, lightening cuttings on Otago Central railway, painting machine, turntable and engine pit, additional coal accommodation, triangle. Rolleston: Shelter-shed and signals; lengthening cuttings Otago Central railway, reconstruction of Rangitokei bridge, wheel drop pits, drainage, asphalt footpath, securing station safes in concrete, making station booking-offices private.

The Uruguay Budget.

It is nice and even, as we gather from the *Monte Video Times'* summary. Expenditure for the current year ended June 30 next, is put at $16,371,516, an increase of $211,516 on the past year. Revenue also figures up at $16,371,516, so that the two exactly balance, which is more than can be said of a good many of the budgets in greater countries. Of the expenditure, war and marine takes $1,941,244, and the national debt $8,920,987. That is to say, more than half the revenue disappears in debt charges alone, but this formidable figure is said to be $115,432 less than for last year, only that "national debt" incidental and "undeveloped" debts do not seem to be taken into account. There are always new debts, of that you may be sure. It may be admitted, however, that the country is jogging along in a more satisfactory manner than we should have anticipated, notwithstanding the fact that $9,800,000 of this revenue is drawn from Customs, a sure indication that the population is kept in poverty. In fact all other taxes except Customs more or less emphasise this poverty. The property tax is only $2,000,000, business licences little more than $1,000,000, profits of the Bank of the Republic only $277,000, and posts and telegraphs only $415,000. Legacy and signature duties yield but $60,000. It is a bundle of small things, and save for the Customs tariff there could be nothing but deficits. However, we are glad to think that Uruguay, in spite of her burdens, does manage to keep the bailiffs out, and trust for the sake of her foreign creditors she may be able to continue to do so.

The Mint.

During the greater part of the year 1902 the department was occupied with Imperial coinage, and delivered to the Bank of England no less than £6,908,000 in gold coin, compared with £2,599,000 in 1901, while the silver and bronze issues were also somewhat larger at £937,202 and £148,499, respectively. The weight of the gold bullion imported was 1,493,971 oz., and that of light gold coin 533,338 oz., of the nominal value of £5,817,149 and £2,100,000. In addition new gold coin to the value of £11,411,279 was issued by the branch mints in Australia, of which £729,000 was shipped to the Bank of England. In regard to silver coin the nominal value of those issued to the Bank of England was no more than £123,900, a much smaller quantity than has been required in any year since 1883, and even of this a considerable proportion was required, only to meet the numerous applications for coins of the various denominations bearing His Majesty's effigy, the first issue of which took place in the earlier part of the year. The average annual value of new silver supplied to the Bank during 1891-1900 was £612,250, while the total requirements for the last two years have been no more than £384,400, and this decrease is ascribed to the fact that the special issues of new coin at Christmas prior to 1901 were in excess of commercial requirements. They consequently gradually found their way to the Bank, and accumulated there until the stock, notwithstanding an excess of £226,100 in the withdrawal of worn coin over the issue, now amounts to nearly £1,000,000 sterling. In addition to this, it is believed that the supplies in the hands of bankers and the public in Scotland and Ireland are sufficient to meet all requirements, so that further issues in the United Kingdom for some time to come will probably be of comparatively small amounts. Some compensation, however, is found in the demands from the colonies, which last year absorbed £661,700 out of a total issue of £937,202. The weight of silver bullion purchased for coinage, at a cost of £214,358, was 2,116,880 oz., the average price paid being 24 5-16d. per oz., or 3-16d. above that of the metal in the London market. On this a profit was obtained of £367,618, or 171.46 per cent., and on purchases of bullion and worn coin together the profit was at the rate of 52.51 per cent. The demand for bronze coin was continuous throughout the year, and exceeded the issue of 1901 by about 20 per cent., at £148,399, of which £108,675 went to the country and £10,940 to the Colonies. According to the account of expenses and receipts, the net profit for the year was £359,532, which is less than that recorded in any year since 1895, and the falling off is ascribed to the comparatively small purchases of silver bullion for the Imperial coinage. The net profit on silver was £365,915, and on bronze coinage £118,601, while sweepings from the gold coinage realised £382, and miscellaneous receipts, such as charges for colonial coinages, etc., produced £16,329, or a total of £501,227. Of this salaries and expenses took £65,574, superannuation and compensation allowances £5,662, expenditure by other departments on account of the Mint £11,549, while the cost of alloy metal for gold coinage came to £269, the loss on gold coinage to £2,961, and on worn silver coin to £40,179. Then interest at 3 per cent. on the average debt to the Exchequer for purposes of bullion required £15,500,

leaving the profit of £359,532 above mentioned. This average debt stands at an unusually high figure, and this also is accounted for by the results of the silver issues, which fell off during the last three months, and rendered it impossible to pay off more than £100,000 in that period.

Gordon Hotels, Limited.

We are glad to see that this great company did better last year. It is the pioneer of luxurious hotels, possessing no less than fifteen of them, a few amongst which are, it is to be feared, not yet freely profitable. The board is none the less able to report an increase in the profits for the past year of £22,022, the total being £132,148, after paying debenture interest. A year ago the total was £110,125. As the increase in the gross receipts was only £28,498, it follows that the bulk of the additional overturn came in as net profits was earned without appreciable increase in expenses. Thanks to this improvement in the revenue the directors are again able to pay 8 per cent. upon the ordinary shares without having, as last year, to fall back upon the reserve. They then took £15,000 from that source in order to make up 8 per cent. After paying this dividend and giving £589 to the deferred shares, of which the nominal value is £1,000, there is a balance of £5,140 left to carry forward, or £1,284 more than a year ago. The gross receipts came to £905,168, which will give some idea of the splendid volume of business done. We wish we could go on speaking in commendation, but unhappily it is again necessary to complain of the inadequate appropriation to reserve for depreciation. Nothing is added to the reserve fund proper beyond £4,211, representing the interest received on the already invested funds. It is right, by the way, to remind readers that both the ordinary reserve and the leasehold redemption funds are invested in securities generally of an excellent character outside the business, and the interest earned upon the invested funds is duly added to capital. That is so far good, but only £53,792 was spent last year out of revenue on repairs and maintenance, or £3,542 more than in the preceding year. This is less than 1½ per cent. upon the capital expenditure of £3,710,323 represented by the hotels, and in the past year £7,525 of additional capital was laid out on these hotels. Deduct that from the sum spent on repairs and maintenance, and depreciation will be found to be provided for at barely 1¼ per cent. per annum. That is not nearly enough, and when lean times come, as they will, times which force the customers of such palatial hotels as this company owns, to economise and seek cheaper lodgings, the lack of due provision for the wastage of capital will soon become painfully felt. Another matter not altogether pleasant is the excess of debts due by the company over those due to it. Sundry creditors, including a loan, stand for £134,262, while sundry debtors owe the company only £54,864. Cash in hand amounting to £43,056 does not suffice to balance these two items by some £36,000, and the preference and ordinary dividends payable for the second half of the year which closed on May 31 absorb over £65,000. This seems sailing rather close to the wind, and is also a fact calculated to raise doubts as to the future. In other words, the ordinary shares of this magnificent and powerful company are only a speculative investment.

Frederick Hotels.

The £10 preference shares in this undertaking, for which the public were graciously allowed to subscribe, now stand at a discount of £2, and no wonder. The capital is £1,050,000, divided into 500,000 preference and 550,000 ordinary shares of £1 each, all the latter being held by the vendors, whose names will be found subjoined. Up to June 30 last the earnings of the hotels were insufficient to meet the dividends on the preference shares, and the vendors were called upon to provide considerable sums under their agreement to guarantee interest on debenture stock and preference shares down to December, 1900. The working of the business gave these poor results, notwithstanding the fact that not a single penny of depreciation has been allowed on the item "cost of properties, goodwill, furniture and fixtures, plant, machinery, etc., etc.," standing in the last balance-sheet at the immense figure of £1,907,734. Year after year the directors make the announcement that they consider it unnecessary to set aside any fixed sum for depreciation, being of opinion that during the time the hotels have been opened an ample amount has been expended out of revenue on repairs and maintenance to keep the properties in good condition. Naturally we are not permitted to know the amount of the up-keep allowance, and the policy pursued would be reprehensible enough were the company possessed of substantial reserves. But not a sixpence has been accumulated against contingencies, and it is pretty evident that the building up of reserves is about the last thing the directors intend to do. Otherwise they would not have converted part of the ordinary shares into preferred ordinary, so as to open the way to the distribution of the smallest possible sum. Maple and Co furnished the hotels, as a matter of course, but if memory serves us, the estimable baronet who presides over that concern denied that Maples was in any way financially connected with the hotel business, and that is something to the good. The whole affair, however, is too much of the one man nature for our liking, and we can reflect with some satisfaction on the criticism passed in these columns when the prospectus was placed before the public.

Dear Sugar.

The subjoined letter effectively replies to that of Mr. George Martineau published last week. Mr. Pascall merely state a well known fact, and it will be very amusing, when it is not painful, to watch the course of our prices for sugar after the continental plot has come into operation. There are indications, however, that the plotters are beginning to quarrel amongst themselves, and we are not without hope that the whole miserable conspiracy will yet fail. The House of Commons has not yet passed the Bill putting the English sugar trade at the mercy of continental forestallers and bounty plunderers, but we have not much faith in any resisting power possessed by that body. Its name is chaos.

To the Editor of the Investors' Review.

Dear Sir,—In your issue of the 18th inst. I notice that Mr. Geo. Martineau is again using the old argument that some years ago confectioners were in favour of the abolition of Sugar Bounties. This argument is just about as reasonable and reliable as most that Mr. Martineau uses. It, no doubt, is true that one or two confectioners some years ago may have expressed their disapproval of Bounties, but Mr. Martineau knows, as well as I do, that the

collective opinion of confectioners, as expressed constantly through their organised societies in all parts of the Kingdom has been that it is the height of folly for this country to tie herself hand to foot to the producers of sugar, and so needlessly to inflict a wanton injury upon a great industry.

Believe me, Sir, to be,
Your obedient servant,
S. Woodroffe Pascall.

Critical Index to New Investments.

*** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Corporation of Hastings 3 per cent. Redeemable Stock.

Applications will be received by the London and County Banking Company for £200,000 of the above stock, which is issued for the purpose of carrying out various public works and of repaying temporary loans. Of the amount £84,410 is required for waterworks, £28,972 for purchase of land for recreation ground, etc., £23,042 for street improvements, and £27,374 for electric lighting. Including the sum now raised, and £75,838 transferred under the Education Act, 1902, the total debt of the Corporation, less sinking funds and loans fund, is £763,616, and the rateable value of the Borough is £462,618. The new stock is offered at 91 per cent., payable 5 per cent. on application, 16 per cent. on allotment, and 35 per cent. each on August 28 and October 9, and although a little advantage will be derived from the payment of a full half-year's interest on January 1, the price asked is too close to the quotation for the existing stock to be considered low. But the security should be good enough.

Flax Pulp, Limited.

This company acquires from the French-Hickman Flax Fibre Co., Limited, the exclusive rights of manufacturing flax pulp under its British patent, dated June, 1899, covering the Hickman invention relating to the reduction of flax tow and straw to pulp for paper making or other uses. The capital is £125,000 in £1 shares, of which 25,000 are reserved for future issue, 33,000 are allotted to the vendors, and 67,000 are offered for subscription. No property of any kind beyond the patent is handed over, yet the vendors take £27,000 in cash or shares, and £5,000 in cash, in addition to the 33,000 shares just mentioned, leaving only £35,000 for the mill and machinery. The directors propose to acquire a mill at once, and to commence with the manufacture of five tons of pulp per day, on which they estimate that a net profit of at least £10 per ton, or £15,000 per annum will be earned, but so far there does not appear to have been any test made by which these figures can be checked. An American company bought the American and Canadian patents in July last year, and the prospectus is full of the eulogistic remarks made by experts and others, but on the results of the year's work there is not a line. Even if the patent is all that is claimed for it, £65,000 out of £100,000 is too big a price to pay.

Auckland Electric Tramways Co., Limited.

Although this company hails from New Zealand, it is none the less the outcome of the restless energy of the British Electric Traction Company, and, like its brethren, owes a good deal of money to its parent. Out of a total capital of £300,000, the B.E.T. on its own showing holds £290,000, and has also advanced large sums to meet the outlay on the purchase of the old horse trams and their reconstruction, the securing of new concessions, etc. It is now, however, apparently driven by necessity into an effort to raise £200,000 by an issue of 5 per cent. first mortgage debenture stock at par to be used largely for the repayment of these loans. It is estimated that the total capial expenditure will be £535,000, which on a system of 16¾ miles would make the cost per mile something over £31,000. The result of working for 1902 was a loss of £4,198, charged to construction account, but the electric traction began on November 24 last, and the receipts since that date have been £35,185, while it is estimated that the working expenses, exclusive of rent payable to the Auckland City Council will not exceed 54 per cent., but if the experiences of other companies of this brood are any guide, this estimate will not be realised. Luckily for the company the issue has been underwritten, but whether the allottees will consider themselves equally fortunate remains to be seen.

Queensland Government 3½ per cent. Inscribed Stock.

The Governor and Company of the Bank of England announce that they are authorised to receive applications for £750,000 of the above stock, repayable at par on January 1, 1945, at the price of 96 per cent. The loan forms part of a total of £2,256,000 authorised, of which £1,024,000 is for railways, £55,000 for electric telegraphs, £20,000 for defence, £685,000 for loans to local bodies, and £150,000 for conservation of water and irrigation, the balance of £322,000 being for discounts on previous loans. Applications must be accompanied by the usual deposit of 5 per cent., and 16 per cent. is payable on August 10, the remainder being due in three instalments of 25 per cent. each on October 9, November 13 and December 11. As a full six months' interest will be paid on January 1, the actual cost to the investor works out at a figure which the market professes to regard as cheap.

Savoy Hotel, Limited.

In January last the holders of the existing £200,000 4 per cent. perpetual first mortgage debenture stock of this company authorised the creation of a further similar amount for the purpose of raising part of the cost of the improvements now being carried out. This issue was sold to the Law Debenture Corporation, and is now offered by it at the price of 102 per cent. The security for the £400,000 stock includes a first mortgage on the Savoy Hotel valued with the alterations and additions at £838,650, floating charges over furniture, stock and goodwill taken at £247,000, including £160,000 for goodwill, and on all the shares in the companies owning Claridge's Hotel and others held by the Savoy Hotel Company, valued at £561,951, and cash balances, book debts, etc., of £793,345, or a total of £1,726,946. Profits for the past year are certified by Messrs. Deloitte, Dever, Griffiths and Co. to have amounted to £69,726 before charging the contributions to sinking funds for the redemption of specific mortgages, or providing for reserves, and as only £16,000 is required to meet annual charges, on the whole £400,000, there would appear to be ample margin for both principal and interest.

Burmah Oil Co., Limited.

This company was incorporated in 1902 to take over the assets and liabilities of an undertaking of the same name which had been working concessions of oil bearing lands in Burmah, and carrying on business as producers, refiners, exporters and dealers in oils, paraffin, wax, candles, and other oil products since 1886. The capital is £1,500,000, divided into 250,000 preference and 1,250,000 ordinary shares of £1 each, of which 165,314 6 per cent. cumulative preference and 991,356 ordinary shares have been issued, together with £100,000 in 5 per cent. debentures. In addition to owning extensive refineries and valuable areas of proved oil bearing lands, the company has further concessions and leases of extensive areas, with from twenty-three to twenty-nine years still to run. Only a portion of these lands has been developed, yet the supply of oil has outgrown the capacity of the refineries as recently extended, and additional funds are consequently required, which the company seeks to raise by the issue of £400,000 5 per cent. debenture stock at par. As security for this stock the assets owned consist of lands, buildings, and machinery at refineries £456,400, oil wells and boring plant £413,217, tankers and tank installations, launches

and cargo boats £181,600, stocks of stores and products £263,152, and sundry miscellaneous items bring the total value up to £1,481,016, or £1,259,168 net after deducting liabilities, including the £100,000 debentures. Profits for the three years to December 31, 1902, were £132,936, £185,841, and £181,656, or an average of £166,811 per annum, while the amount required for interest and redemption fund on the debenture stock is only £46,000. The security, therefore, appears to be amply covered, both as regards principal and interest, and the enterprise is a thoroughly legitimate one.

Passing Events.

A select committee was recently appointed to inquire into and report upon the question whether some means could not be found of rendering the control of the House of Commons over expenditure more effective than it now is. It now recommends that an Estimates committee should be appointed to sit continuously, and to possess the same powers as the existing Public Accounts Committee. To this body all estimates would be submitted, and it would have power to call for witnesses and papers, its efforts being devoted each year to some special section of the estimates, with a view to thoroughly sifting their character. As far as it goes this seems to us an excellent recommendation, and we trust it will be carried into effect, were it for no other reason than that as now treated the handling of the departmental estimates by the House of Commons is little more than a scandalous farce. The permanent services do exactly as they please, and ask for whatever moneys they please, and the helpless House of Commons is reduced to the humiliating position of a registering body to legalise the demands of the services, no matter how monstrous. The committee also advocates the extension of the powers of the Treasury, and the Controller and Auditor-General, and there is much need for reform in these directions also.

The Irish Land Bill has passed through the Commons, and we shall not make any nasty remarks about it. After all, if it brings peace between England and Ireland, and paves the way for handing the government of Ireland over to its own citizens, a contribution of £12,000,000 from us will be money well spent. What we dislike—what everybody dislikes about the measure—is the extreme care of the landlords shown in its provisions. They are to get excessive prices for their land, partly at our expense, but more at the expense of the purchasing tenants. However that also is a temporary evil, and cannot now be helped. The tug is to come, though, when the financing has to be done.

The *Standard* was quite right in describing that representative meeting held in Manchester on Monday last as "a warning, almost an ultimatum, to Mr. Chamberlain and his associates." The conference of the cotton representatives was composed of fourteen masters and nine men, and it passed a resolution by twenty-one votes to two to the effect that "the entire cotton trade is firmly convinced that the great cotton industry of the United Kingdom owes its pre-eminence to, and can only be maintained by, the policy of free trade." Also the meeting pledged itself "to oppose to the utmost of its power any proposals which, by imposing taxes on food or raw materials, and so raising the cost of production and living, will cripple the trade in its already severe struggle to uphold its position in foreign markets, by which 80 per cent. of its productions are absorbed." Well done, Lancashire, but it is only what we should expect from the sturdier north. As the President of the Employers' Association, Mr. C. W. Macara, said, "there is no doubt that the increased cost of production will render it impossible for us in the face of the severe existing competition to continue to secure the large share in the world's trade in cotton goods which we have at present, and would thus bring ruin upon an industry which supplies the means of livelihood for millions, and in which millions are indirectly interested." Another speaker, Mr. Garnett, the Vice-President of the Employers' Association, pointed out that of 16,336,000 cwts. of raw cotton consumed in this country, only 351,000 cwts. came from British possessions. Four-fifths of the product of this great industry finds its way once more across the seas.

We augur well of the new Spanish Ministry, were it only because Senor Villaverde has assumed the Premiership. From all we have ever heard about this man he deserves the position to which he has attained, being an enlightened and progressive statesman, inspired by high ideals, and at the same time prudent. None of his colleagues are much known in this country, but that does not argue them unfitted to second the Prime Minister in his endeavours to bring Spain into line with other countries in the matter of economical administration, the spread of education, the reform of taxation, and other clamant reforms.

Contradictory reports continue to reach this country about Manchuria, and the opening of ports there. The *Times* correspondent in Pekin telegraphed on Wednesday that Prince Ching has told Mr. Conger, the United States Minister, that the Imperial Government cannot open towns to foreign trade which are not in the possession of China and held by Russian troops. On the other hand, the Washington Cabinet persists in declaring that an agreement has been reached in virtue of which two ports will be opened in Manchuria. The one thing certain appears to be that Russia holds Manchuria just as determinedly as ever, and can do with it what she pleases.

Japan seems to be making progress, and we trust will not spoil a fine position by a too hasty assumption of hostility towards Russia. Russia is unquestionably provoking in her determination to not only hold on to Manchuria, but to encroach upon the independence of Corea, but we feel certain time will bring its revenge, and that Russia will have to pay for her greed to the full without war. From this point of view we almost regret that Japan should be so prosperous. The *Times* correspondent says that the gold in the Bank of Japan and the gold bullion and foreign gold bonds in the Treasury aggregate 173,000,000 yen, against a note circulation of 200,000,000 yen, and calls this an unprecedented situation. It is, and we trust will long continue so. No wonder that the rate of interest is gradually falling, and new joint-stock enterprises coming into being. The foreign trade of the empire is also flourishing, the first half of the current year showing a large increase both in exports and imports. Part of the increased imports, however, arose from the bad home crop of rice, but this year a fine harvest is promised. A conflict is anticipated over the next budget, one party of officials advocating economy of expenditure and increased taxation, and others timidly advising the issue of domestic loans for naval increment. We trust the loans will be avoided. Japan has already quite enough debt.

Major-General Sir Herbert Chermside is one of the best men in the British army, a man for whom we have the highest respect; therefore we should never dream of blaming him for anything said in his capacity as Governor of Queensland. The fallacies contained in his speech at the opening of the Queensland Parliament, and the assertions about flourishing trade, cheerfulness and hope, coal-beds of national importance, and so on, merely make up what his Ministry told him to say. "Evidences of returning prosperity," he said, "were undeniable, and producers were looking forward to an enlarged export trade between the Commonwealth and European markets." Do they also look for another war to give them fine orders? There is not much chance of enlarged trade with Europe in the present state of European finances. "Public credit was unshaken," Sir Herbert was also told to say. Yes, and a new 3½ per cent. loan is now being offered on the London market at a price little above 95. An issue of the same stock was sold in England little more than eight years ago at an average price of £101 12s. per cent.

A good deal of opposition, as was to be expected, is being exhibited in the Australian Federal House of Representatives to the Naval Agreement Bill, and the leader of the Labour Party moved that it be read a second time this day six months. He was defeated by a majority of eighteen, and the second reading was passed by a majority of fourteen, thanks to the help of Mr. Reid, the leader of the Opposition. We always thought Mr. Reid rather a shifty politician, and now he shows himself to be so;

but the opposition in the country is none the less strong because the Bill has passed the House of Representatives.

What a modest man Mr. Brodrick is. He only wants another £5,000,000 for military works, most of which we may depend upon it will be obsolete by the time they are completed, and all of which are probably really quite unnecessary. The objects on which this money is to be poured out are called "defence works," the completion of housing of troops in barracks, the providing of huts for the force in South Africa, of additional store-houses necessitated by the increase in the reserve of stores—nice material for bonfires later on; and £700,000 is to be spent upon training grounds and rifle ranges. The money of course is to be raised by loan on the terminable annuity system, like so many millions that have gone before, disappeared for ever, leaving only an additional clog upon the industry of the country.

Speaking at Birmingham against a motion in the Chamber of Commerce to support his brother's latest craze, Mr. Arthur Chamberlain badly cuffed his elder brother.

> We are playing with the whole subject by the pretence of inquiry. No one who is in the know cares for this inquiry. It is only waiting until we are ready to have a raging, tearing propaganda. It is only keeping us from discussing the thing by saying there will be an inquiry. There will be no inquiry until the autumn, at the moment when people are ready to go round the country, and then the inquiry will be "Can I get the people with me?" There are already statistics ten times more voluminous than anyone in this room can provide.

It is to be hoped that Mr. Robert Donald will see his way to reprint the articles he has been contributing to the *Contemporary Review* on Municipal Trading, for they are full of valuable information and comment. The latest of them, entitled, "The Trust or the Town," appears in the *Contemporary* for the current month, and contains a mass of telling facts illustrative of the depredations of corporate bodies of capitalists in the United States. It is a melancholy tale of municipal or legislative apathy, of corruption as well as of capitalist unscrupulousness, and deserves to be in the hands of every intelligent citizen. Incidentally, of course, the proceedings of the British Electric Traction Company in this country are alluded to, and to some extent illustrated, but if he collects the article into a little book Mr. Donald will be able to supplement what is said in his article by much interesting further information. The campaign of Mr. C. T. Yerkes, having for object the capture and annexation of underground means of communication in London, is also dealt with in a manner calculated to excite reflection. Altogether these papers are of the highest value.

Much of the recent troubles with the County Council's electric trams has been caused by the malicious acts of some person or persons unknown, who have inserted pieces of bent iron into the conduits. These have caused a short circuit, with the resulting disorganisation of the traffic. Whoever these individuals may be, whether supporters of the overhead system of traction or not, we hope they will soon be discovered and sharply punished.

The Cunard Company must now be perfectly happy, having by the change in its articles of association secured itself against the danger of any Frenchman, Turk, Russian, or Prussian ever becoming the owner of any of its shares. With the assistance of its annual subsidy of £2,000,000 for new ships it ought to beat not only the Morgan trust but all other competitors, European or American. Long life to it.

Is the secret leaking out? Has De Beers found the money for the Anti-English, trust-the-empire literature in order to boom its derelict Rhodesia. You can grow cotton and tobacco to any amount in that lonesome land, the Duke and the Earl keep telling us, they and their press and other pawns. What more simple then than to shut out United States cotton and tobacco, deport our 12,000,000 of "starved" people to Rhodesia, and get them to work? The fleet could be used as transport, such portion of it as could be trusted so far at sea, and De Beers be happy for ever and ever.

The Paris correspondent of the *Financial News* is very bitter against the latest Russian loan issued in France. It is a railway loan—4 per cent. guaranteed by the Government—and the Hottingner Syndicate is said to have bought the bonds it has kindly offered to the French investor at par at 90 per cent., so that the "commission" earned is £680,000 on a loan of less than £7,000,000 nominal. This is pretty stiff, if true, and we do not wonder that Messrs. Rothschild when invited to participate "peremptorily refused to have anything to do with it." The same syndicate is alleged to have made £960,000 out of the Russian-Chinese indemnity loan, but that was only 6.2 per cent. So business is improving.

Why was Mr. Gibson Bowles so unkind as to jog the Ministry about that agreement with the American International Marine Association, whereby it also, although now a Yankee affair, is to get a little money out of our pockets for a time? He is a most inconvenient man this keen-witted and diligent member for King's Lynn.

If they go on finding diamonds in the Transvaal at the speed they are doing, the precious stones will soon become as common, and as cheap as flints in the Isle of Thanet.

The Court of Appeal has reversed Mr. Justice Byrne's order in the Allsopp case, and sanctioned the scheme for the reduction of capital. As Lord Justice Vaughan Williams said in his judgment, the scheme will not work unjustly or inequitably to anybody, and as a reduction of capital must be made if the business is to be placed on a sound basis we cannot understand the objections raised to it.

When unmuzzled in the autumn, Mr. Chamberlain proposes to stump the country, and assist the inquiry he has asked for. After he has done the provinces he thinks of winding up the campaign with a big speech in the City, giving a summary of the position. Will the Corporation throw open the Guildhall for his meeting, or will it abide by its recent decision not to lend the home of Gog and Magog for such an unholy purpose as an enquiry into anything, for fear, perhaps, lest an enquiry might be held there some day into Turtledom and its doings?

These are a few of the contemptuous criticisms passed by Brother Arthur, who, by the way, has the family tongue, on Brother Joseph and his little games. It is most refreshing to learn from such remarks that the most strenuous opposition to the Colonial Secretary in his own lair comes from one of the clan. And how well the critic must know the weak joints in his adversary's armour.

It was cruel of Mr. Labouchere to tell that story in this week's *Truth* illustrative of Mr. Gladstone's opinion of Mr. Chamberlain. He said he was talking to Mr. Gladstone, and complaining to that gentleman of Mr. Chamberlain's intrigues against him when he was still a member of the Cabinet. Mr. Gladstone replied: "I do not wish to say one word against Mr. Chamberlain, for he is my colleague, but I feel grateful to think that I have had in the past only to deal with colleagues who were gentlemen." Yes, that is the pity of it.

TRADE AND PRODUCE.

Wheat.—With the supply of English wheat almost at an end, farmers are beginning to regret they did not hold their stocks with more reserve earlier in the year, instead of flooding the market and cheapening rates. Now wheat is dear enough certainly, but the supply is so small the price paid for it cannot make up for the earlier loss. Last week 17,132 qrs. were delivered, at an average price of 28s. 3d. per quarter, bringing the average for the year to 26s. per quarter, against 27s. 8d. last season. The markets remain dull and inactive, spot parcels keeping steady and unchanged, and speculative position showing a downward tendency during the week. The American markets also tended downwards—with fluctuations—but improved latterly, the firmness of the interior markets, light offerings and poor accounts of the new crop having a hardening effect. According to Bradstreet, the supply in sight of the Rockies this week is 20,154,000 bushels, against 2,082,000 last week, and 28,165,000 a year ago.

Wool.—The London sales closed on Wednesday last, and of the quantity sold—145,000 bales out of 157,000 catalogued, 77,000 have been taken on home account, 6,300 for the continent, and 5,000 for America. In this country almost all the wools bought were crossbreds of different descriptions, mediums and coarse grades especially. The Continent and America also received some good parcels, and prices have risen from 5 to 10 per cent. above the May quotations. Merinos lost ground, and only rallied a little towards the end of the sale, little notice being taken of them over here, and even the Continent restricting its buying, except for superior qualities. Trade is very quiet, not to say disappointing,

throughout the country. There is a lack of confidence, business is of a hand to mouth order, prices keeping too high to allow for speculation. Orders for winter are not coming in very freely, and neither spinners nor manufacturers are working full time in many districts. Our export trade is only moderate, the Colonies alone showing any briskness.

Linen.—Local holidays and, in Ireland the coming of royalty, have temporarily disorganised the markets, but there is no real change in the position, only business has been quieter than usual. No sign of cheapening values, nor any expected, though it is hoped that cotton yarns may fall a little in the near future to brighten up the union branch. Housekeeping goods, which at present are very dull, are expected to show great activity in the autumn, hand power brown looms are in steady and increasing demand; other branches of the trade are keeping up a good average for the season, and, generally speaking, the outlook for the coming season is very promising. Flax and yarns are not likely to be cheaper, for though the reports of the home crops and those of France and Belgium are very fair, some of the Russian districts both Slanetz and water retted show a large deficiency. There is nothing worth noting at present in the shipping trade.

Cotton.—Weather reports are the chief factor in determining the course of prices at the present moment, and as they are bad or good so quotations go up or down. The bulls in New Orleans and New York have again entered the field, and by means of reports of damage done by the alleged excessive heat have succeeded in scaring the bears, whose efforts to cover, assisted by manipulations on the part of the bulls themselves, have during the week lifted prices sharply. Another lever which the bulls hold, and this perhaps their most powerful, is the small movement of the old crop, and until the weight of the new one forces them to sell they will remain masters of the situation. The trade is depressed by the fear of a sudden collapse in the price of staple, though Sir Jacob Behrens and Sons hardly think such a thing likely to occur. Between old and new crops the difference in price is not nearly so wide as it was, and stocks in spinners hands being small they will be reduced to a minimum by the end of the season. For these reasons new arrivals will be in strong demand, and unless the crop is exceptionally large, the above mentioned firm anticipate a rise rather than a fall in the prices of the winter months. It is common knowledge that many manufacturers are selling both yarn and goods at prices based on lower values during the winter, and thus, if Sir Jacob Behrens and Sons' forecast is correct, these will find themselves in a sad plight later on. For Egyptians the demand has been dull, though prices manage to keep up, and are practically unchanged this week. In yarns no improvement has taken place, and the poor demand compels spinners, in spite of their reduced production, to give way with every fall in the price of raw material. To make matters worse, any reaction in the price of staple is of no benefit to them, for having once given way they find it difficult to secure higher rates, and margins are therefore going from bad to worse. There is only a small trade in cloth finding acceptances, and the market keeps dull and irregular. The rise of the last few days, however, made a few buyers anxious to close their transactions. China continues to offer, but at rates which permit of but little business going through, and the same remark applies to India. Friday's market at Liverpool was quiet both for spot and futures, with American quotations slightly reduced. For middling spot 6.60d. was asked, and for Egyptian fair 7 7-16d., and futures July-August was 6.30d., and later positions 5.80d. to 5.20d.

Iron and Steel.—On account of the annual holidays in the Glasgow district business there has been suspended all the week. The market, it is true, met two or three times but the meetings were only formal, and nothing will be done until next week, when work generally will be resumed. In the North of England business nearly all round has been brisker than for some time past, and the outlook is very encouraging. The greatest activity has been shown in ordinary Cleveland pig-iron and steel rails, and the only branches which have not participated in the improvement are those turning out shipbuilding material. For Cleveland pig-iron the price has risen both for actual deliveries and warrants, the latter having gone up to 46s. 10½d. cash, but hematite is weak owing to the depressed condition of the industries which take it. At Barrow business continues fair, in spite of the market not being so active as it has been of late. Mixed Bessemer numbers, f.o.b., are steady at 58s. 6d., while warrants are easy at 56s. 7d., with but little doing in them. The demand for steel rails, prompt delivery, has fallen off somewhat, though makers are still well employed with orders for shipment at future dates.

The *Iron Age*, in its weekly review of the American iron and steel trade, states that there has been a great improvement during the week in the labour situation, and that now the chief point of interest is whether the fall in securities will check industrial development. A pool has been formed by the makers of steel billets, which has fixed the price on a basis of $27 for Bessemer billets delivered at mill.

Coal.—The north of England and Wales as usual show the most activity in the coal trade, prices for steams, gas, and anthracite all stiffening, and in connection with the last-named much interest is shown locally in the Anthracite Syndicate of the Swansea district, a scheme which is gradually taking shape, and which is expected to bring much prosperity to the coal owners concerned. House coals are naturally at their lowest ebb, but owners are not disturbed at the pit accumulations, and except, occasionally, for special reasons, are not lowering prices or attempting to force sales. Even in Lancashire they are not anxious to transact much business ahead at the very low prices which prevail there, hoping that the autumn will show a revival of trade, and a better market. In Scotland inland trade is practically nil, but shipments remains very satisfactory, 235,605 tons being sent from the ports last week compared with 226,398 the week before.

Copper.—For the greater part of the week this market was dull and apathetic, and prices, though occasionally rallying, on the whole fell off steadily. Unfavourable advices from the States, combined with the drop in copper shares, were mainly answerable for the depressed feeling. On Thursday, however, things brightened up a little under the influence of a demand to cover July and August prompts, only on Friday to become irregular again, the closing price being £56 5s. for cash and £54 17s. 6d. for three-months.

Tin.—This market started the week with a burst of activity on receiving better news from the Straits and Singapore. The firm tone, however, did not last long, and though prices still tended to rise dealings became smaller and more irregular, until the leading operators for the rise came in to support the market. The quotations rose smartly, Thursday sessions seeing a rise of 50s. and 42s. 6d., respectively, for cash and three months, and the closing prices on Friday were £125 15s. and £122 15s., with a quiet though firmer market.

Tea.—The small quantity of Indian tea offered at auction this week sold well enough, without any noticeable change in quotations, the quality of the new tea being of a very fair average on the whole, with latest reports indicating an improvement from almost all districts. 11,687 packages were offered, 7,897 sold at an average price of 7.67d. per package, against 11,687 packages last year averaging 6.17d. In the Ceylon market the quality of the tea continues poor, but the average price keeps much the same—6.97d. per package, against 6.91d. last week, and 6.08d. a year ago. Ceylon green tea for North America has steadily progressed in favour since the bonus was first given for its manufacture in October, 1898. 13,302 lb. was the quantity then made, while last year it was 3,914,062, and the total quantity on which the grant was paid up to December 31 last was 6,075,985 lb.

Sugar.—Last week's improvement has been fairly well maintained during this in spite of favourable weather, good crop reports, and disappointing statistics. The reason is that prices leave but a small margin to the producer, and so discourage sowings, and this causes reserve on the part of the factories. Stocks in the hands of the trade are also by no means large, and there is a large lot of next crop paper held by speculators who will not sell. Why should they when their game is to keep prices away from the point where factories could expect to get a large supply of roots for next spring? These circumstances combine to make both buyers and sellers indifferent and keep the market flat. The Sugar Bill comes on for the second reading next Monday, and the trade hopes the Government will try to explain some of the difficulties that have arisen, if such can be done. It would not, however, cause very much surprise if the whole matter ended in a fiasco, after generally upsetting business. For a time in the beginning of the week prices were slightly easier, but moved up again until they were fully equal to those of last week, the following being the quotations for beet in Mr. Czarnikow's circular:—July moved from 7s. 11¼d. to 7s. 11¾d., August from 7s. 11¾d. to 8s. 0¼d., and January-March from 8s. 9¼d. to 8s. 9¾d. For cane both the demand and the quantity offered for sale have been small, and prices were therefore well maintained. Argentina, in order to limit its output, has passed a decree to destroy a certain percentage of the canes in the fields, which is a novel method of reducing supply. The United States markets are still dull, stocks having further increased until they now stand at 325,000 tons, the landings at the three ports this week being 40,000 tons, against 39,000 tons melted.

Freights.—With the supply of tonnage in the outward market exceeding the demand, rates have weakened, though the fall in values is practically limited to Mediterranean ports. Charterers to the Baltic find no difficulty in getting all the vessels they require at the low rates of the past few weeks, and in some cases have even been able to obtain 3s. 7½d. Tyne-Cronstadt. To Bay and Mediterranean ports the demand is steady, and it is here that the excess in supply is most felt. If prices fall much lower rates will soon equal ballast, as at present the best prices from Cardiff are only 4s. 6d. Lisbon, 5s. 6d. Gibraltar, 6s. Venice, and 5s. Constantinople. Shippers still fight shy of Barcelona, as the labour troubles there are not yet past. There is a steadier tendency in freights to the Western Islands, though the enquiry is by no means active. For South American ports business is confined to narrow limits at unchanged rates, while the to the East quotations show no improvement, and it is hard to see what owners can find in such low rates as 8s. 6d. Cardiff-Djibonti, or 13s. Cape Town. In the homeward market a fair business has been done from Black Sea and Azoff ports at slightly higher quotations. But in every other direction there are absolutely no fresh features to record, White Sea, Baltic, and Mediterranean all being dull. Trade from North America is practicaly at a standstill for all positions, while the South, though steadier, continues depressed, this also being the condition of the Eastern markets, where the sputter of last week has already died away.

The voting trustees of the National Railroad Company of Mexico give notice to holders of trust certificates for preferred and common stock of the company issued under the voting trust agreement, dated March 15, 1902, of the dissolution of this agreement, likewise that on the 27th inst. they will deliver National Railroad stock certificates for outstanding stock trust certificates. The latter must be presented for exchange to Messrs. Speyer Brothers, 7, Lothbury, E.C.

MINING NOTES AND NEWS.

By far the most interesting section of the mining market during the past week has been the West Australian. One sensational event has followed another in rapid succession, leaving us all quite breathless with excitement. Over and over again we have been told that we had seen the end of the dirty past of Westralian mining, and that directorial skirts had been cleansed of all their impure stains. We tell elsewhere the story—or, rather, stories,—of the week as lucidly as we are able, and they make another sordid chapter in a history that has from the beginning been revolting. Who is to blame in this affair of the Associated Northern Blocks no man can tell until the evidence on each side is presented for weighing and judgment. At present we have only unseemly bickerings to listen to, whilst those whose interests are directly and seriously concerned are left to wonder and to conjecture what it is all about and what it all means. Amidst the quarrelling, however, one thing is clear—the "bears" knew long ago that something was wrong with the mine. How did they know? For their information was accurate. It seems plain, as has been often asserted, that the "eyes" of this mine have been picked out, and that dividends have been declared, therefore, that were apparently unjustified. We want to know if this is actually the case, and if so, who is responsible. At the last meeting Mr. Landau declared the mine second to none in the world. That was in January. The ore turned out was remarkably rich, it is true, but a man of Mr. Landau's experience ought to have doubted its permanence. Such extravagant language cannot be justified under any circumstances, and it is most reprehensible in the mouth of a chairman who presumably knew the history of Western Australia and likewise of his own company, the Associated Gold Mines. And what is the end of it? Quite lately it became advisable to give notice to the smelting company that shipments would shortly be suspended, whilst the recent cable announced the ore reserves at only 45,000 tons, against the previous "conservative" estimate of the late Mr. Rodda, of 99,795 tons, of a value of £1,164,206. That is the present position, a perplexing one in itself, but made the more perplexing by the action of the majority of the directors in dismissing Mr. Landau.

Then there is the pretty little quarrel between the directors of the Great Boulder Company and the board of the Golden Horseshoe. It can be summed up in a very few words. The former shout they have the Horseshoe No. 4 lode in their mine. This is indignantly denied by the Horseshoe directors, who have retaliated in a recent cable by saying the Great Boulder lode enters the Golden Horseshoe property at a depth of 1,100 ft. So it's a case of a little hard swearing on both sides, and our private concern only is that it may not come to fisticuffs. Wherever we look in this market there seems nothing but snarling. In one respect the spectacle is ludicrous, in another it is saddening.

Nor does it end here. The Great Boulder cable issued to the press last Friday week contained news which ought to have been sent from the mine and published earlier. The directors have tried to explain the delay, and we give that explanation elsewhere. Is it a fact, however, that the news contained in it was actually known to many before it was sent to the shareholders? For some days previously the shares had been rising mysteriously, and it is asserted that two jobbers walked round to the office and demanded the cable, saying, they knew it had come. Mr. Doolette is chairman of the Great Boulder Proprietary, and shareholders have many categorical questions to put to him and his co-directors. Prices show very few changes. Northern Blocks, Horseshoes, Great Boulders and others have fluctuated in accordance with the nature of the literature published from day to day, and that is all.

For the time being the Kaffir market has taken a back place. No one is interesting himself in it, for all who care twopence for the mining market are absorbed spectators of the scandals in the Westralian department. South African prices have drooped daily, no support coming from any quarter. Little has been heard of the labour question. From the Parliamentary paper issued in the early part of the week it appears there is no surplus available for the Rand from East Africa. Mr. W. J. Monson, Assistant Secretary to the British East Africa Administration, says in his report:—"There is in the East Africa protectorate no surplus labouring population beyond what is actually, or may potentially be, required; it would be impossible to induce the people to proceed to South Africa on the terms proposed if the conditions of compound life were explained to them, and, finally, it is highly doubtful whether the scheme, even if otherwise practicable, would be beneficial to the natives themselves, and, therefore, deserving of encouragement." Business is so slack that several Kaffir jobbers are endeavouring to do away with the preliminary contango, or "arranging" day in mines, which was fixed some years ago in the days of the great boom. The movement, however, does not appear to be very popular, for hopes are not quite dead that we may have another boom if only we can get Chinese labour.

With respect to Asiatic labour for Rhodesia Sir Thomas Dewar asked the Secretary of State for the Colonies on Wednesday evening whether his attention had been called to the remarks made on this subject at the recent meeting of the Chartered Company. He asked if the Government intended to facilitate the supply of such labour. Mr. Chamberlain replied that the Indian Government have felt compelled to express their inability to consent to the proposal made by the Government of Southern Rhodesia for various reasons, one being that the demand for underground labour is at present greater than the supply, thus crushing all hopes of Indian coolie labour for the Chartered territory. But the Chinaman is just as deeply in need of "Christian salvation" in the good Earl Grey style.

West Africans, even Egyptians, and miscellaneous markets have all been unrelievedly dull. In Indians Ooregums have strengthened slightly on good news from the mine, whilst in coppers Rio Tintos have weakened.

Westralian Mines and Ore Reserves.—At a dinner given to the members of the Council of Westralian mineowners by its president a little over a week ago the latter threw out the suggestion that the Westralian Government be asked to appoint a Government expert to check the ore reserves estimated by mine managers to exist in Kalgoorlie mines. This proposal does not appear to have been received with general approval. At any rate the directors of the Ivanhoe Gold Corporation have written a letter to the Council in which they say the proposal meets with their "most emphatic disapproval." Continuing, they say:—"Such a proposal implies an admission that the London boards are incapable of ensuring able and honest management in their mines, an admission which, as regards this company and others, is wholly at variance with the facts. While my directors repudiate any suggestion of this sort which would in the smallest degree imply such an admission they would pont out that the request for such an appointment would be justly resented by the many able and honourable men who are entrusted with the management of the mines on the field." The feeling of the Ivanhoe directors is comprehensible, but it may be they're a little too sensitive. The Ivanhoe, from the moment it got into the hands of its present management, has been ably and honestly conducted. So have several other mines, nevertheless, it is impossible to forget and to draw a sponge over the many scandals of the past. Westralian mining is cleaner now than it has been for some years, but it is not spotless in many instances. In fact, no sooner do we hear this suggestion made than something like another scandal is brought to light, that of the Associated Northern Blocks, a matter with which we deal in a separate note. There is much to be said in favour of a State mining engineer, and there are many objections—principally private—against him. But are the general advantages to the investor at large likely to outweigh the disadvantages against individuals? As a practical step the difficulties in the way of any such policy, difficulties of appointing the right man, for instance, and of limiting Governmental responsibility, and so on, are immense, if not insuperable. Government guarantees of honesty in short are not advisable remedies, and it is not likely the suggestion will be acted upon. It was received with lukewarmness in Westralian mining circles, and is not likely to be received with any greater enthusiasm in the colonies. After all, there are many other evils to cure besides those of false estimates of ore reserves. What is to prevent directors and mine managers from picking out the eyes of a mine—which has been done time and again—from issuing false balance-sheets, from paying dividends not earned, and resorting to many of those disreputable practices which have brought well-deserved odium on West Australian mining? Only a higher standard of honesty can put a check upon this conduct, and rogues will have no traffic with honesty. Mr. F. A. Govett, who is chairman of the Ivanhoe, and also of the Lake View Consols, has resigned his seat on the Executive Committee of the Council of West Australian Mines Owners. He does not give his reasons, but it is presumably due to the course of action proposed to be taken by the latter body. Not the least remarkable of the developments during the past extraordinary week is the fact that Mr. G. P. Doolette is now chairman of the Council of Mine Owners, likewise of the Great Boulder and Associated Northern Blocks Companies.

The Agent-General for the Colony does not consider the idea practicable. Not only, according to him, would it entail a great amount of work in efficient sampling, but the scheme would be very costly and full of difficulties. "If the Government Inspector under-estimated the value of the ore there would be trouble, while if he formed a too liberal opinion on it, there would be more trouble still when the shareholders found it out." Precisely, we quite agree, you cannot create honesty by a Government action.

Associated Northern Blocks.—Those who have followed our mining notes for some weeks past, will, like ourselves, have had their suspicions aroused that all was not right with the Associated Northern Blocks Company. For one thing, the "bears" have made a most persistent raid upon the shares, and have circulated from time to time the most disquieting rumours. One was that the "eyes of the mine" were being picked out, another that the ore was becoming poor in depth, another that the mine was "an empty husk." Many of these seemed exaggerated, incredible, especially in face of official utterances and opinions, nevertheless the selling continued, and the quotation steadily fell. On Saturday morning last the *Financial Times* published a story to the effect that "it is said that the board has for some time been in possession of the new manager's report upon the mine; secondly, that the directors are at variance over that report, the point at issue being whether or not to send it out to the shareholders; and, thirdly, the report is understood to be of, to say the least, a disappointing nature, the reserves being estimated at only 40,000 tons of ore, averaging no more than 25 dwts. per ton." Following upon this came the news of another sensational development, namely, that Mr. H. Landau, the chairman of the company, received a letter from his colleagues on the previous Friday informing him that, pursuant to article 96 (g) he had ceased to be a member of the board. Simultaneously with this the directors published a cable from the manager, stating that he estimated the quantity of ore in reserve at 45,000 tons, worth 27 dwts. per ton, including the ore on the dump. He added it was not possible to estimate exactly, but that there was every reason to believe prospecting operations, if vigorously carried on, would increase the reserves. Thus many of the rumours receive official confirmation, the ore reserves being far below the figures given by the former manager at the last annual meeting, and going some way in their shrivelledness to justify the assertion that the mine is "an empty husk."

It is calculated that the above reserves show a profit of £125,000, whereas it was alleged some time ago the ore exposed was worth a million or so. The mystery of Mr. Landau's deposition by Mr. Doolette and his co-directors has not been cleared up, so the market and the public have plenty to talk about. Activity under such circumstances is an impracticability. Those immediately concerned are reticent as to causes, and assume a defiant attitude, which only serves to feed curiosity. Mr. Landau, in interviews, says he wants to know why he has been deposed. He says he has written to the directors asking a reason for their action, and the summoning of a meeting at which the matter could be thrashed out before the shareholders. Mr. G. P. Doolette, who has been elected chairman, says that Mr. Landau was asked to send in his resignation before the drastic step of dismissal was taken. He thinks matters will go on smoothly under the reorganised directorate, but will give no reasons for the step taken beyond saying it was "imperatively necessary in the interests of the shareholders. . . . If Mr. Landau is not satisfied with the decision no doubt he will find his remedy and take it." It is impossible, however, for the matter to remain in its present dark state without further enlightenment. Mystery will satisfy no one, and public interests demand that full explanations should be given so that all may be able to apply their individual and collective judgments to what in the meantime must be regarded as another Westralian Scandal, and a very evil odoured one, too. Nor are Northern Blocks shareholders themselves, who appear to have been greatly misled or deceived by some one, likely to allow things to go on without a general clearing up. If anyone or any persons have disabused the trust reposed in them, we should know who they are that they may be in some way punished in accordance with their misdoings. Otherwise the innocent may be the scapegoats of the guilty.

A circular has been issued by the directors of the Northern Blocks to the shareholders, informing the latter of what has taken place, but in which they do not enter into any particulars or explanations. They say that on the 6th inst. the directors saw Mr. Landau and "suggested to him the wisdom of his sending in his resignation as a director. This he declined to do, on the ground that the directors made no specific charge against him. The shareholders are asked to believe that the directors have only taken so unusual, and to them, unpleasant, a course, as the enforced removal of a colleague and their chairman, under the most urgent sense of duty. The directors have felt for some time out of harmony with the chairman, and feel that a period has arrived when, in the interests of the company, a severance should take place." With respect to the mine itself, about which there have been so many contradictory rumours and reports, the directors ask the shareholders "to suspend their judgment as to its value and prospects until they have the full text of Mr. Roberts' report in their hands, and also the report from Mr. Griffith, who, at the request of an influential section of shareholders, has gone out to again inspect the property, and, in collaboration with the manager, to ascertain the extent and value of the ore bodies now disclosed." The directors promise to give the shareholders "promptly" all information as to the course of developments. "It will be satisfactory to the shareholders to know," they add, "that the company has cash assets to the value of £128,000, and several shipments of ore not yet developed." Evidently, then, they intend to leave it to Mr. Landau to convene a meeting of shareholders should that gentleman be so disposed. At any rate, the present situation, enveloped, as it is, in such an air of mystery, is intolerable, and the sooner it is cleared up the better. Surely the shareholders should know, without unnecessary delay, the why and wherefore of all this? If they are content to remain passive spectators of events which so seriously concern them then we have nothing to say. But such indifference seems incredible.

In the meantime Mr. Landau has addressed a letter to the shareholders, enclosing copies of the correspondence that has passed between himself and his late co-directors during the recent eventful days. This letter is far too lengthy to quote in full. It is sufficient to confirm us in our view that the matter cannot rest where it is. "I challenge Messrs. Doolette, Tetley, Heath, and Waddington," says this gentleman, "openly to state whether I have at any time during the period I have served the shareholders—which is practically from the birth of the company—suggested or done anything to which the board have taken exception." He also shows that his holding is 5,805 shares, against 1,876 held by the other members of the board, a great disparity.

Great Boulder and Golden Horseshoe Companies.—A cable from the Great Boulder Company apparently confirms the "bear" rumour, first circulated some two or three weeks ago, that the No. 4 lode in the Golden Horseshoe mine dips into the Great Boulder at a depth of 1,300 ft. It was the opinion of the manager —or, rather, he hoped—that the lode, which takes a zig-zag course, would not go into the Boulder, but turn back into the Horseshoe property at that depth. If it is the Horseshoe lode it is possible that at a lower depth still it may come back into the latter mine. Meanwhile, this discovery has improved the value of the Great Boulder, and the price of the shares has shot up accordingly. The Boulder cable which announced this important news naturally created some dissatisfaction. It gave particulars of developments at depths of 1,240 ft. and 1,300 ft. As it would take some days to drill from one point to the other it was but natural to ask why the news of developments at the 1,240 ft. had been delayed, especially as the shares had been mysteriously advancing. If the news was not cabled, why not? And if it was cabled, why was its publication delayed? These questions have been answered officially, to the effect that the news was received in one cable communicated to the press immediately on receipt. That being so, why did not the manager send an earlier cable announcing the results of the prospecting operations at the higher level, especially as it looked as if someone was benefiting from earlier knowledge? This question has been answered by Mr. Doolette, the chairman of the Boulder Company. He attributes the delay "to Mr. Richard Hamilton's well-known cautious character. He has always been careful to forward us facts. If Mr. Hamilton had cabled a month ago saying he thought the Great Boulder had got the Horseshoe lode and our shareholders had bought largely on that idea, which might have turned out incorrect, they would in the latter event obviously have had cause to complain." Shareholders must make what they can of this explanation and argument, but it does not seem altogether conclusive and satisfactory. Were the results actually known to others before they were published?

The Golden Horseshoe directors are not of opinion that the Great Boulder cable demonstrates conclusively that the No. 4 lode goes into the latter's property, that being their conclusion from the following cable, dated the 21st inst.:—No. 3 borehole continued 53 ft. into Great Boulder. There is nothing in it. Makes our cable of the 8th a most important point, especially in view of Great Boulder lode enters Golden Horseshoe at a depth of 1,100 ft. to the south of the north boundary, 340 ft." This "clearly demonstrates," say the Horseshoe directors, "that the No. 4 lode continues in the Golden Horseshoe property and contradicts all the rumours of it having dipped east into the adjoining property."

Stratton's Independence.—At the adjourned general meeting of this company, held at the Cannon Street Hotel on Tuesday, the directors, in response to the clamours of the shareholders, decided to distribute a dividend of 5 per cent. out of the large cash balance they have in hand. Our readers will doubtless recollect that this money has been lent to the Stock Exchange, the directors arguing that they could employ the money more profitably in this manner than by placing it elsewhere. Moreover, they wanted these resources, they said, for the purposes of the company, and hinted at some Alaskan proposal they were considering. This created a feeling of considerable indignation amongst the shareholders, who wanted a dividend, and were against any money being spent upon an Alaskan property. Tuesday's meeting was a very lively one, the directors and the chairman, Lord Chesterfield, coming in for a great deal of heckling and abuse. The dividend of 5 per cent. they have consented to pay will absorb £50,000, and leave nearly £100,000 in the company's coffers. This concession did not satisfy many of the shareholders, who cried for ten per cent., but the directors were obdurate. As for the mysterious Alaskan property, this appears to have been suddenly dropped, like a hot potato, and this admission apparently pleased the malcontents. But the most surprising intimation made at the meeting was the resignation of Mr. John Hays Hammond, the company's consulting engineer. There are differences of opinion held regarding the mine by Mr. Hammond and Mr. Maclaren, an independent expert. The former complains that he has been subject to attacks both in England and America, and has "no disposition to submit to further injustice." The directors, however, do not desire to lose his services, at any rate not until the case against the Stratton estate has been cleared up. After a prolonged discussion, therefore, a resolution was carried approving the action of the board in requesting Mr. Hammond to remain with the company until then. This company has had quite a dramatic history ever since the date of its birth. Nor has it been lacking in the tragic. As for the future the outlook is most uncertain, as we showed in our comments on the report some weeks ago. It is no exaggeration to say, indeed, that the position of the mine is precarious. The chairman hopes the mine will still be a good one, but hope is not assurance.

MINING RETURNS.

Alaska Mexican Gold.—Crushed 20,566 tons ore; value $28,801; saved 449 tons sulphurets, value $33,181.

Alaska United Gold.—Crushed 18,252 tons ore; value $15,081; saved 372 tons sulphurets, value $8,842.

Associated Northern Blocks.—Fine gold 2,127 oz.; fine silver 262 oz.; net proceeds, £8 726.

Broken Hill Proprietary.—Fine silver 415,383 oz.; soft lead 4,193 tons; antimonial lead 30 tons.

Brookfield Mining (Nova Scotia).—800 tons crushed, 375 oz.

Central and West Boulder.—90 tons crushed, yielding 119 oz.

Central Chili Copper.—316 tons.

Chinese Engineering.—Output 13,500 tons; sales 18,000 tons.

El Oro.—Crushed 8,247 tons, producing from the new mill $107,880; from the old cyanide plant $9,223. The annual clean-up produced $28,988. Total $146,091.

Lachlan Goldfields.—Crushed 750 tons, result £1,465.

Myalls United.—2,647 tons crushed, 539 oz. produced.

New Heriot.—Number of oz., 2,507; tons crushed, 7,800.

New Ravenswood.—Crushed 1,270 tons of ore, value £6,700; 300 tons of concentrates and smelting ore produced, value £3,000.

Nigel Gold.—Number of oz., 2,485; tons crushed, 2,839.

Nimrod Syndicate.—Atlin Mining: 280 oz.

North Kalgurli.—Shipped to smelters 120 tons sulphide ore, assaying 5 oz. 8 dwt. gold, and 16 oz. silver per ton.

Peak Hill.—Crushed 5,136 tons, yield 2,718 oz., including cyanide plant, slimes, etc.

Queensland Copper.—368 tons ore treated; production, 76 tons matte, value £3,000.

Queensland Mining.—1,320 tons customs ore for 1,477 oz.

Tyne Valley Colliery.—Output 13,057 tons.

Westralia Mount Morgans.—Crushed 7,000 tons, yielding 2,246 oz., cyanide treated 4,416 tons, yielding 2,079 oz., slimes treated 2,533 tons, yielding 887 oz., total value £18,443.

WEST AUSTRALIAN CRUSHINGS.

Below we publish our usual statistics of gold production of West Australian mines. As usual, it will be seen that things keep about the same and show very few changes, none of outstanding importance, except the figures of the Associated Northern Blocks which have dropped from 6,020 oz. to 4,956 oz. This is significant in face of the startling events of the past week. A splendid return is that of the Great Boulder Perseverance, which exhibits a material improvement in spite of the month being shorter. Good figures are likewise published by the Westralia Mount Morgans.

At first glance the output for the past month looks like a prodigious jump upwards, but is nothing of the kind. For 26,924 oz. are included, which are explained as belonging to previous returns, in which they were omitted. Thus the net return for June is 19,102 oz., showing an increase over May of 18,815 oz., which is not a bad exhibit. Compared with the corresponding month of last year the improvement is 23,917 oz.

The business of Messrs. Makins, Venables and Co., in which Mr. Edmund Ernest Venables is now the sole remaining partner, will, as from the 25th inst., be amalgamated with that of Messrs. James Capel and Co., and for the future will be carried on in their name. The partners in Messrs. James Capel and Co. will remain as formerly, and the new firm are taking in Mr. Neville Balfour, son of Mr. R. D. Balfour, and Mr. Louis E. F. Holt.

The Capital and Counties Bank announces that it has entered into an agreement with Messrs. Hammond, Plumtre, Hilton, McMaster, and Furley, bankers, Canterbury, founded 1788, with branches at Ramsgate and Whitstable, for the acquisition of their business as from the 14th prox. They also desire us to announce that their Temple Bar branch, 28, Fleet Street, was opened on the 20th inst. Messrs. Hammond's Bank, according to the latest figures available, has a paid up capital and reserve, together, of £100,000, and an authorised note circulation of £33,671. This last it will now surrender. Its London agents are Messrs. Glyn, Mills, and Co., and its liabilities on deposits, etc., were on December 31, 1902, £676,300.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Barry Railway.—Dividend at the rate of 9 per cent. per annum, with £6,368 carried forward, compared with 8½ per cent., and a credit of £800 last year.

Central London.—A dividend for half-year ended June 30 at the rate of 4 per cent. per annum, carrying forward £45,000.

Great Central.—Dividends on the company's preference stocks down to and inclusive of the 5 per cent. convertible preference stock, 1876, carrying forward £12,800.

Great Eastern.—Dividend on the ordinary stock at the rate of 1¾ per cent. per annum, carrying forward £16,000. A year ago the dividend was 1½ per cent., with £11,844 forward.

Great Northern (Ireland).—Dividend on the ordinary stock for half-year ended June 30 at the rate of 6¼ per cent. per annum, carrying forward £40,340.

Great South and Western Railway.—Dividend at the rate of 3½ per cent. per annum, carrying forward £20,731. The dividend for the corresponding period was at the same rate, and £20,222 was carried forward.

Lancashire and Yorkshire.—Dividend for past half-year at the rate of 3¾ per cent. per annum, carrying forward £37,000. A year ago the dividend was at the same rate, carrying forward £21,800.

London and South-Western.—Dividend for half-year ended June 30 at the rate of 4 per cent. per annum on the original ordinary stock, and carry forward £25,546. The dividend for the corresponding period of 1902 was 4 per cent. per annum, with £25,104 forward. The dividend on the preferred converted ordinary stock will be at the full rate of 4 per cent. per annum.

London, Brighton and South Coast.—Dividend of £1 10s. per cent. on the undivided ordinary stock for half-year, carrying forward £18,000. A year ago the dividend was at the same rate, with £20,267 forward.

London, Chatham, and Dover.—Dividend of £1 5s. per cent. for half-year on the arbitration preference stock, making with the £2 5s. per cent. distributed for half-year ended December 31, 1902, £3 10s. per cent for the financial year, carrying forward £140.

London, Tilbury, and Southend.—Dividend on the ordinary stock at the rate of 4 per cent. per annum, carrying forward £8,092. The dividend for corresponding period of 1902 was at the same rate, carrying forward £11,027.

Metropolitan District.—Dividend on the 4 per cent. guaranteed stock at the rate of £2 per cent. per annum, as against £3 per cent. per annum in the same period of last year, carrying forward £342, as against £1,433.

Metropolitan.—Dividend on the ordinary stock for past half-year at the rate of 2½ per cent. per annum, carrying forward £26,000. The dividend on the Surplus Lands stock is at the rate of 2¾ per cent. per annum. Last year the dividend on the Lands stock was the same, while the railway stock received 2¼ per cent., with £20,277 carried forward.

North-Eastern.—Dividend on North-Eastern Consols at the rate of 5 per cent. per annum, carrying forward £45,000.

Rhymney.—Dividend for half-year ended June 30 at the rate of 7 per cent. per annum.

South-Eastern.—Dividend at the rate of 10s. per cent. per annum on the ordinary stock of the company, carrying forward £17,000. Upon the preferred ordinary stock an interim dividend can be paid of 10s. per cent. for the half-year. At the corresponding period of 1902 no dividend was paid on the ordinary stocks, carrying forward £19,566.

Waterloo and City. Dividend on the ordinary stock at the rate of 3¼ per cent. per annum for half-year ended June 30, carrying forward £170. The dividend at June, 1902, was 3 per cent.

BREWERIES.

Bristol United.—Interim dividend on the ordinary shares for past half-year of 15s. per share, being at the rate of 15 per cent. per annum.

Cannon.—Interim dividend on the ordinary shares at the rate of 10 per cent. per annum for the half-year to June 30, carrying forward £14,243.

Milwaukee and Chicago.—Interim dividend of 5s. 6d. per share on the prefrence shares, payable September 15.

Royal, Brentford.—Final dividend of 12 per cent., making 10 per cent. for the year, placing £8,000 to reserve.

BANKS.

Bank of Victoria.—Dividends at the rate of 5 per cent. per annum on the preference and 3½ per cent. per annum on the ordinary shares, and to carry forward £14,810.

Carlisle and Cumberland.—Interim dividend at the rate of 9 per cent. for the six months.

Commercial of Sydney.—Dividend was declared at the rate of 10 per cent. per annum, and £20,614 was carried forward, placing £15,000 to reserve.

London and County Banking.—Dividend of 10 per cent. for the half-year ended June 30, together with a bonus of 1 per cent., carrying forward £85,102.

TRAMWAYS.

Associated Omnibus.—Interim dividend at the rate of 6 per cent. per annum for six months ended June 30.

London General Omnibus.—Dividend after the rate of 7 per cent. per annum, for half-year ended June 30, placing £10,000 to general reserve.

London Road Car.—Dividend for half-year ended June 30 at the rate of 5 per cent. per annum, with a bonus at the rate of 1½ per cent. per annum, carrying forward £6,000.

MINES.

Alaska Mexican Gold.—Dividend of 10 cents per share, payable on the 28th inst., at the rate of 4 4-5d. per share, being 2s. for every five shares.

Alaska Treadwell Gold.—Dividend of 37½ cents per share, payable on the 28th inst., at the rate of 1s. 6d. per share in exchange for coupon No. 58.

Botolph Mining and Exploring.—An interim dividend of 2½ per cent., or at the rate of 5 per cent. per annum.

Champion Reef Gold of India.—An interim dividend of 5s. 6d. per share, in respect of shares numbered 1 to 473,000, payable on August 24, making 10s. per share for the eight months to May 31 last.

White Feather Main Reefs.—Dividend of 6d. per share, payable to members whose names stand on the register books of the company on July 24, 1903.

MISCELLANEOUS.

Anglo-American Telegraph.—Interim dividend for the quarter ended June 30, of 15s. per cent. on the ordinary stock and £1 10s. per cent. on the preferred stock less tax payable on August 1, carrying forward £1,468.

Bengal Iron and Steel.—Interim dividend on the ordinary shares at 10 per cent. per annum.

British Steamship Investment Trust.—Final dividend at the rate of 6 per cent. per annum on the preferred and deferred stocks for year ended June 30.

Bovril.—Interim dividend on the ordinary shares for half-year to June 30 at the rate of 7 per cent. per annum.

Brentford Gas.—Dividends for the past half-year at the rates of 5 per cent., 12 per cent., and 9 per cent. per annum, carrying forward £52,043.

Bristol Tramways and Carriage.—Interim dividend to June 30 last of 8½ per cent. per annum.

Chandpore Tea.—Dividend of 10 per cent., carrying forward £1,806.

Consett Iron.—Dividend for the past half-year of 30s. per share.

County Fire Office.—Interim dividend of £3 per share.

Eastern Telegraph.—Dividend of £1 5s. per cent. and a bonus of £2 per cent. on the ordinary stock, making a total distribution of 7 per cent. for the year.

Edmundson's Electricity.—Final dividend on the ordinary shares of 9 per cent. for the half-year ended March 31 last, making, with interim dividend of 5 per cent. already paid, a dividend of 7 per cent. for the year.

Federation Company.—Further dividend of 1s. a share for six months ended June 30, payable on the 31st inst.

"Financial Times."—Interim dividend at the rate of 10 per cent. per annum on the ordinary shares for the half-year ended June 30.

Gas Light and Coke.—Dividend at the rate of £4 8s. per cent. per annum, carrying forward £116,530. This result compares with a distribution at the rate of £4 per cent. per annum for the June half-year, 1902, and carrying forward £68,165.

Horley District Gas.—Dividend of 7 per cent. on the "A" capital stock.

Hunters the Teamen.—Dividend at the rate of 10 per cent. per annum on the ordinary shares for half-year ended June 30 last.

Madame Val Smith.—Interim dividend at the rate of 6 per cent. per annum on the ordinary shares for half-year ended June 30.

Midland ailway.—Dividend at the rate of 2½ per cent. per annum on the preferred converted ordinary stock, and at the rate of 2¼ per cent. per annum on the deferred converted ordinary stock, being equal to 4¾ per cent. per annum on the former ordinary stock, with £22,259 carried forward. A year ago the dividend was at the rate of 4½ per cent. per annum, and £21,270 was carried forward.

Nelson Brothers.—Interim dividend of 3 per cent., being at the rate of 6 per cent. per annum, for six months ended March 31, on the ordinary and preference shares, payable August 15.

New Sharleston Collieries.—Interim dividend of 8s. per share, payable on the 31st inst to preference shareholders.

Pease and Partners.—Dividend of 10s. per share on the ordinary and 16s. on the deferred shares, making, with the interim dividend paid in February on the ordinary 8 per cent. on both classes for the year, being at the same rate as last year.

R. Lunt and Co.—Interim dividend on the ordinary shares at the rate of 10 per cent.

Robert Roberts.—Interim dividend at the rate of 5 per cent. per annum on the ordinary shares.

Scottish Wagon.—Dividend for the half-year of 6 per cent. per annum, placing to reserve £1,000, and carrying forward £856.

Shanghai Water Works.—Interim dividend of 15s. per share will be paid on the 27th inst.

Spratt's Patent.—An interim dividend for the six months to June 30 on the ordinary shares at the rate of 6s. per share.

Price's Patent Candle.—Dividend of 15s. per share.

W. B. Fordham and Sons.—Interim dividend at the rate of 6 per cent. per annum, for six months ended June 30, being at the same rate as for the corresponding period of last year.

Warner and Co.—Final dividend for half-year ended June 30 at the rate of 12 per cent. per annum.

Weardale and Consett Water.—Interim dividend at the rate of 5 per cent. per annum.

Weaver and Co.—Dividend at the rate of 10 per cent. on the ordinary shares, less the amounts paid on account of dividends in January last.

Western Wagon and Property.—Interim dividend at the rate of 10 per cent. per annum for half-year ended June 30 last.

Westminster Electric Supply.—Interim dividend for half-year ended June 30 at the rate of 13 per cent. per annum, payable on September 1.

William Wallace and Co.—Interim dividend at the rate of 5 per cent. per annum for the six months ended June 30.

REPORT OF THE AUDITORS.

We have audited the above Balance Sheet and beg to report that in our opinion such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs as shown by the books of the Company. The audit as regards London, and the Metropolitan and Eastern and Southern Counties Branches, has been carried out by the undersigned Turquand, Youngs, Bishop and Clarke; the audit as regards the Manchester section of the business has been carried out by the undersigned Alfred Tongue & Co.; and the audit as regards the other Provincial Branches and those in the Isle of Man, has been carried out by the undersigned Stead, Taylor and Stead, for whom Messrs. Watson, Sowter & Co. have acted as regards the Derbyshire section of the business.

We certify that all our requirements as Auditors have been complied with.

(Signed)

London, 14th July, 1903.

ABRIDGED PROSPECTUS.

QUEENSLAND GOVERNMENT

£3 10s. per Cent. INSCRIBED STOCK.

ISSUE OF £750,000 OF STOCK.

Part of a sum of £2,256,000, authorised by the Queensland Government Loan Act, 2 Edw. VII., No. 27, 1902.

Repayable at Par on the 1st January, 1945.

The First Dividend, being Six Month's Interest, will be payable on the 1st January, 1904.

Price of Issue, £96 Per Cent.

The Government of Queensland, having observed the conditions prescribed under the Colonial Stock Act, 1900, as notified in the "London Gazette" of the 27th September, 1901, Trustees may invest in this Stock under the powers of the Trustee Act, 1893, unless expressly forbidden in the instrument creating the Trust.

The GOVERNOR and COMPANY of the BANK OF ENGLAND give notice that, on behalf of the Agent appointed for raising and managing the Loans of the Company, they are authorised to receive applications for £750,000 Queensland Government £3 10s. per Cent. Inscribed Stock, repayable at par on the 1st January, 1945.

By the Act 40 and 41 Vict. ch. 59, the Revenues of the Colony of Queensland alone are liable in respect of this Stock and the Dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of His Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the Stock or of the Dividends thereon, or for any matter relating thereto.

Applications, which must be accompanied by a deposit of £5 per cent., will be received at the Chief Cashier's Office, and at the Dividend Pay Office (Rotunda), Bank of England. In case of partial allotment the balance of the amount paid as deposit will be applied towards the payment of the first instalment. Should there be a surplus after making that payment, such surplus will be refunded by cheque.

Applications may be for the whole or any part of the present issue of Stock in multiples of £100. No allotment will be made of a less amount than £100 Stock.

The dates at which the further payments will be required are as follows:—

On Monday, the 10 August, 1903, £16 per cent.;
On Friday, the 9th October, 1903, £25 per cent.;
On Friday, the 13th November, 1903, £25 per cent.;
On Friday, the 11th December, 1903, £25 per cent.;

but the instalments may be paid in full on or after the 10th August under a discount at the rate of £3 per cent. per annum. In case of default in the payment of any instalment at its proper date, the deposit and instalments previously paid will be liable to forfeiture.

Applications must be on printed forms, which may be obtained at the Bank of England (Chief Cashier's Office), or at any of its Branches; of Messrs. Mullens, Marshall and Co., 4, Lombard Street, London, E.C.; of Messrs. R. Nivison and Co., 8, Finch Lane, London, E.C.; or of the Agent-General for the Government of Queensland, 1, Victoria Street, Westminster, S.W.

The List of Applications will be closed on, or before, Tuesday, the 28th July, 1903.

Bank of England, London,
23rd July, 1903.

The Investors' Review.

The Week's Money Market.

Bank Rate 3 per cent. (Reduced from 3½ per cent. on June 18.)

Norfolk House, Friday Evening.

Nothing at all has happened in the Money Market this week. It has simply dragged along from day to day, waiting events. A sort of holiday torpor has already come over business, and has been much intensified by the financial and political uncertainties. It follows that bankers' balances have not been in strong demand, and although the surplus of such has never risen to a formidable total, day and seven-day loans have been almost uniformly easy to come by. At first bankers got 1¾ per cent. for week to week advances, and sometimes 2 per cent. for call money, but the prevailing rate throughout the latter half of the week has been 1½ per cent., whether for call or notice money. Into August, however, money cost 1¾ and 2 per cent., and the India Council got the latter figure to-day for some renewals and fresh advances for three weeks.

Discount rates also have stuck round about 2⅜ per cent. for three months' bank bills, with a tendency towards 2¼ per cent., that being the figure for sixty-day paper. Yesterday and to-day brokers tried to make things look firmer, because of the Treasury bill sale, and gave 2⅜ per cent as the three months' rate, while "sixes" were quoted at 3 per cent., but business was done 1-16 per cent. below these figures. This morning, however, the tactics succeeded sufficiently to secure the market a good rate on the £2,000,000 of six months' Treasury bills offered for renewal. They were sold at a price equal to an average discount rate of £3 0s. 5d. per cent., and tenders at a discount of £3 1s. 8d. got about 24 per cent. of the amount asked for.

Oddly enough money seems to have been as easy in New York as here, but that is by no means a good sign, because there would have been any number of borrowers at quite handsome rates if those who wanted the money could be trusted. When a Money Market quotes 1¾ to 2 per cent. for short advances in the midst of circumstances so disquieting as those surrounding Wall Street and its business, we may be quite sure that the ease arises from absence of confidence and utter perplexity. To some extent we fear our market is in a similar position, and there are a great many mysterious to be opened up and dark corners thrown into the light before we can have an active and progressive money market again here, any more than in the United States. Continental exchanges continue adverse, and the Bank of England is naturally less able to retain the bullion coming in from abroad than it was before it lowered its rate. It is not to be blamed for that reduction, but the consequences of very cheap credit may react most unfavourably upon our Money Market later in the year. We should have accumulated gold during the past six months to be ready for the autumn and winter demands, and this has not been done. Nothing calls for remark in this week's Bank return.

There was no sensational movement in bullion during the week, but it is a certain relief to the market that moderate amounts continue to come in from abroad, just enough to about satisfy continental requirements not met from New York. About £500,000 of the metal is due in between to-day and Monday, and will be taken for export, the Paris cheque, although slightly harder, being still quoted at only 25.13½.

The Bank of England notifies holders of the £10,000,000 Exchequer bonds repayable on the 7th prox., that they must lodge the bonds for examination at least three clear days before payment is required. The bonds will be received at the Dividend Pay Office, where the necessary listing forms may now be obtained. Where personal attendance is impossible, a banker or other agent must be employed, as the Bank will not undertake to pay the money through the post. The prospectus of the £6,000,000 issue of Yearling bonds to replace part of the above is out, but has not been sent to us.

SILVER.

Quotations for bars opened firm on Monday, chiefly because there was a struggle on the part of the "bears" to buy back in a market none too well supplied, and the spot price jumped to 25½d. per oz. China, too, continued to absorb a certain quantity of the metal even at this high figure, but the inquiry gradually became less keen, and a gradual slipping back to 25 5-16d. per oz. was reported. India was for a time driven out of the market by the upward movement, but later supported future metal, and the price has see-sawed to a much greater extent than that for cash. Early in the week it touched 25d., but dropped back to 24⅞d., and after being once more hoisted closed to-night at the latter figure. Applications for the Rs.50,00,000 of India Council drafts this week reached a total of Rs.38,65,45,000 for bills and Rs.11,05,000 for telegraphic transfers. The whole sum, however, was allotted in bills, tenders for which, at 1s. 4d. per rupee, received about 4 per cent. Next Wednesday the amount to be offered is again Rs.50,00,000.

BANK OF ENGLAND.

Stock Market Notes and Comments.

What surprises one about the action of the Consol market jobbers in deciding to do no more loan underwriting is that they should have been so long in coming to this prudent decision. They have had lessons enough, and could we know the extent to which they are indebted to their bankers for advances to enable them to carry the unsold portions of the securities they have subscribed for or underwritten during the past four years we might be able to understand how it is that banking prosperity is sometimes accompanied by national impoverishment. What is the meaning of this underwriting fashion which has sprung up since the day when we proudly and joyfully entered upon a war that was to cost us a bagatelle of £10,000,000? It means, for one thing, exhaustion on the part of the investing classes. Securities have continued to be manufactured because colonies and home corporations continue to spend a great deal more than they can afford, but there is no longer a free market for them. It has, therefore, been necessary to try by roundabout ways to pass on the debts contracted by extravagant public bodies to the investing public. As much more than the savings of the nation were swallowed up in war, the natural consequence of this ever-present borrowing on the part of colonies and municipalities, as well as of other corporate bodies of every description, was to throw upon the market enormous quantities of obligations the public would not buy. And the excess thus induced, coupled with the poverty of the investing classes, had a tendency to depress prices. Very soon it was found that not only could borrowers get no one to buy anything near the whole of the securities they were busy manufacturing to cover their lavishness, but that the prices offered by those willing to purchase were much below what a long season of peace and superabundant floating credit had accustomed them to. But they must have money, that was imperative, and to help them the old-established and always ensnaring underwriting device was extended to what are called "gilt-edged" securities. It became the fashion to guarantee issues because there was no other means by which the subscription of a loan could be secured. Jobbers and other credit handlers all over the City immediately took to the business, and for a time it seemed to flourish. For 1 per cent. commission and upwards the borrowers were guaranteed all the money they asked for, and in the early days the public generally took the stock off the underwriters' hands at the offered price, or even higher. An increasing number, however, of the loans and other forms of public security offered have remained more or less completely unsold, and latterly the condition of the market has been something woeful to contemplate. It found that the prices at which the securities were offered to the public did not tempt moneyed buyers, and sometimes the entire issue has fallen back upon the underwriters. No wonder then that the Consols' jobbers decided to do no more underwriting after they had got the Hastings and Queensland loans, to which they are pledged, off their hands, if they do get them off. The truth is they have long been struggling to keep the market at an artificial level of prices, and one effect of the agreement now come to will be to bring all securities of the class called "gilt-edged" down to a lower plane. Active business will not be resumed until quotations are lowered to figures that tempt the outside speculator and investor. Will other divisions of the Stock Exchange follow the example of the Consol market, and resolve to have nothing more to do with underwriting, even should the commission be 10 per cent., or more? That is not to be expected, because there is no cohesion between other sections of the Stock Exchange such as exists in the Consol market, but the step thus taken will undoubtedly contribute to damp the ardour of the underwriting class everywhere. One more untoward event has therefore come to bar the way to the enterprising financier who, unable to get money direct from the people who have it, or control it, get banking credit pledged to them indirectly through underwriters to an extent that may be dangerous to the nation.

We do not think the recent railway dividends contribute much to sustain a "bull" campaign in Home Railway common stocks. Until all the reports are out, and we can analyse them, it is useless to devote space to a discussion

of the dividends declared by the South-Eastern and Chatham Companies, the "Leeds" Company, the South-Western, or the Great Central, but it may be pointed out that the Chatham Company continues the vicious policy of taking part of the fragmentary dividend declared on its arbitration preference stock out of "reserve." That reserve is really capital. The company never had any revenue reserve, for the good reason that it has never been anything else than bankrupt since it was a company. The only praise we can give is that it does acknowledge having dipped into capital labelled reserve in order to keep up the farce.

Grumbling is bitter in the Kaffir market at the absence of business, and, as usual when there is nothing to do, the idle jobbers and brokers look around for somebody to abuse. Their wrath is now directed against the big South African finance houses, who they say do all the business direct with the public, and only come to the Stock Exchange when they want an authoritative price made, or when they have shares they are anxious to dump upon the market. There is no doubt a great deal of truth in this complaint, but we fancy the Stock Exchange will have its day again by and by, and if meanwhile all who find it troublesome to hold South African mine shares would quietly unload them upon these outside finance houses they might wait on events with easy minds. The public certainly should do this, because now would seem to be their opportunity, since the firms that have created the South African market and decreed what prices should rule there must now buy what is offered to them to the last shilling of credit they can command in order to save themselves from embarrassment, or worse. It is very significant that the Stock Exchange should growl, and quite natural, but its wailing should give a hint to outsiders to set about parting with shares that yield them nothing.

The Week's Stock Markets.

Stock markets as a whole have again had little to occupy themselves with this week in the way of genuine business, and have been dominated by the fears that the trouble between Japan and Russia is becoming so acute that any day may see an outbreak of hostilities, and by the unsatisfactory position in New York. Rumours of this or that financial magnate in trouble on Wall Street have been plentiful, and although nothing definite has been allowed to come to the surface, the selling of United States Steel issues and other stocks has been continuous enough to increase the suspicion with which this market has been regarded by careful observers. The uneasiness caused by the liquidation has spread to the Home Railway section, which was already overburdened with a large stale "bull" account to an extent that prevented it feeling the effect of the stream of dividend announcements fairly satisfactory as things go. Beyond these two sections and that for "gilt-edged" securities, which has its own troubles, there has been nothing of outstanding importance to call for detailed mention here.

After suffering the pangs of indigestion for many weary months from the enormous masses of securities the public had refused to even look at, dealers in the section devoted to gilt-edged securities have been forced to call a halt. The recent Brighton Corporation issue gave the final clinching to the decision, as when the underwriters found themselves left with 82 per cent. of the loan, they called an informal meeting of their brethren and came to an agreement not to underwrite any more British Corporation or Colonial loans. They were already pledged to the Hastings and Queensland issues, so that these have been proceeded with, although the latter is for only half the amount expected, but other borrowers will have to take their chance with the public without this help, a state of matters which is not altogether evil. Consols sagged steadily all week, largely because of the overloaded state of the market, and finished ⅞ down for money and 1 lower for the account at 91⅜ to 91⅝ in both cases. National War Loan stock only receded ¼ to 97¾, but Transvaal scrip went back ⅝, and is now no better than 7-16 premium. Domestic Corporation and County stocks have not so far been affected appreciably by the above mentioned decision of the dealers, but that is simply because business has shrunk to exceedingly small proportions, and the same remark holds good with regard to Colonial issues. In the last named section the principal changes were in Queensland Inscribed stocks, which fell sharply on the new loan.

In the section for Foreign Government bonds the principal event of the week has been the sharp advance in Spanish 4 per cents. on the change in the Ministry. These bonds are largely held in Paris, and operators there chose to put the price up 1½ to 89¾ on the appointment of Senor Villaverde as Finance Minister, and were perhaps helped a little in their decision by the Spanish Premier's speech describing France and Spain as allies. Japanese issues also provided a certain amount of business as a good deal of selling took place, and the market was further depressed by a revival of the belief that the situation is becoming very strained, and that very little would be

required to bring about an outbreak of hostilities between Russia and Japan. At the close the 5 per cents. were 1 lower, and the 4 per cent. issue was 1½ down, Chinese again followed this lead and showed irregular movements, but in other directions there was not much doing. Portuguese have been heavy and relapsed ¼, Turkish grouped issues, after meeting with a little support, went back on fears that the Unification scheme might after all be rejected, and closed unchanged, or only fractionally harder. In South American issues a little profit taking sent quotations of most Argentine and Brazilian issues down ¾ to 1, and Uruguay 3½ per cents. also fell ½.

Dividend announcements interspersed with a few reports have provided a certain amount of interesting matter for discussion in the Home Railway market, but although the majority of these have been quite up to the expectations formed, their effect on prices has been practically nil. The Brighton Company was the first this week to announce its distribution, and the market was disappointed to find that this was no better than for the corresponding period of 1902, while the carry forward was £2,000 less. Next came the Metropolitan Company, with a dividend of 2½ per cent., against 2¼ per cent. a year ago, and immediately after quite a string of dividends were declared. The Lancashire and Yorkshire pay the same as a year ago, with about £37,000 forward, the South-Eastern succeeded in paying at the rate of 1 per cent. per annum on the ordinary, and an interim dividend at the same rate on the preferred ordinary, whereas it had only been expected to meet its preferential charges, and the Chatham managed to meet the arbitration preference dividend with only £12,500 withdrawn from reserve, against £20,000 so taken last year. The South-Western distribution is the same as last year, with much about the same balance forward, and its little feeder, the City and Waterloo, pays an additional ¼ per cent. at 3¼ per cent. The District announcement, on the other hand, is at the rate of 2 per cent. per annum only on the guaranteed stock, compared with 3 per cent. for the corresponding half of 1902. The North-Eastern declare ½ per cent. more at 5 per cent., with £45,000 forward, or only £3,000 less, whilst the Midland distribution is likewise ½ per cent. higher at 4¾ per cent., nearly £1,000 more being carried forward. Yet, notwithstanding all these apparently favourable influences, the market remains in about as rotten a condition as it can well be, and the reason put forward for this melancholy state of affairs is that a large stale "bull" account, opened by dealers in the Kaffir Circus, exists, on account of which heavy liquidation has been going on to an extent which more than counteracts any chance of improvement. The Brighton return was not liked at all, and the deferred fell 5, City and South London receded another 3, South-Western ordinary and deferred lost 2 and 1, and South-Eastern deferred 3, although in the case of the last named the market professed to find comfort in the forecast of small future capital outlay by the joint management of this company and the Chatham. Great Eastern, Great Western, and Midland deferred, and North-Western all relapsed 1½ to 2½, and Great Northern deferred dropped 2¼. Amongst underground lines City and South London was again put down 3, Central London followed with a loss of 1, and Metropolitan was 2 lower. Scotch stocks, too, were weak, Caledonian ordinary deferred dropping 2 and 1, and North British issues ½ and 1¼. North-Eastern are ½ down at 145½, after being higher.

Bear selling overnight, and repurchases in the morning are still a fair description of the ways of the Yankee market on this side, where business in American securities is fortunately still very limited. Wall Street, of course, has had some fairly exciting times, as prices see-sawed and liquidation followed every rally. The Bank statement last Saturday was at first regarded as favourable, but dealers became less easy in their minds after further study of the figures revealed the fact that in spite of the heavy sales of the week the reduction in loans was a trifle of £502,700 only. When this had been digested, the "bears" seized the opportunity, and improved upon it by pointing out that many of the loans were made upon securities which are practically unmarketable. The market became somewhat demoralised, and as the underwriting syndicates are being forced to take up the issues to as great an extent as their brethren here, with perhaps less available credit at their disposal, good stocks have had to be sacrificed, and the rumours and hints of financial difficulties here and there grow stronger and stronger each week, without, however, anything definite coming to the surface. Just before the end of the week some of the heavies were supported, and such things as New York Central rose 1½. Pennsylvania was also bought a little, and gained ¼, and Erie first preference put on 1, but the ordinary shares dropped 1¾. Losses, however, were in a decided majority, and although most of them consisted of fractions, Chesapeake declined 2½, Southern common 2, and Missouri and Texas and Denver common 1¼.

Canadian Pacific shares finished ¼ lower, at 124¾, while the preference rose 1. Grand Trunk stocks have

fluctuated within very narrow limits, and call for no particular mention here, as the changes are confined to the most modest fractions. One or two Indian Railway issues receded ½ to 1, and Portuguese West of India guaranteed stock was 1 harder.

Business in the Foreign Railway section has shrunk to very insignificant proportions, and of this the largest part is due to efforts to realise by those who bought during the recent boom, and who have been left with the stock. Even these, however, are not unduly pressing the market, and few important changes have emerged as the result of the week's business. Antofagasta debenture stock was at one time 3 up, but relapsed, and closed with a gain of 1, while the ordinary and deferred are also higher. With few exceptions Argentine issues wore as neglected an air as the rest, and in many cases the improvements of the early part of the week disappeared before the end. Cordoba Central irredeemable debenture and East Argentine debenture both managed to retain their rises of 1, but Buenos Ayres Western ordinary, Cordoba and Rosario first and second debentures, and Buenos Ayres Great Southern lost 2, Buenos Ayres and Rosario preference stock and Argentine Great Western ordinary fell 1. Of other South American lines, Brazil Great Southern first mortgage debentures, Guayaquil and Quito Railway bonds, and Salvador debentures all put on 1, and San Paulo ordinary declined 1.

The decision of the Court of Appeal in the Allsopp case had quite an encouraging effect on the market, and some good buying, especially of the preference, resulted in the price rising 7½, while the preferred put on 2. One or two other Brewery issues were also inquired for to a moderate extent, and quite a number marked improvements of 1 to 2. Welsbach stocks were rather persistently sold during the early part of the week, but rallied on the Allsopp decision, and finished a point higher. Gas Light and Coke stock was bought on the increased dividend, and gained 2, and there was a similar rise in South Metropolitan. Several of the Telegraph companies have issued good reports this week, and prices all round have hardened in consequence, the lead being taken by the Eastern company, with an improvement of 2. Of Home Iron and Steel issues there is little or nothing to mention beyond a fractional advance in John Brown and Co.'s shares, but United States Steel issues have suffered severely. Heavy selling of these stocks went on in Wall Street, according to some reports because of the Schwab trouble, and to others because one of the junior partners of a well-known international financial house was in difficulties, so prices went plunging downwards. The ordinary

finished 4 down, and the preferred 4¼ lower. Meat shares, Caterers, and such like things have followed their usual course, fluctuating within narrow limtis, and closing with only trifling changes on the week.

Both the Johannesburg and Cape Town loans have been withdrawn from the London market. The former never seems to have made any way with the underwriters, and the latter was insufficiently taken up by them, so that the attempt to issue it has been abandoned. It was to be a 3½ per cent. stock, offered to the public at 95. There is talk now of floating the Johannesburg loan in the town of Johannesburg itself, and that is just what the magnates should do. Being so rich, why on earth do they come here? Markets were flat to-day and Consols at one time nearly ½ down. Politics are given as the reason, Manchuria and Turkey, the story of Prince Ferdinand's flight from Bulgaria being utilised for a joke on the Stock Exchange to the effect that the Prince has resigned to come over and join the firm of Panmure Gordon and Co., on the Stock Exchange. Something is needed to lighten the gloom and excite a little merriment, for the Yankee market has been again in a miserable condition, although prophets are busier than ever assuring us that the liquidation is about closed, and everything now on the turn for the better. That is not true, wherever truth may lie. The country bought Chartered shares to-day and Paris took copper shares, why we have not the least idea, but markets were flat all the same. Even the fine Berwick dividend did nothing to stop the rot in Home Railway stocks.

Company Reports and Balance Sheets.

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

South-Eastern and Chatham Railways Managing Committee.

Gross receipts last half-year on the combined lines came to £2,140,205, or £50,679 more, and working expenses to £1,459,505, or £12,395 more than in the first half of 1902. The proportion of expenses to income was thus 60.82 per cent., as against 65.06, and the net income was £38,284 better at £680,760. Passenger traffic gave an increase of no less than £41,551, of which £8,109 came from season tickets, and the income from the steamers was better by £13,794. Goods, though, gave £4,632 less, thanks to a loss of £8,109 in the coal traffic made good only to the extent of £4,786 by the increased income from general merchandise. Expenditure seems to have been pared in places, but £6,599 was saved on locomotive power, £2,992 on law and Parliamentary charges, and £4,399 on compensation, all commendable. Then £4,424 more went under maintenance of way, £9,284 more in traffic expenses, and £6,658 more in rates and taxes, about the increase in which there is the usual directorial growl. Interest charges on various items of capital, etc., for which the joint committee is responsible, take away £69,144 of the net income, leaving £616,137 for division between the two companies in the fixed proportion of 59 per cent. to the South-Eastern and 41 per cent. to the Chatham. This is £21,472 more than a year ago. Capital expenditure came to £264,263 on joint account, all on lines open for traffic, and £32,645 of it on new working stock.

South Eastern Railway.

This company's share in the joint profits was £363,521 for the six months to June 30, or £12,669 more than in the corresponding half-year. Further, the company received £12,597 as the proportion of the Eastbourne traffic, and about £88,000 from rents and hotels, including £317 from transfer fees, so that the entire net income of the half-year was £464,058, or £15,934 up. After meeting all fixed and preference charges, the balance left for the common stock is £42,176, as against £19,566 a year back, and accordingly the directors are able to declare a dividend on the ordinary stock at the rate of ½ per cent. per annum, which gives that stock 5s., and the preferred ordinary stock 10s. for the half-year. Not oppressive wealth, but better than the nothing at all of last year. How long ever-willing hope will thus be kept alive we may not forecast, but the company spent £287,355 in the six months on capital account, no less than £145,558 of it on its own lines open, besides £155,915 laid out on the joint committee's account, and £88,466 on subscriptions to other lines, local affairs, which may be long in yielding profit. The directors still think the 4 per cent. preference stock (1902), a million of which was offered to the stockholders, cheap at par, but that opinion does not appear to be widely shared, for only £97,210 of it has been sold. But the board has happily borrowed at a cheaper rate to go on with, so the failure is a gain rather than a loss. It results from this, however, that the capital account was overdrawn to the extent of £878,146 on June 30 last, and that the "temporary loan" amounts to £600,000, notwithstanding the fact that fully £700,000 of trust money is swallowed up in the business. But then the debt of the Chatham Company to the South Eastern now stands at the rotund figure of £472,455. The dividend warrants will be posted on August 5.

Great Eastern Railway.

Last six months' gross revenue amounted to £2,706,854, against £2,654,420 in the corresponding period of 1902, an increase of £52,434. Working expenses at £1,769,408 are, however, £48,338 more, their ratio to gross revenue, being 65.36 per cent., compared with 64.88 per cent. a year ago. The net revenue, inclusive of £78,7 8 brought forward, and £7,031 received for dividend on shares, held by the company, is, therefore, only £6,056 more, at £937,466. From this has to be deducted £16,250, and £9,561 for Metropolitan and Rent Charge Stocks, £83,744 for rental of leased lines, and £376,298 for interest on debentures and debenture stock, including the sums carried to redemption funds, leaving £537,341 available for dividends. After paying those for the half-year on the guaranteed and preference stock, a balance of £150,537 is left, compared with £115,815 in June, 1902. Out of this the directors propose to pay a dividend at the rate of 1¾ per cent. on the ordinary stock, which will leave £16,112 to be carried forward to the next account. This is an improvement on the position twelve months ago, when the carry forward was £4,268 less, and the dividend only 1½ per cent. per annum, and if several items in the expenditure did not show a considerable increase, the comparison would have been even better. Maintenance of way, etc., for example, was £8,410 more, at £259,009, the two items showing the heaviest increase being materials and repairs to roads, bridges, etc. Locomotive power cost £451,966, or £1,081 more than twelve months ago, in spite of the train mileage being reduced by 165,051 miles to 10,580,140. Parliamentary expenses, compensations for injuries to passengers, and damage to goods and rates and taxes are all considerably higher, and the economies made in other directions were but small. Traffic receipts, with the exception of that from second-class passengers, are all higher at £1,126,932, although only £123,831 was received from the continental steamers compared with £125,880 a year ago, a saving of £1,337 has been effected on their working, and they therefore show a net profit of £10,184 for the six months. Capital expenditure continues to grow, £194,889 having been spent since last December, of which only £506 was devoted to lines in course of construction, while £26,118 was spent on working stock. In the current half-year capital to the extent of £182,000 it is estimated will be required, new construction absorbing £12,000 of this. As the capital account was overdrawn by £605,077 at the date of the balance-sheet another issue of stock may soon be necessary, although the company has so many trust funds to dip into, their aggregate being about £1,500,000, that the directors are by no means yet in a corner. Of the funds, however, £800,000 appear to be invested in securities apart from the business—a most commendable fact—so that the margin left is not large.

London Brighton and South Coast Railway.

Gross receipts for the past half-year £1,529,396, an increase of £21,947. Working expenses £960,451, an increase of £16,126. These figures show that the working charges have again a tendency to increase at a greater ratio than the gross revenue, and the percentage of income to outgo is accordingly slightly higher than it was a year ago at 62.78 per cent., compared with 62.64 per cent. then. Locomotive charges showed a falling off of £7,000, and traffic charges were down nearly £11,000, but maintenance of way and some other minor items such as law and Parliamentary charges were higher. Complaint is made by the directors that the rates and taxes have increased rapidly, more than 50 per cent. of the total being due to this cause, and it is not revised rating either, but additional rates per pound levied by the local authorities. As already intimated the dividend payable on the ordinary stock is at the rate of 3 per cent. per annum, which gives 30s. on the undivided stock and £3 on the preferred ordinary for the half-year, leaving £18,000 to be carried forward. Capital expenditure came to £293,080 in the past half-year, mainly upon the improvements, at Victoria Station especially and also at other stations, and on the widenings of the line. A further outlay of £357,000 is estimated for in the current half-year, and as the capital account is at the present time overdrawn to the amount of £664,309, it seems probable that fresh stock will have to be offered before long to the public. The company has a balance of £228,000 of borrowing powers unexhausted. Dividends will be payable on and after August 11.

Metropolitan Railway.

In the six months to June 30 gross receipts were £424,468 and working expenses £211,252, or again almost 50 per cent. of the gross income. Net receipts, therefore, came to £213,216, the gross income having been £11,494 and the working expenses £3,755 larger than a year ago when the net income was only £205,478. After meeting all fixed charges the net revenue of £179,156, including the balance of £21,637 brought forward, allows the directors not only to meet the dividends on the preference and guaranteed stocks, but to pay an extra ¼ per cent. per annum upon the ordinary stock, which therefore receives 25s. for the half-year, as against 22s. 6d. in the first half of 1902, leaving £26,255 to carry forward. The surplus lands stock as usual receives a dividend at the rate of 2¾ per cent. per annum. The directors state that the

British Westinghouse Electric and Manufacturing Company is making satisfactory progress with the power station at Neasden, and that the generating plant and machinery are well in hand. They also say that the new railway from Harrow and Uxbridge connecting with the Metropolitan is approaching completion, and is being equipped throughout for electric traction. They speak favourably of the effects of the fare reductions of a year ago, and have made further progress in the same popular direction by arranging another reduction on June 1 last. Capital expenditure in the past half-year was £82,651, and took the form chiefly of a subscription of £74,000 to the Harrow and Uxbridge line. Nothing in the accounts call for any special observation. The company has plenty of funds in hand, and what the new capital proposals, rendered necessary by the electrification of the line, are to be will not be disclosed until the special meeting of proprietors is held. Dividends will be payable on August 11.

London, Tilbury and Southend Railway Company.

In the past half-year the gross receipts came to £214,143, or an increase of £15,809. Working expenses took £136,402, or £10,245 more, the result being an increase in the net profit of about £5,500. The proportion of expenses to receipts was about 63.55 per cent. The directors in view of the small increase in the net income recommend the same dividend as was paid a year ago, viz., 4 per cent. per annum, leaving a balance of £8,093 to be carried forward. This balance is about £3,000 less than that of twelve months ago. Capital expenditure in the half-year came to £58,092, all on lines opened for traffic. Business was good in passengers alone, other branches of traffic showing up poorly. Particulars are given in the report about the position of various bills before Parliament, which are not of a very great interest to the general public. The company has a credit balance on capital account of £41,000, but this will soon be exhausted, as the capital expenditure for the current half-year is put at £145,000, including £45,000 for working stock and steamboats. The dividends will be paid on and after the 31st inst.

East London Railway.

This company's report for the half-year ended June 30 shows that in accordance with the returns of the Railway Clearing House the gross receipts for the six months ended April 30 last were £26,980, or £621 more than in the corresponding period of the preceding year. Again the company has to report a decline in coaching traffic, this time of £472, but fortunately goods revenue once more improved, the advance here being £1,093. The company receives a minimum guaranteed rent of £30,000 per annum, and in order that this may be augmented the receipts must exceed £53,571. This amount having been arrived at, the earnings, less 44 per cent. for working expenses, belong to the company. Now for the entire year to December 31 the income was £55,138, and it follows that the company is entitled to an additional £877. Deducting income-tax on this and the minimum rent for the half-year, and including rents, transfer fees, and interest, and the sum for disposal is £15,571, against £15,504. Rates and taxes, general charges, etc., absorb £947, leaving £14,624, to which is added £10,025 brought forward, making £25,249. From this is met the interest on the 3½ per cent. first and 4 per cent. second charge debenture stocks, and £12,087 is carried forward. The directors have laid a memorial before the Royal Commission appointed to consider the London locomotion and transport question setting forth the history, present position, and constitution of the East London Railway. They hope that so important a link between the railways north and south of the Thames may receive due consideration. The wide powers sought by the Government in the Port of London bill have rendered necessary a petition against it in order to get a protective clause inserted.

City and South London Railway Company.

For the half-year ended June 30 the receipts from all sources were £81,770, or an increase of £1,407, but working expenses came to £37,919, or £1,962 more, leaving net profits £555 smaller at £43,851. Including the balance brought forward, the net revenue came to £45,379, and after meeting debenture interest and placing £1,500 to renewal fund, against £2,000 a year ago, the amount available was £33,006, compared with £34,200. Out of this the full dividend of 5 per cent. is paid on the preference stocks of 1891, 1896, and 1901, but the distribution on the consolidated ordinary stock is at the rate of 2¾ per cent. per annum, compared with 3 per cent., and the amount carried forward is reduced to £1,500. This result is due partly to the increased working expenses and partly to the larger sum required to meet preference and debenture interest, while the company has also felt the competition of the new electric tramways of the London County Council. The appeal in respect to the compensation to be paid for the site of the station under St. Mary Woolnoth Church having been decided against the company, an order was made for the payment of the whole sum, amounting with interest to £89,904, in addition to £81,350 already paid, and the funds for this purpose were raised by the issue of preference and debenture stock. It is proposed, however, to carry the case to the House of Lords. The Bill for the extension to King's Cross, St. Pancras, and Euston and for the transfer of the City and Brixton undertaking to this company having been passed, the directors recommend that the construction of the first named line should be proceeded with at once, and will ask for powers to create and raise the necessary capital.

London and Westminster Bank.

In the six months closed on June 30 this old established and powerful bank made a gross profit of £348,493, or £13,373 less than in the corresponding half of 1902. As the indistributed balance brought forward was down nearly £14,000, it follows that the net revenue was quite £27,000 less, at £239,753, after deducting working expenses, which, at £143,623, came to about £400 more than a year ago. In the circumstances it was quite proper for the directors to reduce their dividend by one per cent to 7 per cent., for the half year, or at the rate of 14 per cent. per annum, compared with 16 per cent. twelve months back. It is a pity, however, that some effort should not be made to provide a dividend equalisation fund, so as to prevent these recurring disappointments. The figures in the balance-sheet show considerable fluctuations which, however, seem to occur periodically. Thus the amount at the credit of current and deposit accounts is down £1,295,280 at £26,076,389. On the other side of the account cash in hand and at the Bank of England, is also lower, by £733,184, and money at call and short notice by £565,655, but the item bills discounted, loans, and other securities at £15,591,902 is merely £17,964 down, so that what presumably is the least variable part of the business ha not been affected by the reduction in the volume of the deposits. Investments are unaltered at £4,100,000, and no change is made in the rest or reserve fund, which stands at £1,600,000. After putting £10,000 as a special appropriation to pension fund, and paying the above-mentioned dividend the balance left to carry forward is £33,754.

The Capital and Counties Bank.

This bank also issues its report and balance-sheet only once a year, and the figures for the twelve months closed June 30 last are on the whole indicative of progress. The gross profit, after making the usual deductions, comes out at £584,159, or £34,526 more than in the preceding year. Expenses took £339,907, or £31,051 more, so that the net profit of £244,252 was less than £3,500 larger than in 1901-2. Adding in the balance of £59,097 brought forward, there is £303,349 available for distribution, and of this the shareholders received £234,000 in the shape of a dividend of 18 per cent. per annum, half of it paid in January last and half now. Then £10,000 is placed in reduction of cost of premises and £10,000 added to officers' superannuation fund, leaving £49,349 to be carried forward, or nearly £10,000 less than was brought in. These figures, however, cannot be compared exactly with those of the previous year, because of the absorption of the Cornish Bank within the twelve months, a step which may have entailed some unusual increases in the current expenditure. The balance-sheet shows the amount due on current deposit and other accounts to be £26,351,535, which is an increase of £2,438,591 upon the figures of a year back. The company also has acceptances outstanding to the amount of £943,374, this forming a cross entry. Cash in hand and at the Bank of England stands at £4,208,192, or £531,301 more, and money at call and short notice is £246,000 down, at £3,064,084. Investments have increased by £227,177 to a total of £5,281,772, of which £2,650,237 is in Consols and other British Government securities, at what figure is not stated. Indian Government securities, British Railway debenture and preference stocks, and Colonial Government stocks and bonds figure for another £1,723,246, and English Corporation stocks and other investments account for £908,289. Bills discounted, loans and other accounts are put down at £15,302,604, being an expansion of £1,878,000 in the twelve months.

Barclay and Co.

This semi-private joint stock bank is now a very large institution indeed, its absorption of the York Union Bank having sensibly added to its resources and liabilities, compared with twelve months back. The directors state that they have also acquired the goodwill of the business of Messrs. J. and J. W. Pease, of Darlington, but that probably has not added much one way or another to the company's wealth. In the year ended June 30 last net profits are stated to have amounted to £493,968, an increase of £33,783 upon the figures for the preceding year. Adding in £102,145 brought forward, the total available amount is £596,113, out of which the directors have already paid an interim dividend of 12s. per share, and now declare another of a like amount, making 15 per cent. for the year, to be paid tax free. This dividend takes £415,800, and another £30,166 is carried to the reserve fund over and above the premiums received on capital issued to shareholders in the York Union Bank, making the total increase £250,000, and raising the fund to an aggregate of £1,250,000, against a paid up capital of £2,772,000. Also the directors have applied £25,000 towards the company's other reserves, and £26,400 to the building fund. After all these adjustments have been made there remains £98,746 to be carried forward, surely an excellent exhibit. The total laibility of the shareholders on current deposit and other accounts was at the date of the balance-sheet £36,168,630, which is an increase of £3,105,026 upon the figure of the twelve months back, most of it presumably due to the York Union. Cash in hand, at the Bank of England, and with other bankers—not quite a satisfactory way of stating things—amounts to £5,321,432, or £632,887 more, and money at call and short notice, amounting to £4,089,500, is down £69,000. Investments show an increase of £380,825, at a total of £9,109,373, of which £3,926,758 consists of British Government securities and Bank stock. It is not stated at what price the British Government securities are held. Another £1,500,000 is in Indian and Colonial Government securities, including guaranteed railways, and £853,000 is in Metropolitan and British Corporation stocks, while £1,254,321 is in British Railway debenture, guaranteed and preference stocks. Then there is a curt intimation that £1,574,672 is in "other securities," particulars left to the imagination. Advances to customers and bills discounted including brokers' bills, form different branches of the business all put together in one item, the aggregate of which is £20,513,728,

or an increase of £2,651,000. Altogether the balance-sheet foots up to £40,339,948.

Eastern Telegraph Co., Limited.

In spite of the competition from the Imperial cable, this company had a highly satisfactory experience in the six months ended March 31, the revenue from all sources amounting to £626,751, or £9,225 more than for the corresponding period of last year, and £2,411 above 1901. This improvement, too, was secured at the cost of an increase of no more than £1,529 in the working expenses to £209,002, and even with the smaller balance of £22,383 brought in, the net income available was £5,546 higher at £440,132. Debenture interests, however, required £35,397, or £4,85- more, and preference dividend took £34,703, against £34,003, so that the extra revenue merely sufficed to meet the heavier prior charges, and although the allocation to general reserve was £5,000 higher, at £180,000, this was counterbalanced by a reduction of the same amount in the allowance for maintenance ships' reserve. The usual two dividends of 1¼ per cent. each and bonus of 2 per cent. are paid on the ordinary stock, making 7 per cent. for the entire year, and £5,031 is carried forward. In addition to the transfer from revenue, the general reserve fund was increased by £8,712, interest on investments £109, premiums on issue of debenture stock, and £7,641 transfer of unappropriated balance of reserve fund for removal of head offices, and after mee ing the interest on the loan from the Eastern and South African Telegraph Company and writing off £101,796 towards cost of new cables, etc., the fund stands at £1,038,342, compared with £958,424 on September 30.

Anglo-American Telegraph Co., Limited.

The six months ended June 30 were rather more profitable than the corresponding period of 1902, as not only were traffic receipts £9,298 higher at £175,049, but £4,499 more was received for the charter of the s.s. *Minia*, etc., at £6,899, and the total receipts from all sources were £12,747 better at £182,655. Expenses, including repair of cables, rose by £6,963 to £65,893, and with £1,706 brought forward the net revenue came to £118,468, compared with £110,977. After transferring the customary £12,000 to renewal account, the ordinary stock received two quarterly dividends of 15s. per cent. each, and the preferred stock two of £1 10s. per cent., making 30s. and £3 per cent. respectively, against 27s. 6d. and £2 15s. per cent., and leaving a balance of £1,468 to be carried forward. In addition to the transfer of £12,000 from revenue, the renewal fund benefited by £14,304 from interest, but against this was placed £12,190 for repairs to the 1873 cable, so that the net addition was £14,114, making the total £962,587, against which sundry securities valued at £873,661 are held.

Direct United States Cable.

This company's revenue for the half-year ended June 30 shows an improvement of £2,276, compared with that of the corresponding period of 1902, the earnings, after deducting out-payment, being £48,887. Working and other expenses, including income-tax, are, however, up £208, at £21,724, leaving a net profit of £27,163 for the half-year which, together with £4,780 brought forward, gives a sum of £31,942 for distribution. Since June 30, 1902, three quarterly dividends of 3s. per share have been declared, and a final one at the same rate, together with a bonus of 1s. per share is proposed, making the total return for the year 3¼ per cent., or £39,462. This allows the reserve fund to receive £8,000, instead of nothing, as it did at the same time last year, the remaining balance of £2,694 being carried forward. During the half-year the reserve fund account has been debited with £22,932 for cost of cable repairs, and after being credited with interest on investments, profit on sale of securities, and the above-mentioned amount transferred from revenue, now stands at £474,665, the investments, the majority of which are first-class, being taken at cost price. Altogether the position of the company is considerably better than it was a year ago, though we should like to see something written off the cost of cables, stations, etc.

Chili Telephone Company.

The year to March 31 was a very happy one for this company. Revenue further expanded by $82,054 to $841,193, against an advance in expenditure of $35,743 only to $401,519, so that the improvement in net income came to $46,312 at $439,674. Not only so, but the average rate of exchange was 0.83d. higher, and converted into sterling, the net profit is no less than £4,383 better, the total being £28,723. Adding interest, discount, and £2,733 brought forward, and deducting London expenses, debenture interest, and income-tax, the sum for appropriation is £26,101, against £21,720. In dividing this a good start is made by placing £11,088, or £3,101 more, to reserve for renewal of plant, etc., shareholders receive 6 per cent., or 1 per cent. extra, and a trifling drop to £2,637 takes place in the amount carried forward. Liquid assets and liabilities in Chili on March 31 were valued at 16¾d., the current rate of exchange on that day, compared with 13¾d. for the corresponding period. This means an advantage to the company of £1,455, which has been added to reserve, making it, with the allocation from revenue, £49,000. Part of this is invested in the business, capital outlay being £295,389, against issued share and debenture capital of £276,000, but a fair amount is kept separate in high-class securities, and altogether the position seems very comfortable.

Dooars Tea Co., Limited.

The outturn up to the end of August was largely in excess of any previous year, but after that the weather proved unfavourable, and at the close of the season the crop was only 93,057 lb. higher than in 1901, at 3,558,372 lb. At the same time the quality suffered, but the company nevertheless managed to hold its position better than its neighbours, and secured an average price of 6.69d. compared with 6.72d., while for the rest of the district the average was 0.13d. down, at 6.51d. A further saving was effected in expenses, which worked out at 4.22d. per lb. against 4.85d. last year, and 5.26d. in 1900, and after paying manager's commission, etc., the net profit, including £1,678 brought forward was £28,134. Out of this the preference dividend was met, and the ordinary shares received a distribution of 10 per cent., leaving £7,209 to be carried forward. The company, like its stable companion, the Empire of India and Ceylon company, relies largely on loans for carrying on its work, and on December 31 owed £20,971 to its bankers and £21,906 to sundry brokers, its total liabilities amounting to £49,099, against which £49,611 was held in tea, and £3,107 was owing by sundry debtors. Cash in hand amounted to £6,110, but the dividend on the ordinary shares just declared requires £15,000.

Empire of India and Ceylon Tea Co., Limited.

Again this company appears to have found the wide area over which its operations range detrimental rather than otherwise, and the directors once more murmur against the weather both in India and Ceylon. Excessive rainfall and early cold weather troubled them in Assam, in the Dooars district it was also wet, and in Ceylon high winds and low temperature were the causes of woe. Yet the Assam gardens yielded 2,537,578 lb., or 40,009 lb. more than in the previous season, the Dooars outturn was 1,025,733 lb., or 77,325 lb. more, and the Ceylon crop was 40,056 higher at 474,651 lb., exclusive of purchased leaf, which was down from 49,303 to 3,294 lb. Prices realised, however, with the exception of the Assam tea, which produced 8.22d. against 7.87d. per lb., were lower at 6.08d., and 5.75d. for the Dooars and Ceylon properties respectively, compared with 6.25d. and 6.06d. a year ago. These reductions though were much more than offset by savings effected in the working expenses, and the net result was a profit, after paying manager's commissions, of £24,392, to which was added £3,879 brought forward, giving an available total of £28,271, whereas a year ago all that could be scraped together was £14,829. The directors consequently are able to pay the dividend on the preference shares for the eighteen months to December 31, and also to declare a dividend of 3 per cent. on the ordinary shares, and still carry forward the larger balance of £5,501. There is still no allowance for depreciation made in spite of the annual remarks of the auditors, and the cost of the estates stand in the balance-sheet at £446,950, or more than £41 per acre. Advances by brokers have been increased by £2,913 to £34,085, against a reduction in loans from bankers of £8,771 to £18,681, but the current liabilities only show a decrease of £4,420, at £66,558, against which stocks of tea and cardamoms represent £60,101. Sundry debtors owe £1,053, and cash in hand stands at £7,845.

London and Manchester Industrial Assurance Co., Limited.

This company is one of those which, under the guise of life insurance preys upon the working classes and by charging very stiff rates for very moderate services contrives to provide a living for a large army of officials. The report for the year ended March 24 states that "by a timely opening up of additional districts, and a judicious expenditure of money for new business in these, and those previously developed, the life premiums reached and exceeded £200,000 in the past year." They actually amounted to £201,991, or £36,162 more than in the previous year, while claims, inclusive of £875 for surrenders, came to no more than £68,545, or 33.80 per cent. of the premium income. But the judicious expenditure of money the directors so pride themselves upon as having yielded such wonderful results amounted to £110,229, or 54.55 per cent., and after writing off £110 for bad and doubtful debts, and deducting dividend and bonus to shareholders and income-tax, the net addition to the funds was only £30,431. But the sickness and medical aid assurance section was, if anything, worse for the insured. No new members are taken into these branches, so that fresh business has not to be paid for, yet the expenses of management and commission absorbed 36.11 per cent. of the premiums, and as claims paid are naturally high in proportion under the circumstances, the funds were increased by the trifling sum of £315 to £8,706. The premium income from all departments was £221,925, and £8,824 was received from interest and other sources, yet so extravagant is the management that the total funds now stand

La Guaira Harbour Corporation.

Last year was a bad one for this enterprise, because of the blockade during the time of the Anglo-German demonstration against Venezuela. Gross earnings fell off £13,137 to £42,289, and the decrease in net earnings amounted to fully £8,600. The wonder is that net earnings were not worse than they turned out to be, for the general manager had a good deal to do in keeping the port well dredged. A large sum was spent on dredging, representing over 16 per cent. of the whole expenses, yet the total rose by only 10 per cent. to 56 per cent. of the gross receipts, as against 46 per cent. in 1901. The net revenue of £13,939 is insufficient by £5,842 to provide the full interest on £396,994 of 5 per cent. first mortgage irredeemable debenture stock, and that deficiency has been carried to debit in the profit and loss account. The company has besides this debt £578,289 of second mortgage debenture stock and there is a paid up share capital of about £400,000, so that it is distinctly overloaded with capital, and must remain so for many years, even should Venezuela become a settled country and foreign capital find its way there, in order to develop its unquestionably magnificent wealth. We must not, however, despair, because the figures of the past year were bad.

at no more than £266,182. A valuation of the business, as at March 24, 1902, showed a surplus of £40,933 over liabilities.

NIPPON YUSEN KAISHA.

For the six months ended March 31 the gross profits were 3,461,415 yen, of which 674,740 yen was written off for depreciation of the fleet and property, 148,882 yen was added to insurance fund, and 404,672 yen to ships' structural repair fund, leaving a balance, including 703,184 yen brought in, of 2,936,305 yen. Out of this 111,656 yen is transferred to reserve, 700,000 yen to the fund for extension of services and improvements of fleet and 71,358 yen is allowed for directors' fees, after which a dividend at the rate of 10 per cent., and a special dividend of 2 per cent. are paid, and 733,291 yen is carried forward. Excluding the four ships now being built, and the fleet of steam launches and tugs, the company owns a total tonnage of 237,995 tons, which at the reduced book value in the balance-sheet of 23,436,107 yen works out at the moderate figure of just over 98 yen per ton. The company also holds buildings, and land worth 3,620,422 yen, and public loans and other securities valued at 2,997,147 yen, while trading balances are largely in its favour—a sum of 4,237,986 yen owing to sundry creditors being more than offset by 2,981,323 yen due from sundry debtors and 6,568,329 yen in cash.

NEXT WEEK'S MEETINGS.

MONDAY JULY 27.

Argentine Municipal Loans Committee.—Winchester House, noon.
British Gold Coast.—Cannon Street Hotel, noon.
Cumberland Gold Mining.—Winchester House, 4.30 p.m.
Colonist's Land and Loan Corporation.—Dashwood House, 11.30 a.m.
Hibernian Bank.—Dublin, 1 p.m.

TUESDAY, JULY 28.

Consolidated Mines Selection.—Winchester House, noon.
City and South London Railway.—71, Finsbury Pavement, noon.
Dumont Coffee.—Winchester House, noon.
Direct United States Cable.—Winchester House, 2 p.m.
Great Eastern Railway.—G.E.R. Hotel, noon.
Gordon Hotels.—Hotel Metropole, Whitehall, noon.
London and Blackwall Railway.—17, John Street, 1 p.m.
Northern Blocks Syndicate.—Cannon Street Hotel, 12.30 p.m.
New Zealand Thames Valley Land.—Dashwood House, 12.30 p.m.
Russian Collieries.—Winchester House, 2.30 p.m.
Whitechapel and Bow Railway.—41, Trinity Square, 3.15 p.m.
Widnes and Runcorn Bridge.—Liverpool, 3.30 p.m.

WEDNESDAY, JULY 29.

Eastern Telegraph.—River Plate House, 1 p.m.
Imperial Russian Cotton.—Institute of Chartered Accountants, noon.
London, Brighton Railway.—London Bridge Station, noon.
London Trading Bank.—Cannon Street Hotel, 6 p.m.
London United Laundries.—Cannon Street Hotel, 11 a.m.
Milner's Safe.—Winchester House, 2 p.m.
North Mount Lyell Copper.—Winchester House, 3 p.m.
North Brazilian Sugar Factories.—Winchester House, 3 p.m.
Tokatea Trust.—Cannon Street Hotel, noon.
Union of London and Smiths Bank.—Cannon Street Hotel, noon.
Union Bank of Manchester.—Manchester, 11 a.m.

THURSDAY, JULY 30.

American Automatic Weighing Machine.—Winchester House, 2 p.m.
British Steamship Investment Trust.—Cannon Street Hotel, 2 p.m.
Bush and Co.—G. E. R. Hotel, 3 p.m.
Eureka Gold Mines.—Winchester House, noon.
Gresham Gold Exploring.—Winchester House, 2 p.m.
Hamilton, Claud.—Glasgow, 2.30 p.m.
Keeling and Hunt.—Cannon Street Hotel, 3 p.m.
Metropolitan Coal of Sydney.—Cannon Street Hotel, 2.30 p.m.
South Eastern Railway.—Cannon Street Hotel, noon.
Threlfalls Brewery.—Cannon Street Hotel, noon.

FRIDAY, JULY 31.

A. J. White.—Memorial Hall, E.C., 2 p.m.
Anglo-American Telegraph.—Winchester House, 2 p.m.
Harrow and Uxbridge Railway.—Cannon Street Hotel, 3.30 p.m.
Linotype Company.—Cannon Street Hotel, 11 a.m.
Machinery Trust.—Cannon Street Hotel, noon.
Metropolitan Railway.—Cannon Street Hotel, noon.
New African Company.—Cannon Street Hotel, 3.15 p.m.
Royal Brewery, Brentford.—Worcester House, 11.30 a.m.
Soudan Development and Exploration.—Cannon Street Hotel, 4 p.m.
St. David's Gold and Copper Mines.—Winchester House, 2.30 p.m.
San Francisco Breweries.—Winchester House, 3 p.m.

SATURDAY, AUGUST 1.

Great Northern, Piccadilly, and Brompton Railway.—Hamilton House, 10.45 a.m.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Argentine North-Eastern.—Traffic receipts for the week ended June 19, $8,236; decrease, $8,440. Aggregate from January 1, $309,920; increase, $15,776.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended June 13, Rs. 27,599; decrease, Rs. 1,373. Aggregate from January 1, Rs. 7,49,929; increase, Rs. 25,356.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended June 13, Rs. 7,425; increase, Rs. 753. Aggregate from July 1, Rs. 1,94,805; increase, Rs. 20,903.

Bengal Central Railway.—Traffic receipts for week ending June 20, Rs. 18,182; decrease, Rs. 4,933. Aggregate from January 1, Rs. 578,623; increase, Rs. 4,215.

Canadian Northern Railway.—Traffic receipts for week ended July 7, $51,200; increase, $25,700. Total, from January 1, $1,085,425; increase, $432,214.

Lucknow Bareilly Railway.—Traffic receipts for week ended June 20, Rs. 27,263; decrease, Rs. 4,587. Aggregate from January 1, Rs. 7,58,643; decrease, Rs. 34,879.

Quebec Central Railway.—Traffic receipts for the 2nd week of June, $13,190; increase, $1,395. Aggregate from January 1, $270,738; increase, $18,133.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended June 20, Rs. 19,411; decrease, Rs. 8,014. Aggregate from January 1, Rs. 2,61,803; increase, Rs. 2,899.

Salvador Railway.—Traffic receipts for week ended July 18, $12,750; increase, $6,750.

Uruguay Northern.—Traffic receipts for April, £2,130; increase, £718. Aggegate from July 1, £15,647, increase, £3,915.

White Pass and Yukon Railway.—Traffic receipts for the week ended June 21 amounted to $76,593.

ENGLISH.

Cleator and Workington.—Gross receipts for the week ending July 18, £1,058; decrease, £9. Total receipts from July 1, £2,723; decrease, £366.

Cockermouth and Keswick Railway.—Receipts for week ending July 18, £1,050; decrease, £186. Aggregate from July 1, £2,873; decrease, £408.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending July 18, £352; increase £13. Aggregate from July 1, £1,025; increase, £50.

Liverpool Overhead Railway.—Traffic receipts for week ending July 12, £1,718; increase, £134. Aggregate from July 1, £3,390; increase, £21.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Aston Manor Urban.—Traffic receipts for week ending July 18, £538, decrease £1; aggregate from July 1, £1,621 increase £41.

Belfast Street.—Traffic receipts for week ending July 18, £3,172, increase £411; aggregate from July 1, £8,762, increase £491.

Birmingham and Midland.—Traffic receipts for week ending July 17, £825, increase £8; aggregate from July 1, £2,480, increase £84.

Birmingham City.—Traffic receipts for week ending July 18, £5,183, increase £173; aggregate from July 1, £15,704, increase £619.

Blessington and Poulaphouca.—Traffic receipts for the week ending July 19, £18, decrease £10; aggregate from July 1, £65, increase £9.

Bristol Tramways and Carriage.—Traffic receipts for week ending July 17, £5,376, increase £111; aggregate from July 1, £15,837 increase £356.

Burnley Corporation.—Traffic receipts for week ending July 18, £935, increase for week £144; aggregate from July 1, £2,582 increase £277.

Dublin and Blessington.—Traffic receipts for week ending July 19, £157, decrease £16; aggregate from July 1, £454, decrease £42.

Dublin and Lucan.—Traffic receipts for week ending July 19, £126, decrease £7; aggregate from July 1, £345, decrease £27.

Dublin United.—Traffic receipts for three days ending July 17, £5,258, decrease £68; aggregate from July 1, £13,046, increase £331.

Edinburgh and District.—Traffic receipts for week ending July 18, £4,716, increase £92; aggregate from January 1, £123,234, increase £16,555.

Edinburgh Street.—Traffic receipts for week ending July 18, £523.

Harrow Road and Paddington.—Traffic receipts for week ending, July 17, £307, decrease £5; aggregate from July 1, £944, increase £13.

Isle of Thanet.—Traffic receipts for week ending July 18, £1,279; decrease, £27; aggregate from July 1, £2,552, increase £256.

London General Omnibus.—Traffic receipts for week ending July 18, £26,284, decrease £629; aggregate from July 1, £83,885 increase £176.

London Road Car.—Traffic receipts for week ending July 18

£8,731, decrease £443; aggregate from July 1, £24,076, decrease £593.

Rossendale Valley.—Traffic receipts for week ending July 17, £188, increase £5; aggregate from July 1, £595, increase £26.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending June 22 £5,523, increase £1,061; aggregate from January 1, £143,146, increase £30,345.

Barcelona.—Traffic receipts for week ending July 18, £2,594, decrease £323; aggregate from January 1, £64,447, decrease £908.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending July 18, £317, increase £219; aggregate from January 1, £8,064, increase £4,437.

Brazilian Street.—Traffic receipts for the month of March, Rs. 42,144; increase Rs. 936.

Brisbane.—Traffic receipts for the month of April, £10,309, decrease £407.

British Columbia Electric.—Traffic receipts from July 1 to May 31, £615,445, increase £82,892. Net earnings £203,054, increase £31,357.

Buenos Ayres and Belgrano.—Traffic receipts for the month of June, £12,834, increase £605.

Buenos Ayres Grand National.—Traffic receipts for week ending June 20, $41,828, increase $570; aggregate increase from April 1903, $1,807.

Calais.—Traffic receipts for week ending July 18, £207; decrease £8; aggregate from July 1, £742, increase £22.

Calcutta.—Traffic receipts for week ending July 18, Rs. 31,632, increase Rs. 6,552; aggregate from July 1, Rs. 96,226, increase Rs. 22,369.

Carthagena and Herrerias.—Traffic receipts for the month of June, £3,798, increase £865; aggregate to June 30, £22,947; increase £3,461.

Lombardy Road.—Traffic receipts for the month of June, £1,285, increase £39; aggregate from January 1, £7,439, increase £128.

Twin City Rapid.—Traffic receipts for the month of May $339,735, increase $42,744; aggregate from January 1, $1,570,908; increase $214,353. Net traffic receipts $180,407, increase $20,380; aggregate from January 1, $817,281, increase $109,729.

COMPANY MEETINGS.

EMPIRE OF INDIA AND CEYLON TEA.

The seventh annual ordinary general meeting of the Empire of India and Ceylon Tea Co., Limited, was held on Thursday, July 23, at Winchester House, Old Broad Street, E.C., Mr. F. T. Turner presiding.

The Secretary having read the notice convening the meeting,

Mr. W. S. Wells having expressed the sorrow of the board at the death of the late chairman, Mr. W. H. Verner,

The Chairman then said: If you will turn to page 12 of the report you will see the balance of profit on revenue working is much better in the past year. The Assam gardens have secured a larger crop, a better average price, and at the same time worked to a considerably reduced outlay, but there is ample room for improvement, especially as regards two or three of the dividends. The Dooars gardens have made a larger profit than in 1901, but I am not satisfied, and hope to be able to report better results for the current seasonu. Ceylon has made a marked advance in the right direction, and the gardens should show better results, as they were worked up and brought into order by our visiting superintendent and the managers appointed in 1901. You will observe we do not propose to divide all our profit, but we carry forward nearly as large a sum as we distribute on the ordinary shares. This is to provide for a larger outlay in 1903 for coolie recruiting, etc., the amount spent during the past two seasons being much below the average of previous years. Looking abroad we find foreign markets taking increased quantities of British grown tea, and the consumption here and abroad exceeded the production by several million pounds. Stocks are on a fairly safe basis. The Indian Government, at the instance of the planting community, has introduced a compulsory cess on tea, and this will place at the disposal of the Indian Tea Association a much larger amount of money for the exploitation of new markets. The labour question has always been a matter of anxiety to every one connected with the management of tea estates in India, and at present we find no alleviation in the difficulties of securing an adequate supply for the tea districts. It is not a matter of too small wages; of that I am convinced. Taking all things into consideration, I maintain that the tea garden coolie is the best paid agricultural labourer in the world. These remarks are based upon Dooars experience, but I have no reason to suppose that the conditions differ materially in other tea districts, and yet the difficulty and expense of obtaining labour is increasing year by year. In Assam the labour difficulty is more acutely felt in some respects than in the Dooars, owing to the great initial expenditure incurred in recruiting coolies under the Labour Act applying to the former district. This primary expenditure is enormous, the recruiting and bringing of coolies to Assam costing about Rs.130 each. The Indian Government would no doubt gladly give every assistance towards remedying the present unsatisfactory condition of labour recruiting, and I would suggest the appointment of special officers in the recruiting districts to prevent abuses, to extend the recruiting areas, and to assist in the legitimate recruiting and emigration of labour. The tea industry has fallen on bad times of late years. The closing of the mints in India in 1893 was the first severe blow to the tea-grower. Owing to the contraction of the currency, the rate of exchange was gradually forced up from 1s. 1d., the lowest point; and, finally, by the Currency Law of 1898, was fixed at 1s. 4d. To the tea-grower this means that having sold his crop in sterling, and having to remit money to India for the working of his estates, he only received 15 rupees instead of 18⅓ rupees for every sovereign. The fictitious value given to the rupee, though, no doubt, it was necessary in the interests of the Indian Government, was the severest blow that has ever been dealt to the tea industry, and, unfortunately, it was not the only one. For some years those interested thought it was reasonable to hope that some relief might be given by a reduction of the duty on tea, but it was one of the first articles further taxed to meet the war expenditure, the tax being raised from 4d. to 6d. per lb., 6d. being equal to at least 80 per cent. of the ad valorem value. It is unquestionable that a proportion of this increased taxation had to be borne, not by the consumers, but by the producers, and a moderate estimate is that of the increase of two millions, £500,000 came out of the pockets of the British tea grower. I have touched briefly on the two great hardships that we have had to contend against during the past seven or eight years. I am of opinion we are justified in thinking we have turned the corner. There are symptoms that the silver market may have touched bottom, and, as regards the tax on tea, we may confidently look for a reduction.

Mr. George F. Moore then gave to the meeting particulars of his visit to the Assam gardens during the past cold season, dealing with the progress made there, and with the labour question.

The Chairman then proposed: "That the directors' report and the statement of accounts for the year 1902 be and they are hereby approved and adopted."

Mr. G. D. Paton seconded the motion, which was agreed to unanimously.

The Chairman then moved that the proposed dividends on the preference and ordinary shares should be paid, which was agreed to unanimously.

On the motion of Mr. G. F. Moore, seconded by Mr. W. S. Wells, the retiring directors, Messrs. J. F. Ogilvy, C. A. Verner, and F. T. Turner were re-elected.

The retiring auditors, Messrs. W. B. Peat and Co., and Messrs. McAuliffe, Davis and Hope having been reappointed, and Messrs. Lovelock and Lewes reappointed as auditors in India, the proceedings terminated with a vote of thanks to the Chairman, directors and staff.

DOOARS TEA.

The eighteenth ordinary general meeting of the Dooars Tea Co., Limited, was held Thursday, July 23, at Winchester House, E.C., under the presidency of Mr. F. T. Verner, Chairman of the company.

The Secretary read the notice convening the meeting and also the report of the auditors.

Mr. W. S. Wells: Before the Chairman addresses you, I shall be glad if you will allow me, as the oldest member of the board, to refer to the loss we have sustained inthe death of our dear friend and chairman, Mr. W. H. Verner. I had known him intimately for many years, and it is doubtless known to many of you that he was mainly instrumental in forming the company in 1885. On his retirement from theIndian Civil Service he joined the board, and in 1895 took the chairmanship lett vacant by the death of the Hon. Sir Edmund Drummond. Through the severe crisis which overtook the tea industry he successfully piloted your company, and in the two darkest years, 1900 and 1901, the ordinary shareholders received dividends of 7½ per cent. The company will miss Mr. W. H. Verner, and the Indian tea industry has lost a friend it will be difficult to replace. In conclusoin, we may, I think, congratulate ourselves on having secured M. F. T. Verner to accept the chairmanship of our company.

A shareholder said he thought it would not be inappropriate if he were to say that those who had assembled on his side of the table, as shareholders, concurred in what Mr. Wells had said regarding the loss which the company had sustained

The Chairman: Gentlemen,—We have made a larger profit for the past year than in the previous two years, notwithstanding that the season has been unfavourable, and the early setting in of the cold weather has reduced our anticipated outturn. We have exceeded the 1901 crop by 93,057 lb., but are short of the quantity we produced in 1898 by about 30,000 lb. A steady maintenance of good quality has always been a prominent aim of the company, but it is not always possible of attainment when weather conditions are against good manufacture. We have not been entirely unsuccessful, as we have secured almost the same average as in 1901, while the whole district has fallen an eighth of a penny behind. The cost per lb. shows further steady reduction, and the savings are spread well over the various headings given on page 12 of the report. For this the local staff are responsible, and it reflects great credit on their efforts that they have succeeded so well in reducing expenditure to such a reasonable figure. The dividend recommended is the same as in 1899, and 2½ per cent. over 1900 and 1901. A substantial amount has been carried forward, and this is necessary, as the company is not too well supplied with working capital. During the past season consumption of Indian and Ceylon tea exceeded production by 4,000,000 lb., and indications point to a favourable turning to the long lane through which growers have been travelling. The shortness of labour is one of the great difficulties we have to contend with. I have touched on this and kindred subjects earlier in the day at a meeting of shareholders of the Empire of India and Ceylon Tea Company, and as a print of its proceedings will appear in the same paper as will report this meeting, I may, perhaps, be pardoned if I refer you to the paper which you will each receive. I now beg to move: "That the directors' report and statement of accounts for the year 1902 be and they are hereby approved and adopted."

Mr. Wells seconded the motion, which was carried unanimously.

The Chairman next moved: "That a dividend for the year 1902 at the rate of 7 per cent. per annum on the preference capital be and the same is hereby declared, and the payments made on December 31, 1902, and June 30, 1903, in respect thereof are hereby approved and confirmed; that a dividend for the year 1902 at the rate of 10 per cent. per annum on the ordinary capital be and the same is hereby declared payable of July 24, 1903."

Mr. C. Rawson seconded the motion, and it was agreed to.

Mr. Wells, in moving the re-election of Mr. F. T. Verner as a director, said it was unnecessary for him to say anything with regard to that gentleman's capacity for the post. Mr. Verner knew the Dooars thoroughly well; he was originally manager of many of the company's gardens, and had had a long experience in connection with the industry. (Hear, hear).

This was also seconded by Mr. Rawson and carried, and, on the motion of Mr. West, seconded by Mr. Wallroth, the auditors were re-elected.

A shareholder remarked that, reference having been made to the need for capital as one of the reasons for carrying forward a large balance, and seeing that the balance-sheet showed there was a loan of £20,000 from the Mercantile Bank of India, shareholders would doubtless be interested to learn whether it was the intention of the board to issue any new capital in the immediate future.

The Chairman: I do not think we have that intention at the present time. We can carry on very well as we are doing now. Later on, however, if a favourable opportunity should occur, we might raise some more capital by an issue of the preference shares which we have power to issue.

Mr. Seton moved a resolution expressing the regret of the meeting at the death of Mr. W. H. Verner, and tendering the thanks to the shareholders to the Chairman and his colleagues, as well as to the local managers of the company. Considering the times through which they had been passing, very great credit was due both to the management on this side and to those working for the company in the Far East for the performances of the past year, as shown by the report and accounts now presented. The local managers were deserving of special mention for having controlled their expenditure to the advantage of the company. Regarding the new chairman, Mr. Seton remarked that that gentleman knew a great deal about the practical working of tea gardens, and his services from that point of view would prove of considerable value to the company.

Mr. Christopherson, in seconding the motion, paid a warm tribute of respect to the late chairman, and also endorsed the remarks made by Mr. Seton regarding the wise selection that had been made in appointing Mr. F. T. Verner as successor to his brother.

The motion was unanimously adopted, and the Chairman having briefly acknowledged the compliment the proceedings terminated.

SINGLO TEA.

The eighth annual ordinary general meeting of the Singlo Tea Co., Limited, was held on Wednesday, July 22, at Winchester House, E.C., Mr. W. S. Wells presiding.

The Secretary read the formal notice. The auditors' report was also read.

The Chairman: It is my first and painful duty to officially inform you of the great loss that this company, together with the Empire of India and Ceylon and the Dooars Tea Companies, has sustained in the irreparable loss of our loved and respected chairman, Mr. W. H. Verner. This loss will be shared by everyone interested in the production of tea, as his experience and advice were always of great weight and importance. Mr. W. L. Thomas was elected to a seat on the board prior to the death of our late chairman. Mr. Thomas is largely interested in the company, and possesses an intimate knowledge and many years' experience of tea production and sale. While regretting that the results have not reached our expectations, the statistics annexed to this report for the past year will show you that the results are more satisfactory than in the two preceding years, and this has been effected, although prices throughout the year were disappointing and ruled against sellers, and the recovery during the spring only slightly affects the class of teas produced in Assam gardens. On the other hand, I am glad to be able to note that estimates of expenditure were fairly adhered to, and a further substantial reduction was made in the cost per lb. on the Assam gardens—namely, from 7.71 in the preceding year to 6.47 in the year under review. As you are aware, the revenue loss on the Assam gardens was shown in the report of 1901 to be £4,130 3s. 4d., and this you will find has been converted last year into a profit of £3,764 4s. 10d., and this notwithstanding the adverse circumstances to which I have already alluded. Unfortunately, instead of a credit balance of £209 17s. 10d., our Dooars gardens show a debit balance of £1,342 3s. 6d., due, I regret to say, to unfavourable weather and an insufficient labour force. It is true that complaint has been raised against the patent boxes supplied from London, but the poor prices obtained are only to a small extent attributable to this cause, and local made boxes will be used in the future. Mr. Moore is of opinion that the withering accommodation was insufficient during the height of the season. This has been remedied for 1903. In a letter dated June 18 the superintendent writes:—"We shall have all the challonies that the house can hold. We shall be well off in the four divisions as regards space and challonies." The board has good ground for believing that the company has turned the corner. The cost has been reduced to a reasonable figure, and the superintendent is confident that he will be able to produce better teas in the current year. The visible stock of Indian tea is less than it has been for the last three years, and it is a fair assumption that the surplus production has been absorbed. Foreign markets are taking increased quantities. Moreover, the difficulties of recruiting will further tend to the stoppage of extensions already brought about by over-production and low prices, so that we may fairly hope that the 1903 Indian crop will not be much in excess of the total average deliveries. Add to this that ½d. per lb. is being offered for the manufacture of Indian green tea, which should further relieve the black tea market. Mr. Moore has carefully inspected the Assam gardens during the past cold weather, and will give you his views of their condition and prospects. Our Dooars gardens are inspected periodically by Mr. Oliver, the resident superintendent of the Dooars Tea Company, and the expenditure is closely watched by Mr. Rawson, a director of the same company, who spends a portion of every year in the Dooars. The board hopes to see a material improvement in their outturn, although labour is very short. I now beg to move: "That the directors' report and the statement of accounts for the year 1902 be and they are hereby approved and adopted."

Mr. W. L. Thomas seconded the motion.

Mr. Fred. Gibbons: As you all know, I am heavily interested in this company, and, to satisfy myself as to the actual condition of the property, I have, with your board's permission, been out on a visit of inspection and investigation into the present condition and working of the gardens. I spent six weeks on the Assam gardens, making several visits to each division, and living with each manager, so that I could study him and his charge closely; and, although my time was limited, owing to prearranged London engagements, I did not hesitate, notwithstanding an Indian June, to visit and inspect the Dooars division. Your property as a whole is thoroughly sound; the soil is good, and the class of plant is also good, and had it not been for the wave of bad luck we have had in our local management, and other serious mistakes which I do not care to enlarge upon, you would have been receiving dividends both on your preference and ordinary shares. I was very pleased to find that Mr. Vaughan, our present superintendent at Singlo Assam division is a good man; and I look forward with confidence to his

administration of our Assam division. Since my return I have given expression of my practical knowledge and lifelong experience of your property to the board, and as a result, at their invitation, have met them to discuss matters in an amicable and friendly way. As a result of this meeting I may tell you—and I think it is mutual on both sides—that we have come to a better understanding, and that it will tend to unity and concentration of our united forces. Singlo Company, with all its past misfortunes—and they have, in all conscience, been many—I am confident will yet swing to the fore. We have good soil and good plant, and only want real, earnest and careful work put in to give our property a fair chance. Last year's economies of £10,000 are a move in the right direction; and this year, with anything like a decent average for our teas, we should show materially improved results. A penny in the £ on our outturn means £7,600 of income to us, and there should be no reason why a full preference dividend be not paid. On figures and facts it is quite possible. I may tell you that I have been buying shares in addition to those held by our trust—some £40,000, in which I hold a reversionary interest. Finally, I went out to your gardens at a great sacrifice to comfort—danger to health—at a critical time of an Indian summer, and at an out-of-pocket cost of over £200. My sole desire is protection of my interest, every respect for your board, and a determination to see that justice is done to the property and your interests. We look forward to good results this season from both the Assam and the Dooars division; but, should it be necessary, I will again, with your board's permission, visit, inspect, and take more determined action. Your Singlo gardens can pay, must pay, and shall pay.

Mr. George F. Moore then addressed the meeting on the subject of his recent visits to the gardens, dealing with the state of cultivation in which he found them, and with the labour question.

The resolution was carried unanimously. Messrs. J. F. Ogilvy and C. A. Verner were re-elected directors, and Messrs. Deloitte, Dever, Griffiths and Co. and Messrs. McAuliffe, Davis and Hope were reappointed auditors.

The meeting closed with a vote of thanks to the Chairman and directors.

NATIONAL TELEPHONE COMPANY.

The thirty-second ordinary general meeting was held on Thursday, July 23, at Hamilton House, Victoria Embankment, Sir Henry Fowler, M.P., in the chair.

In moving the adoption of the report and the payment of the dividends therein recommended, the president stated that, as usual when dealing with the June half-year, the accounts for the last two or three weeks had been estimated. The estimates, however, were always taken very much under the mark, and from what had transpired since the present report had been circulated the directors were fully satisfied that it represented the position of the company; in fact, the position was a little better than it appeared to be. The income accrued during the half-year amounted to £894,046, showing an increase of £70,803, compared with that for the June half of 1902. The working expenses had been £516,052, showing an increase of £38,020, a considerable proportion of which, however, was owing to the larger amount of business done. Their rates and taxes had also been more, but this had been the case with every one else, and there had also been a considerable increase in their policy of insurance. The advance in wages was owing partly to the general rise in wages and partly to the increase of 600 in the number of their staff, which was now 12,064. The net result of the half-year's working was a profit balance of £377,994. At their meeting six months ago he stated that the amount paid by the company to the Post Office for royalties was £154,000 for the year 1902, and for the past half-year they had had to pay £81,930, which was a heavy burden on their income. The profit balance was £32,783 more in the past half-year than in the corresponding period of the previous year, but as they had had to pay £6,165 more to the Post Office the net increase in the company's income was £26,618. The rentals carried forward for unexpired terms of running contracts amounted to £874,383, against £821,397 a year ago. The available balance of revenue was £239,748, out of which the directors proposed the payment of the half-yearly dividends on the first, second, and third preference shares, 6 per cent. per annum on the preferred stock, and 5 per cent. per annum, compared with 4½ per cent. hitherto, on the deferred stock. Some of the shareholders, while approving the directors' recommendation to pay an increased dividend of ½ per cent. on the deferred stock, had asked for more, but he could only remind them of what he stated at their meeting last February as to the importance of strengthening the position of the company by adding to the reserve fund. This half-year they were transferring £85,000 to that fund, compared with £70,000 a year ago, and, of course, this was a decided improvement. In his opinion, however, they ought to add £200,000 a year to the fund, for they were rapidly approaching 1911, when the company's term would expire. Their position was satisfactory both as to their plant and their staff. In the past half-year they expended on entirely new work £334,115, in addition to many thousand pounds more than the amount spent in the June half of 1902, in maintaining the efficiency and the full value of the existing plant. In a company like theirs everything depended on this being done, and as there was, perhaps, a more rapid depreciation in telephone plant than in many other plants, the directors intended, in order fully to maintain it, to continue to take large sums from revenue. The business of the company in London was increasing very considerably, as was also that of the Post Office, and the present arrangement justified what had previously been said at their meetings—namely, that there was room in London for the systems both of the Post Office and of the company.

The vice-president (Mr. George Franklin, Sheffield), seconded the motion.

Mr. Lea-Smith congratulated the directors on the report, and said that he regarded the increase in the dividend as very satisfactory, taking into consideration the larger amount which had been added to the reserve fund. He quite agreed that the strength of the company would be in this fund, and he therefore hoped that the directors would always add largely to it. At the same time he thought that the ordinary shareholders were a long-suffering body. In view of the risk they had undertaken in the past and which they would also have to run in the future he thought it would be allowed that a dividend of 5 per cent. was very moderate indeed.

The president, in reply, said that he agreed with a great deal of what Mr. Lea-Smith had said, but with regard to the question of dividend he maintained that the directors policy of strengthening the reserve fund should be pursued.

The motion was unanimously adopted.

NILE VALLEY COMPANY.

An extraordinary general meeting was held on Thursday, July 23, at Winchester House, to consider resolutions sanctioning an arrangement with Mr. J. B. Robinson, and other matters involved in the proposed scheme of reconstruction.

Mr. R. J. Price, M.P., who presided, said that the board had been engaged for some time in trying to transfer the property to the new and larger company registered two or three months ago. At the beginning of the year a satisfactory arrangement was concluded with Mr. Robinson, and they were all sanguine that it would be carried through in the exact form in which it was originally sanctioned. However, objections were raised to it by the Egyptian Government, who ultimately decided that the shareholders were obtaining too much. A subsequent arrangement was made, but this was refused by Mr. Robinson, and it came to an end. After much consideration the directors did not think it advisable to attempt to enforce the agreement by process of law. They then continued mining operations with, on the whole, favourable results; but a point was at length reached when it became imperative that something should be done to obtain further capital, because, besides the Um Garraiatt property, they had a concession over 7,000 square miles of country, the whole of which they had to accept or reject within two years from March 31 last. It was intended to send out at least two expeditions, and probably three, with a view fully to explore the whole of their extensive concession. Apart from the further funds required to work the concern, provision had to be made for permanent transport from the banks of the Nile to the mines. The board were aware that it was the wish of the shareholders to have the privilege of subscribing for the new issue of capital, and, therefore, in seeking to get underwritten the £40,000 which was considered a reasonable sum to start with, it was their intention to reserve to them the right of subscribing for the new shares. They applied to Mr. Robinson to know whether he would wish to have an interest in the undertaking, but, while refusing to have anything to do with supplying the new capital in that capacity, he made the proposal which was now before the meeting. As the result of careful consideration, the board came to the conclusion that, while on the whole Mr. Robinson was getting very good terms, it was probably in the best interests of the company to fall in with his views, although by doing so they were prevented from offering the new issue to the shareholders. He then explained the financial position of the company, stating that about £32,000 had been expended in Egypt, and that there had been received from crushings at the mine £13,557, exclusive of the latest return and the specimens in the London offices, worth about £1,000. The mining evidence of the value of the property, as a permanent producer, was good, and it was in the fullest confidence that the new company would be a great success that he moved the first resolution, which was to the effect that the agreements for the sale of the undertaking and assets to the Nile Valley (New) Co., Limited, should be approved.

Mr. J. E. Eastwood seconded the resolution.

A shareholder inquired what guarantee there was that Mr. Robinson would not refuse to carry out the new arrangements?

The Chairman replied that they had received from Mr. Robinson a deposit of £5,000. Answering further questions, he explained that the company had a thirty years' lease, with a 15 years' extension, of the Um Garraiatt mine, and a concession for two years to explore 7,000 square miles and mark out mining areas. When that was done, they would have two more years in which to mark out definite mining leases and take them up. The resolution was carried with one dissentient. The scheme for redistribution in the winding up of the assets and rights acquired by the company under agreements dated April 17 and July 14 last was also agreed to, and a resolution was afterwards passed for winding up the company voluntarily, with Mr. Joseph Pasfield as liquidator. Separate meetings of the ordinary and deferred shareholders were also held, at which the proposals were sanctioned.

UNION BANK OF AUSTRALIA.

The annual general meeting was held on Monday, July 20, at the offices, Cornhill.

Mr. Arthur Flower, who presided, moved the adoption of the report. He observed that in comparing the balance-sheet with that of six months ago, the features which would probably first attract attention would be that while the total figures of the balance-sheet were now higher by £1,000,000, the bank's advances and deposits both showed material increases—£400,000 and £700,000

respectively. The item of bank premises and property in the Colonies showed a reduction of about £8,000 consequent on the sale of a property in Queensland. On comparing the liquid and readily available assets with those of six months ago, it would be found that the specie on hand and cash balances in Australia and money at call and at short notice in London were less by £700,000 and £145,000 respectively; the balance of remittances and drafts in transitu was now higher by £1,460,000, while on the other side of the account the deposits and bills payable were higher by £690,000 and £304,000 respectively, the net result being that the present balance-sheet showed liquid and readily available assets to the amount of £8,478,000, which, after deducting £1,000,000 for investments allotted to the reserve fund, represented about 8s. 2d. in the pound of all the bank's liabilities in London and the Colonies, amounting to £18,413,000. The proportion of similar resources shown six months ago was 8s. Five new branches had been opened; these extensions were only made after careful investigation of the prospects of doing remunerative business. He was glad to be able to refer to the pastoral prospects at present ruling in Australia in a more hopeful spirit than had been the case for some years past. There were parts of New South Wales still suffe ing from insufficient rainfall, but, speaking generally, while losses of stock had been enormous, present conditions were certainly more favourable. It was hoped that further rains at the proper season would continue the improvement, and that a series of good seasons were now in store for Australian pastoralists. He thought that the shareholders had every reason to be well satisfied both with the condition and prospects of the bank's business. It was a matter of no small satisfaction to the directors to be able now to return to the reserve fund the last instalment of the £250,000 allotted by the shareholders in July, 1896, towards provision for debts considered to need it. In referring to this restoration of the reserve fund to the £1,000,000 at which it formerly stood, he desired to express the board's recognition of the promptitude with which their recommendation in the matter was met by the shareholders and of the entire confidence then displayed towards them.

Mr. W. Harris seconded the motion.

In the course of a short discussion it was suggested that in view of the improved position of the bank the directors' remuneration should be increased, and that definite proposals with this object should be made at the next meeting. The motion was adopted; and the general manager afterwards read the advertisement of the dividend of £1 a share.

NIMROD SYNDICATE.

An extraordinary general meeting of the Nimrod Syndicate, Limited, was held on Wednesday, July 22, at Winchester House, Old Broad Street, E.C., for the purpose of submitting the following resolutions:—"That the capital of the company be increased to £50,250 by the creation of 25,000 new ordinary shares of £1 each, to rank in all respects pari passu with the existing ordinary shares." "That the directors be and are hereby authorised to make such arrangement for the issue of such ordinary shares from time to time as they may think fit." Lord Ernest Hamilton presided.

The Secretary having read the notice convening the meeting,

The Chairman said: This is a special meeting called for a special purpose to do a certain thing, and, that being so, it had to be called in a hurry. He then dealt with the delays that had occurred in reaching pay ore in the Chuquitambo gold mine, and the progress of the work at the Atlin mine. These, although not bearing on the resolutions before the meeting, explained why the directors had not yet called the general meeting. Proceeding, he said, now I want to get to the real business for which you have been called here. You are called here in order to ask your sanction for the issue of 25,000 new shares, but these shares are not to be issued to the present holders for the following reason. We have made an arrangement with a very well known contractor—a contractor of high reputation and standing—to build thirty-five miles or thereabouts of railway which will connect the coalfield with the coast of Peru, and that contractor has agreed to take the whole of his payment for the building of that railway in shares of this syndicate. The contractor who has done this is a certain Mr. Phillips. He is a very well known man and is a contractor of great experience and very high standing. In addition to this he has the reputation of being an extremely shrewd man of business. I mention that in order to make a point of this, that this contractor does not agree to take all his payment in shares out of benevolence or from love of the Nimrod directors or the Nimrod shareholders. He does it because he is firmly convinced in his own mind, as a prudent and shrewd man of business, after investigating carefully all the facts and figures in connection with the enterprise, that this undertaking, when completed, will very considerably enhance the value of the Nimrod shares. Now, naturally you will be curious to know—it may probably be in the minds of many of you to ask—at what price these shares are going to be issued. Well, now, I want you to allow me to leave that question unanswered. I do not want you to press for an answer to that question. I think that is a matter which you must leave to the discretion of the directors, knowing that in their own interests as well as in yours they will do the best that possibly can be done for you. But if I may venture to say so, I really do not think it concerns you as shareholders as to what price we issue these shares at. What does concern you is this: What you want to know is whether by the issue of these 25,000 extra shares your holding in the Nimrod Syndicate will be increased in value or otherwise. That is all you have to consider in my opinion. To enable the meeting to form an opinion on this point the chairman then outlined the benefits which the syndicate would gain by the proposed line of railway, referring to the reports of the experts on which he based his statements, and closed his speech with the following remarks. All I have now to say is that we ask you to sanction the issue of these 25,000 shares, and we ask you to do that with confidence, believing as we do that in doing so you will greatly enhance the value of your present holding in the syndicate. In doing so you will double the capital of the company. If you take the shares at £7 you will capitalise the Nimrod Syndicate at something like £350,000. I therefore ask you to sanction this issue of shares, believing as I do, and believing as our very shrewd contractor does, and believing as I think all of you must believe now that you know the facts, that in doing so you will make the shares of the Nimrod worth considerably more than the figure at which they now stand. I now beg to formally move the resolution of which notice has been given.

The resolutions having been seconded by M. F. Lowry, were then put and carried unanimously, and the proceedings terminated with a vote of thanks to the Chairman.

This Prospectus has been filed with the Registrar of Joint Stock Companies.

The SUBSCRIPTION LIST will be OPENED on Monday, the 27th, and CLOSED on or before Tuesday, the 28th July, 1903.

The Burmah Oil Company, Ltd.

NOMINAL SHARE CAPITAL, £1,500,000,
Divided into 250,000 Preference and 1,250,000 Ordinary Shares of £1 each.

ISSUED SHARE CAPITAL, £1,156,670,
Consisting of

165,314 6 per Cent. Cumulative Preference Shares of £1 each (all fully paid)	£165,314
991,356 Ordinary Shares of £1 each (all fully paid)	991,356
	£1,156,670

EXISTING FIVE PER CENT. DEBENTURES, £100,000.

These are not secured by any charge, and will rank equally as regards the Company's liability for payment with the present issue, but are repayable at par at fixed dates, and will not be included in the annual drawings for redemption of this issue, or participate in the redemption fund, or have the benefit of the obligations and provisions of the Indenture aftermentioned.

ISSUE OF £400,000 FIVE PER CENT. DEBENTURE STOCK AT PAR.

Payable as follows—

On Application	£5 per cent.
On Allotment	£25 "
On 15th September, 1903	£35 "
On 30th October, 1903	£35 "

Payment may be made in full on allotment, in which case interest at the rate of 3½ per cent. per annum will be allowed on the amounts prepaid.

The Stock is redeemable at £105 per £100.

The rights of the holders of Debenture Stock and the obligations of the Company in regard thereto are set forth in an Indenture between the Company of the one part, and the Trustees for the Debenture Stockholders of the other part, dated the 21st day of July, 1903, and Schedules appended thereto. No mortgage or charge is to be given; but by the said Indenture it is *inter alia* provided (1) that the Company shall, on the stock being fully paid, grant a Bond constituting an obligation in favour of the trustees for payment of the amount of the stock and premium of £5 per £100 with interest; (2) that the Company shall redeem the whole Debenture Stock not later than 31st December, 1923, at £105 per £100 by annual drawings of not less than £20,000 of stock and until redemption thereof shall pay interest on the amount of the stock at five per centum per annum; and (3) that the amount due at any time in respect of the stock shall be a debt enforceable against the Company by the trustees on behalf of the stockholders in the event of default by the Company in its obligations under the Indenture and also in certain other contingencies. Right is conferred on the Company to redeem, at or after 31st December, 1908, the whole stock outstanding, subject to six months' prior notice being given of the intention to do so. The Indenture also contains a covenant, authorised by Ordinary Resolution of the shareholders, that, so long as any part of the Debenture Stock remains unredeemed, the Company will not either charge its property or borrow any sums beyond sums of such amount that the total amount borrowed by and outstanding against the Company at any time, including the amount of the Debenture Stock outstanding, will not exceed one half of the paid-up capital of the Company for the time being, and, even within that limit, will not borrow or secure the payment of sums borrowed so as to rank preferably to the stock now being issued. The Indenture also contains a provision to the effect that the stockholders shall not have any right of action thereunder against the Company except through the trustees.

The interest on the stock will be payable half-yearly on 30th June and 31st December, the first payment of the interest being on the instalments from the respective dates of payment thereof to the Company.

Arrangements have been already made under which £200,000 of this issue will be applied for at par, and of this £100,000 will be allotted in full. The balance of £300,000 will be allotted, as nearly as possible, *pro ratâ*.

The stock will only be issued, and will only be transferable, in sums of £100, and multiples of £100.

Trustees for the Debenture Stock Holders.

Offices.

Registered Office—45 Renfield street, Glasgow.
London Office—123 Bishopsgate street Within, E.C.

PROSPECTUS.

The Company, which was registered on 15th May, 1902, was incorporated for the purpose of *inter alia* acquiring and taking over as a going concern the undertaking and all or any of the assets and liabilities of a company (hereinafter referred to as "the old Company") registered under the same name in 1886, which had been working concessions of oil-bearing lands in Burma, and carrying on business as producers, refiners, exporters, and dealers in oils, paraffin wax, candles and other oil products. A copy of the Memorandum of Association is printed in the fold of the Prospectus and is to be deemed part of this Prospectus.

Of the issued shares in the capital of the Company, 800,000 Ordinary Shares of £1 each were issued as fully paid up to the Ordinary Shareholders of the old Company in satisfaction to the extent of £800,000 of the price payable to the old Company for its undertaking and those of its assets acquired by the present Company; and 106,670 Preference Shares of £1 each were issued as fully paid up to the Preference Shareholders of the old Company in satisfaction of the sums to which they were entitled as holders of the Preference Shares of the old Company.

In addition to owning extensive and well-equipped refineries and works and other buildings and ground connected therewith, and certain very valuable areas of proved oil-bearing land purchased outright, the Company is in right of a number of concessions and leases granted by the Government of Burma to the old Company, and has also, since its incorporation, obtained further concessions and leases of extensive areas. Under the concessions the Company has rights to prospect for and select land in an extensive area with the view of obtaining further leases of suitable land. The period for which the Government of Burma is at present granting such leases is thirty years from the date of selection. The leases already granted cover an area of over 36 square miles, of which extensive tracts have, as will be seen from Dr Redwood's Report after-quoted, been proved to be oil-bearing. With the exception of leases of areas amounting in all to less than 1½ square miles, which expire in 1910 and 1911, and areas amounting in all to less than 6 square miles which expire in 1917 and 1919, the existing leases have periods of from over twenty-three years to over twenty-nine years still to run. The leases are granted in consideration of payment to the Government of fixed rents or royalties.

The Company's businesses include:—

(a) The winning of crude oil.
(b) The refining of crude oil.
(c) The manufacture of paraffin wax, candles, and other oil products.
(d) The sale of illuminating and other oils, paraffin wax, candles and other oil products throughout Burma, and in India and other Eastern markets; and
(e) The export of paraffin wax and candles from Burma to the United Kingdom and the Colonies.

Within recent years the business has been very largely extended both in volume and in the sphere of operations.

The Company's plant and machinery is practically wholly of the most modern type and in excellent condition, and the Company owns several specially-built tank steamers for the conveyance to India and other Eastern markets of its oils (in bulk) and other products. The Company also owns tank installations for the storage and distribution of oil in a large number of the principal markets in India, which afford the Company a most efficient and economical system of distribution.

Notwithstanding the fact that of the areas of oil-bearing lands already selected only a portion has been developed, the supply of oil has outgrown the capacity of the Company's refineries as recently extended, and, in order to deal with the increased supply already available and to enable the Company to develop its concessions, the Directors have found it necessary to make further extensions involving enlargement of the works, the procuring of additional plant, and adding to the distribution installations. A commencement has already been made with these extensions and part of the cost has been paid. To replace this outlay, meet the additional expenditure and for further working capital, the Directors consider it advisable to raise a sum of £400,000 by the present issue of Debenture Stock.

The audited Balance-sheet of the Company, as at 31st December, 1902, showed assets as follows:—

Lands, buildings and machinery at refineries	£456,399 19 0
Oil wells and boring plant	413,216 15 0
Tankers and tank installations, launches and cargo boats	181,600 11 10
Stocks of stores and products	263.152 2 0
Investment at cost	55,016 13 4
Sundry debtors	82,685 7 4
Cash in hand and in bank	28,944 17 2
	£1,481,016 5 8
Deduct liabilities, including £100,000 Debentures	221,848 8 1
	£1,259,167 17 7
To which falls to be added the sum to be raised by the present issue of stock	400,000 0 0
Making in all	£1,659,167 17 7

Or more than four times the amount of the Debenture Stock now being issued.

Nothing was included in the Balance Sheet in respect of the concessions and leases.

The following is a copy of a report by the eminent oil expert Dr. Boverton Redwood, D.Sc., F.R.S.E., F.I.C., &c.:—

4 Bishopsgate street Within,
London, E.C., July 6th, 1903.

The Directors of the Burmah Oil Company, Limited.

Gentlemen,—In the capacity of your technical adviser it has been my duty for some years past to study the records of the work of development of the Company's oil lands, and I have thus had exceptional opportunities for forming an estimate of the value of the property.

A considerable proportion of the large area of territory embraced by the concessions has been from time to time carefully selected in the light of experience gradually gained by systematic exploitation.

Only a comparatively small portion of these lands has been fully developed, but the boring operations have been so conducted as to prove the oil-bearing character of extensive tracts.

In addition, the Company owns valuable producing lands and wells acquired by purchase from native proprietors.

I consider that you have already an assured production far in excess of your present refining capacity, and, further, that you have in your proved but as yet undrilled lands untouched stores of crude oil which will furnish you with adequate supplies to meet increasing demands for many years to come.

I am of opinion that the values assigned in the books of the Company to the lands, buildings and machinery at the refineries, to the oil wells and boring plant, and to the tank steamships, tank storage installations, &c., are reasonable.

It would not be possible, without expressing it in figures which might be regarded as extravagant, to give a definite estimate of the value of the Company's lands, but having regard to the market price of oil territories in other parts of the world, and taking into account the relative productivity, it may certainly be said in general terms that you have a property which is unique in character and so exceptionally valuable as fully to justify a far larger increase in the capital of the Company than is at present contemplated.—I am, Gentlemen, yours faithfully,

(Sgd.) BOVERTON REDWOOD.

The following is a copy of a certificate as to the profits of the business of the old and present Company for the last three years by Mr. Robert Alexander Murray, Chartered Accountant, Glasgow, who has acted as Auditor of the books of both Companies since the formation of the old Company:—

175 West George street,
Glasgow, 14th July, 1903.

To the Directors of the Burmah Oil Company, Ltd.

I have examined the books of the Burmah Oil Company, Limited (old and new), kept at the registered office, in which are incorporated the audited accounts sent home from Rangoon, and hereby certify that the profits of the business for the three years ending 31st December, 1902, have been as follows:—

For the year ending 31st Dec., 1900	£132,936 8 9
Do. do. 1901	185,841 5 8
Do. do. 1902	181,656 3 5
	£500,433 17 10

or an average annual profit of £166,811 5s 11d.

The above profits are arrived at after making allowance for depreciation and management expenses, but before charging Directors' fees or debenture interest.

(Sgd.) R. A. MURRAY, C.A.

The Investors' Review.

Capital-Swallowing South Africa.

Sir William Harcourt signalised his most welcome return to the House of Commons, after a long absence through illness, by delivering an effective criticism upon the South African borrowing policy of the present Government. It has always been great in credit juggling, and the occasion of the debate in the House of Commons on Monday night was the introduction of the South African Loan Bill, the total of which is £65,000,000. As has been often explained in these columns, £35,000,000 of this total is a loan guaranteed by the Home Government, the largest debt ever underwritten for any dependency by this country. Of that debt £10,000,000 is to be devoted to "recuperative" and development purposes, and another £14,000,000 or so goes to pay out the owners of the Netherlands Railway of the South African Republic, while various other sums disappear, principally in land jobbery and favouritism, in land settlement conducted in the spirit beautifully described from Lord Milner's despatches, and treatment of Boer prisoners in last week's *Speaker* by Mr. March Phillipps. But there remains a £30,000,000 loan to be issued for our special benefit, and it was to the conditions surrounding this part of the additional debt to be laid upon the annexed republics that Sir William Harcourt's criticism was principally directed. We are not supposed to "guarantee" that loan as a Government or imperial nation, but neither has it yet been endowed with any security from representative authorities in South Africa from anybody. There are no representative authorities there, the two republics being now crown colonies, ruled over by a despot of the name of Milner, under the orders of his masters the mine bosses. These bosses have given a sort of a kind of a promise to underwrite at least £10,000,000 of this coming loan, but nothing is yet settled. Negotiations are in progress, and bearing in mind that the Consol market went on strike last week for an indefinite period against underwriting of any sort, it seems by no means a far-fetched supposition that considerable difficulties are being encountered in getting this £10,000,000 genuinely subscribed. There will be haggling about the commission for one thing, and even if the rate of interest is fixed at 4 per cent. the bond will not be peculiarly attractive to markets in present circumstances. Moreover, they are a niggardly set those Johannesburg money, or credit, potentates, and lost their chance of getting their Johannesburg Town loan of £4,000,000 underwritten a fortnight ago by trying to dodge the payment of stamp duty to the Imperial Exchequer, such being the quality of their patriotism. When, finding no way of escape, they agreed to pay up, it was too late, the market was not doing underwriting.

Naturally, Sir William Harcourt drew the Colonial Secretary, who delivered a really ingenious harangue in his usual manner, full of confident predictions, vague generalities, subtle turnings of nasty corners, and abounding assurance everywhere. If we are to believe this great man, he considers our latest annexations "the most progressive countries on the face of the earth," if not just exactly at the present moment certainly in the near future. But he did not make things very clear or satisfactory about the additional loan, nor can confidence be inspired by his glowing anticipations of the magnificent revenues coming in the future from the wonderful development of the unrivalled resources of these great "steals." From the tone of his speech we should judge that he has not taken the time to study any portion of the masses of figures diligently compiled for his benefit by the mine bosses, against his semi-royal tour through South Africa. These statistics have been gathered together in a nice red portfolio tied up with a green ribbon, and are quite overwhelming in their mass and variety, duly printed, or "processed," by the Argus Company, which controls the greater part of the press of South Africa in the interests of De Beers. We have been looking into some of these figures out of curiosity, to try and find some basis for the astounding revenue estimates put forward by Lord Milner, and swallowed whole with his eyes shut by the Colonial Secretary. Including the net revenue from the railways the total income of the Transvaal is going to be £7,000,000 almost immediately, Mr. Chamberlain said and not merely £4,500,000, as set forth in the Milnerian estimate. Where on earth is this money to come from one year with another? We can perfectly understand that so long as tens of millions are being raised to be poured into the annexed lands revenue will abound, at least revenue of a certain kind. Also, if the mining companies are able to raise £50,000,000 of new capital, which they contemplate spending on their mines, new and old, during the next five years there will doubtless be a handsome income drawn from that expenditure by the railway companies and other industrial agencies or organisations in carrying materials, erecting new mills, building houses, and so forth, but none of these sources of income can be considered the product of the wealth of the annexed territories. The wealth is poured in from without, and it is highly questionable whether it will not soon produce financial embarrassment instead of abounding wealth. All human experience, at least, leads us to suppose that the rapid piling up of capital against the industry of any people, in the form of debt or otherwise, does as a rule end in mischief and in poverty.

Let us measure probabilities of the future by what has taken place in the past. Among the statistics got together in nice large figures for the illumination or befogging of

the Colonial Secretary, we have a table setting forth the total yields of the mines from 1884 down to the end of 1898, and in another table we get particulars of the cost at which the gold was won in the last year of the period. Dealing with the latest figures, we find that in 1898 the value of the gold extracted from the bowels of the earth was £16,240,630, a very excellent and cheering total. But it cost £10,086,215 to get this gold, so that the cost of production amounted to nearly 63 per cent. of the gross yield. Not a bad return, it may be said, and we do not question its excellence. It ought, perhaps, to have yielded more dividends to the shareholders than it did, but then there are lots of expenses to be met designed to enrich the directorial class, the bosses, the finance houses and share manufacturing agents, over and above the mere cost of getting gold out. And prudent managers look after sinking funds. What we wish, however, to draw attention to is the fact that fully £10,000,000 of the product of the mines was spent in 1898 within the Transvaal, or mostly within it. The money went to sustain life in the white and black workers, the former getting £3,486,000 and the latter, including their food, £2,069,000. The Transvaal had other resources then, in wool particularly, but now it is from gold mines alone that the revenue of the Transvaal must be drawn for a good many years to come. Mr. Lambert did not in the least overstate the drawbacks attending agriculture and pastoral pursuits within the country, and we know from the testimony of Lord Milner himself that the devastation perpetrated by our troops and their black allies during the war, has so crippled the country that a generation at least must elapse before the cultivators, flock masters, and shepherds can have any appreciable surplus to contribute to the revenues of the state, or to any other purpose. Settlers may be poured into the country, at a cost of from £3,000 to £5,000 apiece, paid out of loans raised in London, but these settlers will not be appreciable revenue producers for another five years, and it may be for another ten years. Some will never produce anything. Accordingly the government imposed upon the country by England has to depend upon the money spent by the mining companies for its revenue. Supplement the output of the mines by the millions borrowed, or otherwise raised in Europe, to be "dumped" in South Africa, and there will be a show of wealth for two or three years, but the mines alone, even at their fullest working, will never afford enough surplus to the community to warrant the expectation of a steady revenue to the State of £4,500,000. The State can only take the surplus left after subsistence has been furnished to the workers, and does anyone imagine that about 45 per cent. of the money spent by the mines in South Africa can be secured for the Treasury. Lord Milner builds great hopes upon the 10 per cent. tax upon mine net profits. Well, it would have amounted to about £600,000 on the profits of 1898, but it will take a good many years, even with the aid of Chinese or other Asiatic labour, to bring the gross yield again up to the figures of that year. It cannot be brought up at all by mere labour alone, however abundant. Capital has to be spent, £50,000,000 of it, the mine bosses estimate, during the next five years in order to bring the yield level with their dreams, and we may be quite sure that the bulk of the new mines to be opened up will for some time yield little or no net profit at all.

Do not let us forget, either, that such development as South Africa may attain to under the forcing system established by plentiful applications of loan money, the usurer's fertiliser, does not necessarily benefit the people, the community at large, it benefits the alien monopolists. Is it not the case that the whole meat trade in South Africa is now controlled by a De Beers syndicate? De Beers also controls the dynamite, and is seemingly on its way to get the whole internal trade of the territories occupied by our troops and administrators into its grasp. If the capitalists make their profit, where does the State come in? What has become of the freedom of the trader in Kimberley? Thoughtful electors might ponder over such questions against the coming general election, and there are quite a number of others calculated to perplex them, and to cause doubts in their minds about the supreme wisdom and foresight of Mr. Joseph Chamberlain. Our own opinion is that his policy, based upon prosperity by loan, will end in disaster as complete as that which has overtaken his policy of war and destruction. Whatever he touches he injures. He has no instinct, no competent faculty of constructive statesmanship, no prudence or forethought A creature of the hour; if he satisfies the demands of that hour he thinks he has attained his object. It is we unfortunately who have to bear the consequences of his dangerous and adventurous experiments in empire stretching and colony development, and we cannot but feel surprised that the country has not long ago wearied of his restless activity and volatile, irresponsible dashing hither and thither, catching up and dropping policies, his lures and sophistries, his blatancies and shallow moralities. Never once does a humane aspiration pass his lips, never the faintest trace of a high ideal. "Is there to be free trade in everything but labour?" he cried on Monday, when educating the House to accept Indian or Chinese coolies. Oh, no. There is free trade in nothing in South Africa, in white labour least of all.

Militarism the Evil.

By courtesy we still call our wonderful collection of ministerial specimens a "government," but it is really a no-government, an anarchy. The Right Hon. Joseph does as he pleases here, even as the Right Hon. Dick—whom he has never sneered at—does in New Zealand. Both are champion illusionists in figures, and both know of only one principle in political life—the principle which keeps No. 1 always in front. And the result of their never-resting, malign and malignant restlessness is confusion, the forerunner of anarchy. We are all at sixes and sevens, not only in regard to free trade and protection, but everywhere all absorbed, and therefore as easy a prey to the thief as a mob at a fire. When it is a question of perpetrating a money wasting job in the interests of a few West Indian landowners, we are the "yours to command" of the Germans, and surrender our initiative as a tax imposing state with the utmost readiness. But when the object is to "boom" land in Canada and decoy simpletons there in the interests of another knot of capitalists, who wish to multiply their already huge fortunes by further stock jobbing and market inflation, then Germany is the beast in Revelation. Were there no dangers for the country, for the miserable 40,000,000 who live in these islands, the sport afforded by Joseph and his bosses, the scope for laughter would be infinite. And the Germans, at least, do laugh. They can afford to, having fairly "got" us on sugar. They and the French can cheapen sugar to themselves at our expense under the convention. That is putting the boot on the other leg in a way that should please Sir Thos. Wrightson, whom we used to think a capable man of business.

The Germans laugh at our Joseph's tariff threats. "He cannot touch sugar for five years anyway," they justly observe, the British Government having tied itself hand and foot to give no preferential treatment to any sugar producing colony during that time. Bah! what does the brisk and rustling Joseph care? If the retaliation and revenge cry will not suffice to establish protectionism in this country, and bring Joseph out on top, he is ready to abandon it and play another card. And we must never forget that protectionism has got to come if anything approaching our present scale of ruinous outlay on the army and navy, with their "building programme" and "works" corollaries, is to be maintained. There lies the true strength of the Colonial Secretary's position, and the weakness of that held by those free traders in the party he is playing Old Harry with, and in the Cabinet he is doing his utmost to shiver in pieces, with his usual gentlemanly loyalty. In his thin, self-centred, narrow way, Mr. Chamberlain is one of the shrewdest of political wire-pullers, and no man understands better than he that there will soon be no more orders for Hoskins and Co., or many another Birmingham business, if the bills have always to be paid, as now, out of a high income tax, and, perhaps, augmented death duties. If militarism, that modern yet world-old leprosy of the soul, is to thrive on, to devour, the nation, it, above all else, must be "protected." The nation

must be coerced, or beguiled, into a system of indirect taxation, which will strip it, and yet hide from it the source of its impoverishment. Because this is the dominant necessity of the hour, Joseph is strong, and the sources of his strength in campaign funds—no small item—can be easily divined. Where would many a flourishing business now be in the iron and steel trades did the nation revert to commonsense and cultivate friendship and peace with its neighbours. Their creditors would have to take possession, and moum among the scrap heaps over money lost.

Because the peril is considerable to this kind of interest, for the country is growing restive under the "military glory" and "imperial splendour" fraud, the methods of the Brummagem politician are unscrupulous, and he is not going to be beaten by a mere exposition of free trade principles and the paying quality of free trade. We, like others, keep setting forth facts and illustrating the dangers of protectionism, but all the while in a kind of doubt whether the labour is not wasted. The multitude is so ignorant, the average business man so incapable of reflection, and the pride of empire has so corrupted the hearts of the masses—with the classes it is usually merely the outcome of that softening of the brain incident to a condition of decadence—that the instruction of an archangel would not keep them from plunging into folly. We feel, too, that so long as men like Lord Goschen, Sir Edward Grey, Mr. Asquith, Mr. Haldane, and other prominent free traders by conviction, uphold or subscribe to the fashionable pretentiousness of our latter-day imperialism, they are likely to get the worst of the fight. There is but one sensible attitude the nation can maintain towards so-called empire, the attitude of the prudent parent towards children who have married and set up independent homes of their own. Each such offshoot must henceforth make its own domestic budgets and stand on its own resources. Harmonious friendships can in this way be secured, mutual esteem, cordial helpfulness, and in this way alone. But that sensible form of imperial union does not please your modern jingo at all. He wants the union of the gun-handler, on murder intent, of hatred and suspicion. And the end is anarchy. Why, then, hesitate to fight the deadly and death-hastening insolent demon of militarism? Our true danger as a people industrious and peaceable, lies there, there also lies Chamberlain's real strength.

Notes from New York.

New York, July 21.

With regard to the United States Steel stocks, the opinion of one of the best informed and reliable men I know, is that at any price, the best thing to do is to sell. Neither stock represents any capital. The only actual capital in the corporation is more than covered by mortgage. He does not suppose that any of the twenty-five underwriters hold a share of the stock more than they were obliged to take in compensation for their services, and they hold it because they can't get rid of it. The company may continue to pay dividends for a while yet, but there can be but one ending to it—failure. Touching the financial situation the same authority says that the system seems to be attracting attention in high quarters, and may force itself into the campaign next year, notwithstanding all the efforts of the Republicans to keep it and the tariff out. The fact is the American financial system is very defective, and it would not be surprising if under given circumstances there were a suspension of gold payments.

One of the papers points out that money is got to capitalise trade amalgamations, even if all other borrowers are denied. Then the prices for the product are held at a figure which effectively prevents relief being obtained through the avenues of trade. This is so in a number of cases. Great economies are effected in the cost of production through amalgamation and reduction of personnel and current expenses, and then the price of the product is raised to meet the calls for dividends on all the varieties of stocks issued. The result is diminished consumption, and diminution of dividends earned, with a slump on the stocks in the market. No doubt this is one of the contributing causes to the present troubles.

The unreliability of the weekly bank statement is described by the New York *Evening Post* as fast becoming an absurdity. To an obsolete method of computation is harnessed a lack of any showing whatever for one large group of institutions concerned in the general credit movement. The result of this vicious system, it says, is a weekly statement which, aon July 11, reported $3,300,000 loss in cash, where none was really lost, and, on July 18, again of $6,000,000 where three millions was the actual limit. "This may," says the *Evening Post*, "be beautiful work in automatic compensation, but for a document drawn up to show the condition of a great money market, it is about as useful as Russian government budgets." I mention this to show that too much confidence must not be placed on financial statements and returns emanating from this side as bases on which to form a judgment for financial action on your side. Your conclusions must necessarily be vitiated by the faulty premises on which they are founded. I refer, of course, to the case of investors, not Stock Exchange gamblers; for them, sufficient unto the day is the evil thereof.

The immigration returns for the fiscal year ended June 30 make a very remarkable showing. The number of immigrants who landed on our shores was 921,315, an increase of 190,517 over last year, and the largest number on record. Of these Europe furnished 814,507, of which 206,011 came from Austria-Hungary; 230,622 from Italy; 135,093 from Russia and Finland; 46,028 from Sweden; 40,086 from Germany; 35,310 from Ireland; 26,219 from England; and 24,461 from Norway. Japan sent 19,968; the West Indies 8,170; and Asiatic Turkey 7,118. This is a valuable addition to the population of a country where the average native family, as recently described by a well-known writer, consists of a man, his wife, and a pug dog. There is, however, a serious danger in this inflow of population at the present moment. In the event of an economic and financial crisis, great masses of this new and largely unskilled labour would be thrown out of work and, not improbably, would refuse to starve without making some effort to procure food. Several of the papers commenting on the subject call on the government to raise the barriers against the flood.

In Canada there seems to be considerable agitation arising out of the railroad-and-industry-bonussing and subsidising policy of the government. The people who are paying for all the extravagance of the Laurier Government are beginning to kick against it, but as yet they have not learnt to vote against it. As in this country so up there, political life is utterly corrupt, and in French Canada the people are so ignorant and easily led, that they are a permanent prey to the scheming and little scrupulous politicians and their hangers on. The resignation of the Minister of Railways and Canals, Mr. Blair, following on that of the former Minister of Public Works, Mr. Tarte, are only symptoms of the disintegration at work in Canadian politics, and I hear that Sir Wilfrid Laurier is losing his grip on the situation. The best hope he has of retaining power is in unlimited expenditure of borrowed or any other money. Mr. Joseph Chamberlain's pressure on the government for contributions in money or men, or both, for imperial purposes, is also causing difficulty for the government, as the majority of the Canadian people are far from being in sympathy with the imperialist policy.

All who knew him and were accustomed to do business with him will learn with genuine regret that Mr. Willie A. W. Scott, of the old and well-known Stock Exchange firm of Shepherds, Pelly, Scott and Co., for the last fifteen years broker to the Ind a Council, died last night from the effects of an operation at the early age of fifty-five. His courtesy, straightforwardness, and uniform readiness to give all the facts available to the Press made him universally popular amongst City journalists, and he was equally so with those who met him in the course of his everyday business on the Stock Exchange and in the money market. His untimely death has evoked wide and general regret. Mr. Scott's family has long been connected with India, and he himse'f succeeded his uncle as broker to the India Government. Unless we are mistaken his grandfather was in his day broker to the old East India Company, and also a member of the firm of Scott, Corthorn, and Scotts.

Economic and Financial Notes and Correspondence.

Furness, Withy and Co., Limited.

A great business is that done by this company, and its year closed April 30 last really shows wonderful results, all things considered. In their report the directors state that rates of freight have been low and unremunerative, but, on the other hand, the income from the other departments of the business and from investments has substantially increased. They state the entire income at £515,261, but that includes £250,000 received as premiums on 500,000 ordinary £1 shares, issued at 50 per cent. premium. The real net profit is accordingly £265,201, or after charging directors' fees, interest on the debenture stock, dividend on the preference shares, and quarterly dividends at the rate of 10 per cent. on the ordinary shares, £110,552. Adding in the balance of £33,724 brought forward, we get £144,276, out of which £50,000 is placed to reserve, bringing the total up to £1,000,000, and £25,000 to the insurance account, raising it to £125,000. This leaves £69,275 to be carried to the new account, the whole of the premiums on the new shares having been added to the reserve, in addition to the £50,000 just mentioned, so that in the year it received actually £300,000. There is no mention of any depreciation on the properties, which figure for very large sums, steamships, freeholds, leaseholds, buildings, dry dock, machinery, plant, stocks and work in progress at shipyard, investments in steamships and shipping companies huddled all in one amount at £1,557,443, and investments in Government and railway securities and industrial companies reach £1,304,223. These are very large figures, on much of which the writings off ought to be severe, but probably the directors think that the splendid provision made, in part really out of capital, to insurance funds is quite ample. The company also owns, in the form of bank deposits, loans at interest and cash and bills in hand, £535,610, and had at the date of the balance-sheet £70,006 in hand in cash, after allowing for £44,017 in dividend warrants, issued on April 30. That is an excellent position, but its floating debt to creditors of various descriptions, including £417,135 on bills payable, foots up at £608,358, while sundry debtors owe the company only £165,951. This implies a large amount of financing in the course of the year. The net profits we make out to have been about £91,464 less than in the previous year, but if business revives that decline will doubtless be made good.

Watney, Combe, Reid and Co.

According to the report of the directors for the year ended June 30 last—a report still rather kept away from the press—the net profit came to £552,679, "after making full deductions for bad and doubtful debts and depreciations." This shows an increase of £15,715 on the profits of the preceding year, and allows the directors to again pay the 4 per cent. dividend on the preferred ordinary stock, together with 2 per cent. on the deferred ordinary stock for the year. These two stocks each amount to £3,185,410 issued, and the total capitalisation of the company, including £6,000,000 of 3½ per cent. debenture stock, is £14,710,820. In addition to this, however, the company owes £256,391 on deposits and the interest due thereon, besides £101,887 to sundry creditors. Altogether, including an insurance fund of £31,747 and a reserve of £70,000, the liabilities of the company mount up to £14,967,211. This is altogether exclusive of the balance of profit and loss, but after paying the final dividend that is only £18,927, which is the sum carried to the new year. The accounts are still peculiar, and anything but suggestive of financial stability. We should like to know where the money stuck down as "reserve against contingent losses" is to be found. It amounts to nearly 10 per cent. of the loans and interest, customers' accounts and rents owing, the total of which is £5,759,092. A year ago that total was larger by £104,455, and the sum reserved just mentioned is now bigger than it was a year ago by £43,941. How these changes are reached we have not the least idea, nor where the money is, and the same remark applies to "provision for discount and collection £30,949." The amount cannot all be in cash in hand, which only stands at £224,658, but perhaps it is in the investments, which apparently cost £404,699, and against which there is a depreciation reserve of £38,573, or in the trade investments at cost, £300,546, against which no depreciation appears to be allowed. On this question of depreciation we also want more light.

The amount entered in the profit and loss account for repairs, maintenance, and depreciation of brewery premises and plant is £26,784, and there is a further entry of £67,965 against repairs and depreciation of freeholds and leaseholds. Adding these two and the £29,500 applied, £20,000 of it to the ordinary reserve and £9,500 to the investment reserve, all together we find that the whole amount is not equal to a depreciation allowance of 1 per cent. upon the net capitalisation of the properties and investments after allowing for the reserves against contingent losses, provision for discounts and collection, and reserve for depreciation on investments. This cannot be good finance, whatever it may be. A year ago it was stated in the customary directorial language that the profits were so much "after making full deductions for bad and doubtful debts," but it seems that "full" was not enough, because £12,018 appears in the profit and loss account for the past year as provision for old bad debts in excess of the amount allowed twelve months back, and the sum reserved for doubtful debts and loans on the past year's account alone is £77,984, so that altogether £90,003 had to be written off on this account from the year's business, and in addition £6,002 had to be written off value of lost licenses, licenses the renewal of which was refused. It is to the good that so much money has been taken out of the current earnings for such purposes, but the figures suggest considerable wastage, and emphasise the inadequacy of the provision for depreciation upon a business so evidently speculative. There are in all ten directors, and they divide amongst them £17,500 as fees, which seems a liberal provision, notwithstanding the magnitude of the business done. It should perhaps be added that the auditors, Messrs. Chatteris, Nichols and Co., put a qualifying clause in their certificate, in which they express the opinion that the balance-sheet is "properly drawn up so as to exhibit a true and correct view of the company's affairs as shown by the books of the company," but add that this is "subject to further depreciation in value of the investments in stocks and shares held by the company." We should think it was also subject to further depreciation upon the brewery buildings, freeholds, leaseholds, copyholds, goodwill and utensils. The stock of beer, casks, malt, hops, horses, forage, coals, isinglass, building materials and sundries stands at £328,155, not a heavy total for such large undertaking. It is, in fact, rather hard-up looking, as we might expect when the "water" in the capital is quite Yankee in its proportion to the solid matter.

The Australasian Budget.

It must be distinguished from the budget of the several colonies. In his capacity as Federal Treasurer, Sir George Turner told a quite pleasant story on Tuesday last to the Commonwealth House of Representatives in Melbourne. In the year closed on June 30 the total revenue of the federation was £12,105,878, of which no less than £9,685,153 came from Customs. This total showed an increase of £535,774 on the preceding year, but that was due principally to Customs duties on cereals imported owing to drought; therefore it was an indication of Australian poverty not of growing wealth. Sugar duties yielded £61,537 more. Expenditure came to £3,901,759, the bulk of the revenue being handed over to the various states of the federation in pre-arranged amounts. In the current year Sir George Turner does not expect to receive so much. He puts the estimated revenue at £11,566,175, of which £9,107,000 is expected from Customs, or £578,153 less than the yield for the past year. On the other hand, the estimated federal expenditure is put at £4,320,449, or an increase of about £419,000. This total includes £791,545 allocated to defence, the federation having sketched out a plan for an Australian army, with guns and all the rest of it. Owing to the increase in the federal expenditure, and the diminution in the anticipated

revenue, it is calculated that the amount to be assigned out of the income to the various states will be only £7,251,464, which is a decrease of £948,993 on the total so handed over in the past year. That does not open up a pleasant prospect to the various state governments, and the fact should certainly stimulate them to efforts at economy.

A Wireless Lull.

Shareholders in Marconi's Wireless Telegraph and kindred companies have not been favoured with much news lately regarding the progress made with the invention which all the world has been told will revolutionise the system of despatching messages across oceans and continents. No words now come through space to the King, the *Times* no longer receives its wireless "cable," and the latest we heard of Signor Guglielmo Marconi was that the state of his health necessitated a long abstinence from active labour. It is to be assumed, therefore, that the immediate publication of the rates at which commercial messages will be despatched need not be anticipated, and meanwhile proprietors may like to know to what extent some of their fellow shareholders are interested, and also the directors. We have, therefore, drawn up the following lists, and they certainly form an interesting study. It will be noted that the famous inventor indulged in a little "profit taking" during the year which ended on April 14 last. Note the confidence displayed by Mr. Henry Cuthbert Hall, the managing director of the parent company, and most of the directors of the Marine Communication Company, as exemplified in the holding of the bare qualification to entitle them to act. The present price of Marconi £1 shares is about £2. They have been over £4:—

The Art Collecting Zeal of Lord Curzon.

Surely that story about the Maharajah of Benares' suite of ivory furniture, told in Thursday's *Daily News* by Mrs. Smeaton cannot be true. We do not cast the slightest doubt on that lady's veracity, but cannot bring the mind to believe that Lord Curzon of Kedlestone, Viceroy of India, the representative of England's honour, would have descended to such a depth of meanness as she describes. There must be some other explanation. The official story is that his lordship offered to buy the suite, and that the Maharajah thereupon presented it to him. A man in his position had no business to express any such desire, or to accept any such present. But Mrs. Smeaton says another story was told to her while she rested a day at the Maharajah's guest house at Benares. "His Divan (Minister), who received me, apologised for the bareness of the state room, explaining that the fine old suite of carved ivory furniture, presented to an ancestor of the present Maharajah, as reward for services to the British Government, had been taken by the Viceroy, who had intimated his desire to possess it. This, to a native gentleman, is equivalent to a command, so the Maharajah received 'in exchange' a rifle (which a well-known sportsman in the district valued at about thirty guineas), and sent his heirloom, at his own expense, to Calcutta." Mrs. Smeaton adds that she subsequently saw part of this precious heirloom which the Maharajah "was most reluctant to part with," under repair in the School of Art, Calcutta, and Mr. Haxell, the superintendent, declares "the exqui-

site painted engravings to be unique, and though said to have cost originally £1,000, to be now practically priceless." This is the furniture valued by Lord George Hamilton's expert at £100. The gorge rises in loathing at such a story, and if the Home Government does not insist upon the return of the suite to the Maharajah forthwith, it will be art and part in what wears the appearance of a most mean and reprehensible abuse of power and privilege. And the effect upon the minds of the native princes of India is easier to imagine than to describe.

The Eastern Telegraph Company's Meeting.

Many interesting statements were made at the meeting of the Eastern Telegraph Company, held on Wednesday last, and the sum of them in that in spite of, or perhaps because of, a reduction in the rates charges for messages the company continues to prosper. During the half-year ended March 31 last, the traffic between Europe and India was carried on at 2s. 6d. per word, a reduction of 1s. 6d. on the previous charge. For three months of the half-year, that is to say from January 1, the messages between Europe and South and East Africa were conveyed at 2s. 6d. per word, instead of 3s., and in spite of these reductions, and of the competition of the British Pacific cable, which existed for about four months of the year, there was an increase in the gross revenue, as our analysis of the report showed. Expenses also grew, they increased about £13,000 in the past half-year, but additional services are rendered to account for part of this increase, and on the whole the position of the company seems to be in no sensible way hurt by the adverse circumstances with which it has to contend. It has now, indeed, to fight a United States cable in the Pacific, which touches Manila, and will soon extend to Shanghai. That cable commenced business on the 25th ult., and its competition reduced the rates by 1s. 1d. between Europe and Hongkong, and 1s. 2d. between Europe and Macao, and 1s. 2d. between Europe and other places in China. The rate to Formosa fell 1s. 4d. to 4s. 10d., and to Japan and the Corea 2s. 1d. to 5s. 8d.; then to Luzon, in the Philippines, the rate came down by 1s. 4d., to 5s. 4d., and to other islands in the Philippines also 1s. 4d., to 4s. 10d. These reductions, as the chairman, Sir John Wolfe Barry, pointed out, will doubtless affect the earnings of the associated companies, and especially the Eastern Extension, but we agree in thinking that in the long run the cheaper terms on which messages can be sent will benefit not only the public but the companies. Altogether, the shareholders had no reason to be dissatisfied with the statement laid before them. It was announced that in view of the desirability of keeping to the forefront of scientific developments in cables and cable instruments, Sir Oliver Lodge had been appointed consulting scientific adviser, and the appointment was heartily ratified by the meeting. Marconigrams do not seem to have disturbed serenity at any point.

The Union Bank Meeting.

Mr. Felix Schuster's speech at the half-yearly meeting of shareholders in the Union of London and Smiths Bank held on Wednesday was of the usual thoughtful and interesting description. The speaker dwelt upon the satisfactory fact that exports have been growing of late, so that the at one time alarming looking excessive amount of the excess of imports over exports was being sensibly diminished, but the most valuable part of his address was that devoted to a vindication of the free trade system under which our altogether unrivalled banking and mercantile business is carried on. He rightly pointed out that if any interference took place, not only with our position as the banking and financial centre, the clearing house of the world's trade, but with the policy of the open ports, incalculable mischief might arise. It was, he said, through being the centre of the world's commerce that we had become the world's clearing house. Second only in importance to our supremacy as international bankers, was our position as the carriers of the world's goods, and the whole economic condition of the country depends on the supremacy and maintenance of our shipping industry. He reminded his hearers of Mr. Gladstone's saying, a saying we should partly endorse, that we should only fear American competition when America adopted free trade, and, altogether, delivered an address which ought to be of great value to those who are fighting against the restless passion for change, at no matter what cost, that now appears to afflict so many of our politicians. This attitude does not imply unfriendliness to our colonies, but the very reverse. The fact is England ought to be friendly with all the world, and in proportion as she ceases to be so she must suffer.

Mr. Horace Lyall's Verdict.

It was surely a remarkable judgment and a remarkable finding by the jury, but we make no complaint. The jury, one of its members declared, took the true jingo view that "it is necessary to keep those black creatures down, you know, as they have a tendency to get out of hand." What connection this view of "our duty as Englishmen" had with £250 damages to Mr. Lyall readers must guess for themselves by help of the condensed report of the proceedings printed in this issue. A verbatim report would have been clearer still, but that would have been an infliction we have no right to ask readers to undergo. The only interesting point not sufficiently brought out is that a majority of Mr. Lyall's fellow countrymen in Calcutta took the same view of his deeds as the Middlesex jury, and not only petitioned Lord Curzon to remit the sentence passed upon him by the two judges of the High Court, a petition his lordship denied, but got up a subscription, placed in the hands of Messrs. Finlay, Muir and Co., to pay his fine. One thing will always remain with us, sweet in the memory, the admirable ability and energy with which our counsel conducted our defence.

Critical Index to New Investments.

*** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Charles Marsden and Sons, Limited.

This company takes over from Mr. James Marsden the business of paper manufacturers carried on at London, Tamworth, Barnsley, Calder Grove and Sheffield. The capital is £170,000 in £1 shares, and £80,000 in 5 per cent. first mortgage debenture stock, but only the latter is offered for subscription at par. Of the shares 168,400 are taken by the vendor, and in addition the company pays off charges on the properties amounting to £51,818 and liabilities of £24,681, making a total purchase price of £244,899 for freehold and other properties, plant, etc., valued at £181,554, stock in trade and new stores £35,828, and book debts guaranteed at £27,517. Profits for the five years ended September 30, 1902, are certified to have amounted to £57,552, or an average of £11,510 per annum, after charging an average of £7,268 per annum for repairs and upkeep, but whether the annual change has been one of progression or retrogression the auditors keep to themselves, and under these circumstances the debenture stock may well be left to Sheffield or—the underwriters.

Provincial Consumers' Ice and Supply, Limited.

Just about a year ago a prospectus was issued of the Brighton, Portsmouth and South Coast Ice and Cold Storage Company, which was formed for the purpose of manufacturing pure ice for Brighton, Portsmouth, and the surrounding districts, but whether or not it proved a success we cannot say. Now this undertaking comes along with an almost similar proposal, except that it does acquire one or two businesses, and has something more than options as a groundwork. The company is an amalgamation of the business of Thomas and Mowat, Limited, Southampton and Portsmouth, the Pure Ice Manufactory, Northam, Southampton, the Kent and Sussex

Pure Ice Company, Limited, Brighton, and the ice business of Larkin and Co., Brighton, and has a capital of £100,000 in £1 shares and £50,000 in 5 per cent. first debenture stock, of which 66,667 shares and all the debenture stock are offered for subscription. The properties acquired are valued at £59,028, and with £2,928 for horses, rolling stock, implements, etc., the total valuation of the assets is brought up to £61,956, while £53,044 more is put down for goodwill, making a total of £115,000, of which £33,333 is taken in shares, £65,000 in cash, and £16,667 in cash, debenture stock or shares. No proper profit statement is made, as some of the businesses taken over do not appear to have kept accounts, but Thomas and Mowat, Limited, in the three years to December 31, 1902, earned £4,220, £5,375 and £5,174, or an average of £4,923 per annum before deducting directors' and managing director's remuneration or interests on borrowed money. To this figure are added £3,000 for estimated profits, based on statements made by Larkin and Co. and the Kent and Sussex Ice Company, £5,000 for expected saving in expenses by the amalgamation, and £2,700 to be derived from the outlay of £25,000, if subscribed, on an ice factory at Brighton. On this method of reasoning the future profits are calculated at £15,623, whereas only £3,500 would be required for debenture interest and redemption fund of £1,000 per annum. The scheme is hardly one to grow enthusiastic over, except perhaps when the investor is also a resident and possible consumer in the places it is sought to benefit.

Southern Punjab Railway Co., Limited.

This company already has an issued capital of £966,000 in ordinary stock and £500,000 in 3½ per cent. debenture stock, and now offers £500,000 in 4 per cent. cumulative preference shares of £10 each, which will be converted into stock as soon as possible. The funds are required for an extension of the line, sanctioned by the Secretary of State for India in Council, commencing at McLeodunge Road and running through Fazilka and Ferozepur to Ludhiana, a distance of about 153 miles. For the past three years the net annual earnings have been £51,913, £64,886, and £57,594, averaging £58,131 per annum, to which is added the return on the new line, estimated at £30,000 and against this is placed the prior charge of £17,500 on the debenture stock.

Passing Events.

If Mr. Chamberlain stated the truth in his speech on Thursday night with regard to the diamond "finds" in the Transvaal, viz., that six-tenths of the profits from working the claims will belong to the State under Lord Milner's regulations, we shall withdraw our opposition to the new ordinance, De Beers or no De Beers. But the Right Hon. Secretary habitually displays such a whole-hearted and contemptuous ignorance about things South African that we dare not accept his assurances without confirmatory proof. All through his speech in fact, he made the most astounding assertions, many of which could be excused on no conceivable ground save that of ignorance.

The construction of the first section of the Baghdad Railway is said to have been commenced on Tuesday. We cordially wish the enterprise success in every respect. In the hands of the Germans it should do more to bring back peace and civilisation to Asia Minor, and to rid that part of the world of the blight of the Turk than a hundred years of war and diplomacy.

Until we read his effusion in last Tuesday's *Daily Mail*, we never heard of Professor Cramb, M.A. We regret this, as he appears to be a grand specimen of the hysterical imperialist, and for this alone worthy of cultivation. "Stern and high Destiny" is the messenger calling the nation to endure conscription and the bread tax; but the nation "hugger-muggered"—the word is the professor's—over the first message, and bids fair to do the same over the second. Shades of Sulla, Cæsar, Cromwell, Bismarck, what is the nation thinking of to allow the voice of the messenger of fate to pass unheeded? Still we have the hysterical professor and the *Daily Mail* to shriek the warning unceasingly in our ears. A thought, is he a relation of Dumb-Crambo, Junior.

"Those dock directors were too clever by a lot," the disappointed bulls of London Docks deferred are now hinting. "They were too cocksure about that dock purchase bill of theirs, thought it would go slick through and give every man par for his deferred on the strength of just one 4 per cent. dividend. It took all the sweepings to pay it, and now the beggars are £30,000 short in their revenue compared with this time last year." Yes, and worse than that friend. The bill is going to be a slaughtered innocent—one of Balfour's abandoned babes.

Mrs. Emily Dale at the close of a pungently worded letter in Thursday's *Liverpool Daily Post*, expresses the opinion that "our clergy might also teach those of us who desire dearer food, to invoke our Heavenly Father not only to give us our daily bread, but to give it to us dear." That view of the matter seems to deserve attention from the bench of bishops.

Mr. T. A. Coghlan, the eminent Government Statistician to the Government of New South Wales, has compiled an essay on the decline of the birth-rate in that colony, and in the Australian colonies generally, which is of the highest possible interest. The statistics are sifted and arranged with admirable lucidity, and the subject discussed from every point of view in a spirit of fairness, and with an anxiety to get at the truth. We have no space at present to go into details, but the following concluding paragraph in the essay is well worth attention of those who are dreaming of a great empire in the southern ocean:—

> Large as is the area of the Australian continent, it is impossible that its people will ever become truly great under the conditions affecting the increase of population which now obtain. Immigration has practically ceased to be an important factor, the maintenance and increase of population depending upon the birth-rate alone, a rate seriously diminished and still diminishing. No people has ever become great under such conditions, or, having attained greatness, has remained great for any lengthened period. The problem of the fall in the birth-rate is, therefore, a national one of overwhelming importance to the Australian people, perhaps more than to any other people, and on its satisfactory solution will depend whether this country is ever to take a place amongst the great nations of the world.

What is the matter with Robert Stephenson and Co., Limited? The shareholders are being pestered with circulars from the board urging them either to attend the general meeting called for July 31, or to send their proxies to the board. "It is absolutely imperative," the directors assert, that power should be given to them to borrow another £100,000 for the company forthwith. The debt is now £250,000, and they want to make it £350,000. At least, the extra £100,000 is all they want now, but the resolution to be passed plainly hints that more demands may follow. Have the bankers called in temporary loans? Does the Pease estate figure as a creditor of the company? Why ask. To borrow nowadays means to show "enterprise"—to borrow and then to demand "protection" for the usurer-gnawed industries in danger of death.

Cordoba and Santa Fé bondholders do well to protest, always to protest. They may in time get something, and they deserve it. But it will not be with the help of our present Government. If its great man has his way Argentina will soon be furnished with a good pretext on which to found a repudiation of all its obligations. "You shut out our wheat, wool and mutton, then we can't pay you anything." Sweet prospect, is it not, dear decadents?

It is unfortunate that the applications received for shares in the Manchester and Liverpool Electric Express Railway Company were insufficient to guarantee the successful completion of the undertaking, but the directors have undoubtedly taken the right course in deciding not to make any allotments at present. The project may be only temporarily postponed, as arrangements for the provision of the full resources required are under consideration. Times are, indeed, untoward for new enterprises.

Underwriters of Mr. J. P. Morgan's Mercantile Marine combine have paid up the last £1,000,000, for which they are liable, making £10,000,000 in all. What may happen when that money comes to an end, who shall say? Or has it been already all absorbed by vendors and others?

Lyall v. Wilson.

This was an action for libel tried before Mr. Justice Bruce and a common jury on July 30, the libel appearing in the INVESTORS' REVIEW on September 27, 1902. Mr. Robert Wallace, K.C., in opening the plaintiff's case, said the plaintiff was the manager of certain tea gardens in Assam, having under him several thousands of native workmen. Put shortly, the libel alleged against him that he had recently been convicted of the manslaughter of one of the natives under his care and protection as manager. It was further said that this conduct of his was an illustration of what went on in connection with tea gardens, and was a sample of the style of treatment which prevailed in the tea gardens of Assam, and especially in connection with the tea gardens of Messrs. James Findlay, Muir, and Co., of Glasgow, and comments on the conduct and the management of those particular tea gardens followed. The INVESTORS' REVIEW had been engaged for a long time in a controversy in connection with Sir John Muir and his firm, and use had been made of the plaintiff's name and position in connection with the matter to attack Messrs. Findlay. What happened was that twelve months before there had been a disturbance in a tea garden between two of the coolies employed there. Mr. Lyall, as manager, had done his best according to the statement of his counsel to put it down. As the result of the disturbance, Mr. Lyall was prosecuted for permitting a riot to take place, and as it was alleged for assaulting a coolie. The case was tried before Mr. Emerson, the District Sub-Commissioner and a mixed jury, partly white and partly native, and after hearing the evidence of the coolies, the jury unanimously acquitted Mr. Lyall of the charge made against him. The Commissioner in Assam was a Mr. Cotton, and it was said he had taken a decided line in connection with the controversies that were going on between the whites and the blacks in the neighbourhood, and had for a long time been raising the question of the wages of the coolies. Mr. Emerson, the gentleman who presided at the trial, was the Sub-Commissioner under him. Mr. Cotton was not satisfied with the verdict of the jury, although two out of the five jurymen were natives. Under the Indian code he had the whole of the proceedings sent up to Calcutta to the High Court, and the depositions, with the result that the judges of the High Court, without hearing further evidence, convicted Mr. Lyall of an assault, and sentenced him to one month's simple imprisonment and a fine of 1,000 rupees. Mr. Lyall applied to the Viceroy to be released, and Mr. Cotton opposing the application, it was unsuccessful.

Mr. Horace Lyall was called in support of the opening statement of his counsel, and said that he had been employed by the Chubwa Tea Company as manager, the particular plantation in question belonging to them, and not to the Consolidated Tea and Lands Company, or to Messrs. Findlay, Muir and Co. Dealing with the occasion of the disturbance amongst the coolies, he said that he was riding round the garden on horse-back. Having ridden among the coolies and seen their work, and nothing having happened, and there being apparently no excitement at all, he rode on to another part of the garden, and about half an hour afterwards a man came running up to him and said that the head man had been assaulted. He immediately rode back to the scene of the occurrence and found the head man sitting under a tree bleeding profusely and covered with mud, having been assaulted by the coolies. These coolies had disappeared, having gone back to their houses, from the place where they were working. The plaintiff then went with the Baboo, or head man, of the garden, who had been assaulted back to the office adjoining the houses where the coolies lived. He sat down in the verandah and told one of the head men of the garden to go and fetch the people to him, as he wanted to investigate the row. The coolies refused to leave their houses at all. He sent three times for them, and they still refused. The plaintiff then got up and walked quietly down the lines where they were assembled, having nothing in his hand. There was a collection of them standing together when he went into the lines. On his going up to them they said: "Here he comes—you have come now, have you." Then two of them went for him, and one of them struck him over the head with a stick. He fell over the foundations of a house which had just been burnt down. Upon this some of the older coolies attacked these people, with the result that there was a general melée. The older coolies beat them off from where the plaintiff was standing, blows being received on each side, the coolies who had first commenced the assault being the weaker party got the worst of it. The row lasted for about a minute, and during this minute three of these people got their arms broken, the plaintiff alleging that one stroke of a bamboo was sufficient to break a native's arm. It was in connection with this disturbance that he had been tried before the Sub-Commissioner and the mixed jury, and unanimously acquitted, and that afterwards the depositions in the case were forwarded to the High Court at Calcutta, and the case retried on the depositions, with the result that the Court in Calcutta sentenced him to one month's simple imprisonment and a fine of 1,000 rupees.

Cross-examined by Mr. Lewis Thomas, the plaintiff said, with regard to the jury, that the two natives were men of great standing in the district, and probably as far as their incomes were concerned and their position, were much more influential men than the Europeans who were on the jury. As to the three Europeans, they were Englishmen, one of them being an agent in the district and the other two being tea planters. The plaintiff knew them and had visited at their houses and dined with them. Dealing with the treatment of the natives in connection with the disturbance, counsel put to the plaintiff the case of a native named Kishnaff, who, it was said, had died in prison. The plaintiff objected to it being called a prison—saying it was really the garden hospital, and that the man had committed suicide, he having been found hanging by the neck one morning. The plaintiff reported the occurrence as a case of suicide, caused by the state of the man's mind and health. He was not beaten, although the prosecution in India said that he had been. It was clearly proved by the Civil Surgeon to be a case of suicide. The case was reported to the police officer on arrival. He had not been convicted of riot and assault in which grevious bodily harm had been inflicted. He had been charged in the lower court with noting and causing grevious hurts only. The High Court in Calcutta had not convicted him of causing grevious bodily harm—the judgment did not bring it out so.

Mr. Lewis Thomas then read the report of the trial in the High Court at Calcutta. In addressing the jury for the defence, Mr. Lewis Thomas said that he wished to make perfectly clear the position in which Mr. Wilson, the Editor of the INVESTORS' REVIEW, was placed. The INVESTORS' REVIEW was a publication dealing with matters of interest to persons concerned in the investment of capital, and for some considerable period had commented upon the management of Indian tea gardens. In connection with the subject the letter containing the libel had been sent to the Editor of the paper and was inserted as being of interest to those concerned in the management of Indian tea gardens. In the following issue of the paper a friend of the plaintiff wrote a letter saying that the statement contained in the issue of September 27 was inaccurate, and that it was untrue to say that the plaintiff had been convicted of manslaughter in respect of the death of a coolie. That letter was put in in full the following week, in order to remove the wrong impression which might have been created by the suggestion that he had been convicted of manslaughter. The whole matter had arisen through the inadvertent use of the word "manslaughter" instead of "riot" in the original letter, one coolie having died either by his own hand or from beating. On July 27 on the findings of the judges of the High Court in Calcutta there had been a severe beating of the coolies in these tea gardens, for whose beating Mr. Lyall was responsible. The evidence went to show that the men had been laid with their backs upwards, and were then beaten and that three of them had their arms broken. It was said that there were found on one man's back 38 abrasions from blows given a month before. What was the value of the character of a man who was responsible for such an occurrence and what damage had he sustained in regard to his character? Mr. Wilson, the defendant, had discharged a public duty in letting the inhabitants of this country know what was going on in connection with the management of tea gardens in India. We in this country were very ready to interfere with the way in which other nations managed their subject races, but it was time to look into the management of our own native races, and a debt of gratitude was due by the public to Mr. Wilson for bringing the matter before public attention. Instead of giving substantial damages the jury should give the plaintiff no more than the smallest coin of the realm, and give that only because there was no smaller coin to give.

Mr. Robert Wallace, in reply, said that it was really somewhat difficult to know how to deal with the defence that had been put forward. If the charge brought against his client was true, it was enough to disqualify him from holding any responsible position in future. So far from there having been any apology offered on behalf of the INVESTORS' REVIEW, a letter from some third party had been inserted, and not one word from the Editor himself in justification or extenuation of his conduct, or by way of apology in any shape or form. Instead of that the jury had been told that the Editor did not know Mr. Lyall, and therefore could not have been actuated by malice. A defence more malicious it would be impossible to conceive. The man who had committed suicide was not one of the coolies who had been beaten, and had nothing whatever to do with the case, but had been dragged in by Mr. Lewis Thomas. Could anything more grossly offensive be imagined to the unfortunate man who had come to tell his story in Court, and did not all that indicate the spirit in which the article had been written? The INVESTORS' REVIEW called itself a guide to judicious investments, and under the cover of care for the unfortunate coolies took occasion to strike Messrs. Findlay, Muir, and Co., and the plaintiff, while it turned out that it was not Messrs. Findlay, Muir, and Co.'s plantation at all. The plaintiff was not the manager of their plantation, and had nothing to do with them. The plaintiff, supported by a great body of evidence, had obtained an acquittal by a mixed jury of natives and Europeans, but according to the system of legal procedure prevailing in India, the case was taken before the High Court at Calcutta, and retried, but not on fresh evidence, and not with the witnesses before the judges, but on the depositions and without those judges having the advantage of seeing the witnesses and observing their demeanour, with the result which they had heard. Mr. Lyall had told them his story in connection with the matter. The other side were entitled to say that the judges in Calcutta, on reading the depositions, took a different view of it, but all that took place twelve months before, and was forgotten entirely, and for the purpose of stabbing Messrs. Findlay, Muir, and Co., if possible, this story was inserted in the paper that he was guilty of manslaughter, and was prosecuted for it, and found guilty, in respect of the death of a coolie from ill-treatment, and that it was one of Messrs. Muir's gardens on which the assault occurred. It was a monstrous thing that in the pretended name of philanthropy and in the native interest the INVESTORS' REVIEW should be enabled to take the opportunity of the trial in the High Court at Calcutta, in order to assail Messrs. Muir and drag in the plaintiff an innocent man in connection with it. The charge was unjustified. He had thought that the long cross-examination addressed to the plaintiff by Mr. Lewis Thomas about the imprisonment and the fine meant more than it did, but it turned out that on the particular charge which took up so much of the cross-examination, the jury had acquitted the plaintiff, and the learned judges decided that that particular charge was

not before them at all, because the jury had acquitted him upon it. That had all been paraded before the jury as an offence on the part of the plaintiff—the defendants were ready to catch at anything by which they could stab him. It was time to put that sort of thing down on the part of papers which lived by writing libels upon those with whom they happened to disagree. There was only one way in which such people could be made to feel. He did not talk about their conscience, or their heart, because there was clear indication that they had neither heart nor conscience. There was only one place in which they could be made to feel, and that was their pocket. This story having gone abroad, having been started in the Investors' Review, and having been repeated in all the Indian papers in connection with the matter, would prevent the plaintiff from getting employment in the future, and he would ask them to measure out damages with no niggardly hand, and to teach the defendants that even if they had made a mistake it was cowardly when they had discovered their mistake not to own up to it like men and apologise. He asked them to award such damages as would show the defendants that that sort of thing could not be done in this country with impunity.

Mr. Justice Bruce, in summing up the case to the jury, said, the plaintiff alleged that the paper in question had published what was untrue of him. Sometimes it was very difficult to say what a charge meant, and because of that it was very difficult to contradict it. The charge in this case was that they had said the plaintiff had been convicted of manslaughter. Manslaughter, of course, was a felony, according to the law of England. The plaintiff had not been convicted of manslaughter, but of riot and of injuring two persons by doing them grievous bodily harm. It was said the plaintiff had been prosecuted in respect of the death of a coolie from assault and ill-treatment, in one of Messrs. Muir's gardens. What was complained of was that having inserted in the paper that the plaintiff had been convicted of manslaughter that was untdue, and the defendants had not apologised. The Editor might have said that the paragraph which had appeared was untrue or that it had appeared by inadvertence, and done so at the earliest possible moment, and said that they apologised. But there was no apology here. That was not the course adopted by the defendant, although that was a course open to him. He said that somebody else wrote a letter in the paper to say that the charge was untrue. But that had not the effect which a paragraph by the Editor would have had. A Mr. Stewart Fox, a correspondent, wrote, and said: "Your statement is untrue," but that had not the same force as if it had been said by the Editor himself. It might had been said that it was untrue, and that they exceedingly regretted it had been published, and that they apologised, but the Editor did nothing of the kind: he merely put in the letter of a correspondent and left people to draw their own inferences as to which of the two letters was true—one letter one week saying one thing and another the next week contradicting it. Of course he might have apologised next week, but he did not do so. There was no comment on it at all, and he did not say it was untrue. The plaintiff had then brought his action, and it was for the jury to say what they thought of it. The plaintiff said the Editor had made no proper apology, and that he was entitled to damages. It was for the jury to say how much he was entitled to—what ought a plaintiff to recover whose character had been blackened in the way that it had been attempted to blacken the plaintiff's character in the action? The plaintiff had said it was very serious to make such a charge against a man in a responsible position, and to say that he had been convicted of manslaughter when it was not true: it had been circulated far and near that he had been convicted of manslaughter, and therefore the plaintiff claimed substantial damages. On the other hand the defendant said his character was worth nothing: although he had not been convicted of manslaughter he had been convicted of cruelty, and that therefore a farthing was enough. It was for the jury to say what they thought about it, having regard to the aspersion made on the plaintiff by a charge of manslaughter which was not true.

His Lordship, in conclusion, said he could not give them any assistance as to the amount of damages, it being entirely for them. Supposing one of them had found a paragraph in a paper making such a charge against him which was not true, what would they think ought to be the damages in such a case?

In the result the jury found a verdict for the plaintiff for £250, the £1 paid into Court by the defendant being paid out in part satisfaction of the verdict.

Mr. Wallace: They hurt my feelings by paying in 20s.

TRADE AND PRODUCE.

Wheat.—Rather more animation has been visible in wheat dealings this week. The American cables have caused considerable flutterings, with an increasing tendency to firmness. Wet weather and consequent fears for the wheat crop have also been in sellers' favour, and prices have gone, more or less steadily, upwards. English wheat is in short supply at all the markets in the country, and though farmers' deliveries this week in London were, if anything, more than last, being 17,224 qrs., against 17,132, and at an average price of 28s. 7d., against 28s. 3d., at Mark Lane, as much as 32s. was paid for the best, and at some of the country markets 30s., 31s., and even 33s. per quarter. In America a large export business has helped to give activity to the markets over there. Unfavourable weather reports, light offerings, and a good deal of local buying further helped the bullish tone. Bradstreet estimates the supply in sight east of the Rockies at 20,293,000 bushels against 20,154,000 last week, and 29,688,000 last year, and these figures were also considered "bullish."

Wool.—The most despondent of the markets express a hope that things must improve in the near future, and in some of them the tone is already more cheerful. Bradford, perhaps, is doing the most business, enquiries being much more numerous than a month ago, and though merchants still continue to resist high prices of yarns, topmakers are firm and confident that the future will justify their demands. Leicester has been doing an extensive trade in English raw wools, domestic produce being now used on a much larger scale than for some years past, but has become quieter with the approaching holidays, and little new business is expected for another month or so. Otherwise there is nothing to note of interest in the woollen trade, the cotton crisis in Lancashire has had an adverse effect upon it, and also the continued bad weather. Continental markets are dull, though less depressed apparently than English ones, and shipping generally is of very moderate dimensions.

Linen.—The markets keep very quiet, but a gradual increase is appearing in the business done, and with manufacturers so well employed there is no necessity to weaken prices, and all transactions are carried through at the highest rates. Union goods are still difficult to deal in owing to the fluctuations in cotton, but little distress is shown at this, as the all-linen goods are rapidly taking their place. The latest reports of the flax crops are favourable without any promise of more than an average yield. The home crop looks well, and the French better than for some years past, Belgium fair, but in many of the Russian districts it is stunted and unsatisfactory. As regards the home and foreign trade in finished lines, there is little life, and some fear is felt that high values may hamper business in the autumn. At present most of the important markets are doing less than the average, with the United States, however, gradually receiving its orders, South America slightly improving, and fair orders coming from South Africa.

Cotton.—The demand for American cotton has fallen off in Liverpool this week, neither the export nor the home trade doing much, the latter being still of a very hand to mouth description. Reports of the growing crop are very mixed, but for the most part favourable, though the plant is both small and late. However, in spite of the poor demand, holders are still in a position to ask full rates, as the receipts at the American ports are down almost to nothing. Spinners of yarn cannot yet make any headway, and the sales both of twist and weft continue small, the former being the more difficult to sell. Sir Jacob Behrens and Sons, in their weekly circular, state that the proportion of looms stopped is in excess of the spindles, and a further reduction of the working hours will be necessary if the supply is to be brought within the present demand. Some spinners are trying to solve the problem by stopping altogether, as they find it more profitable to close down than to run their machinery on half time. There is, however, an extensive demand, though little actual business, for certain descriptions, China being the chief purchaser, while the Levant is buying more freely, both of extra hards and water-twist. For cloth there has been a fair enquiry, and business in bulk could doubtless be done at a price. Unfortunately, the price is such that manufacturers find it pays them better to stop than to accept it, and the business is therefore declined. India is offering from all markets, and as the difference in price between sellers and buyers is lessening, some orders may possibly be fixed.

In America the price of near months had a tendency in the early part of the week to find a lower level, but only so long as the bull clique kept off the market. This it was not able to do long, and what with manipulations and bear covering orders, prices rose far more sharply at the end of the week than they had dropped at the beginning.

Liverpool on Friday was quiet, both for spot and futures. For the former the price was 6.60d., American middling, while July-August was quoted at 6.32d., August-September at 6.27d., and November-December 5.32d.

Iron and Steel.—Although the holidays were supposed to end last week, there has been but little work done in Glasgow during this. The slackness in the shops has naturally reacted on the market, and neither consumers nor speculators have been much in evidence. Scotch hematite was quoted at 52s. to 52s. 3d., and Cleveland at 46s. 9d. cash, though the figures are little more than nominal, with the enquiry so small. Builders of locomotives are busy, the shipments this week being heavy, while there is a large amount of work on hand. A few shipbuilding orders have been received, but were it not for the Government contracts the position of the Clyde yards would be more than unsatisfactory. In the north of England the pig-iron trade may be considered fairly good, a decided improvement over the conditions of the past three months having taken place, while the future promises well. Most of the business has been done with home consumers, as the shipments for the month are poorer than in any year since 1892. Steel rails continue brisk, but the official price of £5 10s. is broken where foreign competition has to be met, and it is therefore impossible to gauge the true position of makers. At Barrow the demand for hematite pig-iron is still fairly good, the market, if anything, showing more liveliness this week. The shipbuilders in this district are hoping for better times, and are busy tendering for the various Government orders going. Vickers, Sons, and Maxim have also secured one of the four new Midland boats for the Belfast-Heysham traffic.

Coal.—Transactions in Welsh steam and anthracite coals continue with unabated activity, and in the north of England trade

generally keeps satisfactory, sellers are mostly booked up for August, and have advanced their quotations for September delivery. Further south the aspect is not so cheerful. Lancashire keeps as gloomy as ever, with no sign apparently of any chance of recovery, and there is much grumbling and depression among merchants on 'Change at the continued unsatisfactory state of affairs. Great uncertainty is shown regarding the question of prices in house coal to the public, but the opinion of the majority seems to be in favour of a rise. The summer trade has been very unprofitable, and it is thought that higher prices may stimulate rather than check demand. Scottish trade has been interfered with owing to the holidays, which have checked the consumption of manufacturing coals, and reduced the shipments from the ports as much as 77,700 tons below the preceding week.

Copper.—The market has again been dull and irregular this week. A reported rally on Wall Street caused a slight improvement, with a better enquiry to cover open contracts, advancing prices from 17s. 6d. to 20s., but the movement was not maintained. At Wednesday's first session values were still above those of the early part of the week, and a fair amount of speculative purchases were made, but the afternoon showed a decline of 5s. on the day, with forward unchanged, and Thursday's values again fell 5s. and 2s. 6d. Yesterday the tone of the market was irregular, cash being quoted at £57 7s. 6d., while £55 12s. 6d. was asked for three months.

Tin.—The market opened quietly, and with little support, Monday's closing prices being at a decline of 20s. and 30s. for cash, and three months respectively. The next day showed some improvement, and prices hardened, with values closing at an advance of from 25s. to 27s. 6d. on the day. Wednesday and Thursday showed still greater activity and excitement caused by the receipt of cables showing a sharp rise in New York and Holland, and news that the Dutch Government had decided to reduce next year's periodical sales from 2,500 tons to 2,000. Values first advanced from 32s. 6d. to 40s. on the day, and yesterday at first rose another 20s. to 25s., but with a slight reaction dropped 15s. for cash, and 10s. for three months. Friday's closing prices were £127 10s. cash, and £128 10s. three months, the market being quiet in view of the approaching holidays.

Tea.—The last auctions held before the Bank Holiday, or until August 10, did not indicate any change in either price or position of the tea markets. Indian offerings were again small, comprising 12,117 packages, some of it of a superior quality and commanding good prices, and the commoner and medium grades firm. Messrs. W. J. and H. Thompson point out in their circular the interesting fact that whereas now no Indian tea is selling under 5½d. per lb., last year at the same time the quotation for the commonest kinds was only 4d. Indian green tea is making some progress, and now that the Tea Cess Act—to quote Messrs. Gow, Wilson, and Stanton—has been passed, is likely to do better still, the output of black tea decrease, and the North American market more catered for. The green tea crop in China and Japan is reported to be short, and high prices demanded, and this also will help the British product. Auctions in Ceylon teas were heavy, 32,247 packages were offered, and in spite of continued poorness in quality, sold fairly well, and obtained good prices. The average price obtained for the week was 6.89d. against 6.25d. in 1902. Our exports of tea direct from Ceylon to places outside the United Kingdom for the first six months of the year, show a slight increase over the same period last year. A result due chiefly to the large quantities of green tea taken in North America and of black tea in China, 2,737,817 lb. of green tea being exported against 494,211 lb. in 1902, and 20,033,570 lb. black against 18,705,191 last year.

Sugar.—The statement in the Commons that 10s. will be the natural price of sugar after the new bill comes into force stimulated the trade demand this week, the present price being considerably lower than this figure. In addition stocks in the hands of the trade are probably small, and this in itself would drive buyers more frequently to the market, which all this week has been firm in tone. From Germany and Austria crop reports continue good, but France still complains of the late sowings, and the non-appearance of hot weather. Our imports of raw are again large, part possibly being cane, of which the supplies will continue to show a moderate increase for some time to come. The precious Sugar Bill is causing a lot of discontent, and promises all kinds of difficulties to the trade. But what does the Government care about this so long as the West Indies reap a benefit of some sort? During the week beet prices, Mr. Czarnikow states, have moved up 1d., July being now 8s., October-December 8s. 8¾d., and January-March 8s. 10¾d., while in cane, though the demand was only moderate, prices have favoured sellers. The American market still presents no feature of interest, doubtless owing to the recent large purchases of Cuban. However, with consumption continuing at a normal rate, buyers must soon come in to renew their supplies. Stocks are slightly down at 307,000 tons, the landings at the three ports for the week being 23,000 tons, against 41,000 melted.

At a meeting held on Wednesday, July 29, the shareholders of Prescott's Bank, Limited, confirmed the agreement for the amalgamation of that bank with the Union of London and Smith's Bank, Limited, by whom the business will henceforth be carried on.

We have received from the *Syren and Shipping* a collection of the cartoons that have appeared from time to time in its pages. The subjects dealt with naturally relate to the shipping world, but there are several such as the one of Morgan in a high chair that will appeal to ordinary individuals.

Company Reports and Balance Sheets.

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Midland Railway.

In the six months ended June 30 last this company's gross receipts came to £5,680,020, or £123,219 more than in the first half of 1902. Working expenses reached £3,455,289, or £45,893 more making the proportion of expenditure to income 62.84 per cent., against 63.43 per cent. twelve months back. This left the net income at £2,224,731, which was an increase of £82,942, but after deducting debenture interest and lease rentals, the balance of £1,765,748 left over inclusive of £44,524 brought forward, was only £70,451 up, because interest and leased line rentals are charges continually on the increase. The company, however, was able to meet all preference charges and to pay an increased dividend of ¼ per cent. per annum—or 4¾ per cent. against 4½ per cent.—on the old undivided ordinary stock, or £2 7s. 6d. for the half year on such stock. This gives £1 5s. on the preferred ordinary, and £1 2s. 6d. on the deferred ordinary for the half year, the company's common stock having, it should never be forgotten, been duplicated, not split, as in the old fashioned way. The report refers to the acquisition of the Belfast and Northern Counties Railway in a hopeful spirit, and also tells shareholders that the Heysham Harbour Works are now rapidly approaching completion. It has been an expensive business this new harbour, and we hope it will pay. Working charges for the half year did not indicate much that requires comment, but we may note that maintenance charges have risen by £45,740 to £484,609. Locomotive power, on the other hand, cost £13,550 less at £1,069,690. This does not necessarily show much economy in the cost of coal, as the train mileage for the half year was less by 413,000 miles. Traffic expenses, which came to £1,272,378, were less than £1,000 up, and there was actually a slight decrease in the general charges at £109,170. Compensation also took about £8,500 less at £30,419, but there was an increase of no less than £14,000 in rates and taxes. The company does not give any particulars whatever with regard to its steamboat traffic, or its hotel business, and we often wonder where the items of these accounts are concealed. Coming to the net revenue we find that interest on debenture stock and leased line rentals, at £503,507, increased £7,512 on the corresponding half year, and the increase in the preference dividend charges, which total £839,778, was £15,342. Thus do the privileged securities creep up upon the ordinary stock. Capital expenditure in the half year under review came to £763,036, bringing the overdraft against the capital account up to £1,172,637. Another £650,000 is expected to be spent on capital account in the current half year, so that in spite of the help afforded by £918,476 of superannuation fund money, and £216,202 of fire insurance accumulations, or an aggregate of £1,134,000, a fresh issue of capital cannot be long delayed. Of the expenditure under this head during the past half year, £535,220 went into lines open for traffic, but only £34,215 into new working stock. Subscriptions to other railways absorbed £71,657, and £121,994 was taken by lines in course of construction. Business was not good in all departments during the half year, it may be noted. Although coaching gave an increase of £86,385, and merchandise and cattle an aggregate increase of £78,404, there was a loss on minerals of £41,570. Whether the business of the company expands at all in proportion of its great capital outlay is what no man can offhand declare, but it unquestionably is a great business. Dividends are payable on August 15.

Lancashire and Yorkshire Railway.

In the six months ended June 30 last this company's gross receipts were £2,643,504, and the expenses £1,588,585, the one showing an increase of £42,174, and the other of £12,867. The proportion of expenses to receipts was accordingly 60.12 per cent., if rates and taxes, £77,241, are included, but only 57.14 per cent. exclusive of that item, and therefore slightly down, compared with a year ago. Both passengers and goods contributed to the increase, but there was a falling off in the income from mineral traffic, and the company's proportion of the Fleetwood and Belfast steamer receipts is down fully £3,000 to £3,826. So the company, along with its partner, the North-Western, is to start competition with the Midland, now owner of the Belfast and Northern Counties Railway, by running a line of boats between Fleetwood and Londonderry. In the working expenses we get no particulars either regarding the costs of working this shipping traffic or about the hotel and refreshment business now so important a section of our railway undertakings. Other particulars of working charges are not of much importance, as indicative of changes, but we may note that the company has benefited nothing by cheaper coal or by the reduction of the mileage of trains run, locomotive power having cost about £418,635, just £247 more than a year ago. Maintenance of way is higher by £7,239, at £263,390, and there are slight increases also in carriage and wagon repairs, traffic expenses, and general charges. Compensation of all sorts took £29,257, against £20,161 twelve months back, and rates and taxes went up nearly £5,000. Of the net income of £1,054,991, £298,045 go in interest charges, or £2,360 more than a year ago, and after meeting the preference dividend, to pay the same dividend of 3¾ per cent. per annum on the common stock takes £9,951 more. After meeting all outgoings, including this divided, £37,109 will be left

to carry forward, against £22,131 brought in, and £21,891 a year ago. Capital expenditure goes on comfortably, £348,477 having disappeared in the half year, £266,867 on lines open for traffic, and £81,611 on new working stock. As the outlay in the current half year is estimated at £820,938, of which £489,301 will go into lines open, and another £65,390 into new working stock, and as the capital account is at the present time overdrawn, £1,005,894, there will be a good deal of help wanted from the moneyed classes soon. However, the trust funds in the company's hands, including £387,052 of superannuation fund money, £320,515 of provident savings bank deposits, and £200,000 of a fire insurance fund, have helped it along up to the present. But what a mess there will be over such moneys, all in the business, when things do go wrong with railway finance. Dividends are payable on August 6.

Great Central Railway.

Gross receipts for the past half year came to £1,687,844, and working expenses to £1,132,838, the one showing an increase of £50,628, and the other of £25,544. This gives a proportion of expenses to income of 67.12 per cent., as compared with 67.64 per cent. a year ago. These figures are for the Great Central proper, but it is joint owner of the Cheshire and other lines, and its proportion of the net receipts of these is £94,232, or £2,020 less than in the first half of 1902. Adding this to the company's own net income of £555,006, and including the £3,839 brought forward, the sum available for distribution is £653,007. This enables all the fixed charges to be met, and the preference dividends in full down to and including the 1876 5 per cent. convertible preference, leaving £12,895 to be carried forward. A year ago the lowest preference paid upon was that of 1874, so that the company seems to be making progress. In a way it is, for passenger traffic gave £18,217 more, parcels and mails £11,355 more, and goods and live stock £35,181 more in the past half year, only minerals showing a falling away of £16,084. But expenses grew pretty fast, too, and the company continues to lay out money on capital account, inevitably, perhaps, but none the less forlornly, for the shareholders. As regards expenses, maintenance, power, repairs, traffic working and general charges all show increases, the aggregate of which was £25,500 in the past half year. Taxes and rates were likewise up £2,098, and steamships cost nearly £1,000 more to work, so that but for a decline of £3,266 in compensation payments, the ratio to receipts for the half year would have been as high as ever. To be sure the company ran 81,484 more train miles than in the first half of 1902, but that should hardly account for the increase of £8,259 in locomotive power. The docks and steamer businesses of the company continue profitless in any direcway, yet £6,461 was spent out of capital on these enterprises last half year, bringing the total capital thus sunk up to £4,297,668. On the steamers the net profit shown is £7,902, and on the Grimsby docks £15,013, or together little more than one half of one per cent. on the capital involved. This does not look good business from any point of view, and the canals owned by the company as usual show a dead loss, which, in the past half year, was over £5,000. It is just as well, perhaps, that the Humber dock project has had to be for the present dropped, for the capital account is already in sufficient of a mess. The expenditure under this head in the past six months was £199,392, nearly £70,000 of it on working stock, and the outlay of another £295,000 is estimated for in the current half year. At the date of the balance-sheet the capital account was overdrawn by no less a sum than £4,429,379, and one may well ask how a business so clogged can go on. By the help of various expedients, the company has borrowed £701,213 from the Great Western Company, and £816,958 from its savings bank depositors; it owes £1,774,500 on Lloyd's bonds, and £900,000 to a rolling stock trust created *ad hoc*. It also owes £755,230 on "outstanding accounts," and has only £308,000 due to it by other companies, yet its board pays the dividend on £1,500,000 more preference stock than it did a year ago. Progress of this kind is incomprehensible to us, and we doubt whether the debenture interest could be found to be squarely earned if the directors did their duty in the face of such a state of affairs. The dividends though will be duly paid on and after Thursday, August 20, except on the South Yorkshire rent charge stock, which will be distributed on the 15th.

London and South-Western Railway.

For the six months ended June 30 the gross revenue of this railway, including receipts from steamers and docks, was £2,414,391, compared with £2,417,324 in the same period of 1902, while the expenditure was £1,553,671, an increase of only £623 on 1902. If, however, the railway is considered by itself, the revenue, at £2,217,682, shows an increase of £17,023 compared with twelve months ago, the expenditure having risen by £9,387, to £1,372,784, although the ratio between it and revenue, owing to the rise in revenue, has fallen from 61.95 to 61.90 per cent. Dock revenue is down £18,427 to £117,631, the expenses are also lower by £10,745, at £85,015. On steamers expenses have risen, while receipts have fallen, the latter being £1,529 lower at £79,078, while the former, including renewal and insurance charges, are £1,980 more, at £95,871. Thanks, however, to debenture interest, preference dividends, and other prior charges only amounting to £614,729, compared with £621,182 a year ago, the net revenue works out at £245,991, or £5,897 better, so with the surplus of £31,544 brought in from the last account the amount available for distribution is £277,535. This permits a dividend at the rate of 4 per cent. to be paid on the ordinary stock, with a balance of £25,546 to be carried over, which is a little better than in June, 1902, when the dividend was the same but the carry over £442 less. Turning to the traffic receipts, passenger income is better by £2,309, due entirely to a substantial rise in the third-class, as first, second and seasons all show a falling off. Of the other descriptions, all except minerals increased, the total return for the half-year being £687,752, compared with £677,955 in the corresponding six months last year. In expenses, locomotive power alone shows a decrease, being £16,109 down, but that is more than balanced by increases in maintenance £4.689, repairs £8,679, and traffic and general charges £12,359. Rates and taxes also went up £9,420, but there was a welcome decline of £7,641 in compensation. Fixed charges are really, as might be supposed, larger on debenture stock, a mere £2,000, but rents are down £1,574, and general interest charges less by £2,413. Then £7,500 less is credited to the reserve assigned to renewal of steam boats. It follows that the entire pre-preference charge is at £284,348, down £9,459 compared with a year ago. On the other hand the preference charges have risen by £3,500, and it takes £9,459 more to pay the same dividend on the common stock that was paid a year ago. Capital expenditure amounted to £624,592 in the half-year, and of this £40,786 went into working stock and machinery, £461,857 into lines open for traffic, and £112,965 into Southampton Docks, the total outlay on which to date is £3,497,175, and the net income from which last half-year was £31,626. The capital account is overdrawn £580,485, but the company holds trust moneys to the amount of £970,000, so that a fresh issue of capital is not yet a matter of urgency. Dividends are payable on August 15.

London, Chatham and Dover Railway.

There is little to be said about this company's report, because all the facts were given either last week in the analysis of the joint committee's report or in the previous dividend announcement of the Chatham board. Its proportion of the net revenue was £252,616, or £8,803 more than in the corresponding half of 1902, and it also received £2,132 as interest on stores and petty cash balances, and £3,113 from the managing committee as interest on capital expenditure. Even so, and including the £14,472 brought forward, the directors were not able to pay the 25s. dividend upon the arbitration preference stock, bringing the total distribution for the year up to 3½ per cent. on a 4½ per cent. stock, except by again drawing on the reserve. This time, however, they took only £12,500 from it against £20,000 twelve months back. This "reserve" belongs to the arbitration preference stockholders and will soon disappear. Capital expenditure, however, goes on, and the position of the company is really a hopeless one, its capital account being now overdrawn £1,058,268. It owes no less than £796,000 on Lloyd's bonds, to the South-Eastern Company on temporary loan, taken together, the debt to the South-Eastern alone being £479,469, and naturally the reserve fund and savings bank money are all in the business. There is no hope for a company thus situated, because it is quite unable to issue any capital on its own account, and seems likely to remain in that helpless position.

Metropolitan District Railway.

In the past six months gross receipts were £456 down, at £202,518, working expenses £380 up, at £112,982. The proportion of expenses to receipts was thus 55.65 per cent. Net revenue was less by £836, at £89,535, so that the company has not yet recouped the loss involved by reductions in fares. It carried nearly 4,000,000 more passengers than in the corresponding half of last year, and earned rather less money. There was also an increase of about £2,400 in the number of season ticket holders. After meeting debenture and rent charges there was only £18,127 left, but that was enough to give the 4 per cent. guaranteed stock a dividend at the rate of 2 per cent. per annum, leaving £342 to be carried forward. Little interest attaches at present to the accounts, the most comforting paragraph being the one which tells the shareholders that the electric power house and other preliminaries to the adoption of the new form of traction are rapidly approaching completion. Capital expenditure amounted last half-year to £421,651, and the company had £86,919 in hand for further outlay. In the current half-year that is estimated at £4,896 net, the £91,955 spent on the Whitechapel extension being deducted as a receipt from the Whitechapel and Bow Railway. An interest in suspense account against that railway, to the amount of £12,881, is carried in the balance-sheet of the District Company as a liability. Rent charges grow steadily, and now amount to £22,226 for the half-year. The preference dividend is payable on August 18.

Central London Railway Company.

Gross receipts for half year to June 30 amounted to £187,236, an increase of £2,118; working expenditure to alled £94,350, an expansion of £1,251, hence the net revenue was £867 higher at £92,886. The number of passengers carried was 23,179,138, or 299,804 more, whilst the receipts from this source advanced from £179,288 to £180,749. There was again a large increase in rates and taxes, which jumped up from £9,750 to £14,052. Expenditure on maintenance of way slightly advanced, but it was partly offset by a goodly saving in locomotive power, and traffic expenses, general charges being likewise reduced a trifle. Nearly £22,000 more was brought into the accounts at £27,717. Interest on debenture stock required a few hundreds more, and nearly £2,000 has been paid on account of vibration enquiry expenses, the net balance being about £20,000 higher at £102,406. After paying as before, 4 per cent. per annum, on the undivided ordinary and the preferred stocks, requiring £36,148, and £10,426 respectively, the sum of £10,426 is put aside for the proportion applicable to the deferred stock—the dividend on which is not payable until the result of the year's working has been ascertained—and the unappropriated balance of £45,406 is carried forward, the directors keeping so much in hand presumably, pending the result of the inquiries

by the Commission into the traffic problem. Capital expenditure was £84,473, and the estimated for the current half year is £75,000.

North Staffordshire Railway.

Gross receipts for the half-year to June 30 were £470,065, an increase of £4,542. Working expenses were only £610 higher, at £283,023. In outgo there was a decrease in maintenance of way of £4,258, at £54,580, with a saving of £605 in carriage and wagon repairs. The largest increase was £2,115 in general charges, whilst traffic expenses rose £1,239, to £70,614, rates and taxes £1,045, to £16,063, and locomotive power £1,028, to £73,947. Under maintenance, the principal saving, over £2,500, was in materials, wages being about £800 lower, whilst in fuel the saving was £1,260. There was but a trifling increase in passenger receipts, but merchandise expanded by £1,930, and minerals by £1,007, canal tolls contributing £1,308 more. Net revenue was £187,043, against £183,110, a balance of £5,061 was brought in, and the share of profit on the Macclesfield, Bollington, and Marple Railway was £1,903. Interest on debentures, loans, etc., required £1,000 more, at £47,196, leaving £2,300 more available for dividend at £146,811. Preference dividends take £74,900, and the unchanged 4 per cent. per annum on the ordinary £64,603, whilst an additional £1,320 goes to the payment of the three months' dividend on the first instalment of the new ordinary stock, the carry forward being increased by £1,000, to £5,988. The capital expenditure amounted to £51,498, and the estimated outlay for the current six months is £64,000. The company has a capital debit balance of £82,099, against which it has available borrowing powers of £382,000. Dividend warrants will be posted on August 18.

Taff Vale Railway Company.

Gross receipts for half year ending June 30 were £463,347, increase, £7,405; expenditure, £264,439, increase, £2,038; the ratio working out at 57.07 per cent. against 57.55 per cent. Sundry credits were over £3,000 higher, at £7,245, the total net revenue being £8,452 up, at £206,153. Interest on debentures and fixed charges took £11 more at £54,915, leaving £151,238, compared with £142,797, available for dividend. After the preference stocks receive 4 per cent., the ordinary get 3½ per cent. per annum, or ¼ more, which is equivalent to 8¾ per cent. per annum on the ordinary stock. The dividend is payable on August 17, and a balance of £6,315 is carried forward. There was a slight shrinkage in receipts from first and second class passengers, but an increase of £1,419 in third class. Merchandise showed practically no change, but there was a trifling decline in parcels and live stock, though minerals expanded by £3,955 to £263,426, dock and harbour receipts growing from £33,516 to £34,743. On the expenditure side small increases are shown in maintenance of way, traffic expenses, general charges, shipping expenses, and rates and taxes, with fair savings in carriage and wagon repairs, and dock and harbour expenses. Capital outlay during the six months totalled £26,111, and the estimate for the current half year is £31,000. The debit balance now stands at £177,441, against which there are £320,000 of stock and share capital and £209,971 of borrowing powers available.

Waterloo and City Railway Company.

During the half year ended June 30 this little company carried 2,281,133 passengers, compared with 2,239,394, exclusive of season ticket holders, who numbered 1,244 against 1,197, and the gross receipts from all sources, after deducting Government duty, amounted to £17,445, or an increase of £232. Working expenses came to £8,023, or 46 per cent., compared with 44.84 per cent., and after meeting the general charges and paying one-third of the excess net revenue over 3 per cent. per annum on the paid-up capital due to the working company under agreement of 1894, there was a balance of £9,088. To this was added £280 brought in, £304 from interest and profit on sale of Consols, and £643 for rent charge, making a total of £10,315, or an increase of £490. Debenture interest took about £100 more, at £983, rent charge absorbed £387, and out of the remainder a dividend at the rate of 3¾ per cent. per annum is paid, leaving £170 to be carried forward.

Lancashire, Derbyshire, and East Coast Railway.

Gross revenue for the past six months was £57,219, compared with £50,550, an increase of £6,669. Working expenses came to £30,670, or £1,902 more, at the rate of 53.60 per cent., against 56.91 per cent. Thus the net revenue grew by £4,767, to £26,549. Coaching receipts were £6,224, against £5,869, there was a trifling increase in merchandise traffic, but minerals yielded £7,000 more at £44,026. There was a small saving under maintenance of way, but locomotive power was nearly £3,000 higher, at £14,553, other items showing unimportant changes. Interest on debenture stocks and on loans took a few hundreds more, but there was a goodish drop in the interest on Lloyd's bonds. This time £5,000 is put to general renewal suspense fund, against nothing, and there is a balance available for dividend of £6,818. The first preference shares get their 5 per cent., and £568 is carried forward. Last March the directors issued, at a premium of £1 per cent., £110,000 4 per cent. permanent second debenture stock. Capital expenditure amounted to £17,577, and £16,000 is estimated to be spent this half-year.

Barry Railway.

Gross receipts for the past six months rose £23,900, to £333,643, whilst the working expenditure dropped from £171,929 to £171,143, so that the net revenue is £24,686 higher, at £162,500. The percentage was 4.20 lower, at 51.30. There was very little change in the revenue from passenger traffic, the principal growth being in merchandise, which advanced from £10,514 to £14,940, parcels yielding over £700 more, and minerals showing a gain of £600, at £123,019. Shipping receipts expanded by £500, dock revenue by £7,000, with a little more from rent, etc. Maintenance of way went up £2,000, to £15,415, but there were large savings in locomotive power, traffic expenses, general charges, and shipping expenses, whilst rates and taxes were only about £100 higher, at £21,795. On the other hand, dock working expenses and repairs took £5,400 more, at £34,629. A balance of £3,231 was brought in, and £261 was received in dividends. There was a large fall in the sums paid on royalties, rent charges and interest on bank balances, but interest on debenture stock was unchanged at £18,300, leaving £18,630 more available for dividend, at £124,348. The ordinary stock get ½ per cent. more at 9 per cent. per annum, and the carry forward is increased by £800, to £6,371. £60,452 was spent on capital account, and the estimate for the current six months is £125,800. Dividend warrants will be posted on August 11.

Rhymney Railway.

Gross receipts for half-year to June amounted to £143,189, an increase of £11,532. Working expenditure advanced £4,478, to £84,062, so that the net revenue is £7,053 higher, at £59,126. Coaching traffic contributed nearly £1,000 more at £25,545, and parcels £200 more, and whilst there was a decrease of some £700 in merchandise, there was an expansion of no less than £17,000 in minerals. More than £1,000 less was spent on maintenance of way, but the outlay on locomotive power, in spite of a fair saving in fuel, was nearly £3,000 higher, rates and taxes going up £1,600. The changes in the other items were slight. The balance brought in was nearly £1,300 more, at £1,331. Interest, etc., absorbed only a trifle more, leaving the balance of £50,221 available for dividend, an increase of £8,100. Accordingly £6,000 extra is absorbed in augmenting the ordinary dividend to 7 per cent. per annum, whilst the balance carried forward is over £2,000 higher, at £2,359. Capital expenditure was £8,369, and the amount estimated for the current half-year is £25,000. Dividend warrants will be posted on August 11.

Louisville and Nashville Railroad.

A long time must elapse before the complete accounts for the year to June 30 of this big road are submitted, and a little space may therefore be devoted to the preliminary statement just published. From it we learn that, compared with the preceding year, the gross earnings increased $4,703,132, to $35,415,389, against a rise in outlay of $3,048,127, to $23,950,565, leaving the net earnings better by $1,655,005, at $11,464,824. Other items of income were larger by $125,976, at $1,126,998, making the additional revenue to be dealt with $1,780,981, the total being $12,591,822. On the other hand, the fixd charges rose $379,829, to $6,465,363, and the two dividends of 2½ per cent. each, took $125,000 more, so that the surplus at the end of the year was $3,126,459, compared with $1,850,307.

London and County Banking Company.

In the June half year this fine old bank earned a net profit of £293,373, after meeting all charges, providing for bad and doubtful debts and setting aside £26,730, as rebate on bills not due. A year back the sum thus set aside was only £19,435, but the net profit was then £304,720. The directors proceed to allocate £25,000 to premises account, and £50,000 to reserve, raising the latter to £1,700,000. This leaves £218,373 for distribution, or after adding in the £86,729 brought forward, £305,102, a sum just £1,482 less than the tree profit of twelve months back. The board is accordingly about to pay the same 10 per cent. dividend, and 1 per cent. bonus for the half year, or a total distribution at the rate of 22 per cent. per annum, which leaves £85,102 to be carried forward. The figures are thus again expressive of the backward character of much of the domestic business, and also probably of the increasing keenness of the competition of foreign banks in London for what may be called international banking business. In all respects, however, the business of the bank continues solid, the product of national development not of amalgamation. Deposits at £44,142,899 are up £598,541, compared with a year ago, and acceptances at £1,327,569 are £86,500 larger. Cash in hand and at the Bank of England totals £7,475,884, a decrease of £191,623, money lent at call and short notice is £2,617,435, or £174,011 up, investments, including £6,894,491, in Consols and National War Loan stock amount to £10,013,456, an increase of a little over £30,000—and it should be noted in this connection that the decrease of ¼ per cent. in the interest on say £6,000,000 of Consols means a loss of £15,000 a year in net income to the bank. Bills discounted amount to £8,420,844, a magnificent total, as the habit of banks is, and £2,216,805 more than the total on June 30, 1902, and advances reach £18,930,864, or £543,451 less. Bank premises come to £716,248, after allowing for the 25,000 written off from the half year's profits.

Stuckey's Banking Co., Limited.

This fine old West of England bank dates from 1806, so that it is now nearly a hundred years old, and is still to all intents a private bank, although it possesses a large number of shareholders, the names of which are duly set forth at the end of the balance-sheet, which is all we get. It, however, is a very interesting and instructive balance-sheet, and shows that the bank goes steadily on its way without much change. This is not surprising when we realise that most of its money is invested in permanent securities. The balance-sheet foots up to £7,535,114, and of this £6,621,728 is represented by current accounts, deposit notes, rebate, contingency and other accounts. The notes and drafts in circulation now amount to only £95,120. Of the resources

thus shown no less than £4,063,326 are invested in high-class securities, including £1,749,000 in Consols taken at 90. This last item shows an increase of £39,000 on the figure of a year back and includes £40,000 lodged against inland revenue and county receipts. Another £2,749,594 is in bills discounted, loans and advances, and loans to bill brokers at call and short notice amount to £250,000, a decrease of £110,000 on a year ago, while cash at the Bank of England, with other bankers, and in hand amounts to £379,762, a decrease of only £5,705. Bills discounted, loans, etc., by the way, show an increase of £360,960. Profits are almost identical with a year ago at £47,837, a sum almost equivalent to 12 per cent. upon the paid up capital of £408,000. Altogether the exhibit is one of the most solid description.

Martin's Bank, Limited.

In the half-year ended June 30 last, this bank made a gross profit of £63,236, or £9,087 more than in the corresponding period of last year. Adding in the balance of £23,620 brought forward from the December half-year, the entire available amount was £86,856, or £9,705 more. Of this £13,226, or £3,025 more went in interest to customers, and working expenses took £19,809, or £983 more. Rebate on bills at £4,970 was also £248 up, so that the net profits are not so much augmented as the increase in gross would lead us to expect. They amounted, including the balance brought forward, to £48,851, and out of this the usual dividend at the rate of 8 per cent. was paid, and £5,000 added to the reserve, leaving £23,851 to be carried forward. The liability of the bank on deposit, current, and other accounts came to £2,825,563, and on acceptances to £314,571.

Coutts and Co.

The balance-sheet of this fine old bank shows that on July 18 the liabilities on current and deposit accounts were £7,453,494, or £271,068 less than a year ago. On the other hand, cash is up £6,282 to £530,094, or 7.11 per cent. of the liabilities against 6.8 per cent. Money at call and short notice has been reduced by £64,296 to £1,378,000, and bills discounted and loans are down £355,338 to £3,785,760, while investments, including £200,000 War Loan lodged for Queen Anne's Bounty, have risen £142,282 to £2,759,639, all of which changes certainly make for increased strength.

Foster and Co., Cambridge.

The annual balance-sheet published by this private bank shows that on June 30 the liabilities on current and deposit accounts were £86,234 higher, at £1,941,779, and on the note issue £200 up, at £19,585. Against this cash in hand, with bankers, and at short notice, was £126,882 up, to £456,254, or 23.50 per cent. of the liabilities, investments in Consols, India Stock, and Colonial Government issues have been increased by £18,462, to £348,965, and other investments reduced by £53,966 to £250,519. Bills discounted too were £10,214 smaller, at £104,102, and advances to customers were only £5,564 more, at £959,293.

London Trading Bank.

For the half-year ended June 30 the gross profits made by this little business amounted to £2,968, or £13 more than those of the corresponding period of 1902. Adding £1,468, the amount brought forward, the total credit is £4,437, out of which current expenses and interest between them require £2,495. The reserve then gets its regular £250, and the usual dividend of 5 per cent. is paid, leaving £1,159, including rebate on bills discounted, to be carried forward. Current deposit and other accounts, at £82,945, are less by £2,785 than they were twelve months ago, and the investments have also shrunk from £26,494 to £25,120, though the £9,000 Consols are taken at par. Cash amounts to £12,503, but here also there is a falling off to the extent of £3,882, compared with June, 1902.

London Road Car Company.

Receipts for the June half-year were £216,018, and expenses £194,916. This left a profit of £21,102, and after meeting debenture stock interest and writing £1,199 off various accounts for depreciation, etc., and adding in £3,946 of a balance forward, the directors had still £16,903 to distribute. Out of this they pay a dividend at the rate of 5 per cent., and a bonus at the rate of 1½ per cent. for the half-year, the two absorbing £12,480, leaving £8,369 to go to the new half-year, as against £8,626 a year ago. Of this balance £2,500, compared with £4,680 last year, is to be placed to general reserve, raising it to £49,200, not an overwhelming total. A balance of £5,869 is left to carry forward. Gross traffic income was nearly £3,000 down compared with a year ago, when Coronation visitors thronged the town, but expenses are less by £5,000, and now there will be no corn tax—for a season—but even with that tax cost of feeding was 11¼d. less per week last half-year than in the June half of 1902, and even ¾d. lower than in 1901. Weekly receipts per car also fell off last half-year by 4s. 9¾d. The reserves are very properly invested in marketable securities, but amount to only £77,731, all told.

Dublin United Tramways Co., Limited.

The number of pasengers carried by this company's systems during the half year to the end of June was 23,702,778, which is an increase of 1,211,460 over the corresponding period, whilst receipts rose from £114,104 to £119,854. Including revenue from other sources gross receipts were £5,610 higher, at £125,165. Working expenses, however, were £5,839 heavier at £72,111, and general expenses were also a few pounds more, so that the net revenue actually shrank from £51,502 to £51,259. In operating expenses there was a decrease of over £1,000, the increase being shown in all the other sections. After paying £7,075 for way leaves, £2,356 for mortgage bond interest (old company), and £266 for interest, the balance left is £41,561, increased to £46,962 by adding £5,365 brought in, and £36 from interest on investments. Debenture interest takes £9,916, and debenture stock discount redemption £163, leaving available for division the sum of £36,883. Dividend on the 6 per cent. preference shares requires £17,025, £2,000 is set aside to reserve, and the ordinary shares will again receive 5 per cent. per annum, £2,858 being carried forward, or £843 more than this time last year.

Edinburgh Street Tramways Company.

The directors have evidently grown tired of racking their brains to find excuses for the lack of success which attends their efforts, and present their report for the half-year ended June 30 with a minimum of comment. Shareholders are told that the drawings per mile of both cars and omnibuses have increased, yet there is a falling off in passenger fares of £1,115, and the total receipts were £1,326 smaller at £13,065. On the other hand, however, a saving of £2,895 was effected in expenses at £12,895, so that there was actually a surplus of £170 shown, compared with a loss of £1,399 a year ago, but this fell short of the amount required to meet the interest on loans, etc., by £435, and the debit balance has consequently risen to £4,988. In order to reduce the loan from the bankers, the company issued £1,200 of preference shares, and also sold the Great North of Scotland Railway stock held at a loss of £1,177, which was charged to reserve. By these means the indebtedness has been brought down to £2,499, and £3,619 is owing in other directions, against which the company can show only £3,621 for £2,500 Lanarkshire and Ayrshire Railway 4 per cent. "B" debenture stock at cost, £740 due from sundry debtors, and cash £129. The directors have been in negotiation with the Corporation of Leith for the sale of the tramways within the Burgh of Leith, and seek the approval of the shareholders. The price offered is £60,000, and all things considered, the proposal should promptly be accepted.

Pease and Partners, Limited.

While it is true that the net profits for the year ended June 30 were £9,982 higher, at £94,550, it cannot be said that the company's position is in reality any stronger than it was a year ago. Including £64,873 brought in, the total available was £159,423, or £10,217 more, but of this £60,000 has been written off against the loss likely to arise on the amount owing by Messrs. J. and J. W. Pease at the time they suspended payment, leaving £99,423 to be disposed of. Of this £5,738 is applied to meet the special expenditure on some of the properties, and £80,000 is paid away in dividends of 8 per cent. on both the ordinary and deferred shares, or the same as a year ago, leaving a very much reduced balance of £13,685 to be carried forward. The amount due by the banking firm, including interest, at the time of its suspension was £121,097, of which £24,219 has been received as a first dividend of 4s. in the £, and with the £60,000 above mentioned written off the debit is now £36,877. Reckless spending of money still characterises the board, and even after deducting depreciation allowances the capital outlay shows an advance on the year of £152,857, to a total of £1,398,644. To meet this a large addition has been made to the item of unpaid purchase moneys and loans, raising it to £186,798. Sundry creditors have risen from £104,994 to £124,458, and in addition £18,148 is outstanding on wages account, while on the other hand sundry debtors stand at £120,766, and cash in hand, after deducting the overdraft of £19,579, amounts to £5,340 only.

Normanby Iron Works Co., Limited.

The story of this Pease promotion for the year ended June 30 is almost as depressing as its predecessor, and sets us to wondering whether the time will ever arrive when conditions will be sufficiently favourable to enable the company to carry out its prospectus promises. Profits on trading came to £6,231 against £4,055, but only £12 came in from transfer fees, and after meeting interest on debenture stock and loans, and directors' and trustees' remuneration, the net balance was £2,315, compared with £627. Adding in £66 brought forward, there was a total of £2,381 available, but neither preference nor ordinary shares benefit by the improvement as the directors have taken to heart the auditors' remarks about the amounts for depreciation and renewals fund hitherto provided having been insufficient, and transfer £1,700 to that account, and write off £431 from formation expenses, leaving £250 to be carried forward. Even this, however, is by no means adequate, as capital expenditure is still growing rapidly, and last year amounted to £11,690, principally on the ore briquetting plant and electric power installation, bringing the total up to £173,832. The company, too, is heavily in debt, having borrowed £14,000 at 4½ per cent. without security, and £4,950 from its bankers on the security of the stocks of hematite iron, and in addition trading balances are decidedly adverse, £30,550 being due to sundry creditors, against £16,490 to come in, and £7,617 held in cash.

Consett Iron Company.

For the year ended June 30 last this company shows a profit of £231,324, and to this must be added £4,150 taken from the undivided profits. The total available for distribution is therefore £235,474, of which £57,500 was required to meet the interim dividends of 4s. and 7s. 6d. paid on the preference and ordinary shares respectively in February last. Special expenditure in the shape of reparations and renewals of works, engine shed extensions, new coke ovens, and the opening out of new limestone quarries, takes £7,974 to wipe it out, and dividends of 4s. per share on the preference and 30s. per share on the ordinary absorb the balance of

£170,000. Had not the company been one of the sufferers in the Pease smash, the profits for the year would be increased by £50,000, though even with this sum they would have been £18,672 below those of 1902. Unfortunately, when Pease's bank suspended payment it had £93,915 belonging to the Consett Iron Company in its possession, of which only £43,915 is likely to be recovered, including the dividend of 4s. in the £ already paid, and the remaining £50,000 has therefore to be written off. Trade accounts are well in favour of the company, as it only owes £96,075 to sundry creditors, while £206,907 is due to it, and its cash at bankers, bills, and cash in hand come to £103,641. The undivided profits, including £8,355 returned to the shareholders in 1882, now stand at £155,441. Out of the works reconstruction fund £14,692 was spent last year, making the total deductions therefore to date £30,876, and leaving the fund at £294,124. Also £6,270 was spent on cottage improvements, the original total of which was £50,000, but which is now reduced to £39,807.

Anchor Line (Henderson Brothers).

In spite of the depressed condition of the freight market this line managed during the twelve months ending April 30 last, to earn a profit, after charging all expenses, of £89,946. With £34,528 brought forward, from the last account, the directors have therefore a sum of £124,474 available for distribution, compared with £118,973, last year. Debenture interest and dividends on preference shares required £30,468 of this, while depreciation went up £10,000 to £60,000, leaving a balance of £34,006. The ordinary shares accordingly get 5 per cent., and to pay this absorbed another £12,500, leaving £21,506 to be carried to the next account. The reserve fund stands at £100,000, which is small considering the age of so many of the company's fleet. Of this no details are given, save that "Massilia" and "Circassia" have been delivered, the one before and the other after the accounts were made up, and that the "Hispania" has been got rid of, being taken as part payment for the "Italia," now on the stocks. Trading accounts are very much against the company, for it owes on open accounts, balances on current accounts, and bills payable £434,352, and has only £42,899 due to it, with £43,489 in cash at banks, and on hand, bills and securities. All the assets are lumped together and entered in the balance-sheet at £1,345,892, which makes it impossible to gauge the real position of the company.

Crompton and Co., Limited.

Business apparently was all that could be desired during the year ended March 31, at least, so far as volume was concerned, as the directors claim that it was the largest in the company's history both in manufacturing and in the contract department. Competition, however, continued exceedingly keen, and the growth of the business was accompanied by a shrinkage in the profits from £22,456 to £19,805, or a drop of £2,651. After meeting debenture interest, directors' fees, etc., the return on the ordinary shares was further reduced to 5 per cent., compared with 6, 7½, and 10 per cent. in the three preceding years, and to accomplish even this much the balance forward had to be again cut down by £1,113 to £2,202. The directors state that in order to meet the competition which has affected the dividends in this serious manner, many economies in the cost of manufacture have been introduced at Chelmsford, and that the margin of profit on present market prices is therefore more satisfactory. It is sincerely to be hoped that this is the case, as the serious items of reserve and contingency funds have not received a pennyworth of help from revenue for the past two years, while repairs and depreciation have not been allowed for on any too lavish a scale. The company carries in one sum of £45,656 its investment in shares and loans of the Chelmsford Electric Lighting Company, and the balance of account for work done, items which should be stated separately. Sundry creditors have risen by £13,639 to £66,607, and although cash has been reduced to £3,176, sundry debtors are £20,304 up, at £91,470, so that trading balances continue largely in favour of the company.

General Electric Company (1902), Limited.

This appears to be a carefully managed business, and the report and balance-sheet wear a straightforward appearance. In the year ended March 31 last the net trading profits and income from investments, etc., amounted to £94,382, but from this £20,002 was deducted as loss at Witton Works, and the directors explain that this arises from the fact that the works there are new and involve the teaching and training of new workpeople incident to the creation of a new industry in this country, so that some loss was inevitable, but these new works are now well provided with orders and "there are indications that they will add materially to the profits of the company in the coming year." It was certainly well to straightforwardly write off the loss at once, although it involves a reduction in the dividend payable on the ordinary shares to 5 per cent., instead of 10 per cent. a year back. This, we infer, means that nothing is distributed for the second half of the company's year, the first having yielded 5 per cent. After all adjustments £21,159 is left to be added to the reserve, raising it to £60,210. Debenture interest took £8,000, and £14,349 is allowed for depreciation, making the entire deduction from the net profits of the year, including that for the loss at Witton £42,350, and leaving the available net profit at £52,031. The managing directors, of whom there are four, and the employees receive a bonus of £3,953 out of these profits, and there can be no possible objection to payments of that description when they are well earned as in this instance. Capitalisation mounts, notwithstanding the sum written off for depreciation, £83,558 having been spent on capital account during the past year. Including £92,105 set down against goodwill and patents, a figure the same as that of twelve months back, the total capitalisation is now therefore £422,368, and on this total the sum devoted to depreciation is less than 3½ per cent. When Witton yields profits we trust goodwill and patents will be written down, and the depreciation allowances increased. The debts owing to the company amount to £237,593, and those owing by it to £147,408. This, of course, is exclusive of £200,000 in 4 per cent. first mortgage debenture stock. Stock in trade is placed at £251,672, but the reserve appears to be invested outside the business in debenture stocks and shares valued at £43,042. The position is therefore by no means a weak one.

Rylands and Sons, Limited.

The directors of this concern are as reticent as ever over their business, and although the results for the half year ended June 30 were as satisfactory as usual, the shareholders certainly have ample cause to grumble at the cool manner in which they get their dividends flung at them, as it were, without a word regarding the working of the business, or the prospects of the property continuing. The surplus, including £20,957 brought in, amounted to £128,112, or £850 short of the figures for the corresponding period of 1902, and after payment of the usual dividend at the rate of 12½ per cent. per annum, £10,000 is added to the insurance fund, and £24,362 carried forward, compared with £7,573 transferred to reserve, and £9,519 to the insurance fund, and £18,120 carried forward a year ago. These additions bring the reserves up to £735,000 nominal, but it is still impossible to say how far these funds are rendered tangible by being invested in realisable assets outside the business, or in fact to come to any conclusion whatsoever regarding the company's position, as the so-called balance-sheet is an insult to the shareholders. The company has received £304,275 for calls paid in advance, owes £600,000 on debentures, and £940,298 on sundry liabilities, and against these items all that the board consider it necessary to set out are freehold and leasehold land, buildings, and plant, valued at £832,906, on which £4,662 appears to have been allowed as depreciation during the year, and stock-in-trade, ledger balances, investments, bills receivable, and cash in hand, and at bankers all taken at £3,374,780, or £33,295 more.

Parker's Burslem Brewery.

In the year ended June 2 last the net trading profits of this big brewery are put at £70,166, and after meeting debenture and loan interest, £49,594 is left, including £782 brought from the previous year. Out of this £10,000 has been carried to the reserve, and £6,000 to the contingencies account, after which the preference dividend is paid, and the ordinary shareholders receive 10 per cent. for the year. This will leave £794 to be carried forward. Could we stop here all would be well, but the accounts are really of a most unsatisfactory description, and the company is making no proper provision for the depreciation of its assets. The total cost of the properties, businesses, etc., and other capital expenditure at June 2 last, the date of the balance-sheet, is £1,105,128, and of this valuation no less than £604,000 is represented by debts, £403,025 of it on 4 per cent. first mortgage debenture stock, and £100,756 of it, including accrued interest, on 4½ per cent. debenture stock, secured by a charge on specific properties. The company also owes £56,504 on sundry mortgages, including interest, and is in debt to its bankers to the extent of £43,123. Deducting this bankers' loan from the cash at bankers and in hand it appears that there is only £12,000 available with which to meet the current requirements of the business and the dividends declared. We make the allowance for depreciation under all heads little more than 1 pr cent. of the capitalisation. This sort of finance cannot end well, and is not showing up well now.

Royal Brewery, Brentford, Limited.

Inclusive of rentals, interests on loans, and dividends, the gross profit of this brewery company for the year to June 30 amounted to £69,336, compared with £62,526, an increase of £6,824. After deducting expenditure, including £5,000 to depreciation on leases and plant—greatly exceeded by purchases and additions—£4,030 repairs to brewery, and £14,251 repairs and alterations to houses, the net credit is lower at £31,737, against £33,489. Debenture interest takes £634 more at £6,990, the directors' and auditors' fees, London expenses, etc., absorb £1,810, and cost of issue of debentures, £567, leaving £22,383. After providing for the preference dividend, the ordinary shares again get 10 per cent., £2,000 less at £8,000 is placed to reserve, bringing that fund to £55,000, and £394 is carried forward against £1,086. The reserve is invested in the business, and the company does not appear to be working with too much freedom. Perhaps this is the reason why the directors wish to extend their borrowing powers, for they intend to ask power to raise not more than £100,000 in excess of the first mortgage debenture debt of £195,000. To secure repayment they propose the creation of "B" mortgage debentures, and by and bye they may get to "Z." They don't want the money now, bless you. They merely wish for the power to seize any opportunity that may present itself, which is modern thrift all over.

San Francisco Breweries, Limited.

A year ago the directors of this company expressed their intention of trying to retain in the prices charged for beer a large proportion of the war-tax, which had been withdrawn, and the report for the twelve months ended April 30 shows that they have been successful, and that the consumers have apparently submitted quietly to the impositions. Sales amounted to 219,826 barrels, or 15,013 more than in the previous year, and trading profits increased by £21,239 to £89,080, to which was added interest on

loans, rents, etc., making a total revenue of £90,116. Of this amount £14,100, or £920 more, was spent on repairs, and depreciation allowances were cut down by £2,257 to £7,325, but the allocation to reserve against agency buildings, doubtful debts, etc., was more than doubled at £15,543, and it would be as well if shareholders were to insist on knowing what has caused the necessity for such an enormous increase. Another £1,201 is written off suspense account, and £4,124 is provided against the amount required over the insurance for the reconstruction of the malt houses at San Jose, which was destroyed by fire, but even after making these provisions, meeting London charges, debenture interest, etc., the net profits came to £15,873, compared with £6,992. With £107 brought in, the amount available was £15,980, and the preference shareholders are gladdened with a dividend of 2s. per share at a cost of £12,600, leaving £3,380 to be carried forward. The balance-sheet shows a much more healthy state of affairs, as the item of bills payable found there last year has entirely disappeared, and other liabilities have been substantially reduced, while stocks are £9,831 lower, at £44,676, trade and sundry debtors remain at much about the same figure as a year ago, and cash in hand is £7,200 up, at £19,911.

Peel River Land and Mineral.

This company's interim report is not at all comforting. On December 31 the returns showed that the concern possessed 132,106 sheep, 4,865 cattle, and 535 horses, and owing to these reduced numbers, and the importance of increasing the flocks and herds as soon as possible, it was not considered advisable to sell any sheep at all. Therefore the amount derived from sales of live stock will be small. Not only so, but the total wool clip from 130,992 sheep and 4,277 lambs was 1,622 bales, as compared with 2,946 bales last year, and although a satisfactory increase in price occurred, profits must inevitably be much below those of recent years. Perhaps the condition of the Peel River freehold, caused by the drought, cannot better be illustrated than by the statement that none of the cattle were in condition for slaughter as rations, and that the company was compelled to purchase supplies of corned beef for issue to the employees. Fortunately the creeks and dams are now full of water, and although the rain has come rather late in the season, there should be ample feed for all live stock during the winter. A telegram received from Sydney is to the effect that the drought in New South Wales has broken up, and lambing which took place in May is expected to yield 45,000 lambs. The Currawillinghi Station has suffered even more severely than the Peel River Estate, and it is feared there may be further deaths among the flocks, as owing to the extremely unfavourable season through which the sheep have passed, many were very low in condition. Latest advices report that sufficient rain has fallen to ensure a supply of grass, and that lambing from 6,000 ewes will take place in October. During the year 45 agricultural allotments situated on the company's River Flats at Tamworth, and amounting in all to 242 acres, were thrown open for occupation. Six allotments were sold for cash, and the remainder leased on the usual terms. The directors propose a dividend of 1½ per cent.

Woolley, Sanders, and Co.

We mildly rebuked the directors of this company last year for paying a big dividend at the expense of reserve, and can now congratulate them on a change of policy. Under the articles £500 per annum must be placed to a special reserve for the protection of the preference shares until such fund reaches £5,000, and last year the minimum amount was set aside, increasing the reserve to £1,500. At the same time the dividend and bonus aggregated 11¼ per cent., a return much too high, considering the slender savings, and it is pleasant to find the board now appropriating £3,500 to the accumulations and restricting the ordinary dividend to 10 per cent. We hope, however, that the directors will not be satisfied with thus raising the fund to the maximum amount required by the articles, but will proceed to add consistently to it, and continue to invest the monies away from the business. Profits for the twelve months to June 30 were £11,792, or £1,612 more than in 1901-2, and twice as much was brought forward, at £1,195, so that the sum for appropriation is £12,987, against £10,743. Directors' and auditors' fees and income-tax take £729, preference dividend £2,500, and the ordinary dividend £5,000. Then the appropriation is made to reserve, and £1,258 is carried forward. The company only owes £0,234 to sundry creditors, against debtors £31,766, bills receivable £2,839, and cash £11,804, and is therefore well placed. Properties and goodwill are valued at £68,177, and stock as taken by the directors at £7,574.

The Colonial Mutual Life Assurance Society.

A big business was done by this important colonial office in the year ended December 31 last. It issued no less than 3,006 new policies, insuring about £788,000, and yielding an annual premium income of £29,910. This is a large business, and it was conducted at a heavy cost, for the expenses of all descriptions and commissions came to just 25 per cent. of the net premium income, old and new together. Therefore, although claims took only £193,000 altogether the life funds were increased by no more than £110,960 to a total of £2,706,829, or by rather less than £6,000 more than the amount earned by interest on invested moneys. Yet the rate of interest yielded on the funds was £4 3s. 10d. per cent. We have not included the £10,789 written off the investment fluctuation fund during the year, as part of the current expenses.

Prudential Mortgage Company.

The position of this company has not altered much during the year to March 31 last. Loans with interest show a small reduction to £59,650, and deposits with interest are some £4 400 lower at £25,958. On the other side £3,843 less is advanced on mortgages at £72,127 freehold properties amount to £73,583, against £73,248, and leaseholds are £694 smaller, at £26,157. Creditors and debtors about balance, and cash comes to £2,383, or a drop of £1,734. Receipts from all sources, after deducting income-tax, were £10,044, compared with £9,888, but a smaller sum was brought in, and the entire credit is a little less at £10,629. Interest absorbs £3,535, management expenses £1,774, and leasehold redemption £416, while £282 is written off preliminary expenses, leaving them at £565, and the net balance at £4,622. From this a dividend of 4 per cent. and a bonus of 1 per cent. are declared, being the same as in the previous twelve months.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1903, and July 5, 1903:—

Revenue and Other Receipts.

—	Estimate for the year 1903-1904.	Total Receipts into the Exchequer from April 1, 1903, to July 25, 1903.	Total Receipts into the Exchequer from April 1, 1902, to July 26, 1902.

The Investors' Review.

The Week's Money Market.

Bank Rate 3 per cent. (Reduced from 3½ per cent. on June 18.)

Norfolk House, Friday Evening.

The Money Market is going through the customary end of the month experience, which represents nothing fresh of importance. Until this morning short loans hardened up as the days passed, and the market was obliged to go to the Bank for considerable amounts to help it through the Stock Exchange and end of the month payments. Up to Wednesday night it had borrowed for seven days at 3½ per cent., £1,591,000 on other securities, driven to do this partly by an expansion in the active circulation amounting to £857,000, and in spite of a decrease of £301,000 in the Government balances. Of this last, however, 100,000 sovereigns went abroad. The market also required to strengthen its available balances at the Bank of England by £1,591,000, and as borrowing continued yesterday, the end of the month market indebtedness seems to be about £2,000,000. Money appears to have been wanted principally in the Consol market, where congested masses of unsaleable securities have to be carried from fortnight to fortnight or month to month. Under the influence of such demands as these, call money rose outside to 3 and even 3½ per cent., and was never less than 2½ per cent. in the latter part of the week. Seven day money also became 2½ to 3 per cent., and the India Council lent and renewed for a month considerable sums at the lower of these rates. To-day, indeed, it only got 2¼ per cent.

Discount firmed up likewise until 2½ per cent. became the finest quotation for three months' remitted paper, some houses asking 2 9-16 and occasionally quoting 2⅝ per cent. Little was done, however, at the highest of these rates, because Continental competition still prevails, especially for long dated paper, which French bankers were taking at 3 per cent., our brokers often quoting 3⅛ per cent. Now, however, that the end of the month has come, rates are slackening again, and we fear there was not much doing at 2 9-16 per cent. to-day, although more bills were about. Short dated paper was perhaps dearer to the buyer than long bills, but brokers still quoted 2 7-16 per cent. as their minimum for such. Between £250,000 and £300,000 in gold is due to arrive next week, including £100,000 in bars from India, and it will all be taken for the Continent.

Some considerable financial operations are impending, including the renewal tendered for to-day of £6,000,000 of the £10,000,000 Exchequer bond loan due next Friday. The Government will also have to renew £1,000,000 of Treasury bills falling due on the 14th inst. So discounts may not be allowed to go back much further.

Some sharp comments are being made about the way the Treasury has bungled over these renewal Exchequer bonds. It seems an offer was made to renew for another year the £6,000,000 not to be paid off for a commission of ¼ per cent., but it was rejected because Mr. Ritchie thought he could sell new yearling 3 per cent. bonds at par. He has been miserably deceived, for the tenders to-day were so poor that those who offered £99 7s. get 76 per cent. of the amount they applied for. That roughly means that the Government is borrowing at 3⅝ per cent.

The Government has taken power to raise £9,000,000 more on Local Loans stock and will be driven to use the power by the inability of municipalities to raise loans on their own account.

SILVER.

Business on Indian account in the market for bars has ebbed and flowed in a very regular fashion this week, being one day keen enough to raise the hopes of the brokers, and the next day dying down to almost nothing, and prices under these circumstances have naturally fluctuated with some freedom. Forward metal was, on the whole, much more wanted than spot, and the movements consequently were larger, but in the end the quotation was only ⅛d. per oz. higher on the week at 25d. The cash price, after moving up or down to the extent of 1-16d. or ⅛d., closed unaltered at 25 5-16d. per oz. For the Rs.50,00,000 of India Council drafts offered on Wednesday tenders were sent in amounting to Rs.49,90,45,000 for bills, and Rs.15,00,000 for telegraphic transfers, of which Rs.45,49,000 was allotted in bills and Rs.4,51,000 in transfers. Tenders at 1s. 4 1-32d. and 1s. 4 1-16d. per rupee respectively, received about 90 per cent. Next week another Rs.50,00,000 will be offered. The practice of large firms or companies sending in tenders covering the whole of the amount offered or more has developed to such an extent that it has had the effect of driving out the small applicant altogether, and reduced the allotment to more or less of a farce. So far has it been carried that the India Council have found it necessary to modify their regulations and provide against any applications sent in exceeding the amount offered.

Tenders for £6,000,000 Exchequer bonds were opened to-day at the Bank of England. The applications amounted to £9,106,500 at prices varying from £99 17s. 6d. to £99. Tenders at £99 7s. will receive about 76 per cent. of the amount applied for, those above that price being allotted in full. The average price obtained for the bonds is £99 9s. 2d.

Stock Market Notes and Comments.

It would be again possible to say a great deal about the position of stock markets, but we have neither space nor heart to do so this week, so dreary is the prospect. The position remains strained, and we really do not see how it is to mend until the concealed weaknesses in all directions have come to the surface. That will involve some very ugly suspensions and considerable demoralisation of prices, but there will be no activity on the Stock Exchange until events have contributed to satisfy the public that quotations have reached their lowest. In the Yankee market the most interesting thing continues to be the distressing poverty of great railroad corporations. It is denied that the Atchison is hunting around for money, and asserted that it possesses nearly £2,250,000 in cash. That assertion at least cannot be true, for the line is a notoriously over-capitalised one, and its history has been sinister from the first. Meantime the Rock Island Company is said to be contemplating the creation of a blanket mortgage for £50,000,000, no less, in 4 per cent. bonds, an indefinite part of which will doubtless be utilised to keep the appearance of solvency well to the front. Nothing, however, fascinates us so much as the continual indications of stress in the direction of the Standard Oil group. It has evidently over-reached itself in copper, shipbuilding, mineral land grabbing and otherwise, and if its difficulties bring down a few banks and trust companies soon nobody need be surprised. What is certain is that the controllers of the trusts will let the credit institutions go long before they themselves consent to suffer. Altogether the outlook in the Yankee market is black, and so is that in the Kaffir Circus, where we shall have no peace or genuinely strong prices for securities until some of the market-rigging agencies outside the Stock Exchange have gone the way of all impostures.

The Week's Stock Markets.

The nineteen day account just ended has well maintained the evil reputation of its predecessors, and has provided a sufficiency of discouraging events to satisfy even the most superstitious of dealers as to the unlucky nature of such accounts. Nor have the troubles been confined to any one particular section of the markets. Gilt-edged securities suffered from the decision not to underwrite fresh issues, to which we referred a week ago, the American market was upset by the failures in New York, and that for Foreign Government bonds was affected by the rumours of war between Japan and Russia. In the Miscellaneous division, a final disappointment to hopeful dealers was provided by the figures of the London and India Docks Company, and as a general wind up there were four failures announced. None of these was of any great importance as far as the amounts involved were concerned, but it is only in keeping with the traditions of the nineteen day account that two of them should be accompanied by talk of unpleasant circumstances. Pay day having passed off in a fairly comfortable fashion otherwise operators at once became much more cheerful, and instead of seeking for adverse conditions endeavoured to find reasons for an improvement, and so far succeeded that fair recoveries were recorded in many cases. The cheerfulness, however, was very fleeting, and a recrudescence of the liquidation set in, accompanied by ugly rumours of difficulties coming to a head in the case of at least one large firm.

Selling of Consols and other gilt-edged securities was pretty persistent until near the end of the week, and the realisations were to a large extent ascribed to those underwriters who are so overloaded with municipal and other issues that they are forced to sell. It was also said that American operators had been turning out the stock in order to raise funds during the semi-panic on Wall Street, and yet another rumour had it that a Scotch bank was likewise in the market. Prices dipped below 91 on several occasions, but were promptly lifted again before the close of each day by "bear covering," and actually finished substantially higher on Wednesday from this cause, but this

was followed by a fresh relapse, which left the final figures ¼ down, at 91½ for both cash and the account commencing next Tuesday. National War Loan stock also fluctuated, but in a more sluggish fashion, recovering at the close, while Transvaal scrip are ⅛ lower at 5-16 premium. Home County and Corporation stocks were rarely mentioned, and the same may be said of Colonial

Government securities. Queensland issues, however, went back on the reports that the new loan had met with a very cold reception from the investing public, and that the underwriters would get practically the whole of it. As a matter of fact, we believe they had to take up about 70 per cent.

Foreign Government bonds have again been dull, without particular change in anything except Japanese issues. These continued to recede steadily, on the uncertainty and nervousness regarding the position between that country and Russia until Wednesday, when the reassuring statement by the Japanese Minister helped to restore confidence. Prices went up after that rapidly, but the recovery was not quite sufficient to wipe out the earlier losses in all cases, and the 5 per cent. closed ½ down, although the 4 per cent.'s were ½ up. Turkish grouped issues improved slightly on the extra ¼ per cent., which it was declared by the Continent that Lord Alverstone had awarded. The "C" issue gained most, owing to the belief that it is to receive better terms in the conversion than originally formulated. Bulgarian 6 per cents. of 1892 were marked up 1. Spanish and Portuguese loans advanced ½ or so at one time, but afterwards receded, the later Chinese issues were fractionally better, and Egyptians after being lower closed with a gain of 1 in the preferred. South Americans showed a firmer tendency with one or two exceptions. Money for the account was as easy as usual, at from 2 to 3 per cent. on South American things, 3 to 4 per cent. on Far Eastern issues, and from "even" to 3 per cent. on the various Continental loans. Except in Japanese, which lost from 3¼ to 4, movements during the fortnight were of trifling proportions as a rule.

Home Railway ordinary stocks have been held down by the depression prevailing in other sections, especially in the Consol market and the Kaffir Circus, and although there have been a few signs of an investment inquiry these have not been sufficient to lift prices to any appreciable extent. A demand sprang up for South-Eastern deferred stock on the announcement that the Hamburg-American Line has decided to make Dover its English port of call in place of Southampton after the end of the year, and dealers talked of the possibility of the example set being followed by other steamship lines. Even this change, however, important though it is, did not exert any substantial influence on quotations until the market received assistance from Continental buyers, when the price hardened only to weaken again. Chatham ordinary finished slightly lower, but South-Western deferred fell 1. The Great Northern dividend, announced on Thursday, was regarded as the most satisfactory of all, showing, as it did, an increase of ½ per cent. and a much larger balance of nearly £23,000 carried forward, but the deferred stock nevertheless finished ¾ down. The all round depression which set in towards the end of the week sufficed to keep the upward movement in this section from making any substantial progress, and at the close most of the changes were adverse. Brighton ordinary and deferred fell 1 and 2½ respectively, District dropped 1, Great Central deferred ½, and Great Western ½. On the other hand Midland deferred advanced ½, North-Western being

unchanged. Scotch stocks were hardly affected by the terrible accident in Glasgow, as the stocks of the Glasgow and South-Western, the line involved, are rarely dealt in on the London Exchange, and business in them was suspended in Glasgow after the accident. The heavy realisations, however, left Caledonian ordinary and deferred 1 and ¾ down, and North British preferred ½ down. Both of the other dividends announced this week were regarded as favourable, but had no effect. Taff Vale stock advanced 2 on the increase of ¼ per cent. to 3¼ per cent. per annum., but North Staffordshire, which paid the same as a year ago with about £1,100 more carried forward, stood still. Contangos, although substantially lighter than they were some six weeks or two months ago, were still fairly heavy at from 5 to 7 per cent. as a rule. Changes during the account were substantial and mostly adverse, the largest being a decline of 6 in City and South London. South-Western ordinary and deferred were 3 and 3½ lower, Brighton deferred 5½, South-Eastern deferred 3, Great Northern deferred 3½ down, and several others, including Caledonian ordinary and deferred showed losses of 2 to 2½.

Wall Street got a good bit of a shake up last Friday when the failures of Messrs. Talbot J. Taylor and Co. and Messrs. W. L. Stow and Co. were announced, and huge blocks of stock were thrown on the market without regard to price. The former firm has apparently been acting for Mr. Jas. R. Keene, whose son-in-law Mr. Taylor is, and that gentleman admits a probable loss of £300,000 by their collapse. Southern Pacific shares were seemingly the cause of their downfall, as quotations for these showed a fall of 40 points from the highest touched during Mr. Keen's famous "bull" pool, while Messrs. Stow were brought down by Mexican Central. As usual after an outbreak of selling of this description the market set to work to bring about a rally, and asserted that the weak spot having been discovered, the danger was past, and all fears of a general collapse might be put aside as groundless. The return of the Associated Banks, however, showed that in spite of the heavy liquidation which had gone on, the loans had increased instead of being reduced, and although there were plenty of theorists ready with the explanation that this was owing to the trade demands of the country for currency, there is undoubtedly more than a grain of truth in the assertions that the realisations of stocks have merely resulted in a shifting of the burden to other shoulders, and that the market is merely working in its own circle without help of any kind from the public. Two more failures were announced on Monday, neither of them important in themselves, but productive of nervousness lest the trouble should spread, and, indeed, other firms were freely talked about as being almost certain to go. One result of the general upset has been to cause the banks to still further restrict facilities for borrowing, and to discriminate more both as to borrowers and to the security offered. Persistent efforts to lift quotations had the desired effect in many instances, although the struggle was an uphill one, and the setbacks almost innumerable. Wall Street has as usual played through the market on this side as much as possible, and although public interest still shows no signs of revival, there have been one or two occasions this week when something approaching excitement has been witnessed, especially in the "street," after official hours. On balance some of the changes since last Friday are favourable, New York Central being as much as 3½ up. Milwaukee gained 1, and Pennsylvania 1¾. Norfolk common also put on 1, but Southern Pacific advanced 1¼, and Atchison preference 1½. On the other hand Atchison ordinary fell 1¼, Baltimore preferred relapsed 6 and Norfolk preferred was 2 down. The "bear" position in this section continues a fairly substantial one, and considerable profits are again shown by the making up prices, which are all substantially lower, ranging from 12 in the case of Milwaukee downwards. Rates consequently were once more light enough at 3 to 4 per cent.

A recovery of 1¼ was recorded in Canadian Pacific shares partly on the traffic statement for June, which showed that $399,000 had been saved out of gross earnings of $973,000, and partly in sympathy with the movements in Yankees. Grand Trunk stocks fluctuated from day to day, and finished with a loss of ¼ each in the ordinary and third preference.

Beyond a continuance of the realisations by holders of Argentine stocks bought during the boom, nothing of importance happened in the Foreign Railway section to cause us to linger over it. Argentine Great Western issues, Argentine North-Eastern 5 per cent. debenture stock, Buenos Ayres and Pacific second preference, and one or two other debenture issues went back another 1 to 2, but Argentine North-Eastern preferred stock and Buenos Ayres and Rosario ordinary are stationary. Antofagasta deben-

ture stock relapsed 1, but recovered it later. One or two Brazilian and Uruguayan issues left off weaker. Mexican Railway stocks are unchanged, and Mexican Southern ordinary and Interoceanic of Mexico "B" debenture stocks were both 1 lower.

In the Miscellaneous section the outstanding occurrence was the announcement by the London and India Docks Company, which came as a startling surprise to holders of the deferred stock. The figures for the half-year show a balance to be carried forward after meeting the preference charges, which is some £30,000 below that of the corresponding period of last year, and when the news became known the price slumped to 65½, or a drop of 15, and the preferred are down 2. Allsopps preference stock lost last week's gain of 2, and Welsbach ordinary and preference stocks also went back 1 each, but these are merely the natural reaction due to a lack of business. Among Caterers, Aerated Bread shares have been sold persistently, and the price at one time touched 9⅞. At this figure, however, buyers came in freely, and brought about a recovery to 11, a relapse of ¼. Even while the selling was heaviest, it was confidently asserted that there was nothing in the position of the company's affairs to cause uneasiness, but some holders were evidently frightened by the ever increasing competition, while others have probably been forced by necessity to sell. Lyons' shares dropped ⅛. In Iron and Steel securities, John Brown's ordinary shares and Pease and Partners' shares were supported, and the latter finished fractionally harder, but Armstrong Whitworth eased off a trifle. Vickers, Maxim ordinary, after weakening slightly, picked up again before the end, on the dividend proving better than had been expected. British Electric Traction shares have been very weak, and closed at 11¼, or a loss of ¾. Continental Gas stock was marked down 3, and Imperial Continental Gas 1, but the movements appeared to be merely adjustments, and of no particular importance. Eastern Telegraph stock went back on the statements at the meeting on Thursday regarding competition.

Stock markets brightened up a little this afternoon to let people get away for their short holiday in more comfort of mind. It is understood that the large firm of brokers whose difficulties were last night reported to be too acute for arrangement, had got things adjusted to-day, so that the account will not be thrown on the market, and that helped to assist prices. Paris rather sold mine shares, but even these were not specially weak at the close, gloomy though the day had been. Scarcely anything went on in the Home securities or in Yankee Railroad shares, but final prices were better than the worst everywhere.

MINING NOTES AND NEWS.

The Kaffir market is again very, very sick, as poorly as it can be and threatens to sink calmly and peacefully into extinction. The poor patient tried to rally itself on the inspiring news that a consul at Johannesburg had received a telegram from Hong Kong containing a positive offer of 200,000 Chinese labourers to work in the mines for a term of five years, wages to be £3 17s. 6d. per month, "tommy" included. The cost of transport to be arranged by the mining companies, and deducted from the wages. This offer, it was added, has been submitted to the representatives of the mining industry. "Who said Chinese?" was the eager attitude of the market when this news was whispered round, reminding one irresistibly of the picture of the malingering dog suddenly alert, with ears cocked up, when the magic word "rats" is whispered in his ears. It was merely the old device, a wicked subterfuge, and the market straightway relapsed into its lethargic condition, more collapsed than ever from the reaction of hope to despair. Then, to crown its woes, Joseph the would-be friend, has refused to physic it with the remedy for which it craves. "At least, not yet awhile," says he. "I'd dearly love to if I dared, but even I cannot defy the lightning. If I were to give you Chinese now there might be a rumpus, and your last state might be worse than your present. But be patient, my friend, even if you have to starve. Those Johannesburgers and Boers and all the other hot-headed whites out there will have to be brought to their knees. The mine bosses know how to do the trick, and put your trust in them. Then, my dear friend, you come to me and you shall have all you want—Chinese, Indians, wild men of Borneo, cannibals, anything that is needed to make the public buy, and have a fine old boom. Be content to suffer now, it will be more than made up to you by and bye." Thus our hero, but the market is not in the least grateful. Rather did it bang prices lower in sheer disappointment and dis-

gust. "Heavens! how long shall we have to wait before local hostility is changed to placability? Will it be before the millenium? We may all be lingering in the workhouse by then, perhaps dead and buried."

In order to make a further effort to stir up the public one of the controlling houses has gone to the labour and expense of compiling a table of statistics giving the value of the Witwatersrand gold output since 1884 to the end of June, 1903, the aggregate being the staggering one of £101,442,764. The highest total was in 1899, when it reached £16,044,135, whilst for the six months of 1903 it has amounted to £5,579,730, so that the current year promises to surpass the 1897 total of £11,476,00.

Paris, evidently, did not like the speech of Mr. Chamberlain, for it has been a free seller since that momentous oration. The depression has been further deepened by the reports of failures in Glasgow, the Scotch banks doing again what they did some time ago, withdrawing facilities from speculators and thus forcing another quantity of stock on the market. Three failures were announced, two of them regarded as of trifling importance, and some relief was affected to be felt when the worst in this respect was known. It is said that one of the jobbers who failed had a large interest in some Rhodesians. At any rate, the Kaffir Circus exhibited a wee spasm of vitality on Wednesday afternoon, though, of course, there was no more outside business than formerly. It pretended to see a faint symptom of hope in the statement of the *Standard*'s correspondent that "it is nearly safe to prophecy that Asiatics will be working on the Rand before the end of the year," a very cautious prediction, with its "nearly safe" proviso. The rally, however, could only last for a few minutes, for after prices had been put up they had to be marked down,and that has been the condition of the market since. However, weary punters and others will now have a longish rest from the weariness of waiting for the better times that show no promise of early coming, for the Stock Exchange is closed to-day (Saturday), and will not re-open until after Bank Holiday. Local opinion may change in that short time, and clamour for Chinese. Who knows?

Mr. Doolette and his co-directors and Mr. Landau also have been as silent as the dumbest of dumb men on the affairs of their Associated Northern Blocks, and neither shareholders nor the press know anything more than they knew a week ago, and that was not much. What do these gentlemen intend doing? To remain silent for ever? Are not the shareholders anxious to know what all this bother is about, and whether or not recent changes have been made in their interests? Westralians have been as dull as Kaffirs, and there is nothing whatever to say of this market except that prices have hardly changed from day to day.

West Africans have been in a similar stagnant condition. In the miscellaneous section Camp Birds have been strong on the report of the directors, Egyptians have been conspicuously weak, Rio Tintos have been gradually moving upwards, and Etruscans downwards. With respect to the latter the promised first monthly circular is to be issued next week.

New African Company.—The credit items in the profit and loss account of this company for the year ending December 31—seven months back—total £102,125. Of this £80,270 represents realised profits on shares sold, £5,725 reserve on Douglas Colliery written back, £9,571 interest and dividends, £132 sundries, and £6,427 nothing more substantial than "appreciation." After deducting outgo a credit of £82,148 goes to swell the balance-sheet, where a balance of £123,633 is brought forward. With reference to this the auditors say:—"The balance of the profit and loss account in the balance-sheet includes £99,108 for appreciation on shares and participations, and £13,210 in respect of shares which the managers of a syndicate have advised as having been sold, but for which the cash has not yet been received." Nevertheless, the directors proceed to declare dividends. The sum of £73,200 goes in a 20 per cent. distribution, paid last July, and they now propose to pay 5 per cent. in cash and 15 per cent. in shares of the International Ethiopian Railway Trust and Construction Company, which leaves £58,611 to be carried forward. We hope the shareholders will be grateful for this kindness, for we have no doubt the paper is artistically lithographed, and there is no knowing for what purposes it might come in useful. Liabilities comprise £13,758, to creditors, and £87,684 contingent on shares. Cash totals £28,609, contango loans figure at £80,852, and sundry loans at £32,391, and sundry debtors owe £23,117. Then there are "debentures, bank, railway, and other assets," valued at £247,541, mining, land, copper, and other shares and participations, £15,728, copper shares—there must be some subtle distinction between these "copper" assets—£15,728, there are things described as "marketable" gold and land shares—the inference being the others are unmarketable—£135,847, syndicate participations, £15,964, and miscellaneous shares and participations, £49,669. All the above seem to be valued in an arbitrary and capricious manner, the auditor reporting:—"The debentures and shares which have a published price are taken at this price, the remainder, and the syndicate, and other participations, about two-thirds of the whole, are taken at the directors' valuation."

East Rand Extension Gold Mining Company.—This company's income during 1902, which came principally from share transactions and the selling of claims to other companies, aggregated £96,845, and a balance of £8,020 was brought in. The profit and loss account is debited with £1,835, written off investments, £2,737 written off Barberton investments, £1,801 loans written off, and £1,365 loss on shares. After allowing for other outgo a balance of £92,168 is shown, which is subject to a five per cent. commission to the directors, a nice little sum. On turning to the balance-sheet it is notified that all this credit is subject to the realisation of shares. The report explains that all the amounts have been realised in cash, with the exception of Leeuwport Deep and Hercules Deep, which are represented by shares taken at par, thus accounting for no less than £64,696 in paper. Investments—how valued it is not stated—stand at £216,340, loans amount to £14,608, and cash figures at £48,335, against liabilities aggregating £95,576. Of the latter £71,218 represents liability for working capital on Hercules Deep and Leeuwport Deep shares.

Mount Yagahong Exploration Company.—During the year 1902 this West Australian company won gold to the tune of 2,889 oz. from the plates and 2,291 oz. from cyanide, realising £9,589 and £6,474 respectively, the gross income, including transfer fees, interest, etc., being £16,900. All with the exception of £385 was swallowed up in expenditure. A balance of £9,798 was brought in, making a credit of £10,183. This has been applied principally in writing down asets. From the mines development account, standing at £11,460, £2,250 is written off, being the balance of the horizontal developments carried out prior to 1902, together with the cost of all other horizontal developments. To writing down plant, machinery, and buildings, £4,094 has been appropriated, leaving the account at £27,405. After reducing live stock by 50 per cent. to £202, a balance of £3,636 is carried forward. The directors report they have a scheme for disposing of the Murchison Main Reef property to a subsidiary company, and that thereafter the operations of the company shall be limited to its work as a finance and exploration company. They intend to consult the shareholders as to the best method of carrying out this policy, though we should have thought, having decided to take so important a step, they would have matured a policy themselves. Mr. G. P. Doolette has recently joined the directorate. The company looks decidedly hard up. It has, or had at the end of 1902, only £193 in cash, with gold and debtors lumped together at £124. Some "investments" are valued at cost at £50,694, but most of it is evidently nothing better than the shares held in its subsidiary, Abbott's Proprietary, a company that can show a nice fat debit, and whose property has yet to be further prospected and "proved." This offspring also owes its parent £3,976, as the balance of purchase price. Other subsidiaries have borrowed £11,292, presumably the Star of the East, and Nannine Goldfields, whose properties were shut down practically throughout the year pending a favourable opportunity of raising further working capital, so probably it has been raised by this parental loan. Liabilities, including £539 overdraft, aggregate £3,955, and there is a contingent liability—sum unmentioned—on underwriting 155,000 shares in the Star of the East. So it did provide the capital?

Oriental Gold Mining Company of India.—The report of this obscure Indian company briefly states that during the year ending March 31 three calls of 1s. per share were made, and the sum of £16,835 was received on capital account. Since the date of the balance-sheet a further 1s. per share has been called up, making the shares 19s. paid. The general expenditure for the twelve months, after deducting £1,225, received for water rent, etc., amounted to £15,164. The work done resulted, it is stated, in a small addition to the reserves of ore opened up and a development "of a promising nature" has occurred recently at the 1,000 ft. and 1,100 ft. levels north of Taylor's shaft. Including the uncalled capital, the available resources of the company at the date of the balance-sheet amounted to between £12,000 and £13,000, and "it is hoped that the developments now proceeding will lead to favourable results in the near future." We share the hope.

Johannesburg Estate Company.—The directors of the Johannesburg Estate Company are never in the habit of troubling the shareholders with much information, the latter being a class of persons to whom they pay the compliment of possessing powerful imaginations. During the twelve months to the end of March the single item on the credit side of the profit and loss account vividly informs the curious-minded that the revenue from all sources was £22,925. On the other side the London and Johannesburg office expenses, directors' and auditors' fees, salaries and wages, legal expenses, electric light, etc., is a delightfully comprehensive entry, aggregating £4,374, then two or three thousands are absorbed by property maintenance, rates, and taxes, insurance, etc., and a credit of £14,641 is left. Into the appropriation account a balance of £25,714 is brought, and there is likewise a "profit derived from the New Doornfontein Estate" of £32,324. After deducting £20,000 in the payment of a dividend of 10 per cent., £52,262 is carried to the balance-sheet. The financial position of the company is a strong one, with £66,014 on fixed deposit, and £2,503 in cash. The shareholders had to wait until the meeting was held for an explanation of why so much is carried forward. It was then explained that the directors do not intend to distribute more than ten per cent. until some definite arrangement as to the principal asset of the company—the Exchange Buildings—has been arrived at." "When addressing you in June, 1902, said the chairman, I mentioned that the board were then in negotiation with the committee of the Stock Exchange, trying to renew the lease which ran out at the end of the present year. Shareholders will be called upon in due time to deal with this matter, unless the directors find some suitable tenants, of which there is still some possibility. But it must not be lost sight of by shareholders that they may be called upon to deal with such a contingency."

Mozambique Macequece.—We may remind readers that last April we recorded the sad fact that this company was hard up for the ready, and in order to get it a brilliant scheme was conceived by the directors, namely, the highly original one of reconstruction, making the second reorganisation in its brief history. The

old company had a capital of £350,000, in 700,000 shares of 10s. each, the present company is burdened with only half this sum. The report of the directors briefly states that the total number of shares allotted is 243,145, of which 208,138 have been allotted as paid up, otherwise than in cash to the extent of 8s. per share; 35,000 shares have been allotted as fully paid to the Companhia Mocambique and upon each of the remaining seven shares 10s. has been paid in cash. "As regards the said 35,000 shares, the company has received no cash in respect thereof, and the total amount of cash received by the company in respect of the remaining 208,145 is £4,778."

Westralian Companies and the Executive of the Council of West Australian Mine Owners.—Last week we announced that Mr. Govett, of the Ivanhoe Gold Corporation, had resigned from the Executive Committee of the Council of West Australian Mine Owners, of which Mr. Doolette is the chairman, presumably, it was conjectured, because the directors of his company objected to Mr. Doolette's proposal for the appointment of a Government Inspector of Mines. This week the press has received copies of letters sent by the Ivanhoe and also by the Lake View Consols Company to the Secretary of the Council of Mine Owners, to the following effect:—"I have to acknowledge receipt of your letter of the 20th inst. inviting this company to nominate a representative for election on the Executive of the Council of West Australian Mine Owners in succession to our chairman, Mr. F. A. Govett. In reply I am directed to inform you that Mr. Govett severed his connection with your Council with the approval and concurrence of his colleagues on the board of this company, who do not desire to nominate a successor or to continue to be represented either on or by the Council. In these circumstances I am instructed to ask you to accept this letter as a formal notice of the withdrawal of the Ivanhoe Gold Corporation, Limited, from membership of the Council."

Camp Bird, Limited.—This is the company which upset the riggers a few weeks ago by the report that the reef had pinched in the Chicago tunnel. In this, the first report issued by the directors, which covers the period from May 12 to April 30, they refer to the above, but briefly, saying:—"The manager advised us that the reef then pinched, and that, owing to the inaccessibility of the tunnel, he had decided to temporarily suspend work until direct communication had been effected with the main workings of the mine." Sales of bullion realised £316,505, from 66,825 dry tons treated, whilst concentrates gave £76,478, cyanide slags £742, miscellaneous receipts £1,349, interest on loans and deposits £1,443, dividends on Consols £354, transfer fees £208, difference in exchange £20, the revenue account being also credited with £9,418, the value of the stocks at the end of April. After deducting the working costs, there remains a balance of £258,800 to be carried forward to the profit and loss account, the cost of working being £2 3s. 8.2d. per ton, and the profit £3 17s. 5.6d. per ton. The directors allow £15,000 for depreciation, being approximately 20 per cent. of the estimated value of the machinery and equipment. Out of the profit four dividends of 7½d. per share each and one of 1s. 6d. per share have been paid, income-tax has taken £14,187, and the directors' extra remuneration of one per cent. £2,348, a balance of £54,323 being carried forward. A splendid balance-sheet is issued, though we think the directors would be well-advised to commence a reserve fund without delay. Cash totals £113,054, of which £72,531 is on deposit and short loan, whilst Consols are put at £50,531. Liabilities aggregate about £30,000. The reports of Messrs. Hammond and Cox show that, after treating 66,825 tons of ore, the reserves were, at the end of April, 81,334 tons of ore broken in the stopes and 142,017 tons blocked out, making a total of 223,351 tons in reserve, which, Mr. Hammond estimates, will yield a profit of approximately £880,051. It is stated that the most important developments during the year have taken place in the western portion of the mine, where the Big Discovery stope has been extended to a height of 170 ft. above the second level. The intermediate drift at 150 ft. above the same level has been driven 750 ft. in payable ore, ranging from 5 ft. to 14 ft. in thickness. The first level, 150 ft. above the Intermediate and 300 ft. above the second level, is now also being driven in payable ore. So directors and shareholders are to be congratulated on the position and prospects, but outsiders should keep a sharp eye on market riggers.

Mashonaland Agency.—This Rhodesian company realised during the year ending December 31, 1902, the sum of £12,818 by the following summary method:—Profits realised by sales of investments, dividends, interest on loans, etc., less amounts written off. Stands and office rentals brought in £5,775, and transfer fees £309. General expenditure in London took £2,901, and in South Africa £9,847, the latter being less fees received and due from other companies for engineering, management and agency. The profit is £6,155, increased to £67,291 by the addition of the balance brought in. After deducting income-tax the sum of £65,918 is taken to the balance-sheet and carried forward. One of the company's principal assets consists of its holding in the Beatrice mine. Unfortunately, owing to the scarcity of native labour and the difficulty of transport, it became necessary to close down the mill. It has been considered advisable, the directors confess, to write down this asset to a nominal amount. At the same time they have revalued other assets, and "in some cases have deemed it advisable to write these down to a lower figure." This has involved a total sum of £78,047, dealt with by utilising the reserve, and by taking £25,625 from the profit on the year's working, which explains the credit item, already quoted, in the profit and loss account. It may be mentioned also that the reserve included £16,711 premiums on shares issued during the year, 16,000 shares being "placed by the directors at advantageous prices." So some of these assets have been written down indirectly out of capital, for seeing the amount of cash in hand, £14,123, and £126,909 out on loan (contango probably), there was no apparent need to issue these additional shares. However, it is quite consistent with Rhodesian finance. One paragraph in the report gives us ancient news, namely, the amalgamation of the five companies, particulars of which we gave in our issue of the 11th ult. The principal asset in the balance-sheet is "Sundry investments at cost or under, £260,843," the report stating that the appreciation in these is more than double the depreciation written off. In 1901, we may recall, £48,785 was written off investments, claims and buildings, making a total loss in the past two years of £101,206, premiums in 1901 being appropriated to the extent of £23,411. The contingent liability has been reduced from £34,704 to £6,461.

Tokatea Trust.—This is a small company, with a capital of only £25,000, which holds interests in mining companies in New Zealand and West Australia. In their report to the end of June the directors state that the company has not entirely escaped its share of the depression that has existed in the mining industry. Interest, commissions, etc., brought in £2,241, and transfer fees £3, and after deducting expenditure, a profit of £1,429 is left, out of which a dividend of 6 per cent. is recommended. This will absorb £1,697, and leave £328 to be carried forward. A fairly strong financial position is shown, the only item to which attention and criticism may be directed being "investments as per valuation of board of directors, £5,290." We look in vain to see what these investments consist of, and we would like to know what objection the directors have to giving them in detail, and also by what precise means they have given them their present book value.

Victory (Charter Towers) Gold Mining Company.—During the six months to the end of April this company crushed 440 tons of stone for a yield of 265 oz., which realised £871. In addition 1,316 oz. of bullion were obtained from the treatment of tailings and concentrates, sold for £3,393. Expenditure, however, exceeded income by £4,235, the latter being the loss on the half-year. As all the capital of the company has been called up, it will be necessary, say the directors, to raise more money for the further development of the mine, accordingly they propose to submit a scheme of reconstruction at an early date, not very pleasing news for the shareholders. Recently application was made for total exemption, for a period of six months, of the labour conditions of the lease, and work was then suspended and the mine shut down. At the end of April the company had cash amounting to £3,245.

Mantraim (Wassau).—A circular issued to the shareholders states that diamond drilling operations are in progress in the southern portion of the company's concession under a joint arrangement with the Effuenta Company, and the reef has been struck at a depth of about 500 ft., in the south-western quarter of the property. Another borehole is now being put down in the south-eastern quarter. It is not exactly thrilling news, but shareholders may be interested in reading it in these quiet times.

Javali Gold Mine and Trading Company.—The report and accounts of this company, whose property is situated in Nicaragua, cover the period of fifteen months from October 1 to December 31, 1902. During these months 6,760 tons were crushed, yielding 1,869 oz. of bullion. This realised £4,643, equal to a recovery of 13s. 8.85d. per ton. The revenue from all sources amounted to £4,647, whilst the working costs took £4,097, leaving a small profit of £550. Of this profit £157 is appropriated to writing off the debit balance brought forward, and only £120 is devoted to depreciation, the directors thus carrying forward a balance of £272. At the end of the year the financial position was weak, for the company had only £72 in cash, with debtors owing £77, and with gold in transit valued at £528, against liabilities of £1,450. It is reported that the results of development work are satisfactory, the payable ore reserves having been largely augmented, and the mine being in a position now to admit of an output of fifty tons a day, sufficient to keep 20 stamps constantly going. Meanwhile fresh ore bodies are being opened up in various parts of the mine. All cost of development work has been charged against revenue. At the end of April last the ore reserves stood at about 20,000 tons, of an average value of 12s. 6d. per ton.

Flagstaff Gold Mines.—This company has made a name for itself as one of the most unfortunate, to speak as gently as possible, in the annals of gold and silver hunting. Originally it commenced its ill-fated career as the Flagstaff District Silver Mining Company, and for years it worked a property near Salt Lake City, Utah. Since then it has been reconstructed no less than half a dozen times. Three or four years ago it bought a property in West Australia and now that has had to be abandoned. But the directors are still hopeful, wonderfully hopeful, as long, probably, as they can retain office. They are actually "pleased" to be able to state "they have entered into a provisional agreement whereby the shareholders of the Flagstaff Company will receive, pro rata to their holdings, 35,000 fully paid shares in the Greenmount Gold Mines, Limited, as consideration for the sale to that company of the net assets of the Flagstaff company other than the mine at Coolgardie." They think this scheme will "substantially benefit" the shareholders, and "minimise the loss" they have hitherto suffered. We doubt it, and think the best way to minimise past and possible future losses is to wind up the concern, and bury it once and for all, never to be resurrected this side the millenium. The chairman has recently visited Salt Lake City with a view to

negotiating an outright sale of the company's interests there or letting the properties on tribute. It was found to be impossible to effect a sale. Is that surprising? The chairman, however, succeeded in leasing the claims, with an option of purchase, at from £10,000 to £15,000, according to the period within which the option was exercised. As, however, the lessees have now intimated their intention to abandon the lease, "and as the directors have just received a communication from their legal agent at Utah notifying that some further legal proceedings may be necessary, owing to the discovery that an adverse claim which was instituted in 1877 and has lain dormant for many years past, will have to be disposed of, the directors regret to say there does not appear to be any prospect of the negotiations for a sale of the properties being brought to a successful conclusion at an early date." We are told that the Greenmount Company has a capital of £100,000, in £1 shares, and is acquiring a property of 24 acres situated at Southern Cross, a district in which large sums of English money have been sunk and lost. However, some "extensive exploratory and development work has been done upon it," and "Mr. Trude reports that the mine is unquestionably a valuable property." It may be and it may not. As for the finances, the company has magnificent assets in the shape of £199 in cash, a debit balance of £4,923, with some preliminary expenses, development outgo, horses, and even harness and drays. It owes the sum of £1,520 to creditors, and can boast of £52 received in premiums.

Golden Links.—The directors of this Westralian company have issued a quarterly report, dated July 20, in which they say development work on the Link and Eclipse leases has been actively pushed forward, and eminently satisfactory results have been obtained, considerably increasing the intrinsic and prospective value of the properties. The principal results of the work done on the Link lease during the three months "prove that we are now below the disturbed zone, and that the two lodes located at the 1,300 ft. level are in settled country and well-defined." A wide body of mineralised ore, payable in parts, has been located in the drive 180 ft. south of the main shaft, and the settled nature of the country has been proved to continue below the 1,300 ft. level, the main shaft having already been sunk another 100 ft. to the 1,400 ft. level in clean country. Good progress, it is stated, has also been made on the Eclipse lease, a "great improvement" being shown both in the size of the oxidised ore bodies and in the average value of the ore. In the opinion of the manager the increase of the ore reserves has made it advisable to erect another ten head of stamps, and to duplicate the cyanide vats, "which should have the effect of doubling the output without materially increasing the working costs." The value of the gold recovered by the 10-stamp mill during the quarter was approximately £17,450, as compared with £12,415 for the previous three months, an increase of £5 035, which gives a gross return for the six months to the end of June of £29,865, or, including the return for December last, £32,396 for the seven months since the mill started crushing.

Russian Collieries.—This company has again suffered from a period of depression in trade. During the year to April 13 last selling prices fell and considerably affected the company's profits. In spite of this the output has been well maintained, and the directors report the sales of coal and coke as satisfactory, whilst there has been no material accumulation of stocks. The profit from the colliery was £26,226, and after deducting expenditure, £7,492, and debentures redeemed, £5,500, there remains a net profit of £13,234. Interest on debentures required £8,914, and adding the balance brought in, there is available for distribution and reserves, £15,675. Out of this 5 per cent. is paid on the 7 per cent. cumulative preference shares, leaving a balance of 2 per cent. to be paid out of future profits. In their report the auditors point out that "nothing has been added this year to the depreciation account, which still stands at £20,984. Debentures for £5,000 have, however, been drawn . . . and this sum has been transferred from the profit and loss account to the credit of a debenture redemption account; but we are unable to say whether the amounts so set aside are sufficient to cover the working out of the coal and the actual depreciation of the property and plant." The financial position is fairly sound, but another year or two like the past will, of course, change the show.

British Gold Coast Company.—In the fifteen months from October 1, 1901, to December 31, 1902, this West African company received £850 from interest, £101 from transfer and other fees, £438 from management fees, and £5,383 representing "amounts included in development expenditure written off September 30, 1901, since recovered." On the expenditure side the directors have allowed £22,069 for depreciation of shares, accordingly a debit of £32,399 is shown. They explain in their report, however, that "taking the investments collectively at their market value, there was, at December 31, 1902, and there is also at the date of this report, an appreciation far exceeding the depreciation written off in the accounts," which is glorious news, indeed, almost enough to start a Jungle boom. As a credit balance of £30,141 was brought in, the debit shown in the balance-sheet is £2,258. Cash totals £8,079, debtors owe £19,332, and shares stand at £47,689, against creditors for £4,037, and a contingent liability of £11,375. Since the date of the accounts 8,493 shares have been issued at a premium of £2.

Menzies Alpha Leases.—During the twelve months to the end of April this Westralian company won sufficient gold to realise £23,153, in addition to which interest gave £35, and transfer fees £2. An aggregate sum of £4,911 has been written off development, and depreciation and outgo absorbed all but £4,344, the latter being the profit earned. After writing off against this the outstanding balance of £3,111, there remains an available sum of £1,233, and at the close of the forthcoming meeting the directors propose to declare a dividend of ten per cent. on the preference capital paid up. A fairly good balance-sheet is issued, but the board lament that "the mining costs in the colony, already sufficiently high, have been further increased, as the result of the action of the Colonial Arbitration Court in imposing throughout the principal mining districts an all-round increase in the rates of pay." The consulting engineer is endeavouring to counteract this increase by letting out upon contract all the mining work possible. Ore reserves at the end of the year were estimated at 2,000 tons.

Elmslie, Limited.—This mining agency and financing company managed to do better during the twelve months to the end of April last than during the preceding year, the profit increasing from £914 to £3,045. The gross income of £5,849 was derived in the proportions of £2,896 from management and agency salaries, commissions, interest, transfer fees, etc., £2,588 from profit on share dealing, whilst £365 represents an increase in value of shares, subject to realisation, in other words, appreciation. The above profit is deducted from the debit of £9,116, reducing it to £6,070, quite a disconsolate position after the dividends the company have paid in the past. The financial position looks sound enough, though the balance-sheet does not specify the stocks and shares held, of a book value of £47,353. A further assets is £59,618 owing by sundry debtors, which the report explains consists principally of advances to various undertakings in which the company is interested, and which are mainly under its control. Against the advances there are mining properties, machinery, town allotments, offices, and stores, and also some uncalled capital. The directors add that the company is now devoting more attention to the leading mines of the Charters Towers, Gympie, and Ravenswood goldfields, and say results have so far been sufficiently encouraging to warrant it continuing to do so.

MINING RETURNS.

Brilliant Block Gold.—Value of bullion, £300.

Brilliant Central Gold.—Crushed 3,030 tons for 2,508 oz.

British Broken Hill Proprietary.—2,909 tons crude ore produced 541 tons concentrates, which contain 308 tons lead and 13,525 oz. silver.

Camp Bird.—Crushed 5,565 tons of dry ore, sales—109,634; concentrates sales (488 tons), $29,875; deposited in cyanide mill, 3,455 tons, which yielded bullion value $11,757.

Chinese Engineering.—Output of coal 17,500 tons; sales 13,000 tons.

Golden Blocks (Taitapu).—Crushed 170 tons; obtained 160 oz.

Komati Reefs.—Crushed 1,260 tons; bullion £3,475.

Mount Lyell.—16,971 tons of ore treated. The converters have produced during the same period 573 tons of blister copper containing: copper, 567 tons; silver 49,698 oz.; gold 1,722 oz. In addition to the above there has been treated during the same period 981 tons of North Mount Lyell ore and metal-bearing fluxes.

Mysore West and Wynaad.—Crushed 1,800 tons, yield 853 oz.

New Queen Gold.—149 tons crushed; 159 oz. realised; from public crushing £350.

No. 2 South Great Eastern.—Crushed 3,732 tons for 3,914 oz.

Pahang.—2,370 tons of stone crushed, producing 45 tons of black tin.

Pahang-Kabang.—810 tons of stone crushed, producing 9 tons of black tin.

Raub Gold Mines (Malay Peninsula).—730 oz. smelted gold from 2,900 tons stone crushed.

Royal Oak of Hauraki.—Crushed 630 tons quartz and 522 lb. picked stone for £1,018.

St. John Del Rey.—Gold produce, £7,750. Yield per ton, .570z. troy.

Sulphide Corporation.—3,306 tons of ore milled at the central mine, producing 640 tons of leady concentrates, and 3,222 tons of middlings treated, producing 1,618 tons of zinc concentrates. At Cockle Creek 818 tons of leady concentrates, 1,192 tons of residues, and 2,451 tons of purchased ores were smelted, yielding 605 tons of lead, containing 51,425 oz. silver. and 9,801 oz. gold.

Waihi Gold.—18,844 tons crushed, yielding, inclusive of concentrates, £52,194.

Witwatersrand Deep.—Tons crushed, 5,790; yield 1,424 oz.; tons of sands and concentrates treated by cyanide, 3,877; yield, 1,175 oz.

Hearts of Oak Permanent Building Society.

During the year ended March 31 the share capital was increased by £37,566 to £272,553, and the amount standing at the credit of depositors in the banking department by £6 859, to £118,309, while £104.561 was advanced upon 329 mortgages, and the balance owing to the society at the end of the year was £36,653 up, at £406,280. Gross profits realised amounted to £23,917, and after crediting the usual interest to shares and deposits, meeting the usual working expenses, and the cost of alterations and repairs to the office, £382 was appropriated for writing down to the minimum market value the 2½ per cent. Consols, and 3½ per cent. India Stock in which the surplus funds are invested. This leaves a balance of £2,585, and the directors propose to pay a bonus of 10s. per cent. upon investment shares of classes "A" and "B" of at least two years' standing, in addition to the regular interest at 5 and 4 per cent. respectively. The financial position is one upon which the officials deserve congratulation, as out of 1,504 mortgages 1,490 are for amounts not exceeding £500, and the society has no properties in hand through the failure of borrowers to meet their obligations.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Barry.—Dividend of 9 per cent. per annum for the last half-year on ordinary stock, carrying forward £6,368.

Dublin, Wicklow, and Wexford.—Dividend on the 6 per cent. cumulative preference stock for half year ended June 30, carrying forward £537.

Great Northern.—Dividend at the rate of £3 per cent. per annum on the ordinary capital for the half-year, £2 per cent. to the preferred converted ordinary stock, £3 per cent. to the B stock, carrying forward £22,880, as against £8,232 carried forward in the same period of last year.

Hull, Barnsley, and West Riding Junction Railway and Dock.—The accounts for the half-year ending June 30, after payment of the fixed and other charges and the contingent additional interest on the second debenture stock, show an available balance (including the amount brought forward) of £29,575, and after payment of the dividend for the half-year on the 3½ per cent. preference stock there will remain £19,338 to be carried forward, compared with a balance of £13,363 at June 30, 1902.

Lancashire, Derbyshire, and East Coast.—Full dividend for the past half-year on first preference shares, carrying forward £568, and transferring £5,000 to the general renewal suspense fund.

Liverpool Overhead.—A dividend at the rate of 5 per cent. per annum on the preference, and 1¼ per cent. per annum on the ordinary shares, against 1 per cent. for the same period last year, carrying forward £3,747.

London and Blackwall.—Dividend at the usual rate of £4 10s. per cent. per annum.

Midland.—Dividend at the rate of 2½ per cent. per annum on the preferred converted ordinary stock, and at the rate of 2¼ per cent. per annum on the deferred converted ordinary stock, being equal to 4¾ per cent. per annum on the former ordinary stock, carrying forward £22,259. The dividend last year was at the rate of 4½ per cent. per annum, carrying forward £21,270.

North Staffordshire.—Dividend for past half-year on ordinary stock at the rate of 4 per cent. per annum, carrying forward £5,987.

Vale of Glamorgan.—Dividend of 4 per cent. per annum for last half-year on the ordinary stock, carrying forward £945.

BANKS.

Isle of Man.—Dividend for half-year at the rate of 15 per cent. per annum, carrying forward £2,763.

London and County.—Dividend for half-year of 10 per cent., together with a bonus of 1 per cent., carrying forward £85,102.

Martin's Bank.—Dividend at the rate of 8 per cent. per annum, placing reserve £5,000, carrying forward £23,851.

BREWERIES.

Arthur Guinness, Son and Co.—Final dividend of 8 per cent. and a bonus of 4 per cent. on the ordinary stock, making, with the interim payment, a total dividend of 16 per cent., and a bonus of 4 per cent.; £210,000 have been added to reserve for capital expenditure and contingencies, £35,000 to depreciation fund, and £69,982 carried forward.

City of London.—Interim dividend for past half-year of 2½ per cent. on the ordinary stock and shares.

Rhondda Valley.—Interim dividend at the rate of 12 per cent. per annum on ordinary shares.

Southdown and East Grinstead Breweries.—Interim dividend for the half-year ended June 30 on the ordinary shares at the rate of 10 per cent. per annum, payable on September 1.

Stroutt's.—Dividend of 21s. per share on ordinary shares and bonus of 7s. per share, placing reserve £2,000, carrying forward £1,128.

MINES.

Brilliant Central Gold.—Dividend of 9d. per share.

Mount Morgan Gold.—Dividend of 3d. per share for July.

No. 2 South Great Eastern.—Dividend (number 60) of 1s. and bonus of 6d. per share, payable 31st inst.

MISCELLANEOUS.

Bristol and South Wales Wagon.—Dividend of 10 per cent.

British Oil and Cake Mills.—Dividend of 5 per cent. on the ordinary shares for year to June 30, after providing £15,000 for depreciation and carrying forward £6,000.

Brompton and Kensington Electricity.—Dividend on the ordinary shares for the half-year ended June 30 at the rate of 9 per cent. per annum, 4s. 6d. a share.

Campania Sansinena de Carnes Congeladas.—An interim dividend of 5 per cent. will be paid on August 4, on presentation of bearer shares for endorsement.

County of London and Brush Provincial Electric Lighting.—Interim dividend for half-year ended June 30 on the ordinary shares at the rate of 4 per cent. per annum, payable August 31.

Gas, Water, and General Investment Trust.—Interim dividends at the rate of 4½ per cent. per annum on the preferred and 3 per cent. per annum on the deferred stock for half-year to July 28.

Great Western and Metropolitan Dairies.—Interim dividend, payable August 1, at the rate of 6 per cent. per annum for half-year ended June 27 on the ordinary shares.

Hayes, Candy.—Interim dividend at the rate of 7½ per cent. per annum on the ordinary shares, payable August 4.

Henry Bessemer.—Interim dividend of 5s. per share on the ordinary shares.

Holborn and Frascati.—Interim dividend for half-year ended June 30 on the ordinary shares at the rate of 8 per cent. per annum, payable September 1.

Jeremiah Rotherham and Co.—Interim dividend for the six months ended July 15 on the ordinary shares at the rate of 7 per cent. per annum, for which warrants will be posted on September 1.

John Howell.—Interim dividend of 3s. per share for the half-year ended July 18.

Jones' Sewing Machine.—Further dividend at the rate of 6 per cent. per annum on the preference and ordinary shares for past half year, carrying forward £1,345.

Lang, Bridges and Co.—Dividend of 10 per cent. on ordinary shares original capital, and 8 per cent. on new capital, carrying forward £469.

London and Middlesex Freehold Estates.—Interim dividend of 2s. 6d. per share, for the half-year ended June 30, payable on September 1.

Metropolitan Electric Supply.—Interim dividend for half-year ended June 30 at the rate of 8 per cent. per annum, compared with 7 per cent. last year, payable August 11.

Metropolitan Gas of Melbourne.—Dividend of 4s. 6d. per share for the half-year, placing £15,000 to reserve, and carrying forward £4,750.

Morrison and Fleet's Dairies.—Interim dividend at the rate of 5 per cent. per annum for half-year ending the 30th ult.

Moss' Empires.—Interim dividend at the rate of 10 per cent. per annum on the ordinary shares for six months ended June 30.

National Gas Engine.—Interim dividend at the rate of 15 per cent. per annum, on the ordinary shares, for six months ended June 30.

Penrikyber Navigation Colliery.—Dividend of 5 per cent. on both ordinary and preference shares.

Perry and Co.—Interim dividend for the first six months of this year on the ordinary shares at the rate of 2½ per cent. per annum; warrants will be posted on August 31.

Price's Patent Candle.—Dividend of 15s. per share.

Real Estate.—Interim dividend on account of the current year of 2½ per cent.

Regent's Canal and Dock.—Dividend on the capital stock of 1⅛ per cent. for half-year ended June 30, 1903, being at the same rate as for corresponding period of 1902, and carry forward £409.

Sanitas.—Interim dividend at the rate of 5 per cent. per annum for six months ended June 30, payable September 1.

Spencer, Turner and Boldero.—Interim dividend for six months ended July 15 at the rate of 5 per cent. per annum on the ordinary shares.

Spratt's Patent.—Interim dividend for six months to June 30 on the ordinary shares at the rate of 6s. per share.

Standard Tea of Ceylon.—Interim dividend at the rate of 10 per cent. per annum for six months ended June 30 last.

Thomas Wallis.—Interim dividend for the six months ending June 31 at the rate of 8 per cent. per annum on the ordinary shares.

United Carlo Gatti, Stevenson and Slaters.—Interim dividend at the rate of 5 per cent. per annum on the ordinary shares for six months ended June 30 last.

Vickers, Sons, and Maxim.—Interim dividends for the half-year ended June 30, payable to the holders of the stock and shares of the company, who are registered on August 21, 1903:—2½ per cent. on the preferred 5 per cent. stock, and 5 per cent. preference shares; 9d. per share on the 3,689,500 ordinary shares of £1 each, all paid.

Western Wagon and Property.—Interim dividend at the rate of 10 per cent. per annum for the half-year ended June 30.

William Griffiths.—Interim dividend of 5 per cent. on the ordinary shares for half-year ended April 30, being at the rate of 10 per cent. per annum.

Woolley, Sanders.—Dividend of 10 per cent. per annum on the ordinary shares for year ended June 30.

Ye Mecca.—A dividend of 8 per cent. per annum for the past half-year.

Colonist's Land and Loan Corporation, Limited.

During the year ended March 31 further progress was made with the realisation of this corporation's land, and thanks to the demand for building sites in the town and suburbs of Feilding, 42 acres were sold for £4,338. This leaves 75½ acres in hand, which are carried in the balance-sheet at £307, cost price. Deducting cost and development charges, the net proceeds of the land sales were £4,026, and with interest, rents, etc., the total revenue came to £11,435. Of this London expenditure absorbed £2,325, and New Zealand outgoings £1,621, leaving a profit of £7,489, to which is added £4,086 brought forward. Two dividends of 2½ per cent. each and a bonus of 1 per cent., making 6 per cent. for the year, have been paid, and £6,131 is carried forward, this sum including the profit on land sales above mentioned. The amount invested on mortgages in New Zealand was reduced by £11,508 to £99,327, and as the market for investments of this description at profitable rates is very much restricted, the directors are gradually reducing their commitments in pursuance of the policy indicated a year ago. As this plan is causing cash to accumulate in London, the board has decided to repay to those shareholders who deposited the £7,460 in advance of calls, which have not been made, and to invest the balance temporarily in securities marketable in this country. A further reduction of £3,565 was made in the debenture debt during the twelve months, and another £600 has since been paid off.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended June 26, $10,950; increase, $536. Aggregate from January 1, $320,871; increase, $16,312.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended June 20, Rs. 30,721; increase, Rs. 2,485. Aggregate from January 1, Rs. 7,74,942; increase, Rs. 25,132.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended June 20, Rs. 8,794; increase, Rs. 3,569. Aggregate from July 1, Rs. 2,03,989; increase, Rs. 24,863.

Bengal Central Railway.—Traffic receipts for week ending June 30, Rs. 39,097; decrease, Rs. 4,247. Aggregate from January 1, Rs. 619,578; increase, Rs. 1,825.

Canadian Northern Railway.—Traffic receipts for week ended July 7, $51,200; increase, $25,700. Total, from January 1, $1,085,425; increase, $432,214.

Lucknow Bareilly Railway.—Traffic receipts for week ended June 30, Rs. 63,575; increase, Rs. 845. Aggregate from January 1, Rs. 8,23,598; increase, Rs. 32,654.

Quebec Central Railway.—Traffic receipts for the 3rd week of July, $16,497; increase, $127. Aggregate from January 1, $359,527; increase, $23,508.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended June 27, Rs. 17,748; decrease, Rs. 2,429. Aggregate from January 1, Rs. 2,81,346; increase, Rs. 2,265.

Salvador Railway.—Traffic receipts for week ended July 25, $8,665; increase, $665.

Uruguay Northern.—Traffic receipts for May, £1,912; increase, £299. Aggregate for 11 months, £17,559, increase, £4,214.

White Pass and Yukon Railway.—Traffic receipts for the week ended June 21 amounted to $76,593.

English.

Cleator and Workington.—Gross receipts for the week ending July 25, £1,118; increase, £10. Total receipts from July 1, £3,841; decrease, £356.

Cockermouth and Keswick Railway.—Receipts for week ending July 25, £1,316; increase, £71. Aggregate from July 1, £4,189; decrease, £339.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending July 25, £361; increase £36. Aggregate from July 1, £1,386; increase, £86.

Liverpool Overhead Railway.—Traffic receipts for week ending July 26, £1,710; increase, £149. Aggregate from July 1, £6,842; increase, £469.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending July 25, £537, increase £32; aggregate from July 1, £2,158, increase £73.

Belfast Street.—Traffic receipts for week ending July 25, £3,178, increase £455; aggregate from July 1, £11,940, increase £946.

Birmingham and Midland.—Traffic receipts for week ending July 24, £834, increase £28; aggregate from July 1, £3,314, increase £112.

Birmingham City.—Traffic receipts for week ending July 25, £5,238, increase £404; aggregate from July 1, £20,943, increase £1,025.

Blessington and Poulaphouca.—Traffic receipts for the week ending July 26, £20, decrease £7; aggregate from July 1, £85, decrease £16.

Bristol Tramways and Carriage.—Traffic receipts for week ending July 24, £5,581, increase £860; aggregate from July 1, £21,418, increase £1,216.

Burnley Corporation.—Traffic receipts for week ending July 25, £889, increase for week £274; aggregate from July 1, £3,471, increase £551.

Dublin and Blessington.—Traffic receipts for week ending July 26, £164, decrease £10; aggregate from July 1, £618, decrease £51.

Dublin and Lucan.—Traffic receipts for week ending July 26, £197, increase £74; aggregate from July 1, £542, increase £47.

Dublin United.—Traffic receipts for three days ending July 24, £10,015, increase £4,889; aggregate from July 1, £23,061, increase £5,261.

Edinburgh and District.—Traffic receipts for week ending July 25, £6,060, increase £1,421; aggregate from January 1, £129,294, increase £17,976.

Edinburgh Street.—Traffic receipts for week ending July 25, £797.

Harrow Road and Paddington.—Traffic receipts for week ending July 24, £295, increase £19; aggregate from July 1, £1,239, increase £32.

Isle of Thanet.—Traffic receipts for week ending July 25, £1,328; increase, £67; aggregate from July 1, £4,880, increase £317.

London General Omnibus.—Traffic receipts for week ending July 25, £25,614, increase £2,055; aggregate from July 1, £109,449 increase £2,231.

London Road Car.—Traffic receipts for week ending July 25, £8,315, increase £407; aggregate from July 1, £32,391, decrease £242.

Rossendale Valley.—Traffic receipts for week ending July 24, £174, increase £1; aggregate from July 1, £768, increase £27.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending June 29 £5,747, increase £1,371; aggregate from January 1, £148,893, increase £31,716.

Barcelona.—Traffic receipts for week ending July 25, £2,647, decrease £201; aggregate from January 1, £67,094, decrease £1,109.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending July 25, £324, increase £213; aggregate from January 1, £8,388, increase £4,650.

Brazilian Street.—Traffic receipts for the month of March, Rs. 42,144; increase Rs. 936.

Brisbane.—Traffic receipts for the month of April, £10,309, decrease £407.

British Columbia Electric.—Traffic receipts from July 1 to June 30, £672,882, increase £95,717. Net earnings £224,347, increase £39,172.

Buenos Ayres and Belgrano.—Traffic receipts for the month of June, £12,834, increase £605.

Buenos Ayres Grand National.—Traffic receipts for week ending June 20, $41,828, increase $570; aggregate increase from April 1903, $1,807.

Calais.—Traffic receipts for week ending July 25, £175; decrease £11; aggregate from July 1, £916, increase £12.

Calcutta.—Traffic receipts for week ending July 25, Rs. 32,424, increase Rs. 8,964; aggregate from July 1, Rs. 128,650, increase Rs. 31,333.

Carthagena and Herrerias.—Traffic receipts for the month of June, £3,798, increase £865; aggregate to June 30, £22,947; increase £3,461.

Lombardy Road.—Traffic receipts for the month of June, £1,285, increase £39; aggregate from January 1, £7,439, increase £128.

Twin City Rapid.—Traffic receipts for the month of May $339,735, increase $42,744; aggregate from January 1, $1,570,908; increase $214,353. Net traffic receipts $180,407, increase $20,380; aggregate from January 1, $817,281, increase $109,729.

COMPANY MEETINGS.

UNION OF LONDON AND SMITH'S BANK.

The half-yearly general meeting and a special general meeting of the shareholders of this Bank were held at the Cannon Street Hotel, London, E.C., on Wednesday, July 29, 1903, Felix Schuster, Esq. (the Governor), presiding.

The Governor: The Secretary will now read the notice convening this meeting.

The Secretary (Mr. F. V. Hornby) read the notice accordingly.

The Governor: I will also ask the Secretary to read the auditors' certificate.

The Secretary then read the auditors' certificate.

The Governor: Ladies and Gentlemen,—I have to announce that the directors have declared a dividend of 15s. 6d. per share, equal to 10 per cent. per annum, and a bonus of 3s. per share, equal to a further 2 per cent. per annum, clear of income-tax, on the whole of the issued capital. The dividend is payable on and after to-morrow, July 30. Before proceeding with our ordinary business, I wish to express the regret which the board feel and which no doubt is shared by all the proprietors at the resignation of our old friend, Sir Sydney Waterlow, on account of advancing years; Sir Sydney's work in the City of London, connected as he was with the Hospital Sunday Fund, which he originated, with St. Bartholomew's Hospital and with many public enterprises of great usefulness, will never be forgotten, and he has been a most valuable member of our board, and as you will remember was our deputy governor for eight years. I am glad to say he is still in good health, but as he has to spend the greater part of the year abroad, he thought that he ought no longer to retain his seat on our board, and I am sure we all wish that he may enjoy the rest, which he has so well earned, for many years to come; and while we are sorry to lose him, we know he remains a good friend to the Bank and still retains a keen interest in all our doings. Our report, gentlemen, has been in your hands for some days, a report which in all respects I feel confident you will consider satisfactory; it has been a busy half-year for us, and your directors certainly felt gratified at the results shown, which more than fulfil their anticipations, for, taking it all round, the half-year has not been quite as favourable for bankers as the high value of money which prevailed would lead one to suppose. For nearly four months the Bank rate stood at 4 per cent., at the end of May it was reduced to 3½ per cent., and at the end of June to 3 per cent.; showing an average of £3 18s. per cent. for the half-year. The open market rate for bills was £3 6s. 9d., the average deposit rate allowed by bankers came to £2 8s. per cent., or about ¾ per cent. more than for the corresponding period last year, and this additional charge is a serious item; while we had to pay a higher rate for money deposited with us, it may be said balances with bankers generally have during the past half-year been very much below their ordinary level. I think this is apparent from the published balance-sheets of all the London banks, and we ourselves have experienced during the greater part of the half-year a considerable falling off in the amount of money we had to deal with; what the reasons are for this general diminution of available floating capital it is difficult to say; owing to the low prices of investment stock generally a considerable part of it may have been turned into permanent investment by the public at large. Thus the value of day-to-day money in the open market was also very high, and this again must have diverted from the banks a great deal of money which would otherwise have been placed on deposit with them. The average value of money in London during the half-year was appreciably higher than in the other monetary centres of Europe, so that very large amounts of foreign money have been and are still employed here; it was only towards the end of the half-year when rates began to recede here, and when large financial operations both in Berlin and Paris took place, that a certain proportion of this foreign money was withdrawn, but according to the best estimates not perhaps more than about 20 per cent. of the whole, so that a large amount of this foreign money is still employed here, and has to be reckoned with in any forecast of the future, especially as Continental Exchanges still remain adverse. The success of the issue of the Transvaal Guaranteed Loan is so well known that I need hardly allude to it here; the market generally for all investment stock was considerably relieved when this issue, the prospect of which had so long been weighing on the market, was at last made in a form which appealed directly to bona fide investors, and thus it may be hoped that with this, the last of the Government loans issued in connection with the war, and with the resumption of the sinking fund, the severe depreciation which has taken place in all Government stocks will no longer continue and a more normal level of prices be restored before very long. Owing to the low prices prevailing for all investment stocks, the new issues of capital during the half-year have been remarkably small, hardly any foreign securities being placed on the market, and the absence of the proceeds of such issues also accounts for the falling-off in the amount of floating money. The money market in New York has been in a very unsettled condition, and large amounts of European money have been lent in the United States at remunerative rates; for, owing to an inelastic banking system, the monetary requirements connected with the rapid development of that country could hardly be met with that ease which its undoubted wealth would lead one to expect, and although, according to the best accounts, the intrinsic conditions of prosperity and progress are fully maintained, there has been a very severe reaction in the New York Stock Market, from the exaggerated level which a too rapid anticipation of the possibilities of the future had brought about two years ago.

If you will now turn for a moment to the figures of the report for the half-year, you will notice how great the change is in the volume of our business, and it is most gratifying to me to be able to state that this change has been effected with the greatest smoothness, and our business has been carried on in all its branches —I believe I may say without hesitation—with entire satisfaction to all our customers, and practically with freedom from bad debts. It has been, and always will be, our greatest care to watch over our business, especially over our advances, with the same close attention as ever. Our deposit and current accounts are £28,000,708, compared with £17,147,988 a year ago, showing an increase of £10,852,720; acceptances, £2,698,327, show an increase of £469,481; cash in hand, £5,681,176, shows an increase of £1,689,687, and you will no doubt be pleased to observe the same high proportion to our liabilities as in former years, and I might here mention that when the figures of Messrs. Prescott and Co. on June 30 are added to our own, as they will be soon, we shall show a total of deposit and current accounts £33,232,263, and cash in hand and Bank of England £6,650,042, or 20 per cent. Our money at call and short notice now stands at £5,168,060, compared with £3,113,000, investments, of which £3,641,442 are British Government securities, and the others all first class investments, stand at £4,837,964, compared with £2,984,271; bills discounted stand at £3,563,761, loans, and advances at £12,543,906, compared with £5,890,550, bank premises at £910,596, and I may state that of this amount, representing as it does the very numerous buildings, of which you have a statement before you, only a very small proportion are leasehold. It is when we come to the profit and loss account that you find the most apparent changes. Interest allowed to customers comes to £175,040, compared with £60,242, salaries and charges to £156,130, compared with £86,761, rebate to £28,480, compared with £15,955; the gross profit to £579,815, compared with £280,742, and a net profit of £220,164, compared with 117,783. The dividend and bonus which we have declared will absorb £179,835, and we propose to appropriate towards the capital of our pension fund the sum of £5,000 (and I may here state that we have already contributed £5,000 out of the half-year's charges towards pensions) and a further £5,000 to our widows' and orphans' fund. This leaves us with a surplus of £30,000, to which we have to add the amount brought forward from the last half-year, making a total of about £89,000, which we might carry forward, but we think it better and more in accordance with the wishes of the shareholders to completely wipe out the balance of bank purchase and goodwill account, which will absorb £67,700. This closes these important transactions and they will henceforth impose no further charges on our earnings, and we still have the sum of £21,600 to carry forward. I have already alluded, when addressing you a fortnight ago, to the election of three of the former directors of the London and Yorkshire Bank, Messrs. J. A. Clutton Brock, John Mews and Right Hon. C. B. Stuart-Wortley, K.C., M.P., to our board, and I have also gone fully into the amalgamation with Messrs. Prescott and Co. I can only repeat that we consider this transaction as of the greatest advantage to the future of the Bank. As to the trade of the country generally, the Board of Trade Returns indicate that there has been considerable activity, and the exports show an increase of no less than £7,000,000 compared with the corresponding period last year: the imports show a small falling off but how much of this is due to the cessation of the war it is difficult to say; during the progress of the war the imports of certain products must have been considerably increased, and altogether it will be some time before we can obtain any really useful comparisons, and arrive at a period in which the dislocation that the war must have caused in certain trades, is no longer apparent and normal conditions are prevalent again. I think we cannot but welcome this large increase in our exports as a very satisfactory symptom and when the settlement of affairs in South Africa takes further shape, as must be the case before long, then a large and important field for our industries will once more be opened. Holding the view, as I do, that the excess of our imports over exports was attaining alarming proportions, and that some part at least of this excess was being paid for by the withdrawal of capital hitherto placed in foreign investments, I think it is highly satisfactory to observe this tendency of growth in our exports. Speaking six months ago on the subject of the increasing adverse balance of trade, I ventured to express the opinion that it was earnestly to be hoped that no remedy would be sought in any hasty or ill-considered departure from the economic policy which has hitherto guided our commercial affairs. I also expressed the hope that our relations with the Colonies which were happily drawing closer and closer would afford an ample outlet for our industries and should without artificial aid open out new markets if we knew how to avail ourselves of our opportunities. This subject has unexpectedly been brought to public notice in such a manner that it is essential for every man of business well to consider the great issues that have been raised, and to form his own opinion concerning them. Perhaps a meeting such as this is hardly the occasion for touching on this question, but we are told that it is not a matter of party politics, and that we are to approach it with our minds open and as men of business, and I can hardly conceive any gathering within the City of London where this momentous subject is not to be touched upon, for no issue of such gravity and of such importance in its consequences has been placed before the nation for several generations past. I am not sorry that the issue has been raised, for I think it is well that we should all ponder over the conditions which the developments of the last twenty-five years have brought about, and that we should not decide in haste or according to preconceived ideas or prejudices, or be influenced by considerations which, however attractive they may appear at first sight, will not bear

examination and close scrutiny. I have been asked how this question affects the banking interest; to this there can be but one answer, and that is, that the prosperity of banking must depend on the prosperity of the nation at large, but as bankers, perhaps, we may approach this subject from a different, possibly a wider, point of view, for we are not engaged in any particular trade; but all trades, all interests, come under our survey, and we are perhaps, therefore, in a better position to judge of the developments of trade in their aggregate effect on whole community. There is one point, morever, which I think has not yet attracted sufficient notice in this controversy. London is admittedly the banking and financial centre, the clearing-house of the world—go where you will, in all quarters of the globe, in every civilised country—one might go so far as to say in every uncivilised country—a bill of exchange on London is the one medium of exchange which always has a ready market; Continental and American bankers hold their reserves in bills on London; shipments of produce from one country to another are in most cases settled by bills on London, many of the larger foreign banking institutions have found it necessary to establish their own agencies in London in order to deal with the business which inevitably flows here. Why is this? Because, it is said, we are the one free market for gold; true, but this applies rather to conditions prevailing a generation ago, but now most Continental nations have established their currency on a safe gold basis; they hold larger gold reserves than we do; there must be other reasons, and the principal one is that a bill on London is created in every part of the globe; there is always a seller because goods are shipped here, there is always a buyer because goods are obtained from here, because our ports are free, because our doors are open to the trade of the whole world. We are the best customers of every producing country, they come to us for their requirements; the proceeds of their shipments of produce come here for employment, temporarily or permanently, and this benefits not only the banking community, but the whole commerce of the nation. It is through being the centre of the world's commerce that we have become the world's clearing-house; that our money market has been the cheapest in the world, which in its turn has enabled us to find for our Colonies and for foreign nations cheap capital for the development of their industries. Let us well consider before we commit ourselves to any step which might possibly in the slightest degree affect this position to which we in the City of London and the country at large owe so much of our prosperity. Next and second only in importance to our supremacy as international bankers, another interest which must be most carefully safeguarded, is our position as the carriers of the world. The whole economic condition of this country, depends on the supremacy and maintenance of our shipping industry; a supremacy which again appears to have been attained only through our trade relations with all parts of the world; let us well consider before we commit ourselves to any step which might in the slightest degree affect this position and restrict our world wide trade into narrower channels. Nothing must be done that might cripple our shipping or any of our industries, if we are to meet the ever-growing competition in neutral markets. It has been stated that other countries and especially the United States and Germany, while adopting protective tariffs have been and are able to compete with us successfully; but it is not articles of food or raw materials which are taxed in the United States these are produced at the very doors of their great centres of industry, and it is only the foreign manufactured article that is taxed. In this connection I may mention an incident which made a great impression on me two years ago. I had then the honour of a private interview with the late President McKinley, who, as you are aware was closely identified with the American Tariff which even bears his name. Discussing these questions at some length, he used this expression: "My tariff has done its work, we have been able to build up great industries in a short time, and now gradually but inevitably the tariff must be reduced." In his last speech made at Buffalo shortly afterwards, he clearly foreshadowed this policy, which no doubt would have taken further shape but for his untimely death. Here you have the advocate of a system of protaection admitting that the time for it was nearly passed. The Democratic Party which is the other great political party in the United States, is almost committed to a policy of free trade and will probably fight the next presidential contest on that issue. It was Mr. Gladstone, I believe, who said that he would not fear American competition until they adopted free trade, and such a possibility seems certainly within measurable distance, especially as it can hardly be maintained that the industrial position under their present system affords an entirely attractive picture or that their working population are contented with their lot, for according to the best authorities the labour question is one of the most serious that is before the people of the United States. Germany is just slowly reviving from a severe industrial crisis, accompanied by failures and much distress, and it can hardly be said that her great industries are in an altogether satisfactory condition, and admittedly some of their products are sold in foreign markets below cost price, at the expense of the home consumer, while questions of tariffs are constantly used as a counter in the conflicts between the many political parties into which that country is divided. Education, business capacity, industry and close attention to detail have made Germany such a formidable competitor, and there are many and influential advocates, in both the countries referred to, for reconsideration of their commercial policy. Let us well consider therefore whether the present is an opportune time for a complete change of our own fiscal and economic system, and especially when at the conclusion of a great war, there is every hope of steady development, when our exports are beginning to grow and when many of our industries recognising the signs of the times have equipped themselves with the most modern improvements. The closest and friendliest relations with our Colonies, relations of trade as well as of sentiment, are of course what everybody desires; what can we receive from the Colonies to make these relations closer than they are, and what can we do for them? Is not the best thing we can give to them the maintenance of our world-wide trade, the maintenance of our position as the clearing-house of the world, of our ability to supply them with what they most require, cheap capital, for the development of their industries, cheap manufactures, rapid and economical means of communication, and cheap freights for the carriage of their produce? Let us well consider before any step is taken which will increase the cost of living to our labouring population and consequently the cost of all our products, lest we lose the markets which we now hold, and new ones which we may hope to acquire. There are ample opportunities, if we only know how to use them. Modern business methods have changed, and we must change ours accordingly; the need of education is recognised all over the country, and scientific systems of technical education are being called into life, and will supply the needed equipment for the struggles of the future. Modern languages must be studied, but not only the languages but also the methods and requirements of those who use them. We must not only insist on the best of Consular reports from our official representatives in all parts of the world, but when we have them we should study them and lay them to heart. It is in this direction that we must work, and if we do I have no fear for the future; but let us well ponder over all these questions, let us see our way clear, and reckon the cost of any new departure, let us hesitate before we take any leap in the dark from which there can be no going back. I must ask you to pardon me for having dwelt so long on this subject, but it is one from which we cannot escape, which we have to face, and on which the citizens of London and the country at large will have to decide within the next twelve months if not before. As far as this Bank is concerned, we are entering on the new half-year under conditions which I think fully justify the confident anticipations which we have for the future. Our business is thoroughly sound in every respect; I believe I may say it is carefully looked after, and our organisation keeps pace with our development. We shall within the short space of twelve months have doubled our business and trebled the number of customers, a considerable number of our new ones being of the very highest class and of great influence—we shall have greatly added to the number of our share—and under these circumstances it is evident that there must be every element for future growth and steady increase. I cannot repeat too emphatically what I said a fortnight ago that we have not gone in for extension merely for the sake of extension, and that we have not gone in for extension merely for the sake of extension, and that we have no desire to compete with our old friends in the country for whom we have the privilege of acting as London agents. We have carefully considered not only the nature of the businesses acquired, but also their localities, with a view to being more useful to all our customers. We think we shall be less exposed to fluctuations in the volume of our business than before, and that the fluctuations in the money market should not affect us in the same degree. I believe the tendency of the money market, not perhaps in the next six months but later on, to be for lower rather than higher rates, this year the tendency is uncertain; a good deal of money has still to be found for various purposes, but on the whole I look forward to a period of rest and recuperation rather than to very active markets, and slowly but surely the steadily increasing output of gold in South Africa will begin to tell. Unless unforeseen contingencies should arise, we expect steady but not very high rates in the money market. We ourselves may look forward to a very considerable increase in our already large turn over, and your directors will continue to use every effort towards maintaining and increasing the prosperity of the Bank and upholding its position. I now beg to move: "That the report and accounts be adopted."

The Deputy Governor (The Right Hon. Sir Algernon West, G.C.B.): I beg to second that.

The Governor: The adoption of the report has been moved and seconded. Would any proprietor like to ask any questions with regard to the report? If not, I will put it to the meeting.

The resolution was then put and carried unanimously.

The Governor: The business now to be considered is that of a special general meeting.

SPECIAL GENERAL MEETING.

The Secretary then read the notice convening the special general meeting, and the resolution to be submitted for confirmation.

The Governor moved the confirmation of the resolution agreed to at the special general meeting of July 14, which was carried unanimously.

A vote of thanks to the Governor, the Deputy Governor, and the Directors for their services during the past half year was moved by Mr. Dalgleish, seconded by Mr. Gibson, and carried unanimously.

The Governor expressed the appreciation felt by himself and his colleagues for the vote of thanks, and concluded by moving a vote of thanks to the manager of the head office and the branches, to the secretary and to the staff of the Bank generally for the efficient discharge of their duties during the half-year.

This was seconded by the Deputy Governor and carried unanimously, and the proceedings terminated with a special vote of thanks to the Governor for presiding.

EASTERN TELEGRAPH CO., LIMITED.

The sixty-second half-yearly general meeting of this company was held on Wednesday, July 29, at River Plate House, Finsbury Circus, London, E.C., under the presidency of Sir John Wolfe Barry, K.C.B.

The Secretary (Mr. George Draper) read the notice convening the meeting and the auditors' report, and the report of the directors was taken as read.

The Chairman then said: Gentlemen, before inviting your approval of the report and accounts presented to you to-day, it becomes my duty to offer a few remarks on the accounts. The result of the working for the past half-year is, in the opinion of your directors, satisfactory, and they trust that this view will also be shared by our stockholders. The gross revenue for the half-year ending March 31, 1903, amounted to, in round figures, £626,000, as against, in the corresponding period of 1902, £617,000, or an increase of £9,000. Of this increase about £4,000 is derived from the message receipts, about £1,000 more has been received from our investments in other telegraph companies, and over £4,000 of the excess has been received this half-year from interest on our surplus funds placed on loan and deposit. As compared with the corresponding period of 1902, the following reduced tariffs have been in operation during the whole of the present half-year:—1st. Between Europe and the Straits Settlements and the Dutch Indies, from 4s. 6d. to 3s. 6d. and from 5s. to 4s. respectively, and for Sumatra and other islands from 5s. 5d. to 4s. 5d. 2nd. Between Great Britain and Victoria, 4s. 10d. to 3s.; Queensland, 5s. 1d. to 3s.; and New Zealand, from 5s. 2d. to 3s. 4d. under agreements for "Standard Revenue" with certain of the Australian Colonies, which have since been completed by a tentative agreement with the Federal Government of Australia. This was recently passed by the Federal House of Rrepresentatives, and now only awaits ratification by the Senate. 3rd. During the whole of the present half-year, as against one month in the corresponding period of 1902, the traffic between Europe and India was carried at the reduced rate of 2s. 6d. per word against 4s. previously charged, under a basis of partial guarantee and "Standard Revenue" agreed with the Indian Government. 4th. For three months—viz., from January 1 last—the rate for messages from Great Britain and Europe to South and East Africa and Mauritius was reduced from 3s. to 2s. 6d. per word, under another agreement for "Standard Revenue" made with the British and Colonial Governments. Notwithstanding these important reductions in the tariffs and the competition of the British Pacific Cable, to which we have up to the date of the accounts been exposed for about four months, I think we have cause to congratulate ourselves on the gross increase in the revenue, however small. (Cheers.) Although the traffic receipts are, as I have stated, actually larger than they were twelve months ago, even after the introduction of so many important reductions in the tariff rates, and the adverse circumstance to which I have alluded, it should be clearly understood that the increase in our receipts is not due to the reductions in the rates to which I have referred; in fact, the effect of these reductions in themselves is, at present at least, in the opposite direction, for, with the exception of the Cape Joint-Purse traffic, there is a considerable reduction in the amount received during the half-year from those places which have benefited by the reduced rates to which I have just alluded. We trust, however, that at some future date an increased volume of traffic will recoup us for the loss incurred by these reductions, but past experience shows that we cannot anticipate more than a very gradual growth of traffic on this account. Whenever we find a natural growth of business, whether it be the revival of trade generally, or the development of a country such as South Africa, we are always ready to respond with further reductions, thereby sharing our profits with the State and the telegraphing public generally. One of the strong features of this company is the variety of sources from which its revenue is derived. If there is a temporary reduction in the receipts from one or more sources owing to reduced rates or other causes we may have a corresponding increase in some other direction, which enables us, as we have done this half-year, to maintain our revenue. There is one very important point to be always borne in mind incidental to reduced rates. In order to earn the same revenue as formerly it is, of course, necessary to carry a much larger number of words to give the same return, and frequently greater cable carrying capacity is required. This must mean an increase of expenditure in working as well as additional revenue charges for interest on new capital issued for dealing with a larger volume of traffic. The alternative is of making large appropriations from our reserve fund to provide for the same, but we still have to employ an additional staff and all the attendant expenses incidental thereto. This result will be found on reference to the expenses to which I will presently refer. No better example can be given than the case of the reduction in the Indian rate. To enable us to earn the same revenue under the reduced rate as formerly, it is necessary for us to carry 60 per cent. more words, but up to the present the increase has been only 33 per cent., and extra expenses are involved besides a diminution in gross receipts. With these few words of general application I approach the statement of our accounts. The ordinary expenses for the half-year amounted to £163,000, as against £150,000 in the corresponding period of the previous year, or an increase of about £13,000. About £6,000 of this increase took place during the half-year to September 30 last, and was explained at the last general meeting. You may no doubt remember that I explained at last meeting that we had modified the statement of expenses under Abstract "B." The amounts we receive from other companies for their share of joint-station expenses, instead of being credited to the respective accounts, were dealt with in total and deducted from the aggregate working expenses of the stations. Next half-year we shall be able to compare each item, but at present Abstract "B" can only be compared in total. A somewhat similar alteration has been made in Abstract "A," where you will find that our proportion of the head office electrical department is shown in one figure instead of being distributed amongst the various items as formerly. This department has been enlarged, and an experimental branch has been properly installed with an outfit of electrical apparatus to enable our experts to test the value and suitability of any new inventions for improving the speed and accuracy of our system in dealing with the ever-growing volume of work. This department is worked in the joint interest of the whole of the Associated Companies. They contribute towards its cost, and all are kept in touch with the latest improvements in electrical matters. It is, therefore, more convenient to keep the expenses under this head separate from the general expenses in London. The board have been for some time past impressed with the necessity of our being in the forefront of scientific developments in cable and cable instruments, and decided, in conjunction with the boards of our Associated Companies, to offer to Sir Oliver Lodge the post of consulting scientific adviser, which, I am glad to say, he has accepted. (Cheers.) Sir Oliver Lodge will occupy with us a similar position to that of Lord Rayleigh with the Corporation of the Trinity House, and we shall be able to obtain at all times the help and advice of, perhaps, the first electrician of our times to help our efficient and admirable staff in their investigations and care of the scientific interests of the companies. The explanation of the increase in the head office charges is therefore due to this necessary addition to our technical branch, the additional office accommodation required, necessitating our removal to Electra House, also to the increase of our staff, and the usual annual promotions. With regard to the increase under the head of "Working Expenses at Stations." There is an addition to the staff of forty-one members from causes already explained, and this, of course, involves a relative increase in other directions. Some further improved electrical apparatus has been supplied also to several of our principal main line stations. When we decided, in conjunction with the Eastern Extension Telegraph Company, to undertake the establishment of the new cable between Great Britain and Australia, via the Cape, a considerable increase in the working expenses was fully anticipated. The increases in our expenses are therefore the inevitable result of the policy which we considered advisable to adopt, and I think it will be agreed that the result fully justifies our action. While maintaining our dividend, we have been able to carry substantial contributions to our reserve fund, and add very materially to the earning capacity of our system, thereby giving additional power to our undertaking, both as a State and public serving institution and a dividend earning corporation. (Hear, hear.) Ten years ago the percentage of ordinary working expenses to revenue (exclusive of repairs to cables) was 22.46, it is now 24.43, or an increase of about 2 per cent., which, taking everything into consideration, must be looked upon as very satisfactory. The expenses attending repairs and renewals of cables, etc., this half-year amounted to £27,400, as against £39,800, or a decrease of £12,400. It will thus be seen that this decrease almost compensates for the increase in the working expenses to which I have referred, so that our total expenses, including repairs to cables, are only £1,000 more than they were in the corresponding period last year. This result is largely due to the exceptionally heavy work we have carried out in the repair of the cables owned by foreign governments, and the cables owned by other telegraph companies, at their expense. The amounts charged for this work during the present half-year amount to the large total of over £60,000, out of which we, of course, secure a fair profit. I do not wish the shareholders to run away with the idea that an expenditure like this is normal. I think it is rather exceptionally high, and that our profits have therefore been exceptionally hign in this half-year. With respect to capital, during the half-year we have issued some further amounts of preference and debenture stock—viz., £58,710 4 per cent. mortgage debenture stock, £37,800 3½ per cent. preference stock, a total of £96,510. This was required for capital purposes. The amount is comparatively small, and for various reasons it was not practicable to offer it to our stockholders, and I must ask you to rely on our assurance that it was issued to the best advantage of the company. It may interest you to know that our power to issue 3½ per cent. preference stock was £2,000,000 and is limited to half the amount of our ordinary stock. The whole of this stock has now been issued. Our present power to issue 4 per cent. mortgage debenture stock is likewise £2,000,000, or an amount equal to one-third of the ordinary and preference stock. Up to the present date, £1,831,314 has been issued, so that the whole of our present power to issue further capital is only £168,686. We know of nothing at the present moment to necessitate an increase in this power, but judging from past experience submarine cable enterprise develops rapidly, and it may perhaps be advisable before very long to ask you to grant us some little further power to increase our ordinary and preference capital as well as the 4 per cent. mortgage debenture stock, the two latter stocks to have the same relation to the ordinary stock as is prescribed by the Eastern Telegraph Company's Act, 1898. This company has purchased the cable-repairing steamer "Duplex" from the Eastern and South African Telegraph Company. The two companies' systems now run so close together both on the East and West Coasts of Africa, that it will be more convenient for us to own the repairing steamers usually stationed on both coasts. Arrangements have, therefore, been made by which we shall in future undertake the repairs of the cables belonging to the allied companies in these regions. It is anticipated that this arrangement will be mutually advantageous to us all. As you will have seen by the report, the International Telegraph Convention, which is

held in the various capitals of Europe every five or six years, was this time held in London from May 26 to the 10th inst. These conferences are at times the source of no little anxiety to your directors, as resolutions are not infrequently submitted, which, if adopted, might adversely affect this company. I can assure you our interests have been carefully watched by the directors, and especially by the managing director (Sir John Denison-Pender), and Sir Albert J. Leppoc Cappel, and by the principal officials of the traffic branch. Various rules and regulations were discussed and amended, and some tariffs were revised, but I am glad to tell you that the revenue will not be materially affected by the revisions adopted at the conference. The fact is that we have carried through so many reductions ourselves in recent years that there was little excuse left to call upon us to grant further concessions at the present time. I should like to take this opportunity of stating that our relations with the various administrations of the different countries are of a most cordial nature. I do not think you will consider it at all necessary for me to refer at any length to the subject of wireless telegraphy. I have really nothing to add to what I have stated on former occasions. We have always held to the opinion that wireless telegraphy will not rival, but will prove a useful adjunct to, submarine telegraphy. I think the public, who were for a time captivated, not unnaturally, by the wonders of the startling invention, are beginning to realise its limited possibilities. We have installed the system of wireless telegraphy on some of our ships, and have found it useful for the purpose for which it is evidently suitable. The United States being desirous of connecting San Francisco with Honolulu, etc., an American company has been formed called the Commercial Pacific Cable Company for this purpose and for projecting their system across the Pacific Ocean to Midway, Guam, and Manilla, to link up the Colonial possessions of the United States and to extend the cable to Shanghai. I am glad to say that, after prolonged negotiation, our friends, the Extension Company, have come to a provisional understanding, which, although necessitating considerable concessions, will bring them into intimate and satisfactory business relations with that company. I cannot go further into the details at the present time, but you may rest assured that our interests are being carefully guarded. The Commercial Pacific Cable was opened for traffic between Manila and the United States on the 25th instant, and the following reductions in the tariff by our route were brought into force on the 15th instant:—Europe and Hongkong from 5s. 6d. to 4s. 5d., China—Macao 5s. 9d. to 4s. 7d., other places in China 5s. 6d. to 4s. 5d., Formosa 6s. 2d. to 4s. 10d., Japan and Corea 7s. 9d. to 5s. 8d., Philippines—Luzon 5s. 9d. to 4s. 5d., other islands in the Philippines 6s. 2d. to 4s. 10d. These reductions will, no doubt, have some considerable effect on the revenues of the Associated Companies, but it is to be borne in mind that it was evidently desirable that the reduction should take place in view of the development of the cables in the Pacific Ocean; and I believe that, in the long run, these reductions will not only prove of the greatest possible advantage to the telegraphing public, but that they will also put the companies on a very firm and solid basis in the Pacific Ocean, vis-à-vis to the connection between the American possessions in the Pacific and the United States themselves. I do not think that I have anything more to say, gentlemen, on the accounts, but I shall be very happy to answer to the best of my ability any question which any stockholder would like to ask. I now move the adoption of the report and accounts, and that the dividend and bonus therein recommended be approved.

The Vice-Chairman and Managing Director (Sir John Denison-Pender, K.C.M.G.), seconded the resolution.

Mr. Wood congratulated the stockholders and the directors on the report, and upon the selection of Sir Oliver Lodge to advise the company in electrical matters. With regard to the issue of stock, he hoped if any further issues were made, the interests of the stockholders would be carefully considered.

Mr. John Newton expressed his desire to emphasise the important point referred to by the Chairman—that arrangements had already been made between the so-called competing line of the American Company and the Eastern Extension Company. This was a fact which he thought proved that the stockholders need not fear any further competition of any kind, because arrangements would be made by the directors whereby the interests of the stockholders would be protected.

The Chairman: I will only shortly allude to the remarks that have been made. With respect to the appointment of Sir Oliver Lodge, I felt perfectly certain that the board would have the stockholders behind them in making such an appointment. With respect to the issue of capital, the amount issued has been, comparatively, so small that it was very difficult to deal with an issue to the stockholders themselves. Moreover, the market for our securities has been in a very abnormal condition, and the directors have invariably used their endeavours—with very great success, I think—to obtain the highest market value for the stock when they have issued it, which might not have been the case had we attempted a more open issue. Here I might point out that the stockholders, as a body, obtain the advantage when we can issue stock at the market value as near as possible, whoever takes it. I think I may also say one word respecting our interests in the Pacific. Our interests, of course, are not directly concerned except through the Eastern Extension Company, and it is with them that the arrangements have been made with the American company. All I can say at the present moment is that I think, from what I know of the Eastern Extension Company's position, that the arrangements are, on the whole, satisfactory. I think they are good for the public, who obtain very great advantages from the two companies working in amity and not in competition, because the American company get access to places where otherwise they would have very considerable difficulty in gaining access to. The telegraphing public thus have the advantage of undisturbed and perfectly connected routes for their messages by the arrangements made. I must allude to one other point, which is certainly a source of great gratification to us, and which I am sure will be of equal gratification to you—namely, that we have been able to transfer this half-year £180,000 to our general reserve fund, and that in the previous half-year we were able to transfer to it £145,000. In the whole year, therefore, the amount transferred to the general reserve fund has been £325,000—(cheers)—and this in spite of the great reductions which have taken place in our tariffs, and in spite, also, of the adverse competition waged by the Colonial and Home Governments between here and Australia.

The resolution was then carried unanimously.

On the motion of Mr. Newton, seconded by Mr. Wood, a cordial vote of thanks was afterwards passed to the Chairman and the directors.

The Chairman, in acknowledging the vote, said:—Although it is not on the agenda paper, I should like to take this opportunity of moving a vote of thanks to Sir J. Denison-Pender, Sir A. J. Leppoc Cappel, and the company's officials for the attention they gave to your interests at the International Telegraph Conference. Those who attended that conference, as I did from time to time, know the etraordinary amount of attention and assiduity which was given for six long weary weeks to the deliberations of the conference, and it is due to these gentlemen that we have come out of the conference with an arrangement which is not unsatisfactory. (Hear, hear.)

Mr. Wood seconded the resolution, which was enthusiastically agreed to.

The Vice-Chairman and Managing Director briefly acknowledged the vote, thanking the Chairman for his kind remarks and the stockholders for the cordial way in which they had accepted the proposal.

The proceedings then terminated.

CONSOLIDATED MINES SELECTION.

The seventh ordinary general meeting of shareholders in the Consolidated Mines Selection Co., Limited, was held on Tuesday, July 28, at Winchester House, Old Broad Street, E.C., Mr. Francis Muir presiding.

The Secretary having read the notice convening the meeting,

The Chairman said: Gentlemen,—I trust that you will consider that the results which we present are not unsatisfactory; considering the stagnation from which we have suffered during the past year in the market, it is not to be wondered at that the amount which we have at our disposal is considerably less than it was last year. Including the balance brought forward, and leaving out of account for the moment the premium on the new shares of £25,000, we have an amount to deal with of £41,923, and our proposal to-day is to pay therefrom a dividend of 12½ per cent., which will take £37,500, and we carry forward £4,423 to the next account, subject to extra remuneration to the directors. The old shareholders will quite understand that I mean the holders of the original 300,000 shares—they alone receive a dividend upon this occasion. We have made it as plain as possible to the new shareholders, both by circular and in the report, that they only participate in the profits of the year as from July 1 this year. The accounts do not call for very much remark. With regard to the new capital, the balance-sheet shows that there had been paid in on July 1 £59,519. There was due on July 1—and it was all paid within a few days thereafter—£90,638, and the balance of 5s. due on October 1 amounts to £49,842, making the total new capital of £200,000. On the sundry creditors side you will observe a debit of £115,349, which is described as loans in anticipation of instalment of 10s. per share on new shares falling due July 1, amounts not yet due on stock bought, and including unclaimed dividends and interest. In accordance with the policy we declared at our extraordinary meeting in March last we had, previous to that, and to a large extent since, taken advantage of the condition of the market to invest considerably in anticipation of the new capital, and that accounts for the large amount of sundry creditors. The reserve fund has been increased to £60,000 by transferring to it the premium on the new shares, amounting to £25,000. On the assets side you will see that our unfloated Witwatersrand deep level claims, farms, etc., in the Transvaal colony amount to £25,144, which is rather a larger amount by £4,000 than in the previous year. Our investment in debentures, £16,197, is £20,000 less than last year. Our shares in South African companies amount to £385,884, and they are £173,000 more than last year. Our Australian investments amount to about £9,000 more than last year, and our American and New Zealand investments are practically the same as last year. From these figures you will understand that on our faith in South Africa and on our confidence in the judgment of the recommendations of ourrepresentatives there, we have acted to a large extent. Mr. McDermott from this chair at the meeting held on March 10 expressed very fully the opinion of the board on this question, and the fact that the applications for the new capital from the shareholders were so large seems to indicate that they quite approve of the position we have taken in regard to this matter. Apart from Africa, you will see that we continue to hold our interests in Australia, the United States and in the Klondyke. We have also, and have had for some time, an agent in Central America looking at some propositions which have been reported upon favourably, but as to which we desire to have further information. With regard to the new capital, we had applications from the old shareholders for 136,052 shares; the Bank für Handel und Industrie

took, according to agreement, 50,000 shares, and they had further to take, under their guarantee, 13,948 shares. Our chare holding list now amounts to something over 1,500 shareholders. Having dealt with a letter which he received from a shareholder, the chairman then moved the adoption of the reports and accounts.

Captain Campbell seconded the motion, which was agreed to unanimously.

On the motion of the Chairman, seconded by Mr. Wm. Green, the retiring directors, Messrs. Carl Parcus and Max Kempner, were re-elected, and the auditors having been reappointed, the proceedings terminated with a vote of thanks to the Chairman and directors.

GORDON HOTELS.

The thirteenth ordinary general meeting of the Gordon Hotels, Limited, was held on Tuesday, July 28, at the Whitehall Rooms of the Hotel Metropole, S.W., Mr. Frederick Gordon presiding.

The Secretary having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—I think the accounts speak for themselves, and I congratulate the shareholders on an improvement over the previous year. The improvement is a very satisfactory and substantial one, but it is not so great as the directors would have liked to put before you. Large hotels like ours depend very much on what is taking place outside. London hotels have undoubtedly benefited by the festivities and various arrangements which our good King has inaugurated and so well carried out. There is no doubt he has thoroughly at heart the interests of the metropolis, and so far as he has been able to, I am sure that we, in common with all other hotels, have received considerable benefit. But what has told against us, and is still telling against us, is the absence of good solid business in the City. I can give you a really good illustration of how that has offected us. One of our principal hotels is the Brighton Metropole, and I venture to say there is no more comfortable hotel and no better managed hotel in the world than that; and I may tell you that if that hotel, coupled with the Folkestone Hotel, had made the same amount of profit last year as they did in the previous year, you would have had £9,000 more profit to credit in your accounts. We are certain that those two hotels are affected by the absence of business in the City, and especially on the Stock Exchange. During the past year your hotels have had the most careful attention of your directors and also of your managers. I venture to say that our managers have exerted themselves during the past year even more than in any year within my recollection. I am sure there is not one of them who could do more for the company if the establishment were his own property. Your directors have certainly given a very large amount of time to the work before them. You will notice that in the report we speak of the increase in rates and taxes. Well, it is rather disappointing when you find so many new buildings around which were at one time rated at very low figures and which are now assessed at very high figures, that this does not appear to have helped us in reducing our rates; on the contrary, they are going up year by year. I do hope that those in power will look a little more into the details of expenditure, for I feel sure there must be money to be saved. Then there is an item which, although it affects the accounts, is not mentioned in the report; we have had to pay in the year under review £3,300 more in debenture interest than we paid in the previous year. The whole of that is charged against the profits and revenue, and a considerable amount of the expenditure that that increased interest represents has not yet produced a corresponding return in the way of revenue. Even in regard to the whole of the expenditure upon the Grand Hotel, although we are beginning to derive considerable advantage from it, yet I do not consider we have as yet obtained the full benefit of that expenditure. I cannot help alluding to the growing competition. I take it that most of the newly-built hotels have come to stay, and you will notice by your accounts that we are not above even investing some of our money in their well-secured debentures. I think you will agree that that is the right thing to do, provided we are satisfied about the security, because, as far as we can, we want to get 4 per cent. on our investments, though that is certainly rather difficult. Perhaps if we had not taken the advice of some of our shareholders a few years back, who were critical as to our investments, and if we had not put so much money in Consols, we should have been better off to-day. You will see from the accounts that we have a large amount of our reserve fund standing in Consols, and if we had to sell them to-day there would be a considerable depreciation shown, but unfortunately for us we do not need to sell. The income is very secure, and when better times come Consols, I suppose, will rise again, and we shall look upon that investment with a more approving eye. With regard to the financial position of your company—and, after all, that is a very important matter—we are, indeed, financially very strong. You must bear in mind that not only have you a reserve fund invested in, at any rate, solid securities, but you have a constantly increasing leasehold redemption fund, which at this moment amounts to £66,000, and is being augmented year by year by £4,767. The fact is that we are putting aside, according to the opinion of a very well-known valuer—no less a man than Sir Whittaker Ellis—considerably more than is necessary to provide the debenture holders and shareholders, when the leases are terminated, with full value for their money, because out of fifteen hotels which you posses seven are freehold and two of the others are partly freehold. We have thus a solid balance-sheet to put before the public, and when you consider the price of our 4½ per cent. first debenture stock, bearing in mind the prices of other securities of a similar nature, I think you will agree that it is very satisfactory, and, remembering the reduction in dividend last year, I am not disposed to grumble at the price of the ordinary shares. I should like to see it better, naturally, as I am a very large holder, but for that we must wait. No doubt the price will improve as times get better. I do not think there is anything else I can say with regard to the past year; but before putting the resolution I am about to move, I shall be pleased to answer any question that any shareholder may desire to ask, provided I can do so without detriment to the interests of the company. I now beg formally to move: "That the directors' report and accounts be received, approved and adopted, and that the dividends therein recommended be declared

Sir Henry C. Burdett, K.C.B., seconded the motion.

Major Smith, J.P., asked what were the prospects of the Grosvenor Hotel, in which he imagined the company had a very valuable addition to its property.

The Chairman, in reply, said that in connection with the Grosvenor, what was a loss in the previous balance-sheet had now been turned into a profit. The Chairman, in reply to Mr. Hirst, said that if the whole of the company's investments were sold at the present time, there would be a loss of £20,000; but, of course, the markets were very bad just now.

The motion was carried unanimously.

The retiring directors having been re-elected, the meeting closed with votes of thanks to the staff and the directors.

THRELFALL'S BREWERY.

The sixteenth annual general meeting of the shareholders of Threlfall's Brewery Co., Limited, was held on Thursday, July 30, at the Cannon Street Hotel, Mr. Thomas Threlfall presiding.

The notice convening the meeting was read by the Acting Secretary, in the absence of Mr. Alexander Elgin, C.A., who was unfortunately injured in the railway accident between Liverpool and Southport. The auditors' report was also read.

The Chairman, after a feeling reference to the death of Mr. Duncan Matheson, one of the oldest directors of the company, said: It is a matter of common knowledge that the company is passing through a period of depression in trade, and that Lancashire is not the least of the sufferers from it. Such being the condition of things, I think I may congratulate the shareholders of Threlfall's Brewery Co., Limited, that the profits for the year ended on June 30, 1903, are only £5,000 less than those of the previous year, and that the directors are able to recommend the very handsome dividend which we again propose to distribute. I doubt if you will wish me to detain you by dwelling upon the details of the accounts for the year. They present no very remarkable feature, as it is of course obvious that when the profit is a little lower and the dividend nevertheless maintained, there cannot be quite so much put on one side as when the profit was a little more. We are reaping the benefit of the prudent policy which prompted us to write off with a lavish hand in years of overflowing prosperity, and the directors have the satisfaction, looking back on the fifteen or more years of the company's existence, of being able to say that they have never recommended an increase of dividend without the belief that they would be able to keep it up. The salient feature of the report this year is the announcement of our intention to redeem the 5 per cent. debentures of the company, which until now we were not empowered to do, and to make a large issue of 4 per cent. perpetual mortgage debenture stock, out of which various mortgages and loans—liabilities of the company—will be paid off. I will give some figures immediately to show you what a satisfactory margin of security there is for this issue, both as regards capital and income; but let me first epitomise the financial history of the company during the fifteen complete years of its existence. The initial share capital of the company was £600,000 and the debentures, as now, £400,000. The preliminary expenses, £5,800, were written of in 1888 and 1889; the goodwill, £133,197, was written off year by year, till in 1896 it disappeared altogether, while at the same date the sum put to reserve had reached £175,000. The amount put to reserve since then is £340,000, making in all the large sum of £515,000; and there has been written off for depreciation no less an amount than £408,261. The addition of these items—namely, preliminary expenses, goodwill and depreciation written off, and money placed to reserve—gives a total for the fifteen years of £1,062,258. The share capital of the company was increased on two occasions, and is now larger by £225,000 than originally; and I do not lose sight of the assistance afforded by the reserve fund and writing off process by the premiums at which we were able to issue the new shares. But these, after all, were earned, and are an indication of the success and prosperity of the company. The dividend record is no less striking—9 per cent. in 1889, it was 10 in each of the following five years. Then there came an annual advance for six years, the dividends being 12, 14, 15, 17 and 19 per cent. consecutively, till in 1900—a year of booming trade—we divided 20 per cent., and have been able to maintain that figure for four years in succession. Now, as regards the margin of security for our proposed new issue of mortgage debenture stock. First, as to income. Taking the same period of fifteen years, and dividing it into three successive periods of five years each, I find that, after deducting all charges, including directors fees and depreciation, but not interest on debentures and loans, the average of profits was for the first five years £102,289; for the second five years £146,315, and for the last five years £170,530, without reckoning the small item "transfer fees." Thus you will note that the average profit of the last five years is sufficient to pay 4 per cent. on the forthcoming issue of £1,000,000 debenture stock more than four times over, and would even pay the interest on £1,500,000 nearly three

times over. As regards capital values, I may remind you that a large amount of property was bought by the company before the great rise in the price of licensed property took place. The whole of the liabilities—debentures, mortgages, loans, and liabilities of every description—are slightly under £1,241,000; The debenture stock will be secured by a floating charge on all the assets, as well as by the specific mortgage to trustees of an adequate amount of the company's properties. It is the intention of the board to make the new issue towards the end of January, 1904. You have given us power to raise money on mortgage to the extent of one million, and we consider that the time has arrived when that power should be increased to enable us, as and when thought in the interest of the business, to borrow in the same way up to £1,500,000. The immediate issue of debenture stock will be, as I have already said, £1,000,000. I now move:—"That the report and accounts be received and adopted, and that dividends for the year ending June 30, 1903, be paid at the rate of 6 per cent. per annum on the preference shares and at the rate of 20 per cent. per annum on the ordinary shares."

Mr. W. A. Matheson, J.P. (Deputy-Chairman), seconded the resolution.

Mr. Hedges asked for a little more information as to the reason for having the increased borrowing powers.

The Chairman explained that though these powers were now being asked for, there was no intention at present to use them to the full extent.

Mr. Hedges expressed himself satisfied with the chairman's explanation, and the resolution was unanimously agreed to.

On the motion of Mr. George Barker (managing director), seconded by Mr. Charles Threlfall, J.P., a formal resolution giving the directors power to borrow the sum of £500,000, in addition to the £1,000,000 already sanctioned, was agreed to nem. con.

The retiring directors having been re-elected, and the auditors reappointed, a vote of thanks to the chairman, directors, and employees of the company, closed the meeting.

NEXT WEEK'S MEETINGS.

Tuesday, August 4.

Forth Bridge Railway.—Great George Street, S.W., noon.
Great Northern and City Railway.—Westminster Palace Hotel, noon.
Normanby Iron Works.—Middlesbrough, noon.
Regent's Canal and Dock.—5, Lloyd's Avenue, noon.

Wednesday, August 5.

Bayley's Gold Mines.—Winchester House, 11.30 a.m.
City of London Brewery.—Cannon Street Hotel, 12.30 p.m.
Crompton and Co.—Salisbury House, 3 p.m.
Central London Railway.—Holborn Restaurant, 2.30 p.m.
Kent Waterworks.—Cannon Street Hotel, noon.
London, Chatham and Dover Railway.—Cannon Street Hotel, 11 a.m.
Leyland and Birmingham Rubber.—Leyland, 12.30 p.m.
Lancashire and Yorkshire Railway.—Manchester, noon.

Thursday, August 6.

Brewery and Commercial Investment Trust.—12, Moorgate Street, 2.30 p.m.
Camp Bird.—Cannon Street Hotel, noon.
Euro Gold Mines.—Winchester House, 12.30 p.m.
Great Central Railway.—Manchester, noon.
London and India Docks.—109, Leadenhall Street, 2 p.m.
Leatherhead and District Waterworks.—Cannon Street Hotel, 3 p.m.
London and County Bank.—Cannon Street Hotel, 1 p.m.
London and South Western Bank.—Cannon Street Hotel, 1 p.m.
London and South Western Railway.—Euston, noon.
Metropolitan District Railway.—Westminster Palace Hotel, 11 a.m.
Mashonaland Agency.—Cannon Street Hotel, noon.
North Star Gold Mines.—Winchester House, noon.
Oriental Gold Mining.—Cannon Street Hotel, noon.
Pease and Partners.—Darlington, 11 a.m.
Waterloo and City Railway.—Waterloo Station, 2 p.m.

Friday, August 7.

Barry Dock Railway.—Barry Dock, 2.30 p.m.
Brentford Gas.—Charing Cross Hotel, 3 p.m.
City of Aberdeen Land.—Aberdeen, noon.
Gas Light and Coke.—Horseferry Road, noon.
Midland Railway.—Derby, 1.30 p.m.
Millwall Docks.—Cannon Street Hotel, noon.
North Staffordshire Railway.—Cannon Street Hotel, 2 p.m.
Rylands and Sons.—Manchester, 11 a.m.
Vale of Glamorgan Railway.—Barry Dock, 3 p.m.

Saturday, August 8.

Cambrian Railways.—Winchester House, 11 a.m.
Consett Spanish Ore.—Newcastle-on-Tyne, 1.30 p.m.

The Union of London and Smith's Bank will open the branch which Prescott's Bank had arranged for at 103, High Holborn, W.C., on Monday, August 10, under the managership of Mr. Henry Bauhof, from Prescott's Cornhill office.

The directors of the Hand-in-Hand Insurance have, with much regret, accepted the resignation of Mr. H. H. Ray, for forty-one years secretary to the society. To succeed Mr. Ray the directors have appointed Mr. H. C. Thiselton, who has been actuary for nine years, and will now combine the two posts.

The Investors' Review.

Scotch Banks.

What does the continual weakness of our Consol market really mean with its attendant demoralisation in the Home Railway market, and in all the groups of what are called the Miscellaneous markets? No failures of any importance have occurred in consequence of the collapse in prices, account after account passes by on the Stock Exchange without evidence that anybody in particular has lost much money. What are we to infer from this conjunction of antagonistic factors? The natural inference is, the inference supported by history and experience, that big credit institutions are in trouble, and that their losses have not yet touched exhaustion point. Rumour points now in one direction, now in another, but mostly points blindly. To-day it is a Kaffir "house" throwing things out in order to prevent itself from foundering, to-morrow it is a Scotch bank or more than one Scotch bank, and some other day a mysterious "firm of brokers" with an "awful" account open. We should not be surprised to find disclosures of catastrophic loss in all these directions, and assuredly things seem about ripe for a blow-up in Scotland. For a long time back we have looked with suspicion upon the position of more than one of the Scotch banks, and feel morally certain that distress in that quarter will before long have to be openly acknowledged.

It is the misfortune of Scotch banks to work in too small a country. The people there save money, often with a grinding thrift and an ardent love of high interest that is really an embarrassment to the banks, who find deposits accumulate in their hands for which there is no adequate employment within the kingdom of grouse moors and deer forests. Accordingly the banks are always sooner or later betrayed into speculative adventures abroad. They come as eager lenders to the London market, and often attach themselves to the most speculative classes of business to be found in it. They go abroad to the colonies and furnish the means to land grabbers and gamblers of all descriptions to carry out gigantic schemes of self-aggrandisement. There has not for many years now been a prominent financier or unscrupulous company hatcher whom they have not assisted. We never examine the share list of a bubble company, prominent or obscure, but what we find one or more of the Scotch banks among the financiers' props or decoys, often to a gruesome enough total.

One consequence is, has again and again been, that dangerous locks-up of capital—of the money of depositors, poor trusting souls—take place, and then follows the usual pious routine. Losses are hidden and carried year after year in the vain hope that some miracle will be wrought to enable the bank to escape. Interest on dead assets is periodically and prayerfully credited and duly divided as dividends earned, always in hope of the miracle. This miracle never comes, and we feel certain that before long there will be plenty of cause for sorrow in Scotland and elsewhere from the enfeebled position of some of the banks in this way brought about.

We believe it to be true that part at least of the unloading of Consols, which has been the object of so much conjecture and alarm in recent weeks, comes from Scotland, where many millions of Yankee railroad securities are held in pawn, and we may be perfectly certain that a majority of the Scotch banks are pretty deeply committed through the extensive and dangerous underwriting industry by which so many loans and share capitals of new companies have in a fashion been floated off. There has not been an adequate investment market for any public security, good, or other than good, during the last four years. As we have insisted all along, the country had no money to spare for that South African adventure, and the hundreds of millions swallowed up therein have crippled our financial institutions in all directions. Still more have they crippled the country. These millions have gone for ever and, in going, have drained away the means of the community to such an extent that a deadly dwindle in prices has set in all round the investment market. That again reacts with disastrous effect upon the lending power of the banks, and effectually cripples both speculator and investor amongst the general public, prevents them from continuing operations on the old scale, or on any scale. We are continually hearing instances of people formerly in affluent circumstances, or in command of plenty of credit with which to operate on the market, who are now to all intents penniless, unable to speculate or to invest. Hence arose the underwriting system to which seekers after new capital were driven to resort at a very early stage in the war, and that system, laden with affliction at all times, has had the consequence of loading up intermediaries, and such banks as would consent to be tools, with uncounted millions of securities for which there can be no market at anything like the prices quoted for them on the Stock Exchange. Many years of peace and prosperity would be required to work off this overwhelming mass of unplaced paper, some considerable portion of which may have no more value than the common shares of the United States Steel Trust or of the Morgan Shipping Combine. It is impossible that

an improvement can take place when the deadlock is of this ghastly description, and therefore the weaker among the institutions and firms that have become involved therein are bound to come to grief. They may plunge and scheme and cook balance-sheets, and fly "kites" until they drop with fatigue, and the true balance-sheet will one day be struck just the same. From all we can note and collate we judge the time about come for the "douce bodies" up in Scotland to look after two or three among their "bankers." The smell of the stored "whusky" should alone be sufficient to guide them where to direct their steps should other indication fail.

English Sewing Cotton.

Something very extraordinary would be required to establish this undertaking on a sound basis while its capital remains so immensely inflated, and failing a drastic reorganisation we never expect to see it flourish. Nevertheless the annual report and statement of accounts just issued afford evidence that the undertaking possesses considerable recuperative power, and we hope the progress made in straightening out its finance during the past year will encourage the new directorate to go further, and by reducing the capital to a reasonable level clear the way for the company's regeneration. Manufacturing profits in the twelve months ended March 31 were £85,864, against a loss of £44,858 in the preceding twelve months, and the American Thread Company, all the common shares of which are held by this concern, also reported a more profitable year's working. Dividends from that business, the Thread Agency and the Yarn Agency, came to £35,036, and with income tax, balance of account, and transfer fees, we find the total revenue mounts up to £124,109. A sum larger by more than £4,000, at £38,561, is allowed for depreciation, debenture interest absorbs £40,000, special payments required £4,109, and after meeting directors' fees and other small charges the net balance is £35,237. This compares with a debit in 1901-2 of £110,793, after crediting £16,214 from previous account, so that the improvement is something like £160,000. Twelve months ago the question arose as to whether the profits of, and incident to, the promotion and formation of the American Thread Company, amounting to £112,601, included in the 1899 profit and loss statement were legitimately dealt with, and counsel's opinion was sought. It was advised that this sum could not be properly treated as profit, and that the account should be amended by debiting the amount to profit and loss, and passing a corresponding amount to the credit of capital reserve. Therefore this sum must be added to the debit balance existing at March 31, 1902, together with £1,241, a sum paid for interest due to vendors of R. F. and J. Alexander and Co., which had been erroneously included in the purchase price, making a total of £224,635. Counsel having further agreed that the sum of £124,621 standing to the credit of general reserve might be properly applied to the reduction of this loss, that course has been taken, and with the further aid of the twelve months' net revenue, £35,237, as already mentioned, the debit is reduced to £64,777, and a capital reserve of £112,601 is possessed. The auditors' statement is a full, straightforward document, and points out that in the item of properties £2,335,751 is included closed works account, £27,535, and that goodwill remains at £448,492. Depreciation is on the same lines as last year, and does not include that charged on the plants of R. F. and J. Alexander and Co. and Ermen and Roby (Armentières), which is separately dealt with in the accounts of those companies. Stocks in trade are about £20,000 lower, and we are glad to note that the auditors consider the instructions laid down for their valuation fair and reasonable. Sundry debtors are up a little, to £202,656, with a reduction in creditors of £11,385, to £70,691, but the loan on security of the common stock of the American Thread Company has advanced 100 per cent. to £268,667. Cash at bankers and in hand is £2,200 higher, at £50,204. In commenting on these results, the directors say that the sales for the financial year to March 31 show a substantial increase over the previous twelve months, and the selling, distribution and administration expenses have been materially reduced, but unfortunately they are not justified in looking for any marked improvement in the near future, owing to the abnormal price of the raw material. A month ago we published details of the friendly arrangement concluded with J. and P. Coats for the working of the Spanish mills, and this, it is considered, will be of material benefit to the company.

So much for the present position, and we must now say a few words regarding the investigation made by the new auditors into "the terms and conditions of the formation of the company and the responsibility of the vendors in relation thereto." The report is a voluminous production, and evidently a thoroughly honest attempt has been made to investigate the circumstances surrounding the inception of one of the worst examples of the trust mania that caused so many people to lose their heads. The task must have been stupendous, and the investigation of certain items of the purchase money, as well as of the profits made by the vendors in the few years prior to the taking over of the businesses by the company caused a large volume of correspondence with the vendors, with Messrs. Jones, Crewdson and Youatt (the late auditors, and the firm responsible for the prospectus profit statements), with the secretary, and with the solicitors of the company. In most cases, the auditors say, they were met with courtesy and have had ready assistance and information furnished, which has been of material help, but from some the help given might have been greatly improved upon. Copies of two letters are published, sent to the Secretary of the Sewing Cotton Company and by him forwarded to Messrs. Jones Crewdson and Youatt, also a copy of the letters sent by that firm in reply. These letters we cannot print, but their tenour can be gathered from the remarks made concerning the correspondence by the investigation committee. They say that after considerable trouble and delay figures relating to the result of the working of each of the businesses for the two or three years prior to the date at which they were taken over by the English Sewing Cotton Company were supplied either by the vendors or by Messrs. Jones, Crewdson and Youatt with the vendors' consent. In some cases full details of the profit and loss accounts were supplied, in others only the bare results year by year, without any details. In several instances, particularly in the case of the vendor companies, the books were destroyed on the dissolution of the company following on the closing of the winding up In the case of Messrs. Dewhurst and Sons, Limited, the matter is further complicated by the fact that the figures given include the results of the weaving department, which was not taken over by the Sewing Cotton Company, but the results of which it was said could not be separated from those of the departments acquired. Thus the auditors are forced to say that it is impossible now to verify satisfactorily what were the results of the working of a large portion of the businesses absorbed for the two or three years prior to the formation of the combine; but accepting as correct the figures supplied it has to be considered whether they do or do not warrant the statements as to profits which are contained in the prospectus as follows:—

> A careful investigation of the accounts of the different firms and companies has been made by Mr. Ernest Crewdson, F.C.A., of Manchester, and in fixing the purchase price, the profits earned during recent years have been taken into account, but the difficulty of arriving at reliable figures on a common basis is so great and the fluctuations owing to the excessive undercutting referred to above are so considerable, that the directors decline the responsibility of putting forward a detailed statement. They think it right, however, to state that the average profits of the past few years have been comparatively small, a result due almost entirely to the undercutting already named.

The committee advance no opinion as to whether these statements were justified, but proceed to give details of the average profits per annum, and amounts paid for goodwill of the businesses referred to in the prospectus. To say that these show wide variations between the relative amounts of each firm's profits and the goodwill paid to them is to record some amazing differences in the gentlest language.

The system of reckoning had nothing uniform or consistent about it, and the figures are so extraordinary that we are tempted to set them out in full. Here they are:—

PARTICULARS OF THE PROFITS OF THE BUSINESSES REFERRED TO IN THE PROSPECTUS BEFORE MAKING ANY DEDUCTIONS FOR DEPRECIATION OR INTEREST ON CAPITAL.

	Average Profit per Annum.	Depreciation of Buildings, Fixed Plant, Loose Plant, and Machinery on the Purchase Price at the rates adopted by the Sewing Cotton Company.	Amount paid for Goodwill.
	£	£	£
Sir Richard Arkwright & Co. (Masson Mill only).			
3 years ending June 30, 1896 ... Cromford Mills closed; Mellor Mills closed.	2,155	2,016	43,580
E. Ashworth & Sons Limited.			
3 years ending December 31, 1896...	3,705	1,345	10,262
Bagley & Wright.			
3 years ending 1896 ... ... In this case depreciation had been charged before arriving at the sum of £3,282 above mentioned, but we do not know the amount of such charge.	3,282	1,966	22,766
Crawford Brothers.			
3½ years ending May 1897 ... ... It is stated that all repairs and renewals had been charged before arriving at the sum of £918 above mentioned.	918	1,457	12,054
John Dewhurst & Sons Limited.			
3 years ending 1897 ... ... The profit of £10,903 above mentioned should be increased by whatever was the average loss of the Weaving Department, which department was not taken over by the Sewing Cotton Company.	10,903	11,247	163,401
Ermen & Roby Limited (including Ermen & Roby of Armentières).			
1 year and 7 months ending July 31, 1897	14,662	5,000	75,250
S. Manlove & Sons.

Marsland, Son & Co.			
3 years ending December 1896 ...	1,470 Loss	403	9,414
J. T. Raworth.			
3 years ending 1896	602	476	1,158
C. A. Rickards.			
3⅓ years ending November 1896 ...	4,408	2,380	50,000
W. G. & J. Strutt.			
2 years ending March 1897	896	1,942	*19,348
Wm. Waller & Co.			
3 years ending June 1896	2,725	564	20,675
J. & E. Waters.			
3 years ending 1896	6,570	2,945	14,845
G. Wigley & Co.			
3 years ending June 1897	1,819	564	3,780
Deduct from Goodwill Messrs. Stott's valuation of the lease for a further term from Messrs. Strutt	£56,537	34,193	£471,805 24,674
	£56,537	£34,193	£447,131

* A Lease for a further term was granted by Messrs. Strutt, which the Valuers valued at £24,674. Messrs. Strutt's total purchase price was not increased, and it may therefore be considered that they did not get anything for goodwill.

The committee come to no general conclusion as the result of their investigation, and refrain from formulating charges against any individual, but surely this is a case where the vendors should voluntarily assist the company's resuscitation by agreeing to the cancellation of part of the shares received as purchase consideration? We rather regret to learn that a struggle is promised regarding the re-election of directors. Two retire at the forthcoming meeting, and one seat on the board is vacant. One of the nominations is that of the ex-chairman, Mr. J. E. Lawton, but it is improbable that he will consent to stand. The others who aspire to assist in the administration are Mr. F. Handel Booth and Mr. Adam Laidlaw, the former of whom is an ex-director. Both may be good men, but any disturbance at the present juncture is to be deprecated.

The Retro-active, or Hitting-Back, Influence of Customs Tariffs.

The Cobden Club might do worse than reprint, with the author's permission, a summary of Mr. Edward Atkinson's paper upon this aspect of the tariff question. It was written last year, and therefore has no special bearing upon the extraordinary outburst of reactionary fiscal chatter started by our Colonial Secretary. Mr. Atkinson is one of the gentlemen appointed by the Société International de Statistique to report upon the "Repercussion des Droits de Douane," the other gentlemen being Messrs. Yves Guyot and Delatour, of France, Von Mayr, of Germany, and Mandello, of Hungary. We should like to reprint here a considerable portion of this essay, but have not space, and must rest content with indicating one or two points in it. Rightly dividing tariffs into three classes, a tariff upon foreign imports for revenue only, or a tariff for revenue with incidental protection, and finally a tariff for protection with incidental revenue, Mr. Atkinson points out that Great Britain has hitherto been an example of the first type, Germany of the second, and the United States of the third. He then proceeds to examine the effect these tariffs have had upon foreign trade, and especially upon the trade of the American Union. The conclusion he arrives at in regard to this last briefly is that the high scales of duty maintained against foreign imports by the United States has materially interfered with the competitive power of the Union in foreign markets. The tariff has not so much tended to raise the cost of production in the United States as to lessen the purchasing power of the country's foreign customers. Still, the exporters of the States have been barred in neutral markets by their own import tariff, with the result that "protection" in these markets has been afforded to the native industries of Europe quite as much as to those of the United States within their own boundaries.

Pointing out that the American Union contains within it everything necessary to constitute it the greatest producer in the world for every form of iron and steel manufacture, Mr. Atkinson shows how the high tariff set up by the rulers of the Union has shielded European nations from the force of competition. Had there been no tariff in the United States, it is probable that the development of their iron and steel industries would not have been so rapid as has been the case since 1890, for during the earlier period when the country was filling up and the population devoting its energies mainly to the occupation of the soil and to the raising of crops therefrom, European manufactures of this and other descriptions might, under free trade, have been stimulated to an inconceivable extent and the workers here would in return have been fed from the States. Trade both ways would have been healthy and of gigantic proportions, but ours would have been trade in finished goods. After a time, however, and that not a long time, although it might have been sufficient to nearly exhaust the iron ore reserves of Spain as well as the iron and coal reserves of England, the natural advantages of the American Union, with its unrivalled sources of metallic ores and fuel, would have asserted themselves as well as the skill, intelligence, and enterprise of the population. The tables would have been turned and the United States have tended to become the greatest source of the world's supply of every description of manufactures. We might not have been beaten from the field, that would have depended on ourselves, but we should have fallen back into the position of a poor second.

In the main this seems to us a fair and logical summary of the probable course of events had freedom of trade been allowed in the States from the first. Had not protection intervened—protection as the author says, resting upon force as against free trade, the child of liberty—we might now have had real ground for asserting that the industries of England were being overthrown or supplanted by those of the United States. This does not necessarily follow, because it is probable, nay certain, that compensating advantages would have arisen for us in other directions. We should have brought into being fresh commodities to exchange for those of the American Union, continued, for example, to be the country whence the finer articles of manufactures would still have had their origin. Be that as it may—and it would have depended on ourselves—it is obvious that if England falls back into the position which Mr. Atkinson asserts the people of the United States are rapidly making up their minds to abandon, and becomes a tariff-fenced country, the repercussive action of the protective tariff will do infinitely greater harm to our old, and it may be in part exhausted, industries than it was able to effect in a new and vast country like the United States. A tariff on important manufactures or food products will have in this country the retro-active effect of

obstructing our exports, not of expanding them, and will soon bring us into a very hunger-stricken condition. We are, as the author of this pamphlet points out, already sufficiently handicapped through our enormous expenditure on military burdens. The present dead weight laid upon Great Britain by its mere unproductive fighting services is about three times that of the United States, that of France almost the same, and that of Germany and the low countries about double the American load. It seems to us that Mr. Atkinson puts our relative figure too low, but as it stands such a burden acts as a tremendous initial strain upon the industries of this country in the competitive race. And on the Continent the dead weight is still further increased by the enormous numbers of the youth of each country kept in a state of idleness, withdrawn from industry. In the United States there is but one soldier to each 1,200 inhabitants. Add to these burdens, to our ghastly load, a new protective tariff, whether with "preference" to the colonies or without, and we shall at once fall into a worse position than the United States have ever occupied, a position that must bring about incalculable miseries to our industrial population, whose outlets will be obstructed and partially closed by the hindrance placed upon free imports under a revived protectionist system. We cannot stand an oppression of this description, and it is the duty of every man of principle, of every lover of his country, of every genuine patriot, to do his utmost to resist and defeat the dangerous agitation now unscrupulously fomented by the politically abandoned and utterly profligate Colonial Secretary and his equally disreputable backers.

Notes from New York.

New York, July 28.

With regard to the wheat crop it would appear that the Kansas yield will have to be heavily discounted, the heads threshing out indifferently. The corn crop will be under the average, and it is now generally understood that the cotton yield will be small. This last fact is unpleasantly affecting the textile industry, which seems to be slow about adapting itself to the new conditions. One of the absurdities arising out of the crazy system we are living under, has been the return here of cotton from England and France that crossed the Atlantic only a short time ago. Four thousand bales arrived in the *Cymric* yesterday, and 559 bales are on their way from Havre. These will, of course, figure in our imports after having already done duty on the list of our exports.

It has been very interesting during the past few weeks to watch the news that was published regarding Russia and Japan. A persistent campaign directed chiefly from London by the correspondents of certain of our papers here has been carried on against Russia, and evidently with the purpose of urging Japan on to attack Russia. Occasionally a supporting despatch has been fired off, dated from Pekin or Hong Kong, and always with the same intent. Fortunately the sinister conspiracy seems to have failed, as this morning's news brings a statement from Berlin of what is described as an arrangement between Russia and Japan; and it is to be hoped it is true, if only because it involves the discomfiture of a deliberate conspiracy against the peace of Asia and the world at large. By a singular coincidence, the same correspondents who made themselves the mediums of transmission of the news described are ardent admirers of Mr. Joseph Chamberlain, whom they continue to laud as the most able and powerful statesman in England. One in particular seems to be entirely devoted to the man most responsible for the ruin in South Africa, and describes the defeat of the Unionist candidate in last week's election in the north of England as caused by the Education Bill, and not in any way by Mr. Chamberlain's food tax proposals. The same correspondent also describes the British taxpayers as overwhelmed with rage and shame that the opposition to Russia in Manchuria should have been left to the United States. It is, however, a satisfaction to be able to say that the object of this attempt to boom Mr. Chamberlain over here is fully understood, and will not gain for England any credit or sympathy in a policy of which your Colonial Secretary is the parent. What this country needs in the period we are entering on is peace to pursue the work of development and to restore the reign of order which was first disturbed by the Spanish war policy of Mr. McKinley and his masters, and is becoming more troubled through the weakness of our present non-elected Chief Executive and the cabals directed against his renomination and election to the Presidency next year. Thinking people are alarmed at the spread of lawlessness all over the country. On mere suspicion or false accusation men of colour are dragged to the stake or lynching tree, and even whites are being lynched; while murders and crimes against property keep on increasing with the growth of luxury and love of display, and the police of the great cities are chiefly employed to look after gambling shops and keep the weary slum dwellers off the grass in the public parks. And as if the rich had not enough power and privilege already, they are permitted to have their servants and retainers sworn in as special police to arrest trespassers and others found on their domains; they themselves enjoying the privilege to interfere with the people's liberties with immunity because of their wealth. Such a political and social system as we have now cannot endure much longer.

Economic and Financial Notes and Correspondence.

The Sugar Surrender.

What a sorry exhibition the Government is making over the Sugar Bill. Ministers who ought to be in the House are conspicuous by their absence, save at division time, while the President of the Board of Trade, who has the measure in hand, knows nothing either of its effect or its meaning. Surely Joseph might come to Gerald's assistance on this occasion. For the Birmingham pundit must know all about sugar through his intimate connection with the colonies, especially the West Indies. His special knowledge would therefore be invaluable in these harassing hours of committee. Points of law he may not know—for is he not a law unto himself—but his peculiar theories on economics, if they did not instruct the House would amuse it, and so redeem the feeble dullness of the Government speeches. That such a Bill should be seriously discussed is a disgrace, and would be so considered by any other cabinet than that in power. The best men of both parties have attacked it, and torn away its miserable cloak of words and phrases, until it stands forth naked but unashamed. Not only are our sugar refiners to suffer, but also all the jam, confectionery and allied industries, merely because we have been fooled into signing the Brussels Convention. That the Bill will pass, or rather be forced, through the Commons no one doubts, so great is the power of a sheepish majority and the guillotine, and the nation will once more pay, and pay heavily, for the ignorance of the rulers it has set up. Still, out of evil good sometimes comes, and if the country by this measure is given a foretaste of protection we may reap the benefit later.

Dear Sugar and Cheap Foreign Jam.

The Sugar Bill is being forced through Parliament in the usual Tory way, by means of the guillotine. Shut off disucssion when there is anything to be said on the other side, that is perfect Tory tactics of the newest degenerate type. It is a contemptible measure from whatever point of view it may be looked at, and not least contemptible in its abject surrender of British independence in fiscal matters into the hands of the foreigner. Full of absurdities the measure is also, of unworkable contradictions, and when it becomes an Act of Parliament it will be the object of derision, a source of bickerings and infinite disputes until it is wiped off the Statute book. What strikes us most about it ,however, is the shockingly bad tactics it displays. Press tradition always credits Mr. Joseph Chamberlain with preternatural acuteness. He is nothing to the newspaper Nestor if not a "smart man, up to all the ropes," ready for every device, keen to trip up a foe, and swift to

grasp the smallest advantage. All this is mere superstition, and opinion-vending by rote. He is one of the most short-sighted men living in the political world, our Colonial Secretary, shallow, alert as a street arab, rash, ignorant, and yet with all his smart unscrupulousness wonderfully inept at times. His ineptitude has come to the front in this sugar matter in an astounding fashion. Why did he not bring about a dissolution before dear sugar came as an object lesson to the voter? Before he can get his programme launched or his nebulous schemes put before the electorate, dear sugar will have exasperated every housewife in the three kingdoms and prepared the electorate to cast him and his quack notions out. We are shocked that the newspapers should continue to worship the political cheap-jack astuteness of this "consistent" politician and advise it to pause five minutes and think things over. The drollest thing, though, about that funny sugar bill is not its abject surrender of our fiscal policy to the control of the foreigner. Good might possibly come out of that at the millenium, were it to lead the nations to discover that their best interests would be served by the abolition of all State props everywhere and of all customs tariffs. Where the fun is most furious of all, is in the care taken that cheap raw sugar shall be kept out, and cheap foreign confectionery let in. Can it be that Joseph seeks revenge on the Cadburys, because they have followed noble ideals while he cultivated monopolies? Perhaps. Anyhow, there is the fact, as Mr. Asquith, with due pungency, brought out.

The Foreign Trade of the United States.

It is getting into a lamentable condition, according to the theories of United States protectionist statisticians, for the difference between the value of imports and that of the exports is narrowing. It was as much as £136,000,000 in favour of exports in 1901, and in the year just closed is only about £83,000,000. In other works tre value of the imports for 1900-1901 was only about 55½ per cent. of that of the exports, whereas in that of the year just closed it exceeds 72 per cent. This must spell ruin if we are to believe these wise men of the west. They do not apparently regard their foreign trade as at all profitable unless their exports merely bring them back something between 60 and 70 cents to the dollar. It does not strike them that this difference, or discount, must, on any commonsense interpretation, represent loss, or if not direct loss then payments to the foreigner for services rendered or for interest on capital borrowed. Were the business out and in on a natural footing, it is obvious that the value of the imports ought to exceed that of the exports. On the fashionable Yankee interpretation, we must assume that the exports are sold at ruinous prices, given away in the countries of their destination. Assuming the figures to be taken as we take ours, exports being entered at the value free on board and imports at the invoice value plus freights and insurance, the total of the latter ought to exceed that of the former if there is a fair profit on the business done. But that is not the view of the United States statistician at all, and directly he finds imports increasing and exports in the least degree falling off or stagnant, he begins to wail, and to talk about the ruin of the country. It is the tariff, good friend, that is ruining the country, exhausting it, preventing its inhabitants from reaping the fruits of their labour, the tariff and the trusts. For a time the ravages may be hidden by a sham, paper-made prosperity, but it will come to the surface in time.

Some movements in the export trade are in a manner suggestive of the power of tariffs to check competition by the country shackled, and to give scope for the establishment of competitors. We are told, for instance, that the provision and dairy exports for the past year were actually some $21,000,000 less than in the year before, and in explanation of this it is sagaciously asserted that "it takes time to transform corn and other products into meat and live animals," the blame being laid upon the poor crop of 1901. But are there not other causes? Is not Europe going to rivals of the United States for its provisions, going even to Canada and to the rapidly expanding Argentine Republic? The more it does so the less we shall be dependent upon the United States for our food supplies. There has, in fact, been a decline in our imports of bread stuffs from the United States that reaches quite a remarkable figure compared with the high-water mark of 1897-8. Then the total reached nearly £67,000,000, and in the year just closed it came to only £44,000,000. Even that was somewhat higher than the figure for 1901-2. The petroleum trade also does not appear to be any longer that absolute monopoly of the Standard Oil Trust which it used to be, for the drop in exports last year was quite sensible, amounting to upwards of £1,000,000, as against the preceding year, and to nearly £2,000,000 as compared with 1899-1900. We are finding supplies of this indispensable substance in other countries to an increasing extent, and the longer the Dingley tariff reigns over United States business with other nations the more will we grow out of dependence upon that great country, whether for food stuffs, for raw cotton, or for petroleum. The exports of raw cotton have been sensibly less than they were in the two years ended with June 30, 1899, quantities alone taken into account. Taking the exports of these four classes of commodities together, the aggregate increase for the past year over 1901-2 was little more than £6,000,000, out of a total increase of nearly £8,000,000 on exports of every description, including tobacco, fruits, and manufactures of all kinds. No wonder that the "balance of trade in favour of the country," as it is called—it being really an adverse balance of a most devouring character—continues to diminish, for imports are heavy by comparison with former years. In June alone the total was $8,778,000 more than in the same month last year.

The Trade of New Zealand.

In the fiscal year ended March 31 last this colony did magnificently in the matter of exports, the total value reaching £15,174,739, or fully £3,000,000 in excess of that for the previous year, and £2,234,000 less than the total for the year ended March 31, 1900, when the colony was enjoying to the full the benefit of the war in South Africa. The March quarter was in itself a "record" one, in the slang of the day, the total value of the exports being £5,405,031, against £3,863,869 in the corresponding quarter of last year. Most of the increase came from wool and frozen meat, which together gave nearly £2,000,000 more than in the preceding year, or to be exact £1,963,055 more. Then there was an increase of £344,000 in the gold exported, of £307,000 in the hemp, of £277,000 in the butter and cheese, of £173,000 in tallow, and of £47,000 in kauri gum. Grain and grain stuffs fell off £188,000 and timber £56,000. Part of the increase was undoubtedly due to higher prices, but that was not the entire explanation. It is found in a telegram from the Wellington correspondent of the *Times*. Wiring under date August 2, this gentleman says the sheep returns revealed the serious shortage in the numbers of 1,300,000 owing to over-exportation. He adds that a further loss of 500,000 is probable through a snow storm in the south island, the severest for many years, and that accordingly the Government meat shop scheme is apparently premature amid such circumstances. This means, apart from the snow storm calamity, that New Zealand over-strained itself last year in making a tremendous exhibition of exporting powers. Probably this had to be done because loan raising has become so difficult on the London market, and certainly money must be had somewhere, because the imports continue on a lavish scale. The figures for the year closed on March 31 came to £11,567,513, and for the three years ended then the total was never less than £11,000,000, averaged, in fact, £11,454,000 over the period, as against only £9,192,000 for the year ended March 31, 1900. This seems to indicate extravagance, but we hope the colony will be able to continue to export on a much more liberal scale than it imports, otherwise it is going to have much affliction. Only it must not exhaust its stock of sheep.

No Through Rate for the London Docks.

Once more the London and West India Docks Company has met with a rebuff in its endeavour to compel the Midland and Great Eastern Railways to grant through rates from its Exchange sidings. On the first occasion the

Docks Company, by the advice of the Railways and Canals Commissioners, took up the ground that their lines connecting with those of the railway companies were a "railway" within the Railways and Canals Traffic Act, 1888. This view the Court of Appeal would not uphold, so the dock people had another try, this time as traders, only to meet with another reverse in the Appeal Court. Though technically these two decisions are correct, we think they bear harshly upon the trader, who, after all, is the party to be most considered. For, as matters now stand, the railways make a charge, corresponding to a terminal charge, when taking over the goods from the dock sidings. This, if a through rate were granted, they could no longer do, as the right to make it would be with the Docks Company, who might, and probably would, include it in their handling charges. The trader would therefore gain though the railways would lose unless they made good the loss by increasing the conveyance rate. However, whether the railway did this or not they should be compelled to quote through rates from the docks in fairness to the traders. Besides, how can the London Docks Company be expected to compete on equal terms with Southampton and other ports where railways own the dock accommodation, and in their own interest quote through rates, unless they are fairly, not to say generously, dealt with by the railways at whose mercy they lie?

The True "Weak Spots" on Wall Street.

Most United States telegrams, and the great majority of the financial letters from New York dwell upon what is described as the "bear tactics" of the Standard Oil group. We are told that it is "smashing" the market for reasons of its own, and selling things in order to force out weak spots elsewhere, playing the game of "beggar my neighbour" with its old soullessness and success. This has long seemed to us a misinterpretation of the actual position of the said group. We have had a growing conviction for many months now that it is no longer the wealthy group it is popularly supposed to be. We are inclined, on the contrary, to attribute a great deal of the demoralisation and market paralysis now visible on Wall Street to the embarrassment of this Standard Oil gang. Things have not gone well in recent years either with its rank and file or its leaders. The foreign trade in petroleum has by no means yielded the profit it formerly did. Competition with Russia and other Asiatic oils has broken in upon the monopoly to a disastrous extent, and the Trust's shipping adventures clearly yielded no profit, else Mr. J. P. Morgan would not have been put up to form that shipping "combine," by which many people and some financial potentates and banks in the Union are going to be ruined. No, our impression is that at the present moment the chief source of weakness in Wall Street lies around the Standard Oil clique, and the failure of some of its chief ornaments would no more take us by surprise than the collapse of the Steel Trust. They have been too blatantly rich on paper, these magnificences, and have not known what to do with the wealth pouring in upon them. Hence it has been utilised to start all manner of gigantic enterprises, and locked up in innumerable undertakings which have proved more or less of a dead loss. Some time ago we were told on excellent authority that the all-absorbing Standard Oil swarm, had obtained the control of seven banks in New York over and above the Standard Oil Company's own bank. The total deposits of five of these banks was put at $42,000,000, and altogether upwards of $150,000,000, or £30,000,000, in deposits were alleged to be brought under the control of the Oil monopoly. If statements like this in any degree accord with the facts we may be quite sure that the struggle has been Titanic to avoid collapse. Collapse when it does come, as it must one day, will clear away a good many misconceptions.

Those Military Stores Again.

Is it true that since they can no longer burn the vast quantities of stores accumulated during the war, the authorities in South Africa are selling them at prices far below their value? We are told it is, and further that the methods adopted to get rid of the goods is ruining the traders of the country. A market is selected on which to dump a large quantity of different articles. These are first offered to the shopkeepers of the district, who in many cases to protect themselves have been compelled to take the things off the authorities' hands. Should, however, the tradesmen not be in a position to buy up what is offered, or if they are already carrying as much stock of the article as they can deal with, the officials proceed to hold an auction, selling the goods in many cases below cost price here, at least such is our information. Anyhow, freight and land carriage charges are not considered, why should they be since the nation has paid them. Having unloaded as much of the goods as the district can take, the rest are moved on somewhere else, and the same performance gone through. The result of these tactics has been ruin to many of the general dealers in the country who not having the nation's purse behind them to pay for getting their merchandise out to South Africa, find themselves shut out from their own markets by the men who rule them. To say they should buy the stores at the low prices asked and then retail them at a large profit is absurd. In the first place the traders have not sufficient capital to absorb several millions worth of goods, and in the second even if they could do this they would cripple themselves for years to come by carrying such a quantity of stock. Instead of hawking these stores about the country and practically throwing them away, would it not be better to re-ship them to this country where the distribution would be comparatively simple? But this would open the taxpayers' eyes to the wanton waste of his money during the war, and it is better to ruin traders in South Africa than undeceive the voters at home.

Are Indian Land Statistics Cooked?

Here is another document from a native of India full of instruction to those who care to study it. Mr. Daji Abaji Khare, in his capacity as President of the Bombay Provincial Conference, delivered an address at Dharwar on April 25 last, which has been printed, and a copy sent to us. We have read it with much interest and instruction. One of the points dealt with by Mr. Khare with great ability is the condition of the people under the existing land assessments. In effect his statements amount to a defence of the position taken up by Mr. Dutt, and an analysis of the official excuse and explanation furnished in rebuttal of Mr. Dutt's conclusions by Mr. Muir-Mackenzie, Chief Secretary of the Government of Bombay. Mr. R. C. Dutt, as is well known, contends, as this journal has long done, that the wretchedly poverty-stricken people of India are over-taxed, and especially that the land assessments have risen to a height which is not only impoverishing the people, but in large areas tending to drive the land out of cultivation altogether. Some of the statements made by Mr. Muir-Mackenzie in his capacity as Government apologist are traversed by Mr. Khare in a manner which cannot be allowed to rest unanswered. He as good as charges Mr. Muir-Mackenzie with cooking his figures, with confusing different totals, either through carelessness or in contempt. For instance, Mr. Muir-Mackenzie says that within forty years, that is from 1855-56 to 1895-96 the area of cultivation in a certain area has increased from about 14¾ to 23⅓ million acres, or about 60 per cent., but, says Mr. Khare, the statement "B" attached to Mr. Muir-Mackenzie's memorandum does not bear this assertion out, because Mr. Muir-Mackenzie has confused "cultivated" area with "occupied," two very different things, and the confusion is quietly introduced without comment or remark. Surely this is an unfair method of controversy if Mr. Khare is right. It is pointed out by this Indian gentleman that the data cannot be properly compared, since in the 14¾ million acreage four districts are left out, while they are taken into account at the later date, 1895-96, and he adds, "surely a calculation based upon such rotten data ought never to have been put forward in such a state paper, which was intended to be a reply of the Bombay Government to Dutt's criticism."

Nor is this all. The figures for Kanara, Ratnagiri and Thana, as given for 1855-56 are, says Mr. Khara, mere estimates, and there is no guarantee that they are correct, and not far below the real area then in occupation. No true comparison, it is justly contended, can be made, unless

the same areas are selected for both dates. This has not been done, and Mr. Khare deducts four districts from the figures for 1895-96, which were not embraced in those for 1855-56, with the result that the figure of 23,373,000 acres put forward by Mr. Mackenzie as the cultivated area of his later date, is brought down to 18,309,000 acres. This gives an increase of only 24 per cent., so that it is far from true to say that in the course of forty years the increase in occupation has been 60 per cent. Even from Mr. Mackenzie's own figures tabulated in statement "B," it is only 24 per cent. But the story of error is not even now finished, according to this distinguished Indian native, since, as was mentioned above, occupation and cultivation are confused. There are large tracts of occupied land which cannot be cultivated, and the assessment of the occupied land is nothing in comparison with that levied upon land in cultivation. If such points as these are taken into consideration it will become manifest that it cannot be asserted that the area under cultivation has increased during these forty years by even 10 per cent. The net result of Mr. Khare's argument may be summed up thus. During the last sixty years the demand against land has increased by 120 per cent., while the area under cultivation has increased much less than 10 per cent. The same land now pays more than double what it paid sixty years ago, and if the payments of sixty years ago represented one-fourth share of the acres produce, the present payment represents more than half of it. To this must be added rigidity in collection, and general absence of remissions, both features quite unknown in former days under native rulers. There is also the local fund charges, and charges for forest produce and the grazing of cattle. It is, therefore, wrong for the Government of India to say that the highest rate of assessment under the Bombay Presidency does not exceed 20 per cent. of the produce for the statements on which this conclusion is based are palpably misleading, and instead of supporting the memorandum of Mr. Muir-Mackenzie, go a long way towards disproving its conclusions. Mr. Khare also declares that the fertility of the soil has deteriorated, a result inevitable if the cultivator is harrowed by excessive taxation. It seems to us that the Government of India ought to treat complaints, remonstrances and arguments such as these, made by natives of position and repute with more courtesy and solicitude than has been shown by the Government of Bombay. Why cannot the modest request of Sir William Wedderburn and the Indian committee in this country, acting for the Indian Congress in India itself, be granted, and a strict, thorough, and perfectly impartial investigation be made into the condition of certain selected villages or well defined districts of India, so that some true conception of what is going on may be arrived at? The truth is of vital interest to us here as to us as rulers of India, and to treat the poverty of the people of India as something to be glossed over by the concoction of spacious and misleading statistics is to invite trouble, to copy the legendary policy of the ostrich.

An Easy Way to Fortune.

You want to make money, do you not, average reader? Well, we can tell you one infallible way in which you can do it, and do it quick. The committee of the Stock Exchange holds the patent, but its charges are not excessive, and you could easily borrow enough to become a member of the 'Ouse, and enjoy the privileges. Once inside, the only thing you have to do is to get a friend to concoct a company. There need not be anything behind it in the shape of cash or anything else. Give it a nice name—"The Sokoto Pioneer," "The Bohotle Irrigator," anything will do, because you only want a name and a "limited," so as to have a decent pretext for bidding for "shares" in the market. Take care to issue only a few, and give jobbers the "call" of some more. Everything being arranged, begin by quoting your paper at a high premium. There is no danger of getting caught by doing so, because the whole show is your own, and you can bid £100 for a five bob share if you have a mind to. Go on "dealing" until you have drawn a few jobbers into your net, and perhaps a few innocents from amongst the public—it costs at least £50, though, to get your prices quoted in the principal dailies for six months—and then when the trap is as full as you think it likely to be, go to the Stock Exchange Committee and ask for a special settlement. It will be granted as a matter of course. Then you can either fail and go, carrying your plunder with you, or make others fail and strip them just as best suits your book. The Committee will see that the "rules and regulations" of the Stock Exchange are duly observed in your interests. Nothing could be more simple and effective. "But why should the Committee grant a special settlement for any swindle?" Ah, "if you tells me no kvestions," as Hans Breitmann says, "I vill ask you no lies."

Critical Index to New Investments.

*** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

The North Wales Power and Traction Co., Limited.

The capital of this company has been fixed at £270,000 in 54,000 shares of £5 each, 3,400 being allotted in part payment of purchase consideration, and the balance offered for subscription. The scheme on which the company is based comprises the generation of electrical energy at a low cost by means of water power from lakes on Snowdon and in the neighbourhood of Conway without steam power and the expense of coal. The current will be supplied to a short railway which is to be extended and electrified to certain towns in the district of Snowdon, to local quarry owners and in bulk to more distant consumers. This railway is called the Portmadoc Beddgelert and South Snowdon Railway Company, and possesses a share capital of £270,000, with borrowing powers, and one of the objects of the North Wales Company is to acquire by subscription the whole of the capital that it may be necessary to issue. Under its act the Portmadoc Company may abstract, impound, appropriate and use the waters of Lake Llydaw and Lake Teyrn, and develop power from them, such act being passed with the initial object of enabling the company to purchase and extend the line known as the Croesor Railway, at present 4⅝ miles in length. The total length of the line when extended will be 12⅞ miles. Estimated cash requirements of the company are £272,000, of which £180,000 is for the Portmadoc undertaking, £12,000 for the purchase of the Croesor Railway, and £80,000 to cover the cost of the freehold of Lake Eigiau and other property, which is the only water power of high elevation that can compete with this scheme, the price payable to the Northern Counties Traction Company, the estimated preliminary expenses, and an estimated amount of nearly £25,000 for brokerage, land, and other compensation not covered by the tender, general expenses and working capital. On the basis of 1,000 horse-power a net revenue of £18,962 is anticipated, but the company is to have 5,000 surplus horse-power, and if the product of 10,071,000 B.O.T. units is sold it will give at 1½d. per unit a further net income of £57,700 per annum, as the cost is expected to be the exceedingly minute one of ⅛d. per unit. These figures seem very attractive, and even if they are not realised to the full, it is not unreasonable to anticipate a revenue sufficient to justify the present capital.

Temiskaming and Northern Ontario Railway (Ontario Government Railway).

The Temiskaming and Northern Ontario Railway Commission announces that it will receive tenders at its offices in Toronto up to 10 o'clock a.m. on Saturday, September 12, for the purchase of $2,750,000 3½ per cent. thirty year gold bonds of this company, to be delivered in Toronto, $2,000,000 on October 1 next, and $750,000 in three equal instalments on December 1, 1903, and Febru-

ary 1 and April 1, 1904. The issue consists of 5,500 bonds of $500 each, or £102 4s. 10d. sterling, which will be dated October 1, 1903, and mature thirty years from that date. The railway being a Government enterprise, the payment of principal and interest, which will be made in gold in Toronto, New York, or London at holders' option, is guaranteed by the Province of Ontario. The contract was let in October, 1902, for the construction of the main line from the town of North Bay to Lake Temiskaming, a distance of 110 miles, and work has been continuously prosecuted since that date.

Passing Events.

The King's tour in Ireland has been an unmixed success, and his attitude towards the Irish people has been excellent. Really we shall have to become an ardent monarchist, so well has King Edward done his duty as representative of the English people and the Empire since he was restored to health and able to actively pursue his duties. More has been done by him to elevate the sentiment of the nation and clarify it towards other nations, and to modify the feeling of the Irish towards England, than any living political leader has been able to accomplish in his generation. All honour to the King, and may he live long to continue the good work he has been doing.

Surely Baron d'Estournelles de Constant deserves a word of praise for his admirable recommendation with reference to disarmament and harmony between the military nations of Europe. In a letter to M. Delcassé, the French Minister of Foreign Affairs, he urges his Government to endeavour to come to an agreement with England in the interests of peace and disarmament. He does not wish to minimise the position of the Hague International Tribunal, but to strengthen it and make it living, and is anxious to see a Convention signed by England with France and Russia to restrict the crushing burden of naval expenditure in all three countries. He also wants an amicable settlement of all the differences between France and ourselves, differences which diplomacy for the last twenty years has exercised its efforts to evade, and which several times have been on the point of causing a war disastrous for both countries. Every Englishman who loves his country and respects his neighbour's patriotism will heartily endorse these proposals, and the moment is surely favourable for some practical outcome. Do not let all the fine sentiments recently expressed on both sides of the Channel evaporate in words, words and nothing beyond.

It is intimated that Lord Curzon is to extend his term of office as Viceroy of India, presumably for another five years, the only stipulation being that he is to have a holiday. No objection can be made to this arrangement, because whatever Lord Curzon's faults may be, and he has a great many, he has been long enough in India to have some glimmering of the problems demanding solution there, and we believe him to be a conscientious, if narrow-minded and pedantic, worker. The probability is that his extended reign will do less harm than the plungings of some other young blood of the Tory Party.

It seems that Mr. Chamberlain has issued a denial of the statements made that he was going to put a tax upon raw materials. Nothing of the sort, he declares. Well, what does he mean by raw materials? Food, we take it, is the principal raw material imported into this country, the material out of which thews and sinews are made and brains sustained, and he has clearly enough intimated his intention to tax that on more than one occasion. But where is the line between "raw material" and finished goods to be drawn? Immense quantities of the half-finished articles imported from abroad in every branch of our manufacturing trades are, as we have once and again insisted, raw materials to the skilled British workman. If these are to be exempt, what is left? Perhaps "Consistent Birmingham" will throw some light upon this question, if capable of throwing light on anything.

We strongly advise protection mugwumps to read an article on the balance of trade in the *Produce Markets Review* of the 1st inst. It ought to convert them from their transition stage into full-fledged free-traders, unless they are gifted with abnormal density.

What does the Committee of Public Acounts mean by bringing into the light of day the incapacity of the permanent officials in dealing with money to be temporarily invested. It seems that no less a sum than £2,360,000 was put into the hands of the National Debt Commissioners as representing capital set aside to pay for public buildings. As the money was not wanted forthwith it was invested, £1,986,668 of it in Consols and £373,992 in Treasury bills. When the Consols came to be sold out from time to time, as the money was wanted, it resulted on March 31 last, from this business perspicacity, that on £704,081 of stock disposed of there was a net loss of 16.03 per cent., or £112,675. That is rather smart patriotism, and of course the taxpayer, or the new loan provider, will have to make the gap good, so why should the officials care? To have put money that was to be wanted within a very short time into a political security with which the market was grossly overloaded may have been regarded as a fine stroke of business, as helping to sustain quotations in the interests of further loans, but it was in reality a gross betrayal of a public trust. And the loss is not nearly at an end, because the rest of the stock will have to be sold, and Consols are going down, down. Who cares? the deficiency can be clapped into the next supplementary estimate. There was also a loss, it seems, upon the transactions of what is called "the Treasury chest" for the year 1901-2, amounting to £156,327. Thus is goes on.

It was quite to be expected that the countervailing sugar duties imposed some years ago upon India by the Simla Government, in the interests of our Colonial Secretary's West Indian friends, would be continued, and due announcement of the fact of their retention for the year ended March 31 next was given last Monday in the Governor-General's Council by Sir Edward Law, the Indian Minister of Finance. Whether this decision accords with the new Act being guillotined through the House of Commons or not does not matter a straw to our great legislators.

One result of our tariff agitation is given by the special correspondent of the *Manchester Guardian*. A confidential circular, he writes, from the President of the National Reciprocity League, whose headquarters are in Minneapolis, has fallen into his hands. It urges renewed efforts to form a commercial treaty with Canada before we can get a look in, gives a plan for raising a hundred thousand dollars to push the campaign, and emphasises the necessity for haste in the statement that "No doubt if Canada is not soon drawn closer to the United States commercially she will be to great Britain." Reciprocity, indeed! A case of the race to swift, and devil take the hindmost.

We are not surprised that the translation of Mr. Babington Smith from his position as Chairman of the Turkish Debt Commission in Constantinople to the Secretaryship of our General Post Office should excite much regret among his colleagues and in the city of his recent labours. He has fulfilled the duties of English representative of that Commission with great assiduity, admirable tact, and firmness, and a perspicacity far above the average. He will therefore, we trust, prove a great acquisition to our Post Office department, not without the need of talent.

The other day the *Manchester Guardian* gave some pertinent extracts from the report of our Consul-General at Frankfort-on-Main, Mr. Francis Oppenheimer. The whole report is well worth reading, and much of it constitutes a satire upon the tariff agitation of "Consistent Birmingham." One of the most amusing points is the mention of the fact that a British firm has recently secured a contract to construct certain ironwork in Berlin, the explanation being that German iron will be used because it can be bought cheaper in England than in Germany, that is to say, the contractors can ship German iron back from British ports to Berlin at less cost than they can buy it within the German Empire. Mr. Oppenheimer further tells us that complaint is made that home industries in Germany are severely handicapped by the operation of the syndicates which, thanks to a foolish tariff, have got control of

German trade. Consumers of German material in foreign countries, especially in Holland and Belgium, by getting German raw materials or half-finished materials at low prices can beat the German manufacturer of finished articles in foreign markets. Some cases actually transpired, says Mr. Oppenheimer, in which "German finishing manufacturers had to decline orders owing to the exorbitant price of raw material, which orders subsequently passed to Holland, Belgium, and the United Kingdom." The proposal has consequently been made to transfer German businesses to free trade countries. Altogether the report is full of instruction and amusement, everywhere except in Birmingham or at Stafford House, and we shall hope to return to it at an early date.

We must congratulate the Cunard Company upon its agreement with our extra-patriotic Government for it stands to gain in all ways, but how it may be with the taxpayer is quite another affair. The company is to get an annuity of £150,000 per annum, and in addition a loan not exceeding £2,600,000 at 2¾ per cent., to enable it to pay for the building of two magnificent new ocean greyhounds of prodigious size and speed. Also it gets £68,000 a year as a mail-boat subsidy. As the Government cannot hope to borrow the £2,600,000 at 2¾ per cent. in present circumstances, which circumstances will not improve for some years, the taxpayer stands to lose some 5s., or perhaps 7s. 6d., per cent. per annum on the money, which charge may be added to the subsidies, say £6,000 to £10,000 more. Altogether, it is a first-class contract for the Cunard Company, and it may well pledge itself to allow no foreigner to enter the sacred fold of its share lists. The new steamers are to be built, it is said, one by the Fairfield Company at Glasgow and one in a Tyneside yard.

We agree with Mr. Borden, the Leader of the Opposition in the Dominion House of Commons, about the railway projects of Sir Wilfred Laurier's Ministry. They seem to us to be fantastic, and to owe their origin to an urgent necessity to find pretexts for spending borrowed money. He says the proposals of the Prime Minister put the principle of Government ownership of railways back for fifty years, and points out the absurdity of endeavouring to shut off interchange of traffic with the United States, dwelling on the fact that the Grand Trunk Company, no matter what arrangement may be made for sending Canadian goods through Canadian territory to Canadian ports, will continue to ship the greater part of its freight at Portland, in the State of Maine. The Grand Trunk Company cannot do anything else, because it owns railways in Maine, and large terminal facilities at Portland are also its property. Is it to be compelled to abandon these in order to gratify a false and altogether dishonest sentiment of "imperial" patriotism? No, the dodge is simply adopted in order to try and humour what is supposed to be a dominant sentiment in this country, with a view to facile borrowing—but the borrowing is not going to be facile.

That is a smashing answer furnished by Mr. G. W. Macara to the misstatements made by Mr. Balfour in the House of Commons on August 4, with regard to the recent joint meeting of the Cotton Employers' Association and the United Textile Factory Workers' Association. Mr. Macara points out that not only was the conference fully representative of the cotton trade, but that exceptionally long notice had been given of the question to be discussed, the question, viz., of Mr. Chamberlain's nebulous tariff proposals. He also points out that it was according to usage that projected legislation should be discussed. In other words, the resolution noticed by us at the time was that of a representative gathering openly come to, fully discussed, and passed with only two dissentients. It was, of course, thoroughly disagreeable to the protectionists and neo-protectionists, but that is no reason why the facts should be misrepresented and honest men reviled. Only what does this tariff agitation rest upon if not upon insistent and continual misrepresentation and abuse of the grossest description?

An interesting article upon the finances of Uruguay was published in the *Monte Video Times* of June 24. It points out that this poor little republic has only about 44 per cent. of its revenue available for administrative purposes, in fact the amount is really only 42.8 per cent., according to its analysis of the budget, if we leave out sundry credits. The debt service alone takes almost 41 per cent., and the pension list 7.8 per cent., while the "port fund," as it is called, runs away with 5.8 per cent. of the public income. No wonder that complaint is made of the lack of progress, and one of the most lamentable features in the position is the absence of any assets to show for the huge debt. Possibly, says the writer, other countries may have borrowed as freely as this, the Australian colonies for instance, but he doubts whether any country has less to show for the money in the way of public works or profitable employment. We agree with that view, and yet Uruguay drags on somehow, but it may be that the materials for another loan issue are being rapidly accumulated in secret.

An old Scotch proverb has it that "The deevil is aye kind to his ain," and its truth often finds illustration in passing events. Look how beautifully the return of Mr. Whitaker Wright in glory suits our sensation using press. It had just finished with the papacy and had, as usual, overdone both the death of the late Pope and the election of the present one; the bloody drama in Macedonia has become stale to the palate of the lover of horrors, Japan has not been goaded into an attack on Russia, and we do not care a sugar convention for the labour troubles at Baku or "all over Russia." The daily press was lost, when lo, the mighty Whitaker emerges to be described, biographied, lionised, bailed out, and interviewed. He has at once proclaimed himself on the side of Joseph, and long ago saw visions of streets running with blood for failure of "reciprocity." And on the "reciprocity" subsisting between promoter and public, he is an authority of unquestioned eminence. Well done "deevil."

The Joint Committee on Municipal Trading has issued an interim report. It is not a very exciting document, as it deals almost entirely with the dull, though important, question of audits and auditors. However, the final report has yet to come, and the Industrial Freedom League can still hope it will contain a crushing indictment of those wicked corporations which try to run trams and other works for the benefit of the ratepayers. The suggestion the committee make that municipal auditors should be appointed for five years and during that time the local authority should have no power to dismiss them, is decidedly bad. These fixed appointments have never been found to work well, and in many cases have been productive of much corruption. Why, then, should the Joint Committee view them with favour? As for the idea of a uniform system of audit, it is not only absolutely impracticable, but grotesque when the diversity of the accounts is considered.

The announcement is once more made "for the information of all concerned," that the debentures of the Netherlands South African Railway will be purchased by the Crown Agents for the Colonies on October 16 next, at the rate of 1,125 florins for each 4 per cent. debenture bond of 1,000 florins, with all unpaid coupons attached. Bondholders are again bluntly told that if they do not accept this offer and surrender their bonds they will receive no further consideration from either the Home or Transvaal Governments, but we are glad to learn that the securities are to be received for purchase without being stamped with the English stamp duty, provided that the bonds have not been assigned, transferred, or in any manner negotiated in the United Kingdom previously to their deposit. To put such a burden on holders would have been the height of iniquity, and it is pleasant to find the authorities incapable of such short-sighted meanness.

We have to acknowledge the receipt of a copy of "Bourne's Handy Insurance Manual for 1903," edited by Mr. F. Harcourt Kitchin, and to give it a cordial welcome. It is an admirable little handbook in every respect, and as it only costs a shilling in paper covers we strongly recommend everybody intending to effect a policy of insurance, of no matter what sort, to buy it and study its contents. They are easily enough understood, and for all practical purposes the public need do no more than turn to the table of "expense ratios" of life offices, and if students make up their minds to give the go-by to any office whose current expenditure sweeps away as much as

20 per cent. of the premium income year after year they will save themselves from many heart burnings.

Mr. Justice Darling's opinion of the part played by Hooley in the Bradshaw bill transactions must make that worthy bankrupt feel proud. To have a transaction in which he had taken a prominent, if not the principal, part described a fraud from beginning to end is hardly the kind of praise to make a man put on side, yet this is how his lordship described the operations of Hooley in his dealings with Mr. Kelly. So pungent are his closing remarks, we cannot do better than reprint them as they apply to others besides Hooley:—

> To his mind it was a grave reflection on justice in this country that this kind of thing could go on in the middle of London; that at a place like the Al bemarle Hotel an uncertificated bankrupt could carry on a business like this with a Liverpool stockbroker, a kept person such as Mr. Craig, and a dupe such as Mr. Cawston was. While people were prosecuted for the comparatively simple crime of thimble-rigging on a racecourse, it was nothing short of astounding that people could go on playing with millions instead of with peas, for it was only another form of thimble-rigging.

Are these not refreshing words coming from so powerful a quarter?

In *The A B C of Free Trade*, a reprint of which has just been issued by the Cobden Club, Mr. Edward North Buxton sets out the leading principles of free trade in a clear and concise manner. For this alone those fighting the flimsy protection sophistries of Chamberlain will find the pamphlet most useful. So flimsy are the arguments used by Chamberlain and his followers to support their latest political madness, it hardly seems worth while disproving them, they are so patently false. Yet, seeing how the nation has of recent years fallen from its high state, we fear this latest evil must be fought, and free traders can wield no better weapon than Mr. Buxton's pamphlet.

The Municipality of Kroonstad, Orange River Colony, desire to raise a loan of £25,000 for public works, and offer the amount at par in bonds of £100 each, bearing 6 per cent interest. Ten bonds will be drawn annually for repayment at par, the first drawing to take place December 31, 1904. Those who desire to subscribe can do so through the Bank of Africa in London, or at its branches at Bloemfontein, Cape Town, Durban, Kroonstad, and Port Elizabeth before August 31 next.

Because the auditors of A. J. White and Co., Limited, considered it their duty to call attention to certain unpleasant features in the accounts, the shareholders promptly dismissed them. How encouraging!

Notes on Books.

The Trade Relations of the British Empire. By J. W. Root. (Liverpool: J. W. Root. Price Half a guinea nett.)—We commend this book to readers of the Investors' Review of a wavering mind. Mr. Root is not what would be called an out and out free trader, since he views with favour the establishment of a preferential tariff between Canada and Australia, but he is an alert and honest writer who marshalls his facts with great industry and effectiveness, and the blows he deals at the fantastic notions of closer fiscal union between this country and its colonies are often in a high degree effective. We do not quite follow the arguments by which he supports the conclusion that Canada would not gain much were it to enter into a reciprocity arrangement with the United States, but he is quite right in his demonstration of the practical futility of special tariff arrangements between this country and Canada. Since Canada set up a preference in favour of British goods our trade with her has not benefited to any perceptible degree; in fact, our proportion of the total is smaller now than it was before the Canadian tariff against the world was put up in order that something might be knocked off in favour of England. Much the same conclusion—the useless of change towards protection—is reached at every point, and therefore the book is seasonable. Its statistics afford an armoury of facts which can be used with great effect in combating the crude, fantastic sentimentalism, and the wholly unreasoned schemes apparently floating in the undisciplined mind of the Colonial Secretary and his followers. Mr. Root is very sanguine about the future of the trade of this country with the Dominion of Canada, and thinks it is only a matter of two or three years before it will head the list of countries from which the United Kingdom draws its supplies. We are not so sure of this, because it is still impossible to forecast the behaviour of the climate in the Canadian North-West. A summer frost there by which the growing crops of grain might be shrivelled up might throw Canada back for an indefinite period, just as the droughts in Australia effectually prevent that great continent from insuring any reliable development in its export business. The Canadian North-West has been stimulated into life and population is crowding there, because of the gold discoveries in the Arctic regions, but one or two bad seasons would drive the people back again to more genial climates, those of them who survived. We hope the trade will grow and expand and that Canada may continue to prosper, but we should not rely too much upon present indications. A valuable chapter is devoted to an analysis of the foreign trade of the United Kingdom, and altogether the book is good and timely. With the final chapter giving general conclusions, we are not at all points in agreement, although there is a good deal to be said for doing the utmost to develop the cultivation of such staples as cotton within the immense, heterogeneous and not very well defined limits of the British Empire. To force an industry in any direction, however, is always costly and often of doubtful profit. If we can grow cotton, tobacco and other semi-tropical or tropical commodities in West Africa, in Egypt, or elsewhere, to a larger extent than is now done, by all means let us do so, but to enter upon a fomentation by means of privileged tariffs, differential duties and things of that kind, or by means of subsidies in a manner that would stir up the hostility of foreign nations from whom we now draw our supplies, would be a ruinous mistake. We also disagree with his view as to modification in the British tariff on sugar, never having been able to see how it would be possible to work a discriminating duty between cane and beet sugars any more than between nations that give bounties and those that do not. Our view, however, is that there ought to be no sugar duty imposed by this country at all. Sugar has become an article of necessity for the bulk of the people and ought to be tax free. Other points of difference might be insisted upon, but we prefer to let praise predominate. The book is an honest one, and well written.

Encyclopædia of Accounting. Vol. II. Edited by George Lisle, C.A., F.A.A. (Edinburgh: Wm. Green and Sons. Price 20s. net.) The contents of the second volume of this excellent compilation cover from "Calculating Machines" to "Farm book-keeping," and are fully equal in interest and value to those of its predecessor. Considerable space is devoted to descriptions of various points in regard to companies, their promotion, conduct, and winding up, the methods of book-keeping, and the books required, with kindred matters of interest. Cost records or factory accounting and farm book-keeping are both dealt with at great length, and with wonderful clearness of explanation. Where there are so many good articles it seems invidious to select any particular one for special mention, but the one on Depreciation, by Mr. Edwin Guthrie, F.C.A., author of "Depreciation and Sinking Funds," etc., is well worth the careful attention of company directors and managers. Other articles which are worth studying include "Customs," by Sir Charles Follett, Solicitor to H.M. Customs, "Decimal Weights, Measures and Money," by R. C. Millar, C.A., author of "Accountant's Handbook," etc., "Company Book-keeping," by Francis W. Pixley, F.C.A., author of "Auditors, their duties and responsibilities," and the editor's own contribution on "Cash Books."

Le Repechage des Cinq Cents Millions à l'Eau. Par Yves Guyot. (Prix 1 franc. Paris: Guillaumin et Cie.)—We have found this *brochure* to be packed with inter-

esting matter relating to the present position of the inland waterways of France, and as far as we can judge the writer is thoroughly right in his contention that it would be much better to improve the existing canals and navigable rivers and to stimulate the traffic thereon by means of more up to date boats and a more intelligent supervision, than to go and waste £20,000,000 upon such fantastic-looking projects as the Rhone or Loire canals. M. Guyot demonstrate that neither of these rivers can be considered navigable, the Rhone being far too swift and the Loire too shallow and erratic to afford a satisfactory basis for water traffic. In this country generally, as apparently in France itself, the idea is that the Republic is blessed beyond most countries in the number and variety as well as utility of its internal lines of water inter-communication. There is a substratum of truth in that view, but readers of this pamphlet will be sadly disillusioned on many points, and one reason why the waterways are not of the utility they might be is found in the fact that the State bears all charges. Users of the canal, whether merchants or navigators, contribute nothing whatever towards the cost of up-keep or administration, or anything else. If the people had themselves to pay directly for these canals and for the maintenance of the navigable rivers in efficient condition, they would probably long ago have seen to it that their efficiency was increased and their "working stock," to use a railway phrase, brought up to date. The boats in use to-day are of much the same character as those of a hundred years ago, and we agree with M. Guyot's conclusion that before throwing hundreds of millions of francs into new projects it would be better to utilise to the full those already in existence.

The Law Relating to Powers of Attorney and Proxies. By V. St. Clair Mackenzie, B.A. (London: Effingham Wilson, price 3s. 6d. net.) The primary object of this little volume is to enable business men to obtain some knowledge of the rights and obligations they acquire and incur under powers and proxies, and it has been well achieved. For though not professing to deal with the legal intricacies of his subject, the author sets out its salient features in a clear and concise manner. At the same time Mr. Mackenzie quotes the Statutes and cases relating to the various points, and for this reason the book is serviceable to the legal profession in showing them where to look for a fuller exposition of the law.

The Tramps of "The Walking Parson." (Walter Scott Publishing Co., Limited, London and Newcastle-on-Tyne. Price 6s.)—"The Walking Parson" is the Rev. A. N. Cooper, Vicar of Filey, Yorks., who has well earned his nickname, for he has walked far and wide. This volume describes his four longest walks, from Filey to London, to Rome, through Ireland, and to Venice, and the impressions he gathered by the way. Many of the incidents might be termed small beer chronicles, yet they are well told, and the whole book is cheery, and filled with a kindly spirit which makes it interesting to the reader. With the present craze for walking, that has bitten so many, it is of interest to note Mr. Cooper's remarks upon speed. In his opinion, and he is well qualified to give one, four miles an hour is about the limit for a long distance where the walker is going on day after day for any length of time. But then he walks for pleasure like a sensible man, and not to lower records.

Answers to Correspondents.

[*A Fee of Five Shillings per query is charged for replies under this heading. Letters, Five Shillings extra per letter.*]

H. C. D.—The time has hardly yet come, I think, else the stock you mention offers a very fair chance. But in present market condition you might, if you bought now, see it dwindle and dwindle until it was pounds lower. So wait a little.

T. A.—Wait a little. I will send your list back next week marked, but be in no hurry at present to buy anything.

TRADE AND PRODUCE.

Wool.—In spite of hopes no improvement is to be seen in this trade, and the holidays have been welcomed as a relief from the general dullness. Cross-breds and home-grown wools in the Bradford and Leicester markets are in fair demand, the latter being held at very firm rates, but cross-breds and merinos, on the other hand, show a slight falling off, which is not, however, looked upon as permanent. Everywhere complaints are heard, looms are standing idle, spinners badly off for work, and manufacturers simply taking enough to cover immediate wants. Nor does the shipping trade show any fresh activity, most of the foreign markets being as sluggish as our own. The figures in the returns of the Bradford exports to the United States for July give the total value of £206,363, an increase of £32,942, as compared with the figures of July last year. Dress goods showing the largest increase, but wools have fallen off a little over £4,000. From Huddersfield the returns of £30,525 show an increase over the given total, but £6,151 less than in July last year, the falling off in woollen goods amounting to £11,436, or £5,421 less than in 1903, and worsteds show a decrease of £5,145.

Linen.—Various signs point to an early and good autumn season. Already the markets are more animated, buyers seem to have come to the conclusion that it is useless to wait for a fall in values, and are placing their orders more freely. All classes of linens, paddings, hollands, damasks, etc., are being taken steadily and increasingly. Yarns also have been more active, but in many descriptions continue very scarce. In the cross-channel and foreign trade little change can as yet be noticed, but what their is promises well. Flax reports are only fair. The home crop continues good, but in Holland and Belgium it varies from a good length in some districts to very short in others, and the Russian crop is not now expected to be any better than last year.

Cotton.—The market for American continues very susceptible to outside influences, and the demoralised state of the New York stock markets proved too much for the bulls, strong though their position seemed to be. Prices therefore made a sharp break yesterday, both in Liverpool and New York, and show on the week a slight drop. The new crop is reported to be good, but is still three or four weeks late, which has created a better demand for September--October. Notwithstanding the holidays and short time, Sir Jacob Behrens and Sons state that yarn sellers have again had a very poor week, and certain numbers of twist are steadily accumulating. Manufacturers are very short of supplies, and expect spinners to provide them with whatever they require at a moment's notice, but do not offer a better price for prompt delivery. However, it is thought the short supply of yarn must soon make itself felt, though the time is long in coming. In the cloth market a considerable business is offering, but only a small amount finding acceptance, and trade is quiet. China is improving its offers for usual staples, and has also taken more special cloths this week, while India has apparently made up its mind to pay a price nearer to that asked by sellers.

In America prices rose in the early part of the week, as the crop reports from Texas were unfavourable, and it was also rumoured that the boll weevil had attacked the plants. The unsatisfactory conditions of affairs in Wall Street, however, reacted on the market, and sent prices down, the movement being assisted by stories of liquidation by the big bull cliques.

The close at Liverpool on Friday saw spot American quoted at 6.66d. middling,, while for Egyptian the price was slightly higher at 7¾d., though the market was quiet. Futures were quiet, and steady, 6.33d. being asked for August, or 6.26d. for August-September, while September-October was quoted at 5.76d.

Copper.—The short week has been very quiet and uninteresting. Prices fluctuated to the extent of a few shillings each day, but with very little real change, and yesterday's final quotations were £57 5s. for cash, and £55 10s. three months. Messrs. Henry R. Merton and Co.'s circular, at the end of the week, states that the Rio Tinto Company sold a fair quantity of tough at £60, and the United States Metal Selling Company are selling freely to consumers at the reduced price of £60. Weekly shipments from the Atlantic sea-board this week, as advised by cable, were 2,415 tons, and the Liverpool and Swansea fortnightly stocktaking shows an increase of 487 tons.

Tin.—The market opened very quietly on Tuesday, and during the first two days prices dropped, though business from Singapore and America was reported better. On Thursday, in spite of lower quotations from America, and unchanged prices from the East, the tone improved, bear covering hardened the market still further, and at the end of the day cash sold at 30s. above Wednesday's price, and three months at 25s. At the close on Friday cash was quoted at £130 5s., and three months at £124 15s., the market being quiet again.

Sugar.—The firmer tone of last week strengthened during this, both refiners and wholesale dealers showing more disposition to deal. Prices in consequence have improved considerably, beet having risen fully 2½d. per cwt., and granulated nearly 3¾d. Sellers, however, are still holding back in the hopes of a further improvement when the passing of the Sugar Bill upsets prices. Meanwhile speculators have transferred most of their purchases from old crop to new, and so relieved the anticipated pressure from August tenders. For cane the demand has also improved, and buyers are prepared to pay 1½d. advance, though even this concession has not tempted holders to sell the small parcels they expect. Mr. Czarnikow, in his weekly circular, gives the following movements in the quotations for beet: August from 8s. 0¼d. to 8s. 3¼d.,

Oct.-Dec. from 8s. 8¾d. to 8s. 11d., and Jan.-March from 8s. 10¾d. to 9s. 0¾d. The recent decline in centrifugals has been recovered on the American market, but it is still dull and inactive. Stocks, however, are down to 293,000 tons, the meltings this week being 41,000 tons against 27,000 tons landed at the three ports.

Freights.—In spite of the holidays the outward market has been fairly active this week, though the difficulty in arranging steamers is still the great bar to brisk trade. Owners, especially those with prompt vessels, are compelled to accept whatever terms and hours charterers care to give, as the tonnage on hand is far in excess of demand. Baltic rates are now down to a basis of 3s. 6d. Tyne-Cronstadt, and to the Bay and Mediterranean ports quotations are weaker. Shippers to the Western Islands can get all the vessels they require, and only quote 6s. Cardiff-Madeira, Las Palmas, or Teneriffe. The depression on the River Plate continues, and it is therefore a matter of some surprise that charterers can obtain tonnage at 8s. Cardiff-Buenos Ayres, 8s. 9d. Rosario, or 9s. 6d. Rio. To the East the market is still dull, with rates low. In the homeward market what little activity exists is limited to the Black Sea. From these ports there is a steady enquiry both for this month and next at rather better rates, 11s. 9d. to 12s. being the quotation from the Danube, L.H.A.R.. Elsewhere the business is dull, and rates unchanged, the position in America being especially disturbing, as there are no enquiries for any positions.

MINING NOTES AND NEWS.

Dealers and share-pushers have for once been profoundly thankful to people upon whom they have hitherto vented unstinted vituperation and wrath—General Botha and his fellow-countrymen, the Boers. For whilst speculators were spending a sad holiday and trying to gaze as far into a darksome looking future, as their powers of vision would enable them, "a large and representative meeting of members of the Farmers' Association" was held at Krugersdorp. The Reuter's cable which informed the world of this momentous fact added that the meeting was attended by leading Boers from all parts of the country, including Generals Botha, Smuts, Viljoen, Kemp, and Celliers. The principal topic discussed was the proposed introduction of Asiatic labour for the mines, and a resolution was unanimously adopted suspending a decision until after the Native Labour Commission had made its report. "The opinion was, however, generally expressed that there was an insufficiency of labour for the mines, and for agriculture." General Botha, it is stated, urged upon those present "that their opinion would be reserved until the result of the inquiry was made known, after which they could meet and pass a final resolution." Evidently this cable was read with undisguised eagerness, and with not a little excitement in Monday morning's papers, and doubtless many wished the market was open that they might buy before the public had time to rush in. "For it means the Boers are a-coming round, by heavens! if they're not! And so soon after Joey's speech, too. Why, we may have Chinese now before the month's over, and another boom in August, as we had in 1895." Judging by subsequent action these were the inferences that seemed to be deduced from a reading of that cable, for no sooner did the market open on Tuesday than dealers at once threw themselves heartily and energetically into the task of making prices higher. Of genuine business there was really none, the public still being indifferent, but that was no reason why another great effort should not be made to attract business, and this meeting, or, rather, cable, made the most of. And so it was. Then there were the opinions expressed by Mr. J. C. A. Henderson, a mine boss, to a representative of the *Financial News*, published in Tuesday's paper. This gentleman has just returned from the Transvaal, and in the conversation he said:—"The result of detailed inquiries into the position on the Rand is that I have formed the conclusion that Asiatics are absolutely required to save the situation. I believe that the white working men of the Rand have now almost unanimously adopted this view also, and it cannot be long before Chinese are introduced."

Accordingly prices were put up throughout the speculative list, and in the majority of cases they closed at the best, giving the market a better appearance than has been observable for some time past. With respect to the impending failure of an influential South African firm, which was whispered about the market right up to the hour of closing on Friday, it is now stated that the matter has been adjusted, and that no more failures are probable. That also gave some relief, and further encouragement to dealers to make every effort to keep prices higher. According to talk no end of private cables have been received from South Africa stating that local opinion is veering round in favour of Chinese. There has been a fair amount of buying on behalf of the continent, and likewise from the Cape, and it is said the magnates are giving support. Two new mines have restarted crushing, viz., the South Randfontein, and the New Modderfontein, which gives evidence of an improvement in the labour situation irrespective of Chinese. Warrants have been posted for the dividends declared some weeks ago, of which we gave a table, aggregating some half million, thus putting some people in funds.

In striking contrast to Kaffirs other sections of the mining market have been depressed, quotations generally tending to a lower level. The directors of the Northern Blocks and Mr. Landau are still silent, so are the shareholders, who are apparently quite unconcerned at what has recenty taken place. A cablegram of much significance has been received from Mr. William Griffith. Some two or three months ago this gentleman told the shareholders there were several thousand tons of ore going from 6 to 7 oz. to the ton, whilst he now says:—"There is a marked change since I examined the mine last year. Ore, high grade, stoped out to level No. 7." What is one to infer from this? Does it not seem to confirm the reports of the "bears" that the "eyes" of the mine have been picked out? That is the only conclusion to arrive at in the absence of official explanations, and it looks, judging from the studied silence of the directors, as if we are to have no explanations, everything being left to imagination and conjecture. Mr. Griffith adds that he has every confidence in the developments in the lower levels. It is not surprising that Westralian prices have weakened.

Egyptians are likewise lower, whilst West Africans just manage to keep from tumbling, and that is all. Etruscans have been knocked down, as the circular issued by the directors is not considered detailed enough. Rio Tintos and other copper shares were irregular. In spite of a record monthly output, Indian shares have not moved, at any rate, not upwards.

African Farms, Limited.—The existence of such a company as this was known only a few months ago, when the £1 shares were suddenly introduced on the market at the low figure of 3½. It was said to be under the auspices of well-known mining magnates, such as Mr. Abe Bailey, Messrs. S. Neumann and Co., Mr. Carl Hanau, and others, a group of gentlemen who did not trouble to write or publish anything in the nature of a prospectus. It was enough for the public at large to know that such a company really existed, and that if they wanted any of the shares they could have them if they cared to pay for them. The nominal capital of the concern is £600,000, all of which has evidently been issued. It owns a large number of farms in all sorts of places, their chief value at present apparently being, relying upon the meagre information that can be scraped together, that "they have been well-selected." In fact, some of them are said to adjoin the Premier Diamond mine, therefore it is possible that some of the stones from the latter may spill over into the African Farms' domain. A balance-sheet, dated May 31, has been published this week, but no diamonds have as yet been found, it seems, at any rate, none have been sold. All that has been disposed of is paper, designated Kaalfontein Diamond shares, in number 31,000, probably with a few diamonds wrapped up in them. These yielded a profit of £30,723, other income consisting of interest accrued on investments, £1,402. From the total there is deducted £11,395 for sundry outgoings, leaving a credit balance of £20,730. In addition to the capital the directors have gathered in a harvest of premiums to the tune of £200,000, and owe £36,265. Farm properties are valued at £249,964, share investments in unheard of companies stand at £293,430, the company possesses some live stock and fencing, and cash to the tune of £304,777. Of the latter £295,419 is out on loan at 5 per cent., so the directors are determined, if they cannot get an income from their properties, to try money-lending. The balance-sheet is accompanied by a report of the meeting held in Johannesburg on June 23. Although these farms are so valuable and have been selected with such care and cautiousness, the owners were glad, nay, anxious, it would seem, to get rid of them, judging by the prices paid. Freehold property, consisting of 1,192,831 acres, cost 4s. 3½d. per acre, 271,375 acres went for 6s. 2d. an acre, and 71,761 acres at 3s. 7d. "The freehold farms," said the chairman, "although chiefly selected for their chance of having minerals, or for the fact of their being in highly mineralised districts, have, in a great many instances, considerable additional value, either as agricultural, pastoral, or suburban lands." And he went on to say they had only lately been able to commence earnest and systematic prospecting for gold and diamonds. "Anyone who, looking at the map, and noticing the enormous extent of their strategic distribution will be filled with hope. We know, of course, that we have coal in great quantities, and in most advantageous positions, as well as most of the base metals, and we also know that in many of your properties the indications of gold and diamonds are promising." Yet there have evidently been idiots eager to buy these shares at a high premium, merely on "chances," "strategic" positions, whatever that military phrase may mean, and before even prospecting work has been commenced. From prospecting to development and from development to profit earning is a long and weary way, but, perhaps, presently these buyers may be able to sell their paper to other idiots at £5? Why the directors have hastened to sell such valuable stuff as Kaalfontein Diamond shares is not explained, but shareholders, if they are intelligent men, may easily form their own conclusions on learning that prospecting for diamonds on another property, that of the Rooifontein Diamond Syndicate, "has been unsuccessful up to the present, and that, although this farm was very highly reported on by well-known prospectors, the result of prospecting has been very disappointing." Again, although the company has had prospecting parties out on the farms which "nearly surround" the Premier mine, "we have as yet discovered nothing of any importance." What a pity!

New Kempinkote Gold Field.—The directors of this Indian company find themselves under the painful necessity of telling the shareholders unpleasant news. Development work both at the South Umblay and the North Umblay has proved disappointing, and it therefore became a question of the expediency of discontinuing operations. By the courtesy of the directors of the Ooregum Company the services of their superintendent were secured to make an examination of the mines, and he was desired to consult with Mr. Thomas Richards, of the Nundydroog, and Mr. J. E. Snelus, the superintendent at New Kempinkote, then to submit their combined recommendations to the board. Their opinion is "there is nothing to warrant further operations being carried on in either the North or South Umblay blocks." Hence all work was stopped in March last. The directors say they have, for some time past, been making diligent inquiries with the object of finding some other property "they could with confidence recommend to the shareholders." They have not yet met with success, "but it seems likely that a promising property in another part of India,

obtainable on reasonable terms, may shortly become available, and in that event the directors would have pleasure in submitting the matter to the shareholders for their consideration." It has been decided to postpone the holding of the ordinary general meeting until later in the year.

Bell's Transvaal.—The directors of this company last week had to make the ignominious confession that they had not sufficient cash to pay the dividend declared by hem as far back as last March. We may recall the unsound financial methods adopted by them to show large, and, as it has since turned out, fictitious profits. Our analysis of the report and accounts appeared in our issue of March 28. The gross profit exhibited in the profit and loss account amounted to £164,697, of which £154,374 was paper appreciation, being "the difference," to quote the directors' words, "between market price at December 31, of shares held by the company, and cost price of ditto," the shares being those of that undeveloped mine, the South East Rand Deep. With this appreciation the directors wrote off the item of goodwi'l, standing at £150,000, and recommended a dividend of 5 per cent. The dividend would have required £9,375, and all the cash in hand was £6,247, possibly less at the time the report was issued. Since December South East Rand Deeps have fallen from the directors' price of 28s. to 16s., hence the greater portion of these so-called profits has vanished into nothingness, and the directors tearfully approach the shareholders, saying:—"We're awfully, awfully sorry, but we never dreamt those blessed shares would slump like this. We heard there was going to be a boom, everybody said so, and, of course, we thought the public would be only to glad to buy 'em. But they haven't, and we haven't got so muc nas a stiver to pay the dividend. But, after all, it isn't our fault, now is it?" But, dear fellows, why cannot you draw up your accounts in accordance with sound financial principles?

An Etruscan Circular.—As we intimated last week the directors of the Etruscan Copper Estates have issued a circular to the shareholders in the way of their promised monthly report. "As regards the copper mine," they say, "in the main drive in the direction of the Earle shaft from Temperino, at a depth of about 300 ft. from the surace, five cross-cuts are being driven in the lode, the result o which has been to prove that the lode increases in richness with depth. Large quantities of highly payable copper are now available for immediate treatment, and in view of this a special meeting of the board was held on the 11th inst. (ju'y), subsequent to which certain of the directors visited the mines, and it was then resolved to proceed at once with the reduction of copper ore. In addition to this, the No. 2 unit copper mill is being pushed on with all possible speed. The regular sales of the copper, lead, and zinc output will commence early int the autumn." The directors add they are of opinion shareholders have every reason to be satisfied with the developments of the mine at depth, and with the excellent work that is being done in every direction, "more especially in view of the fact that the company is able to deal with its copper ores some months earlier than was ant cipated."

MINING RETURNS.

Ashanti Goldfields.—Obuassi Mine, 1,710 tons for 4,000 oz.

Ashanti Sansu Mine.—1,680 tons crushed produced 1,630 oz.

Associated Northern Blocks (W. A.).—435 tons, 3,723 oz.

Barrett Gold.—603 oz. gold, value £2,100.

Brilliant Extended.—Crushed 2,080 tons, 940 oz.; concentrates and sands, 625 oz. Total, 1,565 oz.

Balaghât.—3,100 tons produced 2,061 oz.; 2,000 tons of tailings produced 189 oz.; total, 2,250 oz.

Beatrice (Rhodesia).—1,100 tons by cyanide, yielding 247 oz.; value, £663.

Burbank's Birthday Gift.—Ore milled, 2,200 tons. Yielded 1,500 oz. Cyanided 1,050 tons. Yielded 94 oz.

Cassel Coal.—Output, 12,434 tons.

Cecil Syndicate.—400 tons for a yield of 309 oz.; value £1,100.

Champion Reef.—14,810 tons of stone produced 14,774 oz.; 18,915 tons of tailngs (cyanide process) produced 2,641 oz. Accumulated collection from plates, 1,211 oz.; total, 18,636 oz.

Chinese Engineering.—Output of coal, 13,500 tons; sales, 13,000 tons.

Collie Proprietary of W. A.—Output and sales, 6,940 tons.

Copiapo.—1,000 tons copper ores, averaging 16 per cent.

Cumberland Niagara.—1,586 tons crushed produced 92 oz.; tailings recovered 156 oz. from 1,575 tons; 31 oz. of the total yield represent return from concentrates by cyanide process.

Day Dawn P.C.—Cyanide works, 1,320 tons of tailings treated, produced bullion, value of £751.

Dundee (Natal) Coal.—Output 12,515 tons.

Durban-Roodepoort.—Quartz, 5,890 tons for 2,943 oz.; tailings, 4,840 tons for 959 oz.

Day Dawn Block and Wyndham.—2,930 tons crushed for 1,274 oz., valued at £4,500. From the company's works at Burdekin River and old Wyndham Mills, 3,780 tons of tailings for bullion valued at £3,000. Total, £7,500.

Eagle-Vulture.—Crushed 1,415 tons, winning 356 oz. Tailings yield 1.50 dwts.

Eaglehawk Consolidated.—740 tons crushed, 353 oz. realised; 100 oz. obtained from cyanide.

Elands Laagte Collieries.—Output, 10,247 tons.

Fraser South Extended Gold.—Battery produced 535 oz. from 1,700 tons of stone, value £1,900; 620 tons cyanided producing 116 oz.; value, £430. Total, £2,330.

Geelong.—Crushed 3,698 tons, winning 1,619 oz.; tailings, yield 6.20 dwts.

Glynn's Lydenburg.—Crushed 1,846 tons, yielding 644 oz.; from cyanide, treated 1,347 tons, yielding 513 oz.; from slimes, treated 499 tons, yielding 193 oz.; total, 1,350 oz.

Golden Links.—1,660 oz. from 2,186 tons crushed; cyanide, 259 oz.

Great Fingall.—Tons of ore 8,270, oz. recovered 8,865; tons of tailings by cyanide 6,684, oz. recovered 1,466; tons of concentrates shipped 85, oz. recovered 684; total oz., 11,015; value, £46,789.

Half-Mile Reef Mines.—505 oz. from 720 tons.

Kalgurli.—3,864 tons for 3,671 oz.; valued £14,225.

Kinta Tin Mines.—320 piculs produced, value $14,500; Eusof's rent, $5,300.

Lace Diamond.—Yellow ground, 24,397; blue ground, 4,865; yield, 3,020 carats.

Lady Loch.—Crushing 389 tons, yield 371 oz.; value, £1,427.

Lake View South.—Robinson, crushed 601 tons, yielding 266 oz.; cyanide treated, 930 tons for 130 oz.; Lake View South, 675 tons for 96 oz.

Lancelot Freehold Tin and Copper, Newellton.—Crushed 213 tons tin stone for 30 tons, dressed 65 per cent. tin-Bismuth ore.

Lloyd Copper.—197 tons copper.

Malacca Diamond.—102 loads washed producing 132 carats diamonds and 2,932 lb. of tin.

Menzies Alpha Leases.—Crushed 405 tons for 503 oz.; cyanide, 540 tons of tailings yielded 250 oz.

Morven (Rhodesia).—Crushed 1,082 tons, yielding 732 oz.; value, £2,818.

Mount Boppy.—2,469 tons gave 911 oz.; cyanide, 1,883 tons, 488 oz.; slimes, 695, 402 oz.; total, 1,801 oz.

Mount Yagahong Exploration.—Cyanide, 195 oz. gold; profit, £120. Milled 350 tons of ore for 210 oz.

Mungana (Chillagoe) Mining.—1,549 tons of ore containing 95¾ tons of copper, 7,912 oz. of silver and 165 tons of lead have been shipped to the Chillagoe Company's smelting works.

Mysore.—14,500 tons produced 14,547 oz.; 10,400 tons of tailings (cyanide process) produced 1,213 oz.; total, 15,760 oz.

Mysore West and Wynaad.—Oz. 854 from 1,800 tons of ore crushed.

Natal Navigation Collieries.—Output 13,456 tons.

Natal Steam Coal Company.—Output 5,000 tons.

New Chillagoe.—3,516 tons of copper ore and 89 tons lead ore; Mungana Company, 1,001 tons of copper ore and 557 tons lead; purchased, 25 tons copper ore and 264 tons lead; total 4,542 tons of copper ore and 910 tons lead ore; producing 308 tons copper Matte and 194 tons of lead bullion containing 175 tons copper, 194 tons lead and 20,674 oz. silver.

Nundyroog.—5,700 tons for 5,421 oz.; 5,018 tons of tailings (cyanide process) for 553 oz. Total 5,974 oz.

Ooregum.—12,105 tons for 6,019 oz.; 8,883 tons of tailing (cyanide process) for 1,078 oz. Total 7,097 oz.

Queensland Copper.—951 tons ore smelted for 220 tons matte. Shipment 211 tons matte.

Queensland Menzies.—Crushed 663 tons, 1,120 oz.; cyanide, 480 tons, 128 oz. Total 1,248 oz.

Red Hill.—465 oz. from 125 tons crushed.

St. George's Coal.—Output 8,404 tons.

St. John del Rey.—£24,200 yield per ton, .53 of an oz. troy.

San Ramon Gold Chihuahua, Mexico.—41 oz. gold, 3,474 oz. silver, realised £547.

Smelting and Refining of Australia.—Dore bullion 4,150 oz. gold and 30,600 oz. silver. The company also report Dore bullion shipped to London containing 13,900 oz. gold and 82,250 oz. silver, and 115 tons of copper matte containing 356 oz. gold, 9,200 oz. silver and 62 tons copper. Soft lead produced during month 510 tons, which was disposed of in the colonies, as usual.

Taitapu Gold Estates.—Clean up 211 oz. This yield is from 802 tons crushed.

Talisman Consolidated.—Tons of ore treated 4,200; value of bullion £8,610.

Transvaal and Delagoa Investment.—Output 38,500 tons.

Transvaal Gold Mining Estates.—Crushed 5,317 tons; yielding 1,982 oz. From cyanide, treated, 3,470 tons; yielding, 1,322 oz. From slimes, treated, 1,800 tons; yielding, 370 oz. Total 3,674 oz. Value £15,607.

Twin Lakes Placers.—Cubic yards of gravel washed, 170,000; value $5,000.

Vogelstruis Estates.—Quartz milled 4,415 tons for 1,817 oz; tailings treated 3,345 tons for 478 oz.

Waterson Gold (Chihuahua, Mexico).—Fifteen bars, containing 302 oz. of gold 15,360 oz. silver, realised £2,929.

Westralia and East Extension.—Crushed 2,300 tons, yield 1,300 oz.; cyanide return, 2,050 tons tailings treated, 315 oz. recovered.

White Feather "Reward."—380 tons of ore milled and cyanided produced 218 oz.

THE LATE SECRETARY OF THE LONDON AND COUNTY BANK.

Before the meeting of the London and County Bank was concluded the Secretary, Mr. J. H. Atkinson, was seen to collapse in his chair. A doctor was at once in attendance, and Mr. Atkinson was removed to a couch in a private room. Other doctors were sent for, but all help was unavailing. His banking career has been a long and honourable one. He steadily climbed the ladder, earned the entire respect of his brother officers, and as pioneer and secretary of the Banks' Cerks' Orphanage, he obtained a position second to none in the City of London. A clever and thoughtful man, Mr. J. H. Atkinson passes away with the deepest regret of the whole of the banking world.

The Investors' Review.

The Week's Money Market.

Bank Rate 3 per cent. (Reduced from 3½ per cent. on June 18.)

Norfolk House, Friday Evening.

This has been a quiet week in the credit market, easiest in the beginning of the week, and hardening towards the end. Stock Exchange settlement payment demands, and the holiday withdrawals of currency impelled rates upwards on Thursday, and the market is now poor, too poor to be able to escape from borrowings at the Bank the moment pressure arises in any quarter. It was not able to pay off the whole of the debt contracted by it there at the end of last month, although it did redeem £1,705,000 in the past week. The Bank return, however, shows that other deposits fell by £2,384,000, thanks to a decrease of £1,298,000 in the reserve, and in spite of help from the Treasury; to the extent of £650,000.

Call loans were to be had at 1½ to 2 per cent. in the early part of the week, and seven-day money at 1¾ to 2 per cent., but rates rose to 2½ and 3 per cent. for day money and 2 to 2½ per cent. for notice money yesterday. To-day, owing to causes indicated below, the market for short credits went up still further, until call money became 3 to 3½ per cent., and the Bank had to advance about £500,000 of fresh credit for a week at 3½ per cent. Bankers easily got 2¼ per cent. for seven-day loans, and the India Council renewed and lent a fair amount at 2½ per cent. for a month.

Discount rates followed money as usual, and from being 2⅜ to 2 7-16 per cent. for three months, bank bills became firm yesterday at 2½ per cent., with some houses asking 2 9-16. This afternoon the quotation became 2 9-16 to 2⅝ per cent. The Continent still takes a sensible proportion of the supply of paper on the market, else rates would be even harder. We are inclined to the opinion that the time of what may be called extreme ease is now over. That opinion is strengthened by what happened to-day in connection with the redemption of £4,000,000 of Exchequer bonds. The market had hoped to get some of this money, and in actual fact it lost the £500,000 mentioned above as having been borrowed from the Bank. It was in this way:—£6,000,000 of the bonds were renewed, and the market took the whole of the renewals, thinking that some of the other £4,000,000 paid off would reach it. What actually happened was that as the Government departments held £1,500,000 of the expiring bills, and as the last paid £3,000,000 instalment on the Transvaal loan was called in from the open market, where the Crown Agents of the Colonies had been lending it, in order to be utilised in payment of the redeemed Treasury bills, the market was actually £500,000 poorer to-day than before the transaction was carried through. It was also pinched by having to find £750,000 on the last County Council loan, and was therefore very hard up. This does not promise well for borrowers next week, because Tuesday brings another call of £3,000,000 on the Transvaal loan, and Thursday next is another Stock Exchange pay day.

There is no change in the bullion market, but supplies of bars continue to be taken for the Continent, chiefly for Austria and Germany, and exchanges continue adverse to this country.

Calls on new issues during the coming week are of some importance. On Tuesday the last 10 per cent. instalment on the Transvaal loan, absorbing about £3,000,000, must be met, and on Saturday £1,750,000 is due on the Underground Electric Railways of London profit sharing notes. On Thursday India 3 per cent. stock requires £375,000, and on Friday £175,000 is payable on Bournemouth 3 per cent. Friday also brings with it the payment for £1,000,000 Treasury bills, tenders for which are due on Monday, but they are merely a renewal, and should not cause much disturbance.

SILVER.

The market for bars commenced quietly, with a few orders to hand on India account, and prices at practically the same level as last Friday's close. Then came the announcement of another French tender for 60,000 kilos., or £210,000, due on Monday, and the metal deliverable three months hence, and this caused a sharp improvement to 25½d. per oz. for cash and 25¼d. per oz. for future delivery. The market was rather surprised at so large an amount being required, following on other orders, and it is assumed that the silver is required in connection with the currency reform in the Indo-Chinese Peninsula, which will probably follow closely the lines observed in India. Buyers hesitated to respond to this advance, and with New York offering a little more freely quotations at once slipped back ⅛. At the reduction, however, India again came forward, and the market closed steady at 25⅜d. per oz. for cash and 25 3-16d. per oz. for future delivery. The restrictions imposed in connection with the application for India Council drafts had their effect on this week's tenders, which reached only Rs.1,80,80,000 for the Rs.50,00,000 offered. The amount allotted in bills was Rs.41,98,000, and in transfers Rs.8,02,000, tenders at 1s. 4d. and 1s. 4 1-32d., respectively, each receiving 22 per cent. Next week a similar amount will be offered.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict., cap. 32, for the Week ending on Wednesday, August 5, 1903.

Stock Market Notes and Comments.

Still we have nothing to say about markets beyond what will be found in other columns. Do not believe, however, that the worst is over at any point, for it cannot be so in present circumstances. Credit is too rotten in various directions, and the undigested and indigestible mass of securities held upon credit is certain to lead to a catastrophe before things can really take a turn for the better. Even in the Kaffir market we are a long way from the time to buy, for on the first appearance of genuine improvement in affairs on the Witwatersrand fresh demands for capital will spring up in all directions. The best advice consequently we can give to unfortunate holders of depreciated securities is to stick to them when they are of a tried character, unless when held on borrowed money, but to sell securities that yield nothing and promise little on every favourable opportunity. The less the general public has to do with credit at the present time the better. It is always more or less true that "he who goes a-borrowing goes a-sorrowing," and the truth of the saying becomes painfully oppressive in times like these. Stand clear of the falling debris.

The Week's Stock Markets.

We are not yet in the happy position of reporting a real change in the Stock Markets. The holidays caused a suspension of liquidation from Friday last until Tuesday, but when the House re-opened on that day the demoralisation was more pronounced than ever, and another week of apprehension and misery has been experienced. The centre of disturbance is still New York, and while the market there remains on the verge of panic any resistance from other sections is not to be thought of. In Wall Street prices have been banged down with relentless persistence, many new "records" have been witnessed, and more firms have gone under. On Monday Morgan told a friend, so says the *New York World*, that the Wall Street market would improve, and that there would be no more failures. Since then his own Steel Trust securities have given way a further 4 or 5 dollars, losses in other directions range up to 6 or 8 dollars, and a couple of firms, as just mentioned, have suspended payment. Most people have now ceased constantly talking nonsense about "liquidation now over," "bed-rock reached," "prices must improve," and so on, recognising that with the market in its present rotten condition anything may happen. Nobody can prophesy; all must await the course of events as calmly as possible, and if they are wise shun the market as they would the plague. Needless to say business is at a complete standstill, and such is the existing state of affairs that the appearance of anyone who even looks like a seller causes prices to sink in a really alarming fashion. A large number of members are now holiday making, and those who can afford to go away undisturbed by the present distress are indeed fortunate.

The monthly Consol settlement commenced with the re-opening of the House on Tuesday, and as the making up price was 91¼, compared with 92 at the previous ad-

justment, "bulls" of the premier security commenced a very unhappy week by having to find a difference of ¾ on accounts continued. Contango charges were not onerous, as things go nowadays, say 3 to 3¼ per cent., with most of the business arranged at the round figure, but this did not prevent a very early relapse in quotations. Realisations, indeed, have been very persistent throughout the week, and we were told that American houses were getting rid of the last of their holdings. Some of the selling can doubtless be traced to the necessity of finding means to meet the ever swelling losses in other directions, but whatever the cause the cash price was at one time driven down to 90¾. Part of the loss, however, was eliminated in the general recovery just at the last, and quotations finish ¼ lower on the week for money at 90 15-16 to 91 1-16, and ¼ down for the September account at 91 3-16 to 91 5-16. Transvaal scrip followed the same course without even a show of resistance until near the end, when it went up with Consols, and closes with a gain of 1-16 at ⅜ premium, but Khaki stock held its ground wonderfully and leaves off unchanged. Local Loans fell ¼ and Bank of Ireland stock relapsed 5, but otherwise the British Fund market was as before. In the Home County and Corporation list London County 3 per cent. and Wolverhampton 3½ per cent. fell 1 and Hastings 3 per cent. ½. Colonials were inert and without movement.

Foreign Governments bonds being outside the range of the general disturbance and very little dealt in here, were comparatively steady, and no prominent loss emerges at the last. Most of the changes, indeed, are favourable, and in the inter-bourse group Spanish, Italian, and Bulgarian were all better. Germans, Egyptian preferred and Hungarians were exceptionally dull and lower. With the exception of a relapse of ½ in the 1898 gold bonds and a recovery of the same fraction in the 1896 issue, Chinese bonds were as before, but Japanese 5 per cent., both old and new, were better. The sterling bonds fell ½. South Americans were rarely looked at, and while Brazilians and Mexican 5 per cent. showed an improving tendency, Argentines slackened off.

Nothing is sacred in times like the present, and the best of Home Railway ordinary stocks are as liable to be banged down as the most rubbishy Yankee Railroad share. The section devoted to British Railways, indeed, has been extremely weak, not because any large blocks of stock have been thrown upon it, but simply because in the present state of uncertainty jobbers are nervous of putting even a few thousands of stock on their books. Therefore they try to ward off sellers directly they put in an appearance by lowering prices in a manner quite out of proportion to the business offering. Investors would be well advised not to attempt to sell until the atmosphere is a little clearer, as such realisation may mean needless sacrifice. Quotations commenced to shrink from the very outset, and it was not long before some nasty losses were visible. Jobbers then indulged the hope that if the two "Heavy" dividends due on Thursday—the Great Western and the North-Western—showed the anticipated improvement of ¼ per cent. per annum, the market would take heart of grace and drive prices forward a little. Dividend estimates were duly justified by results, but expectations of better prices unfortunately were not to be realised, Thursday proving one of the worst days in the Yankee market. As will be seen by our table, the losses range from ¼ in Great Central deferred to 2 in South-Western ordinary, and would have been much more severe but for to-day's rally. The outlook for the weaker ones at the settlement commencing on Monday seems gloomy indeed.

The Yankee Railroad and Industrial market continues in a state of seething excitement and the disruption proceeds with undiminshed force. Liquidation more violent than ever was witnessed all week, and, notwithstanding a sharp rally just before the end, further serious losses have been piled up. The first incident was a statement alleged to be made on Monday by Morgan, while our "House" was closed, to the effect that the Wall Street market would improve, and that there would be no more failures. From that point the demoralisation was acute, and it seemed that nothing would stay the rot. At the outset a tremendous raid was made on Steel Trusts, ascribed to the news that Mr. Schwab, the president, had really resigned, and the rumour that Mr. Frick, who demanded the suspension of dividends on the common stock, would succeed him. In addition the market was called upon to face a big increase in the capital of the Consolidated Gas Company of New York, and with rumours of financial difficulties filling the air prices broke sharply all along the line. Top-heavy things like Atchison, Southern Pacific and Union Pacific fell 1 to 2 dollars, New York Central gave way 2½, and a whole crowd of others lost 1, or thereabouts. Next day Wall Street seemed on the verge of panic, and two failures were announced, Messrs. Sharp and Bryan and Messrs. Hurlbutt, Hatch and Co. The first named were interested in a pool of the Virginia-Carolina Chemical Company's securities, which collapsed. Banks were calling in loans in all directions owing to the utter inability of

operators to provide further margins, the Standard Oil people were said to be on the "bear" tack, and serious pressure was exerted against Gould stocks, Missouri Pacific at one time breaking 6 points. Steel Trusts, however, were supported, the buying being prompted by the announcement that Corey, and not Frick, had been chosen to succeed Schwab as president. Our market used this as a pretext for bringing about a feeble rally, but the rebound was only momentary, and further shrinkages of 3 in Louisville, 2½ in Milwaukee, 2⅜ in Union Pacific, 2 in Wabash bonds, Atchison, and Baltimore, and 1¾ in Chesapeake and Denver preferred were added to previous losses. On Thursday morning here some effort was made to stem the tide of depression, and, aided by a few provincial orders, prices were lifted above parity. Almost immediately, however, the big New York houses with London connections literally swamped the market with shares of all kinds, and the worst slump of the week set in. Wild rumours soon began to be disseminated, and a story got afloat that the son of the notorious speculator Gates had failed, with liabilities amounting to $160,000,000. That was denied subsequently, and prices rallied a little from their lowest, only to give way once more. The excitement in the "Street" was rather intense, but before members dispersed, Wall Street made a vigorous endeavour to prevent what seemed likely to prove a complete collapse, with the result that absolutely closing figures were well above those current in the "House." These showed a further relapse of 6 in Wabash bonds, 4 each in the preferred and common shares, and 3 or thereabouts in Atchison ordinary, Baltimore, Erie common, and Denver and Southern preferred. Then Atchison preferred, Milwaukee, Erie first preferred, Missouri, and Union Pacific fell about 2, and the rest 1 to 1½. The early liquidation in Wall Street was said to be of a new character, which was difficult to trace, and the recovery was partly due to joint action on the part of prominent interests to help the situation, which appeared very grave. Assistance also came from the fact that all brokers were able to meet their obligations, as the sheets went safely through the Clearing House, and this caused vigorous covering by "shorts." So the market there closed with several important gains, which were eagerly responded to when we commenced business this (Friday) morning, and final figures are well above the worst.

The two leading Canadian lines gathered splendid traffics for the last ten days in July, the Canadian Pacific reporting an increase of $164,000 and the Trunk one of £34,000. Also the first named announced that the land sales in July were 268,000 acres realising $1,020,000,

against 155,000 acres for $565,000 in the same month last year. But such was the demoralisation elsewhere that these points had not the slightest effect, and prices followed the course of Yankees, although the set back was comparatively trifling. Prices at the end are without alteration.

Foreign Railways have been exceedingly uninteresting, and there would be few words to say about them but for a little speculative revival in the stocks of the old Mexican Company. This carried the first preference up about 2, but the advance was lost again before the end, and prices finish unchanged. In the Argentine division, Rosario ordinary and preference and Buenos Ayres Great Southern attracted a little attention, but only the first named were better at the finish. Villa Maria shares were marked down 3, and a few debenture stocks moved narrowly, usually without a sign of business.

The Miscellaneous section were idle and dull, and movements for the most part lacked significance. There was, however, a further relapse in India Docks deferred, on the growing belief that the Port of London Bill cannot get through this session, and Millwall ordinary shared the weakness on the publication of a disappointing report. Shipping securities were also easier, and Royal Mail and P. and O. deferred gave way 1. Meat issues continue miserably flat, with big sales of James Nelson's, which are now quoted about 32s., against over £4 during the recent boom. The Aerated Bread tap was off during the week, and the shares recovered ½, to 11½, but other Caterers were no more than steady. Allsopps slipped away a little, but Watney, Combe, Reid deferred jumped up 2, and Guinness ordinary was marked 10 higher. Vickers had a much needed recovery in the Iron and Steel group. The quotations for the new Linotype and Machinery Company securities are ⅜ to ⅝ for the ordinary and ½ to ¾ for the preference both being quite nominal. English Cotton eased a little on the report, and other Textiles were steady. The result of the operations of the Calico Printers' Association for the six months ended June 30 is now known. After charging £104,695 for depreciation, maintenance, repairs, renewals and upkeep, £64,000 for debenture interest, and £50,000 for a capital reserve account, as further provision for depreciation and closed works, the net profit is £160,029. This, with £219,820 brought forward, gives an available balance of £379,848, and the directors will consider the question of a first dividend and other distributions. Welsbachs were better, and B. E. T. ordinary at last recovered.

Stock markets were firmer this morning, and desperately idle. Left to themselves they weakened slightly in the afternoon, and nobody now believes that the end of the troubles in the United States is in sight. Consequently, fears about the future and holidaying make the Stock Exchange dreary enough. It is going to be drearier before all is over, what with the tariff cackle and hollow finance everywhere.

The London and South Western Bank, Limited, will open, on the 10th inst., a branch at 36, High Street, Southend-on-Sea.

The *World's Work* for August devotes many of its pages to "The Great Question," i.e., Protection, dealing clearly with its different aspects and perils in a number of articles by well-known men, such as the Earl of Crewe, Sir Charles Dilke, and Mr. Alfred Emmot. Mr. Frank Lloyd gives a particularly good paper on "An overlooked Point." Such an all-important question cannot be too much discussed. The magazine also contains an excellent portrait of the King, and profusely illustrated articles on "Yachting," "Learning from Nature," Mr. Chamberlain's Record, with portraits of the divided Unionist Party, and, need we say it—Motoring.

The Strand, *Sunday Strand*, *Captain*, and *Wide World* magazines for August are all good numbers, each after its own particular style; the *Sunday Strand* contains its usual inocuous, but by no means uninteresting fiction, with a due leaven of various articles. *The Captain's* heroes are as doughty as ever, and we anxiously await the next number to learn the fate of the "Long 'Un." Two articles in the *Wide World* are specially good, "The Cure Dwellers of Mexico, and "Calamity Jane," and it thrills us as usual with "wild beast" adventures, even unto the capture of a puma in Surrey. The *Strand* has its article by W. W. Jacobs, another miraculous escape of Tammer, and an excellent all round selection of fiction and fact.

Company Reports and Balance Sheets.

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

North Eastern Railway.

In the six months ended June 30 last gross receipts came to £4,443,333, and the working expenses to £2,845,359, the income being £102,486 larger, and the expenditure £13,921 smaller than in the corresponding half of 1902. These improvements reduced the proportion of working expenses to income, compared with twelve months back, by 1.83 per cent. to 64.03 per cent. No other English railway whose figures we have seen shows such excellent results as these, and they have plainly been attained without straining. The most important item amongst the outgoings showing increase is rates and taxes, up £14,793. On maintenance of way, etc., £9,888 more has been spent, but £15,624 has been saved on locomotive power, and no less than £19,095 on carriage and wagon repairs. These savings are doubtless in part due to the more economic arrangement of the traffic as illustrated in a decrease of nearly 960,000 miles in the train mileage run during the past half year. That a larger business should have been done, and this economy in train running attained testifies to vigilant and admirable management. It results from the larger receipts and more economical working that after meeting all fixed and preferential charges, the balance left for dividend on North Eastern Consols is larger by £90,000 than it was a year ago, and the directors are accordingly able to give the shareholders a dividend at the rate of 5 per cent. per annum compared with 4½ per cent. for the first half of 1902. With these paid a balance of £45,287 will be left to be carried to the new half year over and above £20,000 placed to reserve. We are delighted to see this last mentioned item openly stated in the accounts, and trust the example thus set will be imitated in other directions. Capital expenditure in the six months came to £658,424, of which £127,071 went into working stock, making the total expenditure under that head up to June 30 last £12,599,074, which is a very heavy burden. On lines open for traffic the outlay was £311,350, and in the current half year it is estimated that another £865,500, will be laid out on capital account, including £288,000 on lines open for traffic and £150,000 on additional working stock. This steady expenditure must presently involve a further issue of capital, although the company has about £1,049,000 of the new stock created on May 9 to come in. It is selling preference stock through its brokers now. The total amount received on premiums by the way from first to last is £5,328,485, a sum that represents a substantial contribution to the cost of the undertaking. The capital account, however, was overdrawn on June 30 by £1,558,892, and the total available sum in the form of savings bank and provident funds, superannuation funds, and fire insurance fund is only £1,707,000, the whole of which may be said to be employed in the business. It follows, however, that the finances of the company are not at present in the least over-stretched. The revenue account, by the way, still fails to give all the various items of income and expenditure. We get dock revenue, but no entry showing dock expenditure, and rents and receipts on real property, which presumably embrace the returns from the companys hotels, are not offset by any intimation of the charges on account of the up-keep of this property, or relating to the business done. In time, however, we shall probably get the accounts of our railway companies stated with greater completeness. Dividends are payable on the 15th inst.

Great Northern Railway.

In the June half-year this company's gross revenue amounted to £2,795,103, or £46,443 more than in the first half of 1902. Working expenses amounted to £1,823,925, or £689 less, and the proportion of expenses to income was accordingly down somewhat at 65.25 per cent. Net revenue rose by 5.10 per cent., to £971,178, and after providing all fixed charges and the full dividends on preferred stocks, a dividend at the rate of 3 per cent. per annum can be declared upon the old ordinary stock, leaving £22 880 to be carried forward. This gives £2 for the six months on the preferred ordinary stock and £3 upon the old "'B" preferred stock. A year ago the preferred ordinary got only £1 13s. 4d., and the "B" stock £2 10s., while about £8,233 was left for the new half-year. Business was good in nearly all branches of businoss except minerals, where there is a decrease of £17,217, but on merchandise the increase was £32,987, and on coaching traffic the expansion was £28.553. On the whole the most satisfactory point about the report is the smallness of expenditure on capital account. It amounted to only £295,231 in the six months, and this included £219,617 spent upon the Great Northern and City Railway, and £23.595 spent on the Great Northern, Piccadilly, and Brompton Railway, moneys which will doubtless be chargeable to the accounts of these railways. On the company's own lines therefore the net expenditure was only about £85.000 net. In reality, however, it was more because credit is taken for £62.221 received on account of the Royal Mint Street depot, presumably old properties sold. At the end of the half-year the debit on capital account was £30.659. The company reduced its train mileage by 278.243 miles net, but the passenger train mileage alone was larger by 54,086 miles. These figures relate to the entire train running, but on the company's own lines the passenger train mileage went up 60,458 miles, and the goods and minerals down 329,016 miles.

Trust funds to the amount of £673,119 are in the company's keeping, prior charges have risen £3,874, and preference charges £4,617, compared with a year ago. Dividends are payable on August 25.

Great Western Railway.

Gross revenue for the half-year ended June 30 was £5,623,332, an increase of £131,944 against a rise in expenditure of £88,002 to £3,604,026, leaving the net balance higher by £43,942 at £2,019,306. Ratio of expenditure to gross earnings was 64.09 per cent. compared with 64.03 per cent. Dividends and interest received and balance brought forward were in excess of the corresponding period, and the entire revenue is £2,099,228, against £2,047,563. Prior charges and guaranteed and preference dividends took about the same, and £51,480 more at £594,965 was available for ordinary dividend. Therefore, the directors raise the distribution ¼ per cent. per annum to 3¾ per cent., carrying forward £23,948. With the exception of merchandise, every important item of revenue shows expansion, passengers alone being £48,791 better. Parcels, horses, etc., rose nearly £13,000, and receipts from minerals were up £67,464. On the expenditure side no important movement is visible until we come to carriage and wagon repairs, which cost £28,446 more. Then traffic expenses were up £34,905, and a big rise of £9,610 occurs in Parliamentary charges. Rates and taxes rose over £20,000, a burdensome increase, but there was a welcome decline of more than £12,000 in compensation. Capital expenditure continues on a great scale, and the sum of £832,182 laid out in the period under review cannot be contemplated without considerable misgiving. Of the total £146,821 was on working stock and £225,694 on lines open for traffic, both directions where vigilant control over outlay should be exercised. In the half-year now current, the expenditure is set down at a further £900,000, but as the company is possessed of a credit to capital account of £432,613, no immediate appeal for further funds need be looked for. The concern is strong in cash, but not too much so considering the immense sums necessary for dividend and interest payments. General stores look big at £1,314,837, but the company has a lot of new construction in hand. The South Wales and Bristol Direct Railway, the construction of which probably played an important part in the rejection of the opposition Bristol, London and Southern Counties Bill, was opened for passenger traffic on July 1, and is already developing a considerable local traffic, as well as affording facilities for through traffic, for which it was promoted. Arrangements for the electrification of the railway between Hammersmith and Bishop's Road are proceeding. Dividend warrants issued August 24.

Hull, Barnsley, and West Riding Junction Railway and Dock.

In the six months ended June 30 the gross receipts were £231,464, or £12,996 more than in the first half of 1902. Working expenses rose £4,183 to £140,995, the ratio to total revenue being 60.91 per cent., against 62.62 per cent. The improvement in revenue was pretty evenly divided between the various classes of traffic and the dock, the chief rise being in merchandise, up £6,273. Movements in expenditure rarely exceeded £1,000, and need not be detailed. To the net balance of £90,469 is added the amount brought forward, £6,771, making £97,240. Out of this is met the interest on the first and second debenture stocks, contingent additional interest on the latter, rent charge, and general interest, leaving £29,575. Preference dividend for the half-year absorbs a further sum of £10,237, and £19,338 is carried forward. The report states that the prolonged strike of miners at the Denaby and Cadeby collieries referred to in the last report terminated at the end of March, from which we may infer that the company's revenue was further damaged by the trouble. Ships of a total tonnage of 615,821 tons entered the Alexandra Dock during the half year, a decrease of 2,564 tons, compared with the corresponding half of 1902. Capital expenditure for the six months was very modest, at £4,484, and we trust the directors will continue on these conservative lines, as the capital account is overdrawn £171,791, and money cannot easily be raised nowadays. Not only so, but £115,286 is owing to bankers, and more must be borrowed before interest payments can be provided.

Brecon and Merthyr Tydfil Junction Railway.

Gross receipts of this company for the half year ended June 30 were £48,898, or £1,486 more than in the first half of 1902. Expenses rose £272 to £30,714, and the net revenue shows an improvement of £1,214, at £18,184. A year ago the company transferred £1,000 from the reserve fund, but no such appropriation is now made, so that including the larger balance of £246 brought forward, the sum for disposal is only £301 better at £18,430. It provides rent charges, the Rumney preference dividend, interest on "A" debenture stock, and 1¾ per cent. on the "B" debenture stock, leaving £28 to be carried forward. The payment on the "B" stock represents ¼ per cent. for the balance due to December 31, 1902, and 1½ per cent. on account of interest due for the past half year. Most of the increased revenue came from minerals, and an important advance in locomotive power was offset by a saving of £1,456 in maintenance of way.

Vale of Glamorgan Railway Company.

Gross receipts (40 per cent.) for half year to June 30 totalled £8,059, amount payable by Barry Railway Company, £5,396, other sums increasing the total to £13,722. Administrative outgo and interest absorbed £4,926, leaving £9,175, including balance brought in, and interest, available for dividend. £8,229 is appropriated to a distribution of 4 per cent. on the ordinary stock, and £945 is carried forward. Capital expenditure totalled £2,065, whilst £128,000 of new ordinary stock was issued and taken up. There is a debit balance of £74,070, with capital and borrowing powers aggregating £89,000.

Cambrian Railways.

For the half-year ended June 30 the gross revenue of this company was £147,424, or £795 less than that of the corresponding period of 1902, while expenditure increased from £95,507 to £99,250, its ratio to revenue being 67.29 per cent. compared with 65.11 a year ago. Including £8,474 brought in from the last half-year, and £1,500 taken from the general renewal suspense fund, the net revenue is, therefore, £58,148, or only £105 less than that of June, 1902. Of this sum £58,050 is absorbed by land rent charges, interest on the debenture stock, and other charges, and only £98 is left to be carried to the general balance-sheet, no dividends being declared. Under expenditure the item which has risen the most is repairs and renewals of carriages and wagons, which, at £11,110 is £3,396 more than in 1902, though nearly all the other items show a slight increase, except locomotive power. In this a saving of £2,515 has been effected, the cost for the half-year being £28,009, compared with £30,524 twelve months ago, due to the fact that the train mileage is down 13,423 miles, at 742,559, and to a smaller coal bill. During the half-year the capital spent was £15,917, of which only £2,138 was taken by lines open for traffic, working stock accounting for the balance, and the capital account is now overdrawn by £161,568.

East and West Yorkshire Union Railways.

This company's receipts rose nearly £1,000 during the six months ended June 30, compared with the same period of 1902, an important increase, bearing in mind that the entire income was only £11,211. Although most of the larger items of expenditure were higher, a fair proportion of the extra revenue was retained, the net balance being £6,246, against £5,722. Balance from last account was £215, making £6,461, and after deducting rent charges and general and debenture interest, the sum available for dividend is £4,802. So the directors provide an increased amount for preference dividend, and again pay 3 per cent. per annum on the ordinary capital, leaving a rather larger sum of £437 to be carried forward. The company has no passenger traffic, nearly all the revenue being derived from mineral carriage.

Belfast and County Down Railway.

This company's gross revenue for the half-year ended June 30 was £67,019, an increase of £2,692 over that of the same period of 1902, while the expenditure was £41,385, or £2,171 more, compared with that of twelve months ago, the ratio to revenue being 61.82 per cent., against 60.96. Adding £5,021 brought in from the last account, and £531 received for tolls, interest, etc., the total net revenue is £31,088, of which interest on debentures, rent, and other prior charges require £8,008, leaving a balance of £23,080 available for distribution. This allows five per cent. to be paid on the ordinary stock, and £2,394 to be carried forward, compared with £1,955 a year ago. Maintenance of way and works has risen £150 during the six months, and locomotive power cost £1,360 more. All descriptions of traffic are better, passengers in particular showing the most improvement, the receipts being £1,773 more, at £42,294. Capital expenditure for the half-year came to £1,434, of which £470 was spent on the Castlewellan extension, and the balance on lines open for traffic, while in the current half-year it is estimated that £6,450 will be required. Yet in spite of the issue of £17,250 ordinary stock during the half-year, the premiums on which have been credited to capital account, this account is overdrawn to the extent of £59,385. Dividend warrants will be posted on August 31.

Midland Great Western Railway of Ireland.

Compared with the corresponding half-year of 1902, the gross earnings of this railway during the first six months of this year show a substantial improvement. Revenue from all sources amounted to £291,607, or £24,211 more than in 1902, while expenses, though £9,085 higher, at £171,847, were only 57.37 per cent. of the gross income compared with 61.05. When interest on debentures, and rent charge stocks and other prior charges have been met, the balance available is £60,978, or including £12,209 brought forward, £73,187. The consolidated stock, therefore, receives 3½ per cent., after the preference dividends have been paid, and £4,503 is left to be carried forward. All the traffic departments shared in the improvement, though some of the items of expenditure show a sharp rise, locomotive power alone costing £5,712 more at £55,031. But the Royal Canal can hardly be described as a valuable source of income to the company, since the half-year's receipts from it only came to £2,401, while wages, taxes, and repairs cost £3,549. Capital to the extent of £18,893 was spent during the half-year on lines open for traffic, and working stock. Dividends are payable on September 1.

Vale of Rheidol Light Railway Company.

This company issues its accounts for the first half year's working of the line from Aberystwith to the Devil's Bridge. Receipts from all sources amounted to £1,561, in the proportions of £1,158 from passengers, £299 from merchandise, and £74 from minerals. Working expenses totalled £1,240, leaving a net profit of £321. This is sufficient to pay nearly all the interest on the debentures, only a debit of £17 being carried to the balance-sheet. £5,462 was spent on capital account during the six months, of which £1,616 was on lines open for traffic, and the remainder on working stock.

For the current half-year the estimated expenditure is £25,000. The report states that the working plans and contract drawings for the Aberayron Extension Railway have been completed, and tenders for the construction of the works invited. The Cardiganshire County Council have agreed to provide the sum of £18,000 towards the authorised capital, subject to the balance of the capital being subscribed.

Colne Valley and Halstead Railway.

During the half year ended June 30, this little company's traffic receipts amounted to £8,216, or £192 less than those of the same period in 1902. This falling off is entirely due to the grain, and mineral traffic, as both passengers and parcels were better. After payment of current expenses, the net revenue appears to be £1,623, of which £1,462 is required to pay debenture interest, leaving a balance of £130.

London and India Docks Company.

The preliminary statement published by this undertaking rather more than a week ago gave a nasty shock to the ultra-enthusiastic "bulls" of the company's securities. They were anticipating fine, robust-looking figures, so that at least "par" could be squeezed out of the Government for the deferred stockholders under the Port of London bill. Therefore, when it became known that the balance to be carried into the current half-year was less by over £30,000, than at the corresponding period of 1902, and that the purchase bill may be among the end of the session slaughtered innocents, speculators' faces grew sorrowful, and the deferred stock responded to the misery with a drop of 15. Yet the figures, bearing in mind the paralysed condition of finance, trade, and enterprise throughout the world, are by no means discouraging. Tonnage of shipping entering the docks from foreign ports to discharge during the six months ended June 30 was 2,428,408 tons, showing an increase of 19,307 tons over the first half of last year, while 7,871 tons more at 357,956 tons entered coastwise. Against this, however, must be placed the fact that the weight of goods landed for warehousing and for immediate delivery to consignees fell away 50,589 tons to a total of 527,750 tons, and that on June 30 last stocks of goods in warehouse were 29,035 tons less at 216,757 tons. So we find the revenue from all sources £67,494 lower at £905,454, the outstanding decline being in import rates on goods, down £66,167. There was also a drop of £5,266 in rates and charges on shipping, but on the other hand export rates on goods were more than £4,000 better. The saving effected in expenditure was all that could reasonably be expected. In wages alone the reduction was £35,852, stores and stationary cost £3,940 less, a sum smaller by £3,000 was spent on maintenance, and renewal of premises and plant and directors' fees fell £525. Unfortunately, the ever-expanding rates and taxes demanded £55,371, or over £7,000 more, and under all heads the outlay came to £605,833, compared with £644,051. It follows then that the net revenue is £29,276 down at £299,621. Adding £1,204 brought forward, the sum for appropriation is £300,825, from which fixed charges take £122,921, or £2,000 more. From the balance of £177,904, the "A" and "B" preference and the 4 per cent. preferred ordinary stockholders receive their dividend, and £52,071, against £82,905 remains to be carried forward. As is well known the amalgamation account does not permit of the payment of any dividend on the deferred stock until the accounts of the year are made up. The directorial statement regarding the Port of London bill is brief. They say it was read a second time in the House of Commons on May 13, and referred to a joint select committee of the two Houses of Parliament, presided over by Lord Cross, which concluded their labours on July 13, after fourteen sittings. It now awaits discussion in committee of the whole House of Commons. The company possesses a capital credit of £42,709, and with cash £130,142, and a large excess of debtors and outstandings, and outstanding charges on goods and shipping over creditors and outstandings seems in a comfortable position.

Millwall Dock Company.

This company's undertaking is also embraced in the Government purchase bill, and the directors tell the shareholders that they closely watched the proceedings before the committee referred to above. They are glad to report that the interests of the proprietors, the debenture-holders, and the staff are duly protected in the bill, as it leaves the committee. The amount of compensation to be awarded, if not agreed, will be referred to a Court of Arbitration for settlement. Regarding business, that, unfortunately, was poor during the six months ended June 30. In fact the net registered tonnage entering the docks dropped 118,334 tons, at 437,108 tons, or more than 21 per cent. Loss of the transports owing to the cessation of hostilities in South Africa accounts for over 100,000 tons of this great decrease, and the lessened tonnage from north and south Russia for the balance. Imports of grain from European ports were considerably below those of the corresponding period, with the inevitable result that the stocks in the granaries were reduced to a very low level. Wood imports also show a large falling off, but fortunately there are indications of improvement in both trades. Decline in revenue was £29,578 to £99,056, against a saving in expenditure of £21,800, most of it in wages, maintenance, dredging, and craft and tug hire. Net revenue was £15,547, and after providing debenture stock interest the sum remaining is £3,260 and shows a fall of £7,729. None of this is paid away, but the directors recommend the distribution on September 1 next of the sum of £12,115, being the balance of the amount standing to the credit of the first preference stockholders for the year ended December 31, 1902. Included in the expenditure is an appropriation of £5,000 to the depreciation and renewals account—half the amount formerly placed in accordance with the opinion expressed by proprietors at the last meeting—but as an expenditure of £4,885 was incurred on special restorations, the fund is very little higher at £19,804. Credit to capital account is £6,277, the company possesses a fair amount of cash, and trading accounts are favourable.

Gas Light and Coke Company.

Although this great company makes a much more satisfactory display for the half-year ended June 30 last than in the corresponding period of 1902, it is not because any of the business lost during the past two or three years has been recovered. On the contrary, the quantity of gas sold fell off 4 per cent., a very serious reduction, attributed by the directors to the presence of abnormally mild and light weather, and the extension of incandescent gas lighting, both for public and private lighting, which, profitable as it is to the consumer, tends to check temporarily the consumption. The improvement in revenue, therefore, is traceable to other reasons, and we find it due to a reduction in the cost of coal, savings in the item of wages brought about by the extended use of machinery, and by the increased values of coke and other residual products. Sales of gas gave a revenue of £1,531,323, or a drop of £62,264, but residuals realised £16,983 more, at £432,318, and with an increased amount from rental of stoves, the entire income is only £43,922 down at £1,997,476. Manufacture of gas cost £104,891 less, at £1,043,676, the saving in coals, etc., being £73,039, and in wages £16,213. Distribution declined £17,315, and the total outgo is returned at £1,416,982, compared with £1,536,475. Net revenue thus improves £75,571 to £580,494, and including £65,147 brought forward, the sum for division is £645,641, an advance of £75,884. So after meeting all fixed charges, the dividend on the ordinary stock is raised from £4 to £4 8s. per cent. per annum, with the balance over of £116,530, against £68,165. The company's bill in Parliament received the Royal assent in June, and under the Act it obtains power to create and issue debenture stock, not exceeding the nominal amount of £750,000. This is coupled with provisions for a new standard price of 3s. 4d. per 1,000 cubic feet of gas, and for a revised sliding scale of dividend. There is a further provision for the redemption out of profits available for division of obsolete capital by the purchase and extinction of ordinary stock to the nominal amount of £1,000,000. The effect will be that after January 1, 1904, with the price of gas at 3s. per 1,000 cubic feet (the present price), the proprietors will be entitled to a dividend not exceeding £4 8s. per annum. These terms are less satisfactory than those submitted in February last, but the directors are satisfied that in view of the course of recent gas legislation, the settlement is one which should be accepted alike by the consumers and the proprietors as a fair compromise on points in dispute between them during the past few years. The Board of Trade has intimated its intention to appoint a committee to review the whole question of gas-testing regulations, a fact which gives the directors great satisfaction. They trust that the result of the enquiry will be the removal of the more onerous of the restrictions under which the gas companies carry on their business, and which tend, they say, to unnecessarily enhance the cost.

South Metropolitan Gas Company.

The directors of this splendid business can once more come before shareholders with an excellent account of their labours. In the half-year ended June 30 sales of gas at 2s. 3d. per 1,000 cubic feet—9d. less than the charge north of the Thames—returned a revenue of £657,158, meter and stove rentals gave £47,947, residuals £262,036, and rents and transfer fees £1,978, or £969,146 in all. To earn this immense sum cost £744,358, including £16,017 paid out under the profit-sharing scheme, so that the net revenue is £224,789, or £33,003 more than in the June half of 1902. From it debenture, temporary loan, and deposit interest absorbs £29,446, and the directors then proceed to add £17,009, or ½ per cent. on the paid-up capital to the insurance fund to, as they put it, meet any extraordinary claim, demand or charge which may at any time arise against or fall upon the company from accident, strikes, or other circumstances which in the opinion of the auditor due care and management could not have prevented. Including £11,178 brought forward, and £934 interest on bankers' balances, the sum still left is £190,445, which provides the full dividend to which shareholders are entitled under the sliding scale, viz., £5 6s. 8d. per cent. per annum, with a big increase in the balance forward to £26,445. The board again gives prominence to the fact that the reduction in the illuminating power of two candles from 16 to 14 has not caused the consumers to burn any more gas. In fact, they say the lower quantity suits them quite as well as the higher, their complaints are fewer, and the saving is the immense one of £96,000 per annum. These points are insisted upon because the London County Council strongly opposed the reduction, contending that the consumers would burn some 30 per cent. more gas and be heavy losers. Naturally, the great desideration for both shareholders and consumers is cheap gas, and the directors assert that the London County Council are not helping in that direction. With the exception of this unfriendly attitude towards the gas companies everything is working smoothly and well, and it is hoped that the time is not far distant when the price of gas will be again reduced. We are glad to see the company possessed of the fine cash balance of £198,591, apart from a small sum in hand for sundry payments, the amount being sufficient for all dividend and interest payments. Amount invested on account of reserves is £195,217, leaving a fair total in the business, and as usual debtors greatly exceed creditors. Credit to capital account is £381,560, the amount expended in the half year being £64,067.

Manchester Ship Canal Company.

Although never destined to give an adequate return on the immense sums spent on its construction, this enterprise continues to

make headway, and, as things go, produces a satisfactory statement for the six months ended June 30 last. Compared with the same period of 1902, the weight of toll-paying merchandise which passed over the canal advanced 237,810 tons to a total of 1,835,805 tons, of which 1,695,333 tons was sea-borne, and 140,472 tons barge traffic. Ship canal revenue was £189,422, or £22,819 more, against an increase in charges of £7,314, net revenue being better by £15,505 at £75,976. The Bridgwater canals earned £1,835 less, at £133,689, with a reduction in expenditure of £2,059 at £121,134, meaning an increase in the net balance of £224, the total being £12,555. This, added to the ship canal earnings gives a combined revenue of £88,531, in addition to which £1,866 was received from bankers' and general interest, making £90,398 compared with £73,877. First of all the directors provide interest on the first and second mortgage debentures, and on the mortgage of surplus lands, and the rents of the new transit sheds. Then £11,500 is placed to a reserve fund, in view of the pending litigation with the Warrington Corporation, and Traders' and the Salt Union, and £30,060 goes to the Corporation of Manchester on account of interest due on debentures held. Actually the amount due to the Corporation is £112,500, and thus the debit balance brought forward of £1,527,377 is increased to £1,609,816. A year ago it was £1,460,276, and as nothing but a capital reorganisation can ever extinguish this tremendous loss, it is to be hoped that the scheme outlined in these columns some weeks ago, or an alternative arrangement, will be carried out. The sum now owing to the Corporation of Manchester is £1,656,250, an increase of £175,000 in twelve months. In other respects, however, the balance-sheet reveals a better position. Cash has advanced £38,202, and sundry outstanding accounts are up on both sides, that favourable to the company showing the larger increase. Traffic accounts owing to the concern are down £11,597, while the investments in Consols are unchanged at £9,559.

Samuel Allsopp and Sons.

Thanks to the factious, but nevertheless temporarily successful opposition to the reorganisation of this company's capital, its balance-sheet for the twelve months ended June 30 is drawn up on the old lines. It was not until July 22 last that the decision of the Court below was reversed on appeal, too late to be applied to the past year's accounts, but the new provisions entitling the preference and preferred stockholders to vote will apply to the proceduce at the forthcoming meeting. When reconstruction has been fully carried out, the position of the company will not appear quite so hopeless, but unfortunately the progress made by the business during the period under review gives small hope that the cutting down of capital will prove sufficiently severe to meet the company's terrible case. Gross profit for the year was £361,775, net interest came to £25,862, rents to £41,014, and dividends and transfer fees to £11,328, or £439,979 in all. Total expenditure was £281,251, and the net profit is returned at £158,728. The improvement compared with 1901-2 is only £7,925, and after meeting debenture and trust certificate interest, the surplus is £10,368. True this is an improvement of £14,793 over the previous year when the deficiency in fixed charges was £4,425, but it is a very slender margin, and makes the outlook for the junior securities, even when so drastically cut down, a very poor one. Some benefit will be derived from the complete extinction of the trust certificates, of which £67,900 were redeemed during the year, leaving £297,400 outstanding, but when these are paid off the fixed debt will still be a lot over £3,000,000, and must ever remain a stifling burden. Then there is the ugly fact that no depreciation has been allowed on the business premises and plant, except £3,064 on the larger plant, but it is pleasant to note that the charge against revenue for repairs, etc., was £32,552. The directors must make a vigorous effort to reduce expenditure, and in glancing at the details one or two items catch the eye, where savings should be possible. We are glad to see that the loss on houses under management is £2,648 lower, at £3,436, and we hope to see this drag in time entirely disappear. Properties, loans, and investments of the book value of £24,119 were realised during the year, the proceeds being £14,846 above the estimated value, but as it is necessary to set aside £18,063 as a further provision for possible losses on old loans, we find the deficiency swelled a little to £1,446,632. Additions to properties and permanent improvement of old properties took £110,103, but capital expenditure elsewhere was unimportant. Goodwill naturally still stands at its old figure of £1,431,988, and we judge it to be a practically valueless item. The company owes £249,834 on sundry trade accounts, deposits, etc., and £212,383 on loans, but customers' balances and other items owing to the company come to £388,502. Stocks reach £451,387, and cash is entered at £68,063. We trust that the £612,901 standing for trade loans and £307,361 for investments are realisable values, and they certainly ought to be, considering the immense amounts already written off. Altogether the balance-sheet foots up to £7,161,567, and sets the mind wondering how much would be realised for the lot if it really came to a pinch.

Arthur Guinness, Son and Co.

Whatever may be the fate of other brewery companies, this magnificent Irish business continues to flourish, and in the past financial year closed on June 30 made a net profit of £1,001,414. This was after paying no less than £964,155 as excise duty. £30,886 on maintenance, and all minor working charges. Adding in the balance of £45,451 brought forward, interest on investments at £34,932 net, the total available for distribution is £1,046,865, and of this the directors have placed £210,000 to credit of reserve for capital expenditure and contingencies, and £35,000 to the depreciation fund. All the prior charges are met, and a dividend of 16 per cent., the final half of it payable on September 1 next, together with a bonus of 4 per cent., also payable then, is declared on the ordinary stock. This will leave £69,982 to be carried forward, and in all respects the position of the company is one of remarkable strength. Its reserve for capital expenditure and contingencies now amounts to £910,000, and the ordinary reserve foots up to £1,000,000, so that the directors can pay off the whole of the debenture stock and still have some £400,000 to the good. To the extent of £1,379,239 the reserves are invested in first-class securities. Their quality, however, has not prevented them from suffering under the general decay in prices, and the net depreciation at the date of the balance-sheet on this large investment was £57,993, a mere trifle, looking at the unassailable strength of the company. Stocks on hand amount to £1,405,375, and the debts owing to the company stand at £249,745. Together these assets reach £1,655,000, and the total current obligations of the company, including a temporary loan of £200,000, amount to only £498,472. It surely is unnecessary to add anything more.

North Metropolitan Tramways Company.

This undertaking pulled itself together a little during the six months ended June 30 last, but the condition of affairs is still far from satisfactory. Owing in part to the sale of the company's lines in Middlesex to the Metropolitan Electric Tramways Company, the number of passengers carried fell away 6,762,366, compared with the corresponding period of 1902, which meant a drop in receipts of £34,613. Advertisements gave £1,000 less, but rents rose nearly £1,200, so that the receipts from all sources were £340,338, compared with £377,552. On the expenditure side some important movements occur. The decline in running expenses was the imposing one of £37,355, forage alone costing £20,932 less, while drivers' and poleshifters' wages show a reduction of £9,580. Then traffic expenses fell £11,580, every item being smaller, and rents were lower by £4,897, but against these declines must be placed an advance of £5,470 in maintenance of roads. In the result the decrease in expenditure was £47,832, so that the half-year's operations resulted in a profit of £10,618, against a loss of £2,758. Including £2,625 received for debenture interest from the Metropolitan Electric Tramways, £466 brought forward, and £415 fees for registration of horses for war purposes, the total revenue is £14,124. Debenture interest absorbs £2,625, and from the £11,499 available for dividend the directors propose a payment at the rate of 2½ per cent. per annum, leaving £407 to be carried forward. A year ago there was no dividend. The number of miles worked during the six months was eight less than in the corresponding period, and the current half-year will witness a further diminution. The directors report that the long-standing negotiations with the West Ham Corporation have been at length concluded, and that the purchase of the lines within the Corporation's area was carried into effect on June 30 last. Not only so, but it has been decided to sell certain small portions of tramway within the County of London which still remain in the possession of the company, and the user of which has been granted to the Metropolitan Electric Tramways. A resolution authorising the directors to carry out this sale is to be submitted to the half-yearly meeting on Wednesday next, but of course the independent shareholders have no power to oppose the sale should they be so minded, as the controlling interest in the North Metropolitan Company is already possessed by the Metropolitan Electric Tramways, actually a B.E.T. creation. On reference to the balance-sheet we find that company a debtor for £160,000, to provide part of which this company has raised a loan of £39,000. The remainder is represented by the reserve funds aggregating £129,907. Credit to capital account is £83,325, and cash comes to £40,754, but the only investment possessed is that deposited with the County Council and amounting to £50,000.

Australian Agricultural Company.

Even this fine company was affected by the drought last year, and after writing off £20,000 from drought suspense account, the net revenue was £35,880 below that of 1901. Stock and wool showed the principal decline, £19,963, while the receipts from the colliery fell £7,035. On the other hand, there was an improvement in land sales of £11,323. The report tells us that the company's coal trade was active during the year, and very little time was lost in the pit for want of trade. During the year a considerable amount was expended in the development of the new colliery at Hepburn, and the railway for the conveyance of the coal to the port was well advanced towards completion. A considerable output from this pit is anticipated in 1904. Including the proceeds of the wool clip of 1901, the net revenue derived from the stations was £28,277, but only £8,277 after deducting the £20,000 written off on drought account. The year was very unfavourable to pastoral operations, the drought became intensified in character, and very heavy expenditure was incurred in order to save the valuable breeding stock. As it was, the decrease from deaths amongst the grown sheep during 1902 was 15.38 per cent. on the average number depastured, while for the previous twenty years it has averaged less than 3 per cent. Loss of cattle was also heavy, but the actual number cannot be known until a general muster of the herd is made. The number of sheep on the run on December 31, 1902 was 113,031, as against 164,176 at the corresponding date in 1901, and the amount allowed in the accounts for this deficiency is £18,384. Fortunately, the land department showed up well, the net receipts being £26,802, against £15,480 in the previous year. Most of the sales were on terms of credit, so that only £17,243 was received out of total revenue to come of £69,508. Prospects of this part of the business seem very encouraging. It will be remembered that the whole of the Port Stephens Estate was offered in 1899 at 10s. per acre, but without result. Since then a large

part has been sold at 11s. per acre, and now 200,000 acres of the northern part have been disposed of at 12s. 6d. per acre, one-fourth being in cash. The cattle on the run were sold to the purchasing syndicate at £5 per head. Revenue from all sources was £251,053, and the outgo £185,400, leaving the net balance at £65,652. Adding £3,345 brought forward, and deducting debenture interest and income-tax, the sum for appropriation is £61,250. Out of this the shareholders receive dividends aggregating 55s. per share, or 10s. per share less, and £6,250 is carried forward. Regarding the outlook, the coal trade is fairly well maintained, and owing to good rains the cattle and sheep are in excellent condition. Prices rule high, and the lambing prospects are good. On the other hand the net proceeds of the 1902 wool clip came to only £21,481, against £36,306, a falling off due to the shortage in the clip caused by the drought.

Liverpool Overhead Railway Company.

In the past six months the gross receipts amounted to £41,550, an increase of £3,697, whilst expenditure totalled £32,005, an advance of £2,717, net revenue being £979 lower at £9,544. Passengers carried increased 487,667 to 5,514,089, the receipts from which grew by £3,652 to £40,859. Expenditure on maintenance of way was only a trifle more, but locomotive power was £1,550 higher, with increases of £407 in traffic expenses, and £148 in law charges, while, strange to say, rates and taxes were a few pounds less at £3,079. £500 more at £2,000 was allowed for renewals' provision. A balance of £4,013 was brought in. Interest on mortgage debentures required an extra £400, and the balance available was £580 higher, at £9,872. After paying 5 per cent. on the preference shares, the ordinary received ¼ per cent. more, at 1¼ per cent. per annum, which absorbs an additional £625 at £3,125, a balance of £3 [illegible] or only a few pounds less, being carried forward. The capital spent during the six months was £8,909, and it is estimated £3,900 will be spent during the current half-year. There is a balance at the debit of capital account of £33,757, with loan and share borrowing powers aggregating £96,500.

New Tivoli.

This music-hall attracted greater custom to itself during the twelve months to June 30, for takings jumped from £43,312 to £49,609. Advertisements again yielded £270, and transfer fees £10, but interest on deposit and investments was £100 more at £353, making the gross income £50,242, against £43,844. After deducting the expenditure the net credit is £9,457, compared wtih £8,414. As, however, £1,406 less was brought in, at £4,156, the available balance is £13,613, against £13,976, from which a 5 per cent. dividend has already been paid. Another 8 per cent. is recommended, making 13 per cent. for the year, or one per cent. more, but a smaller balance by £1,063, at £3,513, is carried forward. The balance-sheet calls for no comment.

William Murray and Co.

In the profit and loss account of this brewery company we are told that the profit on trading for the year ending June 30 was £5,987, that interest gave £286, and transfer fees £1, whilst £1,011 was brought in. £380 is allowed for depreciation on plant, furniture, horses, lorries, etc., over 10 per cent., income-tax took £337, managing director's salary, directors' and auditors' fees £685, interim dividend on preference shares, £937, and interim dividend on ordinary £984, leaving a balance of £3,963. Out of this the directors recommend a further dividend of 6s. per share on the ordinary, making 6 per cent. for the year, after paying the final dividend on the preference, that £1,000 be added to reserve, and that the balance of £1,024 be carried forward. In the balance-sheet premises, plant, utensils, and goodwill, including additions during the year, less written off for depreciation, are lumped together at a book value of £49,101, stocks stand at £9,274, debts, less trade discount and unspecified provision for bad debts £16,139, and cash, £15,131. The reserve is £5,000, invested in the business, and, the company has £8,987 owing to it.

New Zealand Thames Valley Land.

Last year this company made a loss of £4,313, so the shareholders should be over-joyed to learn that this year a small profit of £577 is shown. Profit on live stock taken at the manager's valuation and including wool in transit is put at £7,677, and £422 was received for 358 acres of land sold, several other small sources bringing the gross revenue up to £8,276, of which £7,699 was spent in London and New Zealand, though the proportion required by the former was only £381. When Seddon was over last year he recommended the company to sell its whole estate to the Government, and an offer was made at a reasonable price. The Government was not, however, wanting it at present, though, perhaps, may take it when it has floated its next loan. Also, it may have a newer favourite. A call of 10s. per share made last August has enabled the company to pay off the whole of its indebtedness in New Zealand, and leave £2,199 in hand. So there is something to carry on the show until the directors see the favourable opportunity to liquidate, which they have been looking for these last two or three years. During the year 358 acres of land were sold at average price of about £1.17 per acre, yet, including money spent on development, the cost of the company's estate as whole works out at £2.86 per acre. This can hardly be described as promising.

Yangtse Valley Company.

The report and accounts cover the period from the incorporation of this company, December 28, 1900, to June 30, 1903, whilst the Chinese figures are brought down to the end of 1902. The operations are not sufficiently advanced to permit of a profit and loss account being published. General expenditure in China to the date mentioned amounted to £16,879, and the London outgo came to £7,739, a total of £24,618. Income included £998, as the amount of indemnity admitted by the Chinese Government, interest and assay office receipts, and £235 interest on deposits and transfer fees. The company's interests consist of 100,000 shares of £1 each in the Electric Traction Company of Hong Kong, which expects its tramway to be completed early in 1904; 1,810 £1 shares in the Association General, Limited, a company with a capital of £5,000, which has obtained a tramway concession in Singapore; 5,562 shares of $20 each in the Wei Hai Wei Gold Mining Co., Limited; 100 shares in the Government Merchants' Co operative Mining Bureau of Szechuen; and one-fourth interest in the Province of Yunnan Concession held by the Syndicat du Yunnan, Limited. Out of an authorised capital of £500,000 £58,882 is issued, and the directors now intimate it is their intention to issue 20,000 priority shares at par.

Regent's Canal and Dock Company.

Compared with the corresponding half year of 1902, the gross revenue of this company for the past six months shows at £44,522, a drop of £2,947. At the same time the working expenses are down £2,910 to £18,712, so the net revenue for the half year comes to £25,810. Adding to this £572 brought in from the last account and deducting £10,609 and £239 required respectively for debenture interest and pensions, the balance available for dividend is £15,688. The directors are, therefore, able to pay a dividend of £4 2s. 6d. on the capital stock, and carry forward £410 to the next account.

National Boiler and General Insurance Company.

This company's total revenue for the year ended June 30 was £66,903, compared with £60,165 in the preceding twelve months, and after meeting all outgo, the net revenue is £2,775 up, at £15,484. Balance from last account, £8,006, and a trifle received as profit on sale of investments, increase this to £23,515, from which an interim dividend of 6s. per share has been already paid. Another payment at the same rate is now proposed, again making 12s. for the complete twelve months, £2,500 is added to current risk and reserve fund, £500 is written off furniture, fittings, and instruments account, and the much enhanced balance of £11,515 is carried forward.

Weardale and Consett Water Company.

During the twelve months ending December 31 water rents brought in £75,829, and transfer fees £35, making a gross income of £75,864. Expenditure, including £4,883 for wages and salaries, £3,383 for rates and taxes, £6,257 for repairs, £1,990 for pumping expenses, and £2,505 for interest and commission, amounted to £22,452, leaving a balance of £53,412. The sum of £15,538 was brought in, making £68,950. An interim dividend took £21,297, and income tax £3,541, leaving an undivided profit of £44,111. The directors recommend out of this a final dividend of 6½ per cent. per annum, making, with the interim 5¾ per cent. per annum. This absorbs £27,168, leaving £16,944 to be carried forward. It will be necessary, say the directors, to issue further capital, therefore they propose to issue £250,000 stock (being the remaining capital authorised by the Acts of 1875 and 1879) in such manner as they may deem most advantageous for the company. Another paragraph states that the amount due by the late treasurers of the company, the banking firm of J. and J. W. Pease, is £16,689, and "it is feared that part of this will not be recovered, but it is not possible at present to say how much, nor how the loss should be met, but fortunately the balance forward is sufficient to meet it.

Clergy Mutual Assurance Society.

A moderate increase was shown in the new business done during the year ended May 31, 480 new policies being issued for £268,690, and yielding in annual premiums £9,464. In addition 11 children's endowment policies for £1,500, and 26 educational annuities for £1,065 per annum, were completed. Claims paid, including £4,782 for interim bonuses, took £244,457, and of this £139,497, or about 58 per cent., was in respect of lives over 70 years of age. Expenses of management show a further reduction from £8 16s. 2d. per cent. to £7 0s. 8d. per cent. of the premium income, which is certainly moderate. The total income from all sources amounted to £400,381, and the outgo to £345,197, leaving £55,184 to be added to the funds, raising them to £4,147,020. A good proportion of these is invested in mortgages on property within the United Kingdom, and the rest is spread over a number of high-class securities, on which the average rate of interest earned was £3 18s. 6d. per cent., against £3 18s. 3d. per cent. in the previous year.

British Steamship Investment Trust.

Owing to the depression in the shipping industry the revenue of this company declined during the twelve months ending June 30 from £67,225 to £50,467, which includes the balance brought forward, but is exclusive of £2,481, against £5,317 representing dividends accrued to June 30, and since received. After deducting debenture interest, directors' fees, office expenses, insurance and other charges a balance of £32,523 remains, a drop of £17,129. About £6,000 less, at £9,070, is carried to the depreciation fund, which, after writing off the proportion attaching to shipping investments realised during the year, now amounts to £110,000. There is carried to the reserve fund the sum of £2,317, being the balance of profit realised on investments in the twelve months. This fund now stands at £63,724. After paying the dividend on the preferred stock a final dividend of 6 per cent. is recommended on the deferred, making 6 per cent. for the year, compared with a similar distribution, and a bonus of 1 per cent. twelve months ago. The

balance carried forward is £3,478 against £9,846. The depreciation and reserve funds are invested in a varied selection of securities and the financial position looks sound enough.

Samuel Fox and Co.

In the year ended June 30 last, this company made a gross profit of £30,698, to which must be added £12,410 brought in from the last account, making the total available for distribution £43,108. A dividend of 12 per cent. for the year will absorb £36,000, of which £12,000 was paid by way of an interim dividend in February last, leaving £7,108 to be carried forward. No allowance for depreciation appears to be made in the balance-sheet, though in a business of this kind such provision should be necessary. Debts due by and to the company about balance, but it has £26,756 in cash and bills in hand or at bankers.

A. M. Peebles and Son.

We are glad to see a revival of prosperity for this well-known paper manufacturing company. For the year ended June 30 last the gross profit was £17,295, or about £9,500 more than in the preceding year, and this is after charging £7,586 to depreciation account, which was a few hundreds more than the amount expended during the year on repairs and renewals. The total of this fund, however, is still only £2,071, after deducting the year's outlay, and we hope as the prosperity revives some money will be put aside for reserve, against goodwill and other contingencies. Out of the balance of £4,650 left, after paying the preference share dividend for the year, the directors propose to pay on August 31 next a dividend of 3 per cent. on the ordinary shares, which will take £3,000, and leave £1,650 to be carried forward, as against £185 brought in. This is decidedly more encouraging, and it ought to be added that the accounts are set forth with admirable clearness, the previous year's figures being given alongside those for the year just closed, so that every shareholder may trace the changes in the items.

Colne Valley Water Company.

The gross revenue for the half-year to June 30 came to £15,260, or £1,187 more than in the corresponding half of 1902, whilst expenses amounted to £6,209, an increase of £393, leaving the net revenue at £9,051, or £794 higher. Interest on investments brought in £46 and on deposits, £51, the sum available, with the addition of £1,027 brought in, being £10,175. Interest on the preference stock requires £340 and on debenture stock £1,229, and after transferring £500 to the contingency fund account, there remains a balance of £8,106. From this it is proposed to pay a dividend of 7½ per cent.—½ per cent. more—on the share capital, and to carry forward £532. Capital expenditure amounted to £2,309, nearly the whole of which was in respect of extensions of mains, the principal being at Wembley and in the Edgware main road, to provide for the increasing population in these districts. It has been decided to lay additional mains for Harrow and Radlett for the same purpose.

Brewery and Commercial Investment Trust, Limited.

For the year ended June 30 the revenue from dividends and interest amounted to £16,380, or a reduction of £122 only, compared with the previous year, but trustees' fees, commissions, etc., produced £1,049 less, at £1,679, and the total income was therefore £1,171 lower, at £18,059. Debenture and other interest, and administration charges, etc., having been provided for, and £1,080 written off for loss on securities realised, the net balance came to £12,085, against £12,694, and the deferred stock once more receives 6½ per cent. for the year, leaving £68 to be carried forward. A valuation of the securities on June 30 showed an appreciation of £5,300, when the investment reserve fund was taken into consideration, but the total appreciation on investments, including the general reserve fund, was no more than £13,625, compared with £18,485 in the preceding year. Even this, however, is better than might have been expected from the very miscellaneous selection of securities held, many of which look like undesired relics of underwriting ventures.

Vyse, Son, and Co.

The business of this straw and felt-hat manufacturing company is steadily progressing, the profit for the twelve months to June 30 exceeding the preceding year's by £1,854, at a total of £26,614. After putting £1,500 to leases sinking fund, and deducting 3,000 for debenture interest, with £2,097 for directors' fees, and managing director's remuneration, aggregating £6,596, against £6,336, there is a balance left of £30,252, including the £10,235 brought forward. The five per cent. preference dividend takes £5,000, the ordinary again receive 7 per cent. for the year, and over £8,000 more, at £18,252, is carried forward. Goodwill still stands at £56,927, the only reserve fund being leases sinking fund account, £6,327. Debtors greatly exceed creditors, though the sum of £116,325 looks rather big, whilst bills receivable stand at £56,927. Stocks have advanced some £4,000 to £42,000, and cash from £12,725 to £31,073, so the directors could very easily commence to build up a reserve fund. What has been written off for depreciation is not stated, but freeholds, leaseholds, fixtures, furniture, and plant has been reduced from £72,338 to £68,037.

Bristol and South Wales Railway Wagon Company.

For the half-year to the end of June the gross earnings of this company amounted to £14,833, to which wagon rents contributed £13,689. Interest on loans and advances required £5,493, administrative and other outgo absorbed £1,575, and £5,000 was put to contingent fund account. The disposable balance is £231 more at £7,265. The directors recommend the usual dividend of 10 per cent., the carry forward being increased £230 to £993. The rolling stock of 15,580 carriages and wagons and 13 locomotives are £109,402. Paid-up capital is unchanged at £125,436, but the debenture debt has grown from £272,526 to £304,561, a decidedly heavy item. Temporary loans have likewise advanced by £16,466 to £29,976, whilst bankers appear for £21,082. Against sundry creditors for £9,402, debtors owe £19,982. The contingent fund, despite the addition of the £500, is £500 lower, and has been decreased during the half-year by £326, representing loss on wagons thrown upon the company's hands by the failure of lessees to carry out their contracts.

Leyland and Birmingham Rubber Co., Limited.

In the year ended June 30 the profits earned amounted to £29,940, or £2,331 more than in the preceding twelve months, and with £5,400 brought in, the total available was £35,340, compared with £31,478. Of this sum £4,459 was set aside for depreciation, discount, and bad and doubtful debts, being an increase of £649, and after setting aside another £4,000 to reserve, the dividend was raised from 7½ per cent. to 8¾ per cent. for the year, and £6,445 was carried forward. All the flaws in the company's methods of handling its surplus to which we have drawn attention in former years, are repeated in the present balance sheet. Depreciation allowances fall short of the additions to land, buildings, machinery, plant, and goodwill, etc.—all of which are lumped into one item—by over 50 per cent., and the capital account grows steadily year after year until it is now £199,817. Trading balances, however, are favourable enough, only £39,035 being due to sundry creditors, against £45,394 to come in from debtors, and £18,618 in cash at bankers, although part of the last amount no doubt represents the reserve of £16,000.

A. J. White, Limited.

These makers and vendors of the nostrum known as "Mother Siegel's Syrup" continue to find a remunerative market for their product, and for the year ended March 31 earned a profit of £65,691, or £2,327 more than for the previous twelve months. With a larger balance of £11,066 brought in, the amount available for distribution was £76,757, compared with £66,066, but after meeting the preference dividend, the ordinary shares only receive the customary 5 per cent. £10,000 was reserved as an advertising reserve, and £11,757 carried forward. As a consequence, of the economic conditions prevailing in one of the foreign countries in which the company carries on business, the board has diminished its advertising in that country, but has slightly increased it in the United Kingdom, Australia, South Africa, and the United States. All this is merely a roundabout way of saying that it has been found more profitable to push the sale of the concoction in English-speaking countries, where the love of a patent medicine seems to flourish more readily. In spite of its prosperity the company continues to ignore the questions of reserve and proper depreciation, and still carries the item of goodwill, trade marks, etc., at the price of £914,398, paid to the old company in 1897.

D. and J. Fowler, Limited.

This West Australian firm did well in its year closed March 31 last, gross profits coming to £36,967, a sum that left £19,417 for distribution, after meeting all charges, and the preference share dividends. Out of this the ordinary shares receive £13,000, equal to 6½ per cent. per annum, £6,000 of it having been paid as an interim dividend, and £7,000 being now distributable. Then £5,000 is placed to the ordinary share dividend equalisation reserve, and £1,250 is given as additional remuneration to the directors, in respect of departmental management. A balance of £1,177 is left to be carried forward. It may be added that £1,942, being 10 per cent. of the net profits, was placed to preference reserve fund. The company does not appear to possess any other kind of reserves worth mentioning, at least, there is only £5,497 set down as sundry reserves, and it owes a good deal of money, but is not worse in this respect than many a bigger affair. Stock-in-trade and sundry debtors outstanding come to £258,000, and the debts on first mortgage debenture stock, bills payable, and to sundry creditors amount to £222,000. The cash in hand is £21,733. Goodwill, trade marks, etc., remain in the balance-sheet at £111,723, and the item might be written down.

Serdang Tabak Maatschappy.

We do not suppose many people here are interested in this Amsterdam tobacco company, but the report for the year ended December 31 has been rendered in English, and may be accorded a few lines. Results were again unfavourable, partly as regards the less desirable colours of which the produce of 1901 consisted to a great extent, but chiefly owing to the unsatisfactory weather. Absence of rain during the planting and growing on Frankfurt rendered it necessary to replant on the estate, but even this did not accomplish much, and the losses here swallowed up a large part of the Adolina profits. Fortunately the cost of production remains low, or even the trifling average profit of 4¼ cents could not have been realised. On the Adolina estate the profit was 82,871 fl., and on the Bengabing 4,673 fl., while interest gave 4,665 fl., and coupons lapsed 27 fl., or 92,236 fl. in all. On the other hand the loss on the Frankfurt estates was the great one of 66,491 fl., and as general charges absorbed 3,939 fl., the credit balance is 21,806 fl. only. Nevertheless, the directors distribute a 3 per cent. dividend, seeing no objection to this course, "considering the amounts written off for depreciation in 1900 and 1901." The payment will require 17,250 fl., and after providing income-tax, the balance of 4,124 fl. will be written off concessions account. The company has a reserve of 76,850 fl., and a fair amount of cash, but trading account are largely adverse, due doubtless to the financing of the current crop, the chances of which are described as not unfavourable.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Cardiff.—Dividends for the half-year ended June 30:—At the rate of 4 per cent. per annum on preference shares, 4 per cent. per annum on preferred ordinary stock, 3 per cent. per annum on second preferred ordinary shares, and 3 per cent. per annum on ordinary shares.

Chicago Great Western.—Dividend on the preferred stock "A" for the six months ended June 30, at the rate of 5 per cent. per annum, payable on the 31st inst.

Cleator and Workington Junction.—Dividend at the rate of 2 per cent. per annum on the ordinary stock for the past half-year. The rate for previous half-year was 3 per cent.

Furness Railway.—Dividend on the ordinary stock for the half-year ended June 30 at the rate of 2¼ per cent. per annum, carrying forward £1,636. For the same period of 1902 the dividend was at the rate of 2 per cent. per annum, with £1,605 carried forward.

Great Northern (Ireland).—Dividend at the rate of 6¼ per cent. per annum on ordinary stock, carrying forward £40,341.

Great Western.—Dividend for the past half-year on the consolidated ordinary stock at the rate of 3¾ per cent. per annum, carrying forward £24,000. A year ago the dividend was at the rate of 3½ per cent., with £23,948 forward.

Hull, Barnsley, and West Riding Junction.—Dividend for the half-year on the 3½ per cent. preference stock, carrying forward £19,338. This compares with a balance of £13,363 carried forward at June 30, 1902.

London and North-Western.—Dividend at the rate of 5 per cent. per annum, carrying forward £80,000, as against £54,000 in the corresponding period. Dividend for same period last year was at the rate of £4¾ per cent. per annum.

Maryport and Carlisle.—Dividend at the rate of 7 per cent. per annum for the half-year ended June 30 last. The dividend for the same period last year was at the rate of 6¾ per cent. per annum.

Midland Great Western of Ireland.—Dividend at the rate of 3½ per cent. per annum on the consolidated stock, carrying forward £4,503.

North London.—Dividend on the ordinary stock at the rate of 6½ per cent. per annum, carrying forward £2,962, against £2,018 in the corresponding period of the previous year, when dividend was at the same rate.

Rhondda and Swansea Bay.—Dividend upon the preference capital for the half-year at the rate of 5 per cent. per annum, carrying forward £550.

BREWERIES.

Arthur Guinness, Son, and Co.—Final dividend of 8 per cent., and a bonus of 4 per cent. on the ordinary stock for the year ended June 30, making, with the interim dividend of 8 per cent. paid in March last, a total dividend for the year of 16 per cent., and a bonus of 4 per cent. £210,000 has been placed to reserve, £35,000 to depreciation fund, and £69,982 forward.

Bent's.—Interim dividend on the ordinary shares for the half-year ended June 30 last at the rate of 9 per cent. per annum.

Smith, Garrett and Co.—Dividend of 7½ per cent. on the ordinary share capital, making, with the interim dividend paid in February last, 10 per cent. for the year, and in addition a bonus of a per cent., placing £5,000 to reserve, carrying forward £11,099.

Southdown and East Grinstead.—Interim dividend for the half-year ended June 30 on the ordinary shares at the rate of 10 per cent. per annum, payable on September 1.

William McEwan.—Dividend of 10 per cent. on the ordinary shares, carrying forward £40,246.

MINES.

Ashanti Goldfields.—Dividend of 5s. per share.

Cosmopolitan Proprietary.—Interim dividend of 1s. per share.

MISCELLANEOUS.

A. Darracq.—Interim dividend of 1s. each on the ordinary shares.

A. W. Gamage.—Interim dividend at 5 per cent. per annum on the ordinary shares.

Adamant Company.—Final dividend of 8s. per share, making 12s. for the year (or 7½ per cent.).

Baker Wardell.—Ad Interim dividend for the half-year ended June 30 of 8 per cent. per annum on the ordinary shares.

Bank of British North America.—Interim dividend of 30s. per share for the half-year ended June 30 last, being at the rate of 6 per cent. per annum, carrying forward £5,400.

Birmingham Railway Carriage and Wagon.—Interim dividend of 7½ per cent. per annum on the ordinary shares for the half-year ended June 30.

Brentford Gas.—Dividend at the rate of 12 per cent. per annum on the consolidated stock and at the rate of 9 per cent. per annum on the new stock, 1881.

Brompton and Kensington Electricity Supply.—Interim dividends for the half-year to June 30 on the ordinary shares at the rate of 9 per cent. per annum, and on the preference shares at the rate of 7 per cent. per annum.

Charing Cross and Strand Electricity Supply.—Interim dividend at the rate of 8 per cent. per annum for the half-year ended June 30, 1903.

Crowe, Wilson, and Co.—Dividend of 6 per cent. per annum.

D. Davis and Sons.—Dividend at the rate of 10 per cent. per annum upon the ordinary shares for the half-year ended June 30.

Grantham Gas.—Dividend at the rate of 5 per cent.

Grantham Waterworks.—Dividend at the rate of 10 per cent., carrying forward £6,787.

Hannans Land.—A fifth interim dividend for 1903 of 1 per cent. (making 5 per cent. for the year), payable 13th inst.

International Coal.—Dividend of 10 per cent. for the year, carrying forward £7,109.

James H. Webb and Co.—Dividend of 6¼ per cent. per annum.

John Wright and Eagle Range.—An interim dividend of 1s. 6d. on the ordinary shares.

Joseph Travers and Sons.—Interim dividend on the ordinary shares at the rate of 5 per cent. per annum (or 6d. per share), for the half-year ended July 31.

Leopold Schwabacher.—Interim dividend for the year ended June 19 on the ordinary shares at 12½ per cent. per annum, carrying forward £1,123.

London and Middlesex Freehold Estates.—Interim dividend of 2s. 6d. per share, for the half-year ended June 30, payable on September 1.

Mazawattee Tea.—Interim dividend for the half-year ended June 21 on the preference shares at the rate of 5 per cent. per annum, and on the ordinary shares at the rate of 8 per cent. per annum.

Mercantile Steamship.—An interim dividend at the rate of 5 per cent. per annum.

North Central Wagon.—Dividend at 10 per cent. per annum, in addition to a bonus at 3 per cent. per annum.

Paquin.—Interim dividend on the ordinary shares at the rate of 6 per cent. per annum for the half-year ended June 30 last.

Pawsons and Leafs.—Interim dividend for the half-year ended July 31 at the rate of 5 per cent. per annum.

Read Brothers.—An interim dividend for four months ended June 30, at the rate of 8 per cent. on the ordinary shares, payable on September 1.

South Staffordshire Waterworks.—Dividend for the half-year ended June 30 on ordinary stock at the rate of £6 10s. per cent. per annum, carrying forward £4,824.

Spencer, Turner, and Boldero.—Interim dividend at the rate of 5 per cent. per annum on the ordinary shares, for the six months ended July 15.

Stock Conversion and Investment Trust.—Dividend announced by the North-Eastern Railway Company for the two half-years ended June 30, 1903, will, after payment of the dividend on the 3 per cent. first charge preferred stock (North-Eastern Consols), permit of a payment to the deferred charge stock (North-Eastern Consols) for the year ended June 30, of £1 per cent., which compares with 12s. 6d. per cent. last year.

Tredegar Dry Dock.—Interim dividend for the half-year ended June 30 at the rate of 4 per cent. per annum.

United States Trust and Guarantee.—Interim dividend on the preferred stock at the rate of 5 per cent. per annum, for the six months ended June 30, payable on September 15.

V. Benoist.—Dividend on the ordinary shares of 10 per cent.

Waller and Sons.—Dividend of 7 per cent. on both preference and ordinary shares for the year.

INDIAN GOLD MINES.

The return for July is the highest yet recorded in one month from the Colar goldfield, at a total of 50,571 oz., showing an increase over the preceding month of 1,591 oz. This seems a big jump, but it is explained by the fact that it includes 1,221 oz. from the Champion Reef plates, so the improvement is really of the gradual and normal character of previous months. Compared with the corresponding month of last year, the increase is 6,724 oz. Looking at the individual returns, it will be seen that the Champion Reef actually crushed less; that the Ooregum, although it milled more, had a lower aggregate return, so that the Champion Reef's plate yield is practically responsible for the increase, with the Mysore's 100 oz. more, and the Nundydroog's good figures.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended June 26, $10,950; increase, $536. Aggregate from January 1, $320,871; increase, $16,312.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended June 20, Rs. 30,721; increase, Rs. 2,485. Aggregate from January 1, Rs. 7,74,942; increase, Rs. 25,132.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended June 20, Rs. 8,794; increase, Rs. 3,569. Aggregate from July 1, Rs. 2,03,989; increase, Rs. 24,863.

Bengal Central Railway.—Traffic receipts for week ending July 11, Rs. 31,903; decrease, Rs. 2,119. Aggregate from July 1, Rs. 31,903; decrease, Rs. 2,119.

Canadian Northern Railway.—Traffic receipts for week ended July 31, $80,900; increase, $31,200. Total, from January 1, $254,800; increase, $122,500.

Lucknow Bareilly Railway.—Traffic receipts for week ended June 30, Rs. 63,575; increase, Rs. 845. Aggregate from January 1, Rs. 8,23,598; increase, Rs. 32,654.

Quebec Central Railway.—Traffic receipts for the 4th week of July, $29,739; increase, $145. Aggregate from January 1, $389,266; increase, $23,653.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended June 27, Rs. 17,748; decrease, Rs. 2,429. Aggregate from January 1, Rs. 2,81,346; increase, Rs. 2,265.

Salvador Railway.—Traffic receipts for week ended August 1, $9,750; increase, $2,750.

Uruguay Northern.—Traffic receipts for May, £1,912; increase, £299. Aggregate for 11 months, £17,559, increase, £4,214.

White Pass and Yukon Railway.—Traffic receipts for the week ended June 31 amounted to $68,008.

English.

Cleator and Workington.—Gross receipts for the week ending August 1, £931; decrease, £72. Total receipts from July 1, £4,772; decrease, £428.

Cockermouth and Keswick Railway.—Receipts for week ending August 1, £1,135; decrease, £151. Aggregate from July 1, £5,324; decrease, £488.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending July 25, £361; increase £36. Aggregate from July 1, £1,386; increase, £86.

Liverpool Overhead Railway.—Traffic receipts for week ending August 2, £1,728; increase, £34. Aggregate from July 1, £8,570; increase, £503.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending August 1, £542, increase £14; aggregate from July 1, £2,700, increase £87.

Belfast Street.—Traffic receipts for week ending August 1, £3,289 increase £663; aggregate from July 1, £15,229, increase £1,609.

Birmingham and Midland.—Traffic receipts for week ending July 31, £827, increase £38; aggregate from July 1, £4,141, increase £150.

Birmingham City.—Traffic receipts for week ending August 1 £5,112, increase £231; aggregate from July 1, £26,055, increase £1,256.

Blessington and Poulaphouca.—Traffic receipts for the week ending August 2, £30, decrease £5; aggregate from July 1, £115, decrease £21.

Bristol Tramways and Carriage.—Traffic receipts for week ending July 31, £5,114, increase £267; aggregate from July 1, £26,532, increase £1,483.

Burnley Corporation.—Traffic receipts for week ending August 1, £825, increase for week £145; aggregate from July 1, £4,296, increase £696.

Dublin and Blessington.—Traffic receipts for week ending August 2, £184, decrease £9; aggregate from July 1, £802, decrease £60.

Dublin and Lucan.—Traffic receipts for week ending August 2, £132, increase £4; aggregate from July 1, £674, increase £51.

Dublin United.—Traffic receipts for three days ending August 1, £5,575, increase £501; aggregate from July 1, £28,636, increase £5,777.

Edinburgh and District.—Traffic receipts for week ending August 1, £4,710, increase £175; aggregate from January 1, £134,004, increase £18,151.

Edinburgh Street.—Traffic receipts for week ending August 1 £548.

Harrow Road and Paddington.—Traffic receipts for week ending August 1, £275, decrease £9; aggregate from July 1, £1,514, increase £23.

Isle of Thanet.—Traffic receipts for week ending August 1, £1,223; decrease, £184; aggregate from July 1, £6,103, increase £133.

London General Omnibus.—Traffic receipts for week ending August 1, £23,737, decrease £571; aggregate from July 1, £133,236, increase £1,661.

London Road Car.—Traffic receipts for week ending August 1 £7,663, decrease £419; aggregate from July 1, £40,054, decrease £671.

Rossendale Valley.—Traffic receipts for week ending July 31, £179, decrease £2; aggregate from July 1, £947, increase £25.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending June 29 £5,747, increase £1,371; aggregate from January 1, £148,893, increase £31,716.

Barcelona.—Traffic receipts for week ending August 1, £2,545, decrease £194; aggregate from January 1, £69,639, decrease £1,303.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending August 1, £306, increase £200; aggregate from January 1, £8,694, increase £4,850.

Brazilian Street.—Traffic receipts for the month of March, Rs. 42,144; increase Rs. 936.

Brisbane.—Traffic receipts for the month of April, £10,309, decrease £407.

British Columbia Electric.—Traffic receipts from July 1 to June 30, £672,882, increase £95,717. Net earnings £224,347, increase £39,172.

Buenos Ayres and Belgrano.—Traffic receipts for the month of June, £12,834, increase £605.

Buenos Ayres Grand National.—Traffic receipts for week ending July 4, $42,992, increase $2,887; aggregate increase from April 1903, $1,716.

Calais.—Traffic receipts for week ending July 25, £175; decrease £11; aggregate from July 1, £916, increase £12.

Calcutta.—Traffic receipts for week ending August 1, Rs. 32,391, increase Rs. 9,196; aggregate from July 1, Rs. 161,041, increase Rs. 40,529.

Carthagena and Herrerias.—Traffic receipts for the month of July, £4,307, increase £75; aggregate to July 31, £27,254; increase £3,536.

Lombardy Road.—Traffic receipts for the month of June, £1,285, increase £39; aggregate from January 1, £7,439, increase £128.

Twin City Rapid.—Traffic receipts for the month of June $347,744, increase $37,861; aggregate from January 1, $1,918,653; increase $252,214. Net traffic receipts $178,999, increase $483; aggregate from January 1, $996,281, increase $110,202.

COMPANY MEETINGS.

LONDON AND COUNTY BANKING COMPANY.

The half-yearly meeting was held on Thursday, August 6, at the Cannon Street Hotel. Mr. John Green presided, and in moving the adoption of the report, said that the six months under review had been a fairly satisfactory period for banking business. Competition, however, had been very active, especially in the multiplication of branches in London and the country. The chief incident in a quiet half-year was the issue of the Transvaal Loan at the end of April, but, apart from that loan, there had been an unwillingness, or incapacity, on the part of the public to subscribe for new securities, and the amount issued, or attempted to be issued, during the six months under consideration was the smallest for a long period. There was a general concensus of opinion as to there being a want of public money. Bankers, Stock Exchange men, important tradesmen, and others all spoke of a lack of purchasing power on the part of the public. There was a sort of indefinable dulness, a want of spirit and enterprise, and it had lasted so long that it was difficult to account for it in any exact terms. Foreign competition and other causes had undoubtedly rendered trade less profitable during the last two or three years. Perhaps our savings were not quite so great as had been estimated, and therefore we had not been able torecover from the expense of the late war so soon as was at one time thought possible. Then the 200 to 300 millions of money locked up in South African mines was largely unremunerative at present for want of labour, while we were heavily taxed for Imperial, municipal, and local affairs. All classes appeared to work less and spend more on living and luxuries, and we had a mass of undigested securities. To some or all of these causes he thought that this general state of things was largely due, and time and good business, both within and without the Empire, were what we must look to for a cure, or at least some alleviation. The Bank of England was in a stronger position than in the corresponding period of 1902, and the monetary outlook in the City might be described as safe and satisfactory. With regard to the fiscal question, which was very germane to their deep interest as bankers in the prosperity of trade, he would say a few words, giving only his personal views. It seemed to him that, although the subject was one which from one point of view must be political, yet it was wicked, if not criminal, to attempt to make a matter of such tremendous importance to the Empire a medium for the furtherance of party politics. He could not see any good reason why we should not be allowed to make such fiscal arrangements as seemed best to us within our own Empire in the same way as was done by the United States and Germany, but it would be at once perceived that this question involved the whole economic position of our fiscal policy, and that was now before us in an acute form. There was no detailed scheme at present to consider, but he took it that the question to be put to the country was not so much protection v. free trade in the abstract as whether we could help our Colonies and bind them closer to the mother country, and advance our own trade and prosperity. If it were possible to find a common denominator between the contending parties, and so arrive at an agreed conclusion, he had the greatest faith in the latent power of the Empire to carry such conclusions into effect—a power which some people hardly realised. Our imports were upwards of 500 millions sterling a year. What a commanding position that gave to practical men of business in any negotiations with our customers. We were the largest and best buyers in the world, and sellers must largely accommodate themselves to our needs. Moreover, it would never be proposed in any way to restrict, but to increase and develop, production, and supply and demand, after all, primarily governed prices. It should not, therefore, be impossible to arrive at some definite conclusion, or perhaps compromise, which should be satisfactory to this country. Our exports did not progress in the same proportion as those of other countries. Between 1890 and 1899 the exports of the United States increased by 48 per cent. and those of Germany by 26 per cent., but those of the United Kingdom advanced by only one-third per cent. Could we not do something to improve our export trade? He thought no one could say these things were not fair subject for inquiry, and, if such a course were not a necessity it was at least expedient. He hoped to see the question considered with care and courage, not alone by politicians, however able, but by men of all shades of politics, who in their daily business were in touch with the financial and trading interests of the country. Given a dozen such men, it should be possible to arrive at some satisfactory solution of the problem without putting the country to the waste of time, energy, and money involved in a political campaign. Turning to the accounts, he pointed out that the reserve fund showed an increase of £100,000, and added that in five years and a half there had been placed to that fund, apart from liberal contributions to Consols and premises account, no less than £700,000. The customers' balances had grown by nearly £600,000, and this was probably the most satisfactory feature in the balance-sheet. Owing to the reduction of ¼ per cent. in the interest of Consols the company would lose £15,000 a year from that source. It was proposed to transfer £50,000 to the reserve fund and £25,000 to premises account, leaving a balance of £218,000, which, with the sum brought forward, gave an available amount of £305,000. The board had declared a dividend for the half-year of 10 per cent. and a bonus of 1 per cent., which would require £220,000, leaving £85,000 to be carried forward.

Mr. W. A. Jones seconded the motion, which was unanimously agreed to.

Towards the end of the meeting the secretary (Mr. J. M. Atkinson) was seized with a sudden illness, and after being attended to by Dr. Drysdale, one of the shareholders, was removed in an unconscious condition into an adjoining room. Mr. Atkinson has been in rather bad health for some time, although able to discharge his secretarial duties. It was stated that the cause of the sudden attack was apoplexy.

MASHONALAND AGENCY.

The annual general meeting of the Mashonaland Agency, Limited, was held on Thursday, August 9, at the Cannon Street Hotel, E.C., Mr. Percy Tarbutt presiding.

The Secretary read the notice convening the meeting and the auditors' report.

The Chairman said: I presume you will take the report and accounts as read. I will, as we have done on former occasions, confine myself to giving such explanations as I think you may require with regard to the balance-sheet and profit and loss account, and leave to Mr. Stokes the more technical details with regard to the mines themselves. By far the most important item in the accounts is the amount written off investments. You will see that we have thought it necessary to write off the whole of the reserve, viz., £48,325, plus an additional sum of £25,625 from the profits realised during the year. This extremely drastic measure has become necessary principally on account of the disappointment in the working of the Beatrice Mine. The mine has been worked, as you will see from the report, for a considerable period, and has produced some £77,582 worth of gold, and has yielded us a little over an ounce to the ton; and, in fact, the mine itself came up in every way to the anticipations made by the engineers before crushing was commenced; but, unfortunately, circumstances arose which not only left no profit on this working, but landed the company in debt. Those circumstances were those we are all heartily sick of, viz., the difference caused by the cattle disease in Rhodesia. That being the case, we had to face the position as regards our big holding in the company. When it shut down its mill it was about £40,000 in debt, of which amount we had advanced some £33,000. An additional £20,000 has been arranged for to carry on the further development, of which we are finding a proportion; so that, in looking at the Beatrice shares, one has to consider what is likely to be the position of the mine in the future. If all goes well, and it is refloated, are we likely to get back much more than the amount we have advanced the company by way of loan. Unless things improve very much with regard to transport, and the mine opens up to the height of our expectations, we do not think that it is wise at the present moment to put any considerable value on our shareholding in the Beatrice. We think we shall get back fully the amount we have advanced the company; but we have thought it best to write down the shares, and it represents a large item in this depreciation which we have thought it necessary to enter in the accounts. The other investments which have depreciated, and which make up this total, are our holdings in the Globe and Phœnix and the Bulawayo Markets and Offices Company. There is also a depreciation on the Rhodesia Railway debentures to a small amount, and on the Nelly and Pioneer; but the main factor is the Beatrice. The next item of any importance is the sundry creditors, £10,867, most of which has since been paid. On the other side of the balance-sheet there is the property and claims, standing in the books at £260,843; that is £23,696 less than last year, the difference being accounted for by the shares that we sold. The shares sold gave us a profit of £38,000. With regard to properties, claims, and rights, there is an increase of £2,000 since the last account, which represents the value on our books of the copper claim we have taken up in the Gwaai district. Farms, stands, and buildings are about the same as last year. In the profit and loss account there is nothing which calls for any comment except the directors' fees, which are £683. The directors' fees are fixed on a percentage of the profits realised for the year, and this year it is £683, against last year £1,200. I do not think there are any other of these items that calls for particular remark; but I shall be very pleased to answer any questions about them which may be asked. I had a letter—a very courteous one—from a shareholder, who told me that he would not be able to attend here to-day. Mr. Tarbutt next dealt with several questions contained in this letter, and with the prospects of the Wankie coalfield, which promised well. Continuing, he said it is as disappointing to us as it is to you to meet you over and over again without declaring a dividend, but I can assure you the first moment we feel justified in doing so a dividend will be paid. The depreciation of our investments which we have had to write down is another most discouraging feature, but you will see from the report that the appreciation of our holding in Wankies, Northern Copper, and Rhodesian Copper, is more than double the depreciation which we have thought it necessary to write off. You will understand, that although we are obliged in our accounts to write down shares below their cost price if the market is lower, we cannot value the shares which have gone up in price over and above what they cost us. I can only say that we hope, and have good reason to believe, that before we meet again, an improvement will be seen. The one thing that is holding back South Africa is the labour question. When the labour question is settled we shall have better markets, and be able to realise some of your investments at a good profit. I now beg to move: "That the report of the directors and the statement of accounts to December 31, 1902, be received and adopted."

Mr. H. L. Stokes seconded the motion, and in doing so referred at some length to the development work which is being carried on on the various properties in which the company are interested.

Mr. H. Wilson Fox, in reply to a shareholder, said that the position in Rhodesia to-day in respect of native labour was not unhopeful. There was a tendency on the part of the natives to remain longer at the mines. It was quite clear, however, that unless the labour question were cleared up for the Rand, it would not be cleared up for Rhodesia. It was known last week that the rail-

way was within seven miles of the Wankie coal mine, and it was now only a question of weeks when connection would be established.

The report was carried, and the proceedings terminated.

PRINCES' HALL RESTAURANT.

The seventh ordinary annual general meeting of the Princes' Hall Rastaurant, Limited, was held yesterday, at the restaurant in Piccadilly. Mr. G. M. Chamberlin presided, and apologised for the absence of the chairman of the company, the Earl of Galloway, who, he said, was detained in Scotland.

The Secretary read the formal notice, and the auditors' report was also read.

The Chairman said: I think you will agree with me that the report of the directors is a fairly satisfactory one. It is very much upon the same lines as that of last year, but there are improvements, I have no hesitation in saying, not only in the report itself, but also in the prospects of the company. The amount of net profit, after having charged everything that ought to be charged, is £4,874, and there have been, during the past year, various extraordinary expenses in connection with the reorganisation of the staff, which, in our opinion, will not recur. The directors have decided to recommend a dividend of 5 per cent. upon the capital on this occasion, and we hope that course will meet with the approval of the shareholders. I ask you to remember that not only has there been a substantial sum written off for depreciation, but also that during the past year there have been large sums spent upon the up-keep of the establishment, and those of you who are in the habit of frequenting the Princes' Restaurant will see that the money which has been expended has been laid out wisely and well. The hotel and the grillroom are also, in our estimation, in perfect working order and in a good state of repair and decoration. I have had a somewhat lengthy experience of business life, and that experience teaches me that when times are good that is the very time when one wants to be careful to keep at high-water mark. One is apt in success to get careless. I am not reflecting in any way upon anybody; but when I look back at four years ago, and see that a dividend of 12½ per cent. was paid in this establishment, I scarcely wonder that in the following year there was no dividend at all. We, however, have got back to dividend-paying times, and also—I do not want to prophesy; for we have to do with the present, and not with the future—I believe that with the present management, and with the present watchfulness in all departments, not only have we got back to paying 5 per cent. upon the capital, but I look forward with anticipation and, indeed, with almost a certainty, I will not say to our getting back to 12½ per cent., but, at any rate, to our getting into a very different position from that which we are in to-day. After expressing the opinion that the intrinsic value of the company's shares was not represented by their recent or present market price, the Chairman said, in conclusion, I may say there are future developments before us. I do not think it would be wise for me at this juncture to specify what they are likely to be; but M. Benoist and I, in conjunction, are attempting to work out a scheme which we believe will have most important results in the future. The very best of my ability, coupled with the knowledge that M. Benoist possesses of catering in the West-End of London, shall be devoted to this company's development, and all I ask of you is that you will accept the statement I am making on behalf of the board as being an honest, straightforward, practical statement of fact. If you will give us your support, I believe you will not repent it. I now beg to move the adoption of the report and balance-sheet.

M. V. Benoist seconded the motion, which was carried, after some discussion.

The retiring directors were re-elected, and a vote of thanks to the chairman and his colleagues closed the proceedings.

NEXT WEEK'S MEETINGS.

Monday, August 10.

Brecon and Merthyr Railway.—Palmerston House, 12.30 p.m.
King Prempeh Treasure Mines.—Cannon Street Hotel, 2 p.m.
Peek Brothers and Winch.—Cannon Street Hotel, 12.30 p.m.
Roumanian Oil Trust.—Winchester House, noon.

Tuesday, August 11.

Bromley Gas Consumers.—Bromley, Kent, 6 p.m.
Cleveland Gas.—Saltburn-by-Sea, 2.30 p.m.
Corn Exchange.—Seething Lane, 11 a.m.
Hull and Barnsley Railway.—Hull, noon.
J. F. Pease.—Cannon Street Hotel, 10.30 a.m.
National Boiler and General Insurance.—Manchester, noon.

Wednesday, August 12.

Capital and Counties Bank.—Cannon Street Hotel, noon.
English Sewing Cotton.—Manchester, 11.30 a.m.
North Metropolitan Trams.—Cannon Street Hotel, noon.

Thursday, August 13.

Bellingham and Co.—Winchester House, 12.30 p.m.

Friday, August 14.

Allsopp and Sons.—Cannon Street Hotel, noon.
Brazil Great Southern Railway.—Winchester House, noon.
Crystal Palace Gas.—Albion Tavern, 3 p.m.
London Road Car.—Cannon Street Hotel, noon.
South Metropolitan Gas.—Cannon Street Hotel, 2 p.m.
Union Assurance.—81, Cornhill, 1.30 p.m.
West Ham Gas.—Stratford, 4 p.m.

Prices of Mine and Mining Finance Companies' Shares.

Shares £1 each, except where otherwise stated.

The Investors' Review.

Cape Colony Finance.

A careful perusal of Sir Gordon Sprigg's budget speech, delivered on April 13 last in the Cape House of Representatives, does not altogether comfort one. He has splendid figures to play with, and made an effective contrast between the figures of the past year, and those of ten years ago in dealing with the foreign trade of the colony. The growth has undoubtedly been splendid. In 1893 textile fabrics were imported to the value of only £3,753,000, and last year the total was £7,903,000, the flower of a gradual increase year by year, the Premier said. Food, drink, stimulants, and tobacco have in the same time risen from £2,139,000 to £9,658,000, and the total imports of the colony were £34,230,500 last year, as against only £10,228,469 the year before, an increase of almost £24,000,000. This would be splendid were it solidly based, but is it possible to believe that out of these swelling aggregates of imports Cape Colony itself was able last year to retain for its own consumption £21,588,000 worth of these imports, and to pay for them out of its own means, a colony whose debt one of the speakers declared is now £47,000,000, including apparently the unexercised borrowing powers of £8,436,000, which would appear to be pledged to the banks. The exports to pay for all these imports and meet debenture interest amounted to only £15,800,000 all told, an increase of £5,666,000 on the preceding year, but of this £5,915,000 was represented by gold, mostly the product of the Transvaal and Rhodesia, and diamonds came to another £5,427,000, so that the exports of the farmers, the wool growers, and vineyard owners really came to but £4,258,000. Net imports of upwards of £21,000,000 cannot be paid for upon this basis, and the fact that such imports have been received, and presumably in the same way paid for, merely shows that the country has been temporarily enriched by the war expenditure of the British Government. It either does that or reveals an unparalleled recklessness in the use of banking credit.

It follows from this that estimates of revenue such as Sir Gordon Sprigg laid before the House are not based upon the solid prosperity of the country. The great increase in foreign trade cannot be expected to continue, and if the permanent outlay of the colony is arranged upon the tempting scale established by this altogether transitory wealth a few years, at most, will elapse before affliction comes. The revenue was naturally magnificent, and amounted to £11,767,166 in the twelve months ended June 30 last. As the expenditure was only £10,738,482 it follows that there was a gross surplus of £1,028,682, as we stated on the faith of the telegraphic summary in the middle of last month. Unfortunately this fine surplus was all absorbed, £221,000 of it going to meet further war charges, with more to follow. A further £33,451 came to the Imperial Government in payment of the board and lodging of Cape Colony refugees in the concentration camps, £252,000 was applied in part redemption of £1,000,000 worth of rolling stock bought last year, and a balance of £501,731 is to be applied to discharge a temporary loan of £600,000. Presumably a little of that loan has been liquidated already, else the sum available is not sufficient to wipe it out, but the Premier said, "We start with a clean sheet for 1903-4," and upon this clean sheet he writes down an estimated income of £11,585,233, or £1,383,471 more than the estimate of a year ago. He says he would have put the figure higher but for the new Customs Convention, by which he expects that the Customs revenue will be diminished. This Convention, it may be mentioned, with its preferential tariff nonsense, was forced through both Houses by casting votes, and in that particular is wholly objectionable to the majority of the people of Cape Colony. As it is, however, it has to be accepted, and the Customs revenue for the current year is accordingly put at only £3,450,000, or £80,000 less than that realised in the year just closed. Most of the remaining revenue comes from the railways, whose receipts are estimated at £5,620,000, and Sir Gordon Sprigg was very jubilant over the splendid paying character of these properties. But can he rely upon its continuance with fresh railways being built and projected to the east coast, with continuous demands on the part of the Rand mine owners for reduced freight charges, and, above all, in the present slack and disorganised condition of the gold mining industry on the Witwatersrand. Sir Gordon Sprigg declares that the railways last year paid all the interest on the capital expended, capital amounting to over £27,000,000, and left a handsome sum to go to the Treasury for ordinary expenditure. In an essentially poor country like Cape Colony, a non-progressive country in many senses, these splendid results must depend almost wholly upon the prosperity of the diamond and gold mining industries, and as the gold mining industry is certainly backward recent railway revenue must have come to no small extent out of capital, from money borrowed and devoted to the restoration of the devastated country, from new capital sunk in repairing the damages at mines, in buying new machinery, spent on food supplies sent up to starving Uitlanders, and so forth. It surely would have been prudent to have reckoned on some diminution of revenues arising from such sources in the current year, and also to have laid account with a probable diminution in freight and passenger charges. In other words, we do not think the railway prosperity based on any more substantial foundation than that which has started the altogether abnormal and diseased import trade. Therefore no one need be surprised should the next budget speech contain a confession of over estimates, and exhibit a deficit. The pace shown by the past year's figures cannot be maintained

under existing conditions even for another twelve months unless the Government of Cape Colony can sell a large new loan upon the London market, and that feat is not going to be easily accomplished within the budget year.

New York Financial Trust Companies.

Including Brooklyn companies there are now forty-eight of them, and we have looked with some curiosity to see what their position was on June 30 last. According to the summaries of their statistics, published by the New York *Commercial Chronicle*, their deposits have actually gone up in the half-year by nearly $30,000,000, to a total of $914,769,869. Six years ago, the same newspaper points out, the total was little more than one-third of the present figure, and of this amount of money no less than $626,694,832 is invested in what we should call contango business on the New York Exchange. They call it "loans on collateral," which sounds very nice, but that is what it means, and the increase is nearly $72,000,000 on the six months, in spite of the enormous depreciation in American Railroad and other securities, and of the violent fluctuations of the market. As recently as January 1, 1898, the total was under $231,000,000, so that it is now not far from three times the amount of five and a-half years ago. We can measure in this way the powerful stimulus to inflation which these trust companies have supplied. Most of their additional resources however obtained have gone in this direction, for their own investments do not grow very fast, and amounted only to $230,000,000 at the latest balance-sheet date.

Altogether their aggregate resources, including paid-up capital and reserves, now amount to $1,146,370,755, of which more than half is lent to the Stock Exchange to bolster markets, and all the reserves are still utterly insignificant. Cash in hand amounts to only $26,708,689. The Trusts have another $120,000,000 on deposits with bankers, but that money would be unavailable were the crisis under which New York is labouring really to come to a head. When the Bankers' Clearing House demanded that these companies should keep 5 per cent. of their liabilities in their own vaults in cash, nine companies retired from the Clearing House rather than comply with that requirement. Their names were the Union Trust, the United States Mortgage and Trust, the Continental Trust, the New York Security and Trust, the Mercantile Trust, the Metropolitan Trust, the Morton Trust, the Trust Company of America, and the Fifth Avenue Trust. One of these companies, the Union, holds quite as much cash as the Bankers' Clearing House demanded, but, apparently, preferred to remain independent, and able to reduce its till money whenever it felt inclined. Some of the largest amongst the other trusts were never members of the Clearing House, such as the Farmers' Loan and Trust, the United States Trust, the New York Life Insurance and Trust, the Central Trust, the Bowling Green Trust, the Guaranty Trust, the Merchants' Trust, the North American Trust, and the Realty Trust. Some of these have practically no cash on hand at all, but they seem to consider that they require none, since they have no active accounts. which appears strange, in view of the enormous commitments shown by their abstract balance-sheets. However, they seem quite satisfied with the state of things in New York, and our only course is to look on and wait developments. It will be a new experience in human history if losses running into many hundreds of millions can take place in Stock Exchange values without leaving a trace anywhere, that assets should continue to apparently expand in the face of rapidly declining markets, and that nothing should require to be written off at any time for depreciation. As long as paper can be given for the deficits this sort of illusion may be maintained, but when paper ceases to be available there will be another story to tell. These concerns are evidently utterly oblivious to the fact that anything has been going on in the Stock Exchange, for their undivided profits are given at $47,351,206 on June 30 last, which is barely $300,000 below the total of January 1, and actually $4,500,000 larger than a year ago.

A few at least of the company whose cash in hand is increased have on the other side of the account augmented their indebtedness on floating loans to their bankers. It is not always so, but where no additional debt of this kind has been contracted it sometimes happens that the cash in hand has not increased, and there are quite a number of companies whose figures are still unsatisfactory. For example, the Equitable, formerly the American Deposit and Loan Company of New York had only $92,000 of cash in hand at the end of June last, or $60,000 more than on December 31, 1902, while its indebtedness to depositors has risen by some $15,000,000, and its advances to the Stock Exchange, or to speculators in securities, now amount to $33,236,000, compared with $12,858,000 six months ago, and only $5,746,000 a year ago. That is a decidedly unsatisfactory position, the more so as it is to be feared much of the money is insurance funds. The Farmers' Loan and Trust Company, again, one of the largest of the group, held less than $6,000 in cash, and its liability on deposits was $46,199,000, an increase of more than $4,000,000 as against December last, but a decrease of nearly $9,000,000 compared with June 30, 1902. Its advances to the Stock Exchange amounted to $32,610,000, a very little more than the amount lent six months ago, and a decline of $5,400,000 on the balance-sheet figure of June, 1902. Another company which shows up rather badly is the Guaranty Trust, whose advances on Stock Exchange securities have risen within the six months from $17,237,000 to $29,419,000. This last figure is about $5,000,000 more than the commitments of the company twelve months ago, and one wonders where it also got the deposits with which to make these heavy additional advances at a time when securities of every description have been declining in price and markets going to pieces. Perhaps the Mutual Life Insurance Company of New York can answer this question? The company has barely $49,000 of cash in hand, as against $36,000 six months back, and is thus one of the worst of its class.

Other companies, however, make a decidedly better exhibit in some respects, and inspire confidence even when, as in the case of the Knickerbocker Trust, their advances to the Stock Exchange have gone up. That particular Trust holds $2,114,000 cash in hand, compared with $300,000 in the end of December, but in the same period its borrowings from bankers have risen by more than $500,000, to $1,238,000, and its debt to other trust companies has risen about $1,000,000. The Mercantile Trust Company, in like manner, shows an increase of almost $1,000,000 in the cash in hand, the total being $1,015,000, but its debt to bankers has gone up more than $600,000 and to trust companies nearly $4,000,000, so that the trusts would appear to be helping each other by credit manœuvres in order to sustain the current of speculation in the market. This company also shows an increased amount lent on the Stock Exchange, the total being almost $49,000,000, compared with little more than $43,000,000 on December 31. Still another powerful company is the Morton Trust, and it disregards completely the popular demands for increased amounts of cash in the till, for its holding was only $28,464 on June 30, the smallest figure of the three half-years put down for comparison. It, however, had increased its advances to the Stock Exchange by nearly $1,500,000, to $35,470,000, and its debt to trust companies has gone up $1,600,000. On the other hand, it owed its bankers $4,200,000 less at $2,041,000, and its debt to savings banks had also declined, but its liability to the public on deposits was larger by fully $10,000,000, at $45,328,000. All of this money, it should be recollected, is payable on demand. The United States Trust Company does not condescend to show cash in hand at all, but puts it with "other assets," the total of which was under $846,000 on June 30, a smaller figure than at the end of either of the two preceding half years. Its loans on collateral have advanced in the six months by upwards of $1,600,000 to $44,189,000, but this is less by $13,500,000 than the advances of twelve months back. Its deposits have increased by upwards of $2,000,000, to $57,581,000, but it owes rather less to savings banks, and only $440,000 more to trust companies. The best company of all, in some respects, is the Union Trust, whose deposits, repayable on demand, went up in the six months

by more than $4,500,000, to $51,809,000, and whose advances to the Stock Exchange also rose by quite $4,000,000, to $48,498,000. Its cash on hand, however, amounted to almost $4,020,000, say an increase of $2,000,000 in the six months. These are some of the companies good and indifferently good, but the figures as a whole seem to point to the continuance of what may be described as bolstering. There is astonishingly little appearance of reduction in the credits advanced to the speculators in stocks, in fact, the total of about $627,000,000 thus employed shows an increase of rather more than $70,000,000 on the figures of six months' back, a situation in no way comparable to the decline in the prices of securities on the Wall Street market during that period. It is therefore still a matter of absorbing interest to watch the proceedings of these finance corporations. They exist to facilitate the creation and emission of new securities of every description, and are the most potent allies the scheming financier can command. That they should in many instances be now lending more to stock markets than they did six months back, although often less than they lent a year ago may be accepted as significant evidence of strain. And a good many of them also lend heavily upon personal security. The New York Life Insurance and Trust, for example, has increased its loans under this head by upwards of $4,000,000 during the six months, to a total of $11,027,000, at the same time that its loans on Stock Exchange securities have fallen off by fully $3,200,000. Its cash in hand has dwindled by $500,000 in each of the last three balance-sheets, to only $2,000,000, but even this figure is magnificent compared to that shown by the great majority of these companies.

Economic and Financial Notes and Correspondence

The Indian Budget Debate.

Perfunctory as usual, Thursday's repetition of the belated annual performance in the House of Commons yielded at least one satisfactory bit of information. The Government has, apparently, been shamed out of its proposal to clap £400,000 per annum, or some heavier sum, as a charge on the Indian revenues on account of the "garrison" for De Beers in South Africa. Lord George Hamilton admitted that Lords Curzon and Kitchener were both opposed to this piece of contemptible meanness, and Mr. Brodrick twisted and prevaricated and fancy-sketched with considerable ingenuity to show that it was all on account of poor dear India and not War Office greed, or villany, but the end of it seemingly was that the scandalous imposition will be abandoned. In other respects, but for the speech of Sir Charles Dilke, there would have been little to relieve the chorus of optimistic idealism. Lord George Hamilton fulfilled his mission well in boasting of surpluses amid famine, and militarism rampant and ruinous was upheld on the usual plea of "enemies." The only enemies that threaten our rule in India are the Anglo-Indian bureaucrats and their soldier master. And those Indian surpluses, so much admired, are entirely the product of an artificial system of currency by which the people of India are robbed, not of a nation's enlarging wealth. The over-valued rupee, Lord George Hamilton declared, has not lowered prices in India, but rather heightened them. Could any statement be more fatuous, reveal more clearly his perfect ignorance of the whole subject. A depreciating, debased currency always raises prices of commodities in the countries afflicted therewith. The rise marks the nature, and to some degree the extent, of the robbery; and in India any, the smallest, advance in the cost of food means an extension of the hunger area among the people. That India is hunger-worn, even the most optimistic official is now and then forced to admit—"dense masses of misery" was Lord George's own description—and its agony of want must become more intense as the years pass, not only because the silver rupee is forced into circulation at a fraudulent valuation, but also because the cost of the army is at least twice as great as a country so poor ought to be called on to bear, and more than twice as great as a wise and subject-fostering administration would require.

The Secretary of State for India chortled with joy over the fact that the external exchange value of the silver rupee has been maintained at the arbitrary figure of 1s. 4d., has only varied by ½ per cent. during the past four years. A wonderful performance, certainly, but how much has the Simla Government and its railway companies borrowed here in that time? An average of more than £10,000,000 net per annum, we believe. Take away this prop for even one year, and where would the "stability" of the foreign exchanges be, Your official never allows his mind to dwell on that side of the question. To him all things are good as long as the truth can be concealed by a steady inpour of British capital. Does he imagine that this borrowing can go on for ever? Oh, no, he never thinks of it at all, his soul is swathed in routine, and what is and has been he accepts as the thing that to him will ever be. Yet, we should like him to try and guess what the silver rupee would be quoted at on the exchanges of India and in London, were our lending capacity to be for a time paralysed. "He would rather think of something else?" Yes, and Lord George Hamilton is just the man for his money, or his mumming, a man who instead of probing things, and endeavouring to ascertain to some slight extent the nature of the risks we are running, trotted out once more, for the delight of the groundlings and the soothing of all that was left of the House of Commons, Sir Edward Law's smart epitome of our "assets and liabilities" in India—direct debt of the Simla Government £224,000,000, railway obligations £94,800,000, minor obligations £5,500,000," making a total commercial indebtedness of £322,800,000." But now behold the assets: "Commercial value of railways and canals created and in working order" £264,000,000, loans to native states and corporations £37,000,000, total £301,000,000. Thus the real debt is brought down to £21,000,000, a product sublime in its effrontery. But it serves its object well enough, and keeps empty heads in the air. How much of the Simla Government's debt is "commercial?" What does India owe the railway companies beyond this parade, £250,000,000, or what? Is not the interest on almost the whole of the debt under every form remitted to London, and therefore a load unrelievable save by fresh loans. Do the officials know whether the railways are flourishing by capital or on revenue? Are the railways really flourishing on any basis? What a fume the Secretary of State would be in were he forced to give clear and thorough answers to questions like these. He is quite safe, nobody will ever ask them.

The Impotence of Parliament.

Speaker Gully, in his pedantic, conscientious way, is doing his best to assist the Government of this country in preparing the ground for a dictatorship, Joseph's or somebody else's. At no time since it became an institution guarding in some fashion the liberties of the people, has the House of Commons sunk lower than it lies to-day. Its control over the spending of the public money has fined away to vanishing point. Millions of estimates are voted as mechanically as if Parliament were like a Lamasi prayer wheel in the hands of a wound up automaton. The mass of its members pay no attention whatever to business, but use the House merely as a convenient club, a place for carrying on the money making intrigues by which it is turned into a nest of jobbery. Therefore, the permanent services can mock at the authority of the House and set it at defiance. And the more free they are the more reckless do their demands become, until the substance of the people is being devoured with a senseless prodigality that must soon bring the empire into contempt. Could anything be more pitiful than the helpless state of the Commons when confronted with this disloyal, and in great measure dishonest, protectionist agitation, carried on with fury by one of the responsible ministers of the Crown in defiance of the country's best interests, in mockery of his colleagues and with a contempt for propriety never surpassed by any public functionary during our whole history? Strafford himself was not more contemptuous of the people than Joseph Chamberlain, but the latter is in no danger of losing his head; he is much more likely to triumph by help of the mob ignorance and the passions of

pride and revenge which he excites and plays upon and utilises for his own ends. The only thing that is successful in this House of Commons is jobbery. If a great "steal" is to be effected at the cost of the people, its zeal knows no restraint. It has handed over the educational rates to the control of a sect; it has distributed doles to the landlord class with a free handedness the richest nation cannot long endure. To the Irish landlords above all it has been generous with a gift of £12,000,000, to be raised on the public credit, and of probably twice £12,000,000 to be extracted from the Irish tenantry. It has endowed the Cunard Company as no shipping company has ever been endowed before, and it will doubtless re-endow the Peninsular and Oriental Company when the times comes to renew the Eastern and Australasian mail contracts. There is nothing it will not do in the way of distributing taxpayers' money to its friends, and all the while its impotence for good becomes more obvious to the sullen multitude. The present administration is a byword of feebleness and inefficiency; the Prime Minister an object of contempt and derision to his own followers. They dare not make up their minds, these ministers, and have not even the courage to put down a rebellious colleague. They are only courageous when the nation is to be preyed upon, and then their dogged resolution is unmatchable. Parliament now goes to its holiday. Already many of its members have rushed off to slaughter birds on the moors or to follow their pleasures all over Europe, and the nation does not care, is rather thankful that the daily flow of talk is at an end. A sense of hollowness, of utter insincerity pervades the atmosphere of the House. Even its free traders cannot tackle the subject from the vital point of view, and are most careful to hide or slur over the South African war and its consequences, out of which the present hubbub of blind reaction and industrial unrest has arisen. They give us fine and full statistics emphasising the excellencies of free trade, illustrative of the dangers and risks the country runs in departing from its established usage, and all the while the army and the navy shout "give us more millions," until protectionism under the impetus of their demands becomes inevitable. Where is the party of true economy, of peace and goodwill among nations, of honour and honesty in trade, of retrenchment and enlightened liberty, of respect for the rights of one's neighbour? Not in the House of Commons.

Macedonia.

What do we care about the troubles in South-Eastern Europe, the ravagings, butcherings, assassinations, and general fiendishness? Much perhaps, perhaps little. Some amongst us surely do care deeply, for the sentiment of humanity is not dead in England by any means, although overlaid by the spirit of greed and selfishness, by the vanity of people whose heads are giddy with the fumes of sham imperialism, brutal as all imperialism of that description always is. But so far as the nation at large is concerned the despairing struggle of the remaining European subjects of the Sultan, and the recrudescence of efforts to be free on the part of the smitten and ravaged Armenians, the uprisings all over Macedonia and its borders, are treated with the utmost indifference. No wonder, for we are perfectly helpless to intervene. For all we can do or say to the contrary, Russia may sweep the Sultan off his throne to-morrow, and clean out the Augean stable of Constantinople without our lifting a finger, indeed our ministers expressly assign the duty of replacing chaos, massacre, and every conceivable infamy of the human beast let loose in South-Eastern Europe by order and peace to Russia and Austria. Should they come to blows over the job, it is to be presumed that our ministers will rub their hands and chuckle, rejoicing that two of the Powers against whose expansion the nation has so long nourished feelings of jealousy, are suffering for their humanity. It is a pitiable spectacle, and the new imperialism has indeed reduced us to impotence. We are no longer able to intervene for the salvation of downtrodden people goaded to madness and desperate, or for some abatement of their agony. Abdul Hamed can snap his fingers at us and mock us. Our fleet is so desperately costly in time of peace, that we cannot afford to send it even to demonstrate at the mouth of the Dardanelles, still less to threaten the Sultan with deposition unless he fulfils the stipulations of the Treaty of Berlin, and grants a measure of liberty to the people ground down to the dust and in utter despair through his monstrous misgovernment. There is nothing sadder in all current history than the impotence of England face to face with what is perhaps the final agony of the Turkish Empire. Totally unable are we to bar the advance of the Russians. They can seize Constantinople whenever it seems to them good without our being able to even obtain a saving clause giving us the right to free entry into the Black Sea. No longer do the Bulgarians, Macedonians, and Servians turn to us for sympathy and help. They know from painful experience that England is the enemy of their liberties and the friend of the ravaging Turk. Or they know that we dare not help even if we would. So one more drama of blood and crime seems about to open in lands all too familiar with such, lands Western Powers have too often already left to their fate.

Seddonic Generosity.

The great man of New Zealand does not mean to allow us to suffer, not if he can help it, worthy soul. He is going to deal with the question of preferential tariffs on grounds of patriotism and love of his country, not with the object of gain, and in order to show that love he proposes to impose a "substantial" duty on certain articles of foreign manufacture, leaving it to the mother country to respond if she thinks fit. For he is sure the poor old country is losing ground, pouring out 150,000,000 of sovereigns, all duly labelled up in bags, every year in order to pay for her excess imports. The good, kind man. What he really can do though looks a little difficult to discover. We have the trade of the colony in detail for 1901, a year of great war engendered prosperity, and do not find many articles in the duty paying list of imports higher exactions upon which as against foreign producers would do very much to restore the lost prosperity here and prevent those phantom sovereigns visible to Seddon from vanishing altogether. Take a few examples of articles on which the duty is 20 to 25 per cent. *ad valorem*. Amongst those bearing the lower of these duties are clothes and other brushes, of which in the year named £4,188 worth was imported from the United Kingdom, and £24 worth from the United States, £606 worth from Germany and £145 worth from France. Other brushes, the duty on which is 25 per cent. *ad valorem*, were received to the value of £4,808 from the United Kingdom, while £258 worth came into the colony from Germany, £117 worth from Belgium, and £780 worth from the United States. Carpeting of various descriptions forms another class of imports bearing a 20 per cent. *ad valorem* duty, and as against £37,575 worth received from the United Kingdom in 1901, £456 worth came from the United States, £32 from Germany, and £30 from Belgium. China, porcelain and parianwares again were bought by New Zealand to the value of £18,822, and the United States sent £12 worth. Germany, however, sent £3,453 worth, and Japan £485 worth.

The Yankee did much better in clocks, beating us hollow with an export of £9.950 worth to New Zealand, compared with only £3,905 from the United Kingdom, so perhaps Mr. Seddon will put the duty on United States clocks up to 30 or 40 per cent. for our benefit. Germany sent £31 worth and the United States £88 worth of confectionery to New Zealand in 1901, compared with £7,437 from here. As the duty in this instance is 3d. lb., perhaps Mr. Seddon will raise it against these countries to 6d., and then count his gains. Cotton piece goods form another class subject to 20 per cent. *ad valorem*, at least the bulk of them do, and no less than £153 worth of these articles were received from the United States in 1901, besides £908 worth from Germany, £817 worth from Belgium, and £364 worth from France. The United Kingdom sent £117,664 worth, so that there is an awful symptom of British decadence at that point. The bulk of the cutlery imported by the colony is also British, £25,886 worth out of a total of £26,745, but the United States sent £357 worth, Germany £266 worth, and Bel-

gium £7 worth; evidently it is time to interfere. Actually, too, the Union sent £1,400 worth of drapery goods, and Germany £2,397 worth, Belgium £122 worth, Switzerland £100 worth, France £125 worth, and Holland £86 worth, against £271,328 worth from the United Kingdom. Is it not horrible the way our colonial trade is being swept up by those unscrupulous foreigners? The Yankees did better still in machinery, and Japan appears to be creeping in here and there, so that it is quite right for the Premier of New Zealand to give that ambitious ally of ours "a black eye" if he can, speaking in a trade sense, of course, and in language the Rt. Hon. Richard can comprehend. In hardware, too, the United States is competing, having sent about £41,000 into the colony against £194,000 from England, and the Yankees do a great business, the population of the colony considered, in killing weapons of various kinds, cartridges, and so on, some of which, however, are admitted free. Perhaps Mr. Seddon will put duties on a number of articles now in the free list, such as iron and steel of all kinds, surgical and dental instruments, musical instruments and scientific instruments. Were foreigners to pay 20 to 50 per cent. *ad valorem* or anything of that kind, the "wealth" ensuing would surely be tremendous, for actually the United States sent a little more than £200 worth of scientific instruments to the colony in 1901 as against £2,312 worth from the United Kingdom, and in surgical and dental instruments the United States run us neck and neck. Here, consequently, there is room for a great display of patriotism, and something might be done, too, in jams and jellies, the duty on which is the modest one of 2d. per lb., for Hong Kong sent £2,481 worth of that class of commodity to the colony in 1901, as against £4,236 worth from the United Kingdom. But is Hong Kong a foreign country? We cannot say, Richard may know. France, though, sent £19 worth of these commodities, and the United States £16 worth, so there is room for doubling the duty against some foreigners with tremendous effect, and the United States ought surely to be struck at with duties on machinery now admitted free, for they are actually sending more agricultural machines to the colony than we do, the sales in 1901 having been about £45,000, as against less than £19,000 sent from here. This is too bad, especially as the machines are better and mostly paid for with money borrowed from us, and Mr. Seddon will doubtless see to it. We might fill pages more with similar examples all of a more or less—especially less—striking or comical description, but this must suffice for the present, and help to reveal to the oppressed industrials of this country the mighty deeds of liberality Seddon the Great has it in his power to perform for their good. And then surely we will take his next loan.

The Post Office Savings Bank.

It goes from bad to worse, and nobody pays the slightest attention, least of all the Government. A year ago we pointed out that the deficiency shown by the balance-sheet of this Government institution exceeded £5,148,000, and the balance-sheet for the year 1902, which has just made its appearance in the annual report of the Postmaster-General, shows that this deficiency has increased by £797,000, to a total of £5,945,000. That figure, however, was attained by taking Consols at the price of 93, and if the price had been taken at to-day's figure the deficiency would have amounted to more than £7,000,000 on Consols alone, of which the Bank holds £62,652,000. But its other investments have also declined somewhat; consequently, we might reckon the deficiency were the balance struck now at something like £8,000,000. Will this ever be made good? Not, it is to be feared, in our time, but we may be perfectly certain that it will be ignored as long as possible. Nothing but a run on the Bank of a serious description will compel the National Debt Commissioners and the Post Office Savings Bank department to look at their position. Then they will doubtless run to Parliament to get an indemnity act passed, and a new creation of stock or annuities carried through to meet the deficit. The patient, stupid taxpayer's back is broad. Other figures in the report are not particularly calculated to excite joviality of mind. As usual the Bank carries on a huge business without any reserve whatever. The only cash it has is, apparently, £47,536, exclusive of £29,562 in the hands of the National Debt Commissioners, presumably for investment purposes, yet the overturn is enormous, and withdrawals per transaction largely exceed the amount of the individual deposits. Last year the increase in the total liabilities of the Bank to depositors was £4,212,172, which would look rather an encouraging figure were it not that £3,390,969 of it is represented by interest credited to depositors, so that the net increase in the Bank's liabilities arising from augmented deposits was just £821,203. The real expansion, however, was somewhat larger than this, because a good deal of the money owned by depositors is annually withdrawn for investment in Consols, but the net increase under this latter head is much less than it was in recent years. In 1898, for example, the number of investments made was 20,162, and the number of sales 12,567, but in 1902, while the investments had risen in number to 40,893, the sales or withdrawals of capital had risen to 17,221, a great leap of 3,647 compared with the previous year. In fact, last year, while £2,694,447 was put into Consols, at an average price of 94⅜, £1,054,193 was withdrawn on the same basis. However, at the end of the year there were 118,696 Post Office stockholders, owning £14,285,617 in stock at their credit, or an increase of 9,187 in number and £1,499,427 in amount compared with a year ago, so that in fairness we must add this sum to the net increase in deposits, which would give the total expansion for the year at about £2,322,000. The Postmaster-General says that there was a profit on last year's business amounting to £29,809, and we hope this is so, but should like to have fuller particulars, since it is difficult to see how the margin between interest received and interest paid could yield any such sum as £556,000 by way of net revenue. Working expenses took £526,007, and showed an increase in the average cost per transaction, which was 5.93d., compared with 5.84d. in 1901, and the interest on Consols has now gone down to 2½ per cent., so that the outlook for the solvency of the Bank is sensibly worse than ever it was.

A Year's Postal Work.

The reports issued by successive heads of the great Postal Department of the United Kingdom do not differ materially in essential facts, but some are more interesting than others, and we take pleasure in saying that the statement for the year to March 31 last, submitted by the latest occupant of the office of Postmaster-General, Mr. Austen Chamberlain, is not less so than any of its predecessors. It is too early yet to pass judgment upon his administration, but since he replaced the not very popular Lord Londonderry, the present Postmaster, without doing anything heroic, has given evidence that he appreciates the importance of the task entrusted to him, and has already initiated one or two reforms which should meet with public appreciation. That the work of the department continues to grow need hardly be said. As near as may be the number of letters delivered in the United Kingdom in the twelve months was 2,579,500,000, a figure that almost takes away the breath, the increase compared with the previous year being 5.2 per cent. Then postcards advanced 9.9 per cent. to 488,900,000 a growth due largely to the picture postcard craze which has seized a goodly proportion of the hitherto intelligent public, book packets and circulars reached a total of 809,800,000, or 5.7 per cent. more, and newspapers and parcels increased 3.3 per cent. and 4.3 per cent. to 175,400,000 and 90,300,000 respectively. The express delivery service continues to find increasing favour, but we are not surprised that a protest should be forthcoming against the carelessness of the public in addressing correspondence. Something like twenty-five and a half millions of letters, etc., could not be delivered owing to insufficient, incorrect, or complete absence of address. It was impossible to return over a million of these, an advance of more than 20 per cent., due partly, however, to the destruction of a large number of letters containing lottery circulars. Nor was the carelessness confined to unimportant communications, for almost 324,500 registered letters, and letters containing property, were sent to the returned letter offices as undeliverable. They contained

£18,862 in coin and bank notes and £714,200 in bills, cheques, money and postal orders and stamps, money which the senders almost deserved to lose.

Regarding the Home Mail services the Great Western Company met with a rebuff at the hands of the Railway Commissioners in connection with its demand for a largely increased payment, but the company has given notice of appeal. An improvement has been effected in the night mail service between the north-eastern and the western districts of England. Motor vans of various kinds have been used experimentally for the conveyance of mails in different parts of the country, but the Postmaster-General doubts whether a thoroughly reliable motor vehicle suitable for post office work has yet been found. As to foreign and colonial post a new agreement with the Cunard Company is under consideration, and an inter-departmental committee has been appointed to consider the future conditions of the Eastern and Australian mail service, notice having been given to terminate on January 31, 1905, the contracts of the P. and O. and the Orient Steam Companies. We are interested to observe that the Somaliland Protectorate is now within the postal union. The extension of the postal order system was not carried out during the period under review, but nevertheless, 93,268,000 orders, representing £32,900,000 were issued. This means an increase of 2.4 per cent. in number and a decrease of 0.2 per cent. in amount. The number of telegrams sent over the Post Office wires during the year was 92,471,000, an increase of 2.3 per cent., and we are told that great progress has been made with the development of the Post Office telephone system in London. But the Government surrender to the National Telephone Company has made it certain that little good will arise from that. The question of wireless telegraphy naturally finds a place in the report, and only the prejudiced would deny that the attitude adopted towards the Marconi Company is exemplary and correct. A wire from Poldhu to Falmouth has been provided on the usual terms, but naturally certain conditions must be imposed to safeguard public and national interests, and it is clear that before the Post Office can act as agent for the company, it must satisfy the Postmaster-General that it is in a position to carry on its business and transmit messages from one side of the Atlantic to the other. Until satisfaction on these points can be given there is no justification for accepting messages and collecting charges from the public for a service which the company might not be—certainly is not yet—in a position to perform efficiently. Postal revenue for the year was £15,004,938, or an increase of £539,068, against an expenditure of £10,818,066, which was £352,965 more, so net profit expands £186,103 to £4,186,872, a sum which, were we a thrifty people, would afford scope for many improvements, including the abolition of sweating in the service.

Our Foreign Trade in July.

At first sight the figures are all right. We imported £45,653,320 worth of commodities from abroad, being £1,566,360 more than in July, 1902, an increase of 3½ per cent. Exports of British and Irish produce at £25,875,545 were down £153,625, or 0.6 per cent., but that is not a serious change. Then re-exports of foreign and colonial merchandise were down £369,011, to a total of £5,665,518, a decrease of over 6½ per cent., but that also may be merely a temporary dip. What, however, does look a little serious is the fact that all the increase in imports comes from cereals. We imported £2,061,101 more of grain and flour in July last than in the same month of 1902, and other articles of food and drink were likewise imported in larger quantities or values, so that altogether, and after deducting a decrease of about £231,000 in the value of tobacco imported, this class of imports increased by £2,751,650. It follows that raw materials fell off £817,000, and wholly or partially manufactured articles £273,000. The explanation, however, of the great increase in the food imports lies simply in the fact that grain merchants waited until the corn duty was taken off, and then hurried in supplies, so that the July expansion is merely one consequence of tinkering with tariffs. As to these food supplies, it is interesting to note that the larger numbers of cattle and sheep imported were due to consignments from Canada. We also received more beef from the United States and Argentina and less from New Zealand, and none at all from Australia. The same remark applies to mutton, for the supply of which we are becoming increasingly dependent upon the Argentine Republic and New Zealand. Australia, as a consequence of the devastation of its flocks by the prolonged absence of rain, is for the time nearly out of the running.

Our export trade was sustained, as usual, by the enlarged demands of our despised foreign customers, as distinct from colonial. We sent out more coal, cotton piece goods, jute yarn and piece goods, soda compounds, woollen and worsted yarns, and woollen and worsted fabrics last month than in the same month of 1902, and, on the whole, got satisfactory prices for the exports. The linen trade, however, was worse, showing decreases in quantity both of yarn and piece goods, and the price received for the yarn was inferior. For piece goods, however, it was rather good, as things go. Prices were also improved for woollen fabrics and for woollen and worsted yarns, but not for worsted tissues. The exports of machinery, it is always well to note, continue satisfactory, and foreign competition has not yet destroyed our markets in any important quarter for cutlery and hardware, locomotive, agricultural and other steam engines, or for mining and textile machinery of all descriptions. Last month we sent £65,858 worth of textile machinery to the East Indies and £43,503 worth to the United States, as against £403 to Australia and £1,581 to British South Africa. European countries took altogether £278,000 in the month, and of

* The values of the Exports represent the cost and the charges of delivering the goods on board the ship, and are known as the "free on board" values

† Not included under following heads.

our total exports for the seven months, amounting to £2,587,614, only £9,357 went to Australia and £7,129 to South Africa. Our South African trade is here and there beginning to show indications of decline, and these indications are certain to be intensified as time goes on, and as the borrowed moneys and wasted war moneys get exhausted. The United States is still buying pig iron pretty freely, but the exports of last month were only 19,484 tons, against 59,442 in July last year. On the other hand, our imports of pig iron from all parts of the world fell off by nearly 17,000 tons, to little more than 10,000 in the month just passed. There was also a decrease last month in the tonnage of new ships built for foreign customers, but the value was somewhat higher. Nevertheless this year to date there is a decrease of over £700,000 in the value of this important class of British manufactures. Take the returns as a whole, however, they are not unsatisfactory, especially in view of the terribly oppressed state of the country through the operation of those disastrous foreign tariffs, *vide* the wails and blubberings of the degenerates.

Visible Balance of Trade.

Australasian Borrowings.

Through several channels we gather that our colonial friends are under a misapprehension as to the attitude of the London market towards their loans. A debate took place in the New Zealand Parliament soon after its recent opening, in which Opposition speakers, headed by that able and competent critic of Seddonian finance, Mr. John Duthie, dwelt upon the changed temper of the London market towards the loans of New Zealand, and the other day we read in the *Financial Times* a letter from its Melbourne correspondent, in which he mentions the unfavourable attitude of the London market towards colonial loans; and on this theory the advice is based that borrowing should be restricted, and the necessary loan money obtained from "local funds" until a better temper came over London. We are glad to see economy urged on any ground, but it is quite a mistake to suppose that the temper of the London moneylender has in any appreciable degree changed. It is the condition of his purse that has changed, not the attitude of what he calls his mind. We are no longer able to afford to lend money to the colonies, whether on easy terms or hard. If people would only bethink themselves that since we entered upon that South African adventure at the order of the De Beers gang, now nearly four years ago, we have lost at least one thousand million pounds in hard cash and shrivelled-up credit, they will begin to understand why it is that the Consol market has struck against the underwriting of any more loans, whether colonial or domestic, and why the most tempting offers from colonial governments meet with little or no response. The probability is that the real loss of the community much exceeds £1,000,000,000 within that time, for not only is there the direct money and labour loss of nearly one-third that amount through the war, but the appalling loss arising through the depreciation in the price of existing securities, through the stoppage of the gold revenue from the Transvaal mines, and through the disorganisation of credit in many directions. And we are not yet at the end of these losses, not by a long way. We should probably have had a crisis of an empire-devastating description before now, but for the fact that we had before the war broke out parted with some hundreds of millions of our foreign, especially of our United States, investments, but the gangrene eats into our credit system now, and there is no health in the body economic. It grows more diseased every week that passes, and one of these days some part of the credit shroud, now hiding dead carcases, enterprises played out, spent or sucked dry, will rend. When that takes place there will be an end for many a year of colonial borrowing in London on any terms.

Meantime, the Australasian group did pretty well last six months, if we may trust the figures put forward by the *Financial Times* correspondent. They raised £3,837,000 locally and £3,850,000 in London, or about £7,700,000 in all, in the first half of the current year. New South Wales was the biggest of the borrowers, getting as much as £2,600,000 here, or at least becoming liable for that amount through sales of Treasury bills, at a price which meant interest of 4¼ to 4⅜ per cent., to be paid by the borrower. The whole of this money, however, was not new, but only £1,600,000 of it, and the same authority calculates that the net new borrowings of the half-year did not much exceed £4,000,000 all round. We should think this an under estimate, but be that as it may, the colonies cannot go on paying the interest upon their already destructive public obligations out of their own means, or with the help of snippets like these and if they cannot freely borrow here they are going to default, either wholly or partially. We have long believed that they will not merely default but repudiate, and give us a fine practical illustration of their imperial patriotism which will upset a good many equanimities and some few credit institutions in the old country. But our market is not afraid of that kind of thing. It absolutely refuses to believe in the possibility of any such consummation. Speaking of them as a mass, there is no more ignorant body of men in the world than the average loan and money jobbers of the London market. They never seem to weigh anything, or judge a proposition on its merits, and seem often wholly incapable of understanding plain facts when put before them. Some are fair judges of horses, others good shots on the grouse moors, other expert with the fishing rod or on the golf links, or as cricketers or pedestrians, but comprehension of finance does not seem to lie within their province. The only question they ever ask is, "can we make a profit out of this issue?" and if they think they can it is forthwith subscribed. Our underwriting gentlemen would not have pursued their industry to anything like the extent they have done, in war time and after, had they been capable of weighing the facts contributing to an accurate judgment upon the undertakings put before them. The colonists, therefore, need have no fear on the score of the sentiments of the London market; only a select few there really understand how things are going, and systematically avoid any commitments in colonial debts or colonial affairs of any description. The vain, heedless mass would undertake to lend £10,000,000 to Australia to-morrow if it thought the public would take the obligations off its hands at a good profit. But we are poor, hampered on all hands by our domestic debts, and by the mountains of unlendable and depreciated securities that we have to hold, whether we are solvent or not; so there is no "market" for any kind of loan. We shall grill away under our misery until the solution of credit continuity takes place, and then many people will become desperately wise after the event, believers in colonial "loyalty" and "honesty" among the number. There is no such thing as mob "honesty," never was

Iron Production in the United States.

It continues tremendous. Mr. Swank's figures show an output of 9,707,367 tons in the first half of the current year, or nearly 1,000,000 more than in the first half of last year, and almost 700,000 tons more than in the second half. This total, we are proudly told, is more than the entire production of Great Britain and Germany together for the whole calendar year 1902, and not only is this iron produced, but it is consumed, so that stocks have increased very little during the past six months, less than 70,000 tons, in fact, to a total of 126,301 tons. As the heavy imports of iron and steel from the United Kingdom and Germany indicate the domestic output has not been sufficient during the past two years to meet the domestic consumption, and what we perpetually wonder at is how all

this prodigious quantity of metal is paid for, especially at the "pool" prices exacted from the consumer. There was a break, apparently, a little while ago in some of these prices, and a rupture in the "pool," but last week the billet "pool" was revived by the leading companies controlling fully 90 per cent. of the open hearth and Bessemer steel produced in the United States. These producers decided to fix the price of steel billets at $27 a ton, and we gather from some telegraphic summaries with reference to a book of disclosures relating to the Carnegie monster that it is, or recently was, possible to produce these billets at $12 per ton. No wonder the Steel Corporation thought it was going to beat the world in fortune making when it started on its flaming career. One explanation of the urgent necessity so many of the railroad companies are now under of raising money, at no matter what cost, is probably found in this portentous consumption of iron and steel bought at altogether dishonest prices, and we fear paid for in many instances by dishonest financial expedients. However, it may take a year or two yet to bring all that is now dark into the light of day, and meanwhile we must congratulate the American iron producers on their tremendous energy. It need excite neither envy nor fear in the minds of ironmasters here, because they generally ask cash, or something readily convertible into cash, for what they sell.

Readjusting the Credit Props.

The changes on Wall Street are quite kaleidoscopic. But a few weeks ago its votaries were looking forward to an export of gold to Europe in the autumn, and now they are talking of imports and fine markets with the hope of salvation through gold from Europe. How is this sudden change to be explained? It seems simple enough. The railroad corporations who have been tumbling over each other in the loan market in order to obtain on loan large sums of money to go on with, have succeeded through the finance houses in raising considerable portions of that money here and on the Continent. The Pennsylvania Railroad we knew all along had drawn an unascertained number of millions sterling out of us in the form of subscriptions for their new shares, and their short term obligations, but other railways have followed suit, with the result that there is now a temporary indebtedness on the part of London, and perhaps of Berlin and Paris, to the United States, the effect of which might be to enable the Union to draw gold from this side, especially when the handing over of the millions borrowed in Europe coincides with the beginning of autumn shipments of food and other raw produce from the Union to Europe. Thus is the burden skilfully shifted, and the breaking strain on United States market credit relieved, but is the position essentially better either on Wall Street or here? We hardly think so, for all markets, even the Paris market, are carrying as much dead weight of financial obligations and paper capital as they can stand up under. The immediate effect, consequently, of shipments of gold from this side to the United States would be to throw the centre of disturbance over upon us. Our markets would become agitated and terrified with visions of failures such as those of the United States have for many months been shuddering over. We might even see a rush to sell back again to the Union the new debts of these railroad corporations subscribed for here, and we should have an agitated money market in the autumn and early winter with high rates of interest and not improbably some serious failures.

We always admire the wonderful skill with which the great geniuses now guide and invent the credit manipulations by which human affairs are swayed and human multitudes stripped, but even these great beings cannot accomplish everything, cannot provide cash for dividends, for daily outgoings, feed the millions and spend the proceeds of their labour at one and the same time, all out of nothing. Our holders of Kaffir shares have begun to discover the truth in this regard. They were proud not so very long ago to be owners of Rand Mines shares, and above all of "Chartereds," bless 'em. They are not now so proud because they cannot eat the "product" of these shares, nor borrow upon them, nor live as they once could or thought they could. Interest on dead capital has to be paid all the same though. So with the great houses, trusts, and groups in America that have been busy for years manufacturing paper which they call capital, and heaving it out upon the market in countless bales, or trying to. Every portion of that paper utilised to raise "money," or sold for "money," represents or implies obligations of some kind to be met, makes a demand upon human labour in order to satisfy the promises given, the interest exacted or the dividends paid, and although it is possible for a time by means of still further credit distillations to meet in appearance the requirements of these mountains of paper, which themselves produce nothing, and represent nothing save the bersecker's idea of plunder, it all comes back in the end to what human labour will yield or human mouths can spare. There would be no value for any security were it not for that labour. Therefore, when the resources brought into seeming existence by paper wealth, creating are exhausted, and we get back to what can be wrenched out of the working hands of industry, and find that the total of such wrenching is insufficient by a long way to make good the promises written upon the said paper, we shall have collapse, and all the while that the inevitable conclusion is staved off the masses grow poorer. Industry becomes crippled, not to say stifled, through the blighting choking action of the overburden of "securities," and underneath the surface there is disorganisation drifting towards chaos. Oh, we are not out of the Yankee Railroad trouble yet, not by a very long way. But for a short time we may have a really praiseworthy artistic simulation of "all's well," followed by an autumn dream of gold.

Roumanian Oil Trust, Limited.

The distressing story which the directors of the above have had to tell yearly has now reached the last and most dramatic chapter. The tragic denouement was, however, foreseen many months ago, and the feelings of shareholders will not, therefore, receive too sudden a shock. Recapitulating as briefly as possible past developments, the Ungarische Bank was the original vendor of the Trust, the latter having been formed to acquire large blocks of shares and debentures in the Steaua Romana Company. Owing to a series of accidents and disasters, the latter has not made sufficient profits to declare dividends, and the vendor company, under the three-year guarantee, had to find large sums to pay the 6 per cent. dividends on the preference and 7 per cent. on the ordinary shares. Then the vendor's affairs became involved, and it had to go into liquidation, with the result that it became necessary to realise its assets. The Steaua Romana Company had been largely financed by the Ungarische Bank since its formation; accordingly the accumulated debt involved serious issues, and compelled the directors to look elsewhere for other financial support. But no such support could be obtained anywhere, no one would purchase the Bank's holding and interest. At last, however, communications were opened up with the Deutsche Bank, and the latter ultimately declared itself willing to assist in the reconstruction of the Steaua Romana. But it stipulated that it should then become a distinctly German organisation, necessitating a complete severance with the English company, involving the liquidation of the Roumanian Oil Trust. In the scheme—which was carried unanimously at meetings of the debenture holders, and preference and ordinary shareholders this week—full security is given to the "B" debenture holders, whilst shareholders outside the Bank participate in a share capital of £40,000. The share capital of the Steaua Romana will be £680,000, of which the above £40,000 is for distribution amongst the outside shareholders, £180,000 "A" debentures are to be exchanged for shares to the nominal amount of £180,000, whilst the debt to the Ungarische Bank of £460,000 is to be taken in shares to the nominal amount of this sum. In consideration of the financial support promised by the Deutsche Bank, the liquidators of the Ungarische Bank have agreed to surrender entirely their holdings of 248,885 preference shares and 300,128 ordinary shares in the Roumanian Oil Trust. They propose that the preference shareholders shall receive one Steaua Romano fully paid share for every two preference

shares, and the ordinary shares one Steaua Romana share for every ten ordinary shares respectively in the Roumanian Oil Trust. Such is the scheme in brief, and it now remains to be seen if the Steaua Romana Company can become a successful enterprise under its reorganisation and reduced capital, with "all Germans" at the helm.

London and Globe Finance Corporation.

The return of the ever magnificent and far seeing Whitaker Wright to this country to meet the charges brought against him renders opportune the publication of some of the chief holdings in the London and Globe Finance Corporation prior to the collapse at the end of 1900. The list is dated November 7, 1899, and provides food for much careful reflection. No comment can be offered upon it at this juncture, and we merely set forth the details for public information. The presence of the Premier's name is a sad fact illustrative of the limitations of human foresight. But we must really for once congratulate the Scotch banks on their moderation. Were they always as dainty, some of them would not to-day be lamenting over millions gone, we fear, never to return—gone in Kaffirs, in "Chartered" stuff, in tea estates, in colonial adventures of all sorts, and perhaps, above all, in "whusky" and tied "pubs," the pious folk. Yet have they not all in this instance been as sharp as some of the nobility and gentry in slipping out. That, though, is doubtless the fault of the clients, by whom the shares were pawned in the confident hope of an early and handsome profit at somebody else's expense.

London General Omnibus Company.

In the six months ended June 30 this company earned £4,503 more than in the first half of 1902, the gross income having been £622,742. It also saved £15,946 in expenses, the total of which was £589,209, so that the net income was better by nearly £20,000. Accordingly the directors feel emboldened to declare a dividend at the rate of 7 per cent. per annum on the common stock, as against 5 per cent. a year back, and, after meeting interest on debentures and carrying £10,000 to reserve fund, a

balance of £5,784 is left to carry forward, compared with £5,558 brought in. Were the finances of the company in other respects satisfactory, this would be a pleasant story, but apart from the addition of £10,000 to the general reserve fund everything remains as before, and the only good point that we can mention is the absence of any further diminution in the company's investments, which are taken at cost and stand at a total of £132,009, or the same figure as they stood at twelve months back. As £40,000 of this is in Consols and most of the remainder in British Railway preference or debenture stocks, we should judge that a considerable depreciation exists, for which no provision whatever is made, nor is anything appreciable written off the valuation of freehold and leasehold properties, which stand at £669,472, against £671,014 twelve months back. The stock of horses, omnibuses, harness, and so on, has risen fully £10,000, to £499,458, so that altogether the valuation of these assets is greater by £8,213 than it was a year ago. It only requires a return to dearer provender and hard times in other respects to emphasise the folly of treating large accounts of this description with such prolonged indifference. In the past half-year the company ran twenty-eight more omnibuses than in the first half of 1902, and carried about 3,820,000 more passengers, but the receipts per omnibus per day fell off 7¾d., to £2 8s. 1¾d. Food, however, was, as might be supposed, decidedly cheaper, especially oats. Barley, indeed, was dearer, but the management bought less of that grain and purchased more of oats, which had fallen most conspicuously. It also bought more maize, with the result that the average cost of feeding and bedding each stud in the past half-year fell off £15 compared with the first half of 1902. It, however, was £1 higher than the cost in the first half of 1901. With the £10,000 added, the general reserve and horse stock reserve, the latter a permanent fixture at £10,000, amount together to £105,000. It would seem, therefore, that there is no immediate necessity to issue more debentures in order to keep the business well supplied with means, and the whole of the loan from Parr's Bank has now been paid off, which is also satisfactory.

Secretive Yankee Railroads.

Three United States Railroads have recently decided to stop issuing weekly returns of income. You can draw what inference from the fact you please. The largest of these is the C.C.C. and St. Louis, or "Big Four" line, which will discontinue its own figures and those of its dependent Peoria and Eastern line. Then the St. Louis and San Francisco Railroad, another big company, has ceased to issue its weekly figures, and the same step has been taken by the Chesapeake and Ohio. All of the companies apparently will issue, say a month or five weeks after the close of each monthly period, what they call "audited returns of gross and net income," but the weekly figures are to be stopped. This, however, is a plan already adopted by several other companies, including the Chicago, Milwaukee and St. Paul, the Northern Pacific and the Chicago, Burlington and Quincy. The Milwaukee Company now issues audited returns of gross and net income about thirty days after the close of each month, but the Northern Pacific neither issues weekly nor monthly returns. It only provides a monthly "estimate" nine or ten days after the close of the month. The Northern Pacific and Great Northern Companies, working together, have ceased to publish figures of any sort until their annual report comes out, and the New York, Ontario and Western is in the same box as far as weekly figures are concerned, but it gives a monthly return like the Erie, the Chicago and Eastern Illinois, and the Atchison. It looks as if all the big roads will soon give the public no information until the figures are properly cooked up. You see so much of their revenue is merely paper, that probably it takes time to estimate the figures and dress them up for effect.

Tangled Threads.

Some rather disorderly scenes were witnessed at the annual meeting of the English Sewing Cotton Company, held in Manchester on Wednesday, and at times the remarks of shareholders became decidedly personal. Almost every proprietor wanted to do something different, with the inevitable result that nothing at all was done likely to be productive of good. After Mr. T. C. Waterhouse, the chairman of the company, had dealt exhaustively with the year's trading and the present position, there was a long wrangle over the re-election of the retiring directors. Certain members desired the number of the board raised from eight to nine, and on this being defeated two gentlemen were proposed in opposition to those retiring. However, after a good deal of uncomplimentary language had been let loose, the original directors were re-appointed, and the way was cleared for the chief opposition resolution moved by Mr. J. E. Lawton, formerly deputy chairman. This was to the effect that negotiations should be opened with Messrs. J. and P. Coats for the sale of the English Cotton business lock, stock, and barrel, to that concern, but the chairman ruled it out of order, remarking that a meeting would have to be specially requisitioned to consider such a resolution. The next business was the consideration of the special committee's report, and needless to say this part of the proceedings gave rise to one or two violent but thoroughly deserved attacks on the vendors. Mr. Diamond, who has lately played a prominent part in the affairs of the company, attempted to speak, but was howled down, and the end of it all was the passing of the following not very heroic resolution: "That the board of directors take the special report of the auditors into their consideration and take such action as they see fit." Mr. Pheazey, of London, then indulged in a few personalities towards Mr. Diamond, urging that he should be removed from office, and the proceedings terminated.

Passing Events.

We have received "Australasian Statistics, 1901-2," with summaries for previous years, compiled by Mr. James J. Fenton, Government Statist for Victoria, and published by Mr. R. S. Brain, Government printer in Melbourne, and the little book deserves acknowledgment, because it is well done. Also we welcome it as a practical illustration of Victorian Government zeal for economy. Formerly it used to issue a big volume, entitled, "Australasian Statistics," which must have cost a great deal of money to produce, but, owing to retrenchments, Mr. Fenton explains, this publication is now stopped, and the small volume before us has taken its place. It really contains everything that anybody outside the colony could desire to know, and has been compiled with much intelligence.

Not much light is thrown upon New Zealand finance by the budget of Mr. Seddon just laid before the New Zealand Parliament. He boasts that "public and private wealth" is estimated at £350,000,000, and we could all estimate our wealth at high figures if imagination got the rein and mortgages were ignored. The more concrete and tangible fact is a debt of £55,000,000, which, however, ignores the municipal, harbour and other debts. Adding these in, the total would be about £64,000,000 for less than 900,000 people. There is also a "surplus" which, including the balance brought forward, is declared at £570,000, and naturally a loan of £1,000,000 is wanted to keep this surplus whole, but it is to be raised locally and strict economy is advocated. Yes, it is easy to advocate, not so easy to practise. The increase in the annual appropriation—what fine language these fellows use—was £31,000, and in the revenue £84,000. This last figure is much too modest, but then the loan in London did not come off, nor was the sale of 4 per cent. debentures in Australia particularly successful, notwithstanding the personal canvass of Sir G. J. Ward, of the defunct New Zealand Farmers' Association and Colonial Bank of New Zealand celebrity.

There is some shame in Mr. Seddon after all. He has withdrawn his offer of £150,000 in 3 per cent. bonds proffered as settlement in full of the New Zealand Midland Railway creditors' claim for about £1,000,000, and is going to pay the whole sum in cash. It amounts to about 15 per cent. of the amount due, and is really a very good composition, when we remember that even that £150,000 will have to be borrowed.

A terrible man is that Treasurer of the Colony of Queensland, for he takes a cheerful view of the conditions

and prospects of the State, but he, too, goes in for economy, and seems to have turned out a presentable budget, although what the details are we do not yet know. He boasted, however, of having got nearly £142,000 from an income tax which "gave rise to less discontent than elsewhere," and that is a remarkable fact. Also, he tells the world that the withdrawals from the Government Savings Bank were declining, and cites this as evidence of the improved conditions of the country. It may be, and certainly the Government is to be congratulated, because had the withdrawals gone on much longer it would have had to throw up the sponge, having no means wherewith to pay. Revenue for the current year is estimated at £3,680,000, with considerable increases in the income tax and the stamp duty, so that, what with land expenditure curtailed and other matters, a surplus of £4,100 is expected on March 31 next. That is quite grand.

The prohibition of sugar imports from tabooed countries has begun, and proclamation has been duly given in the *Gazette* that no raw sugar will be henceforth received from Russia, Denmark, or the Argentine Republic. This is terrible, especially when we remember that £433,500 of Tucuman Sugar bonds are held in this country, and that we actually imported £305,000 worth of raw sugar from Argentina last year. From Russia we only received £2,040, and from Denmark none at all, so these countries are only put in by way of flourish. It is possible that the Tucuman Sugar Factory's debt may now be defaulted upon, but then investors think this Government the finest England has ever enjoyed, so we do not feel disposed to weep for their misfortunes. There are more to follow.

So Lord Curzon is to have about two years and four months added to his term as Viceroy, and not another five years. He should quit office in the ordinary way at the beginning of January next, but his term is first to be extended to May, and then he is coming home for a holiday, to go back for another period of two years. It is all very nice, and we hope he will stay long enough to enjoy some of the fruits of his weakness. He has not reformed the Indian Civil Service, nor taught the whites in that dependency to respect their native fellow subjects, but sometimes he has allowed justice to be done.

South Australia, the sweet innocent, dreams of establishing a sinking fund "thereby redeeming a moiety of the present debt within thirty-five years." And the substance beneath this dream is the redemption of £78,000 in the past fiscal year, and a hoped for redemption of £87,000 in the current year. Yes, and how much does the colony mean to borrow in that time? Tut! "Prospects were never brighter."

If our Ministry were not tied to De Beers it might pause before sanctioning the importation of Asiatic labour, in view of the fact that the Cape Parliament appears to be to a man opposed to any such step. Should the grievances attaching to the non-payment of military debts, the refusal of redress to victims of marial law, and the withholding of compensation from the plundered, be crowned by a race grievance in resisting which English and Dutch settlers will be as one man, how long do you imagine will our "garrison" suffice to keep South Africa within the empire? That point might be studied by those so eager here to back up the bosses. Really no men are so short-sighted as your average South African credit magician and company manipulator. They clamour, intrigue and bully to get Asiatic labour for their mines, and thousands of unemployed whites cumber the streets of Johannesburg and other towns in the annexed countries, starving, fast becoming ready for a new revolt. Is that the way to bring peace and prosperity to the land? The fools!

Again, out of evil cometh good. Had not Mr. Chamberlain trailed so furiously his red-herring of protection across the stench from Africa's charnal heaps, the Cobden Club would never have opened wide its doors to free-traders of all parties and all descriptions. But the Colonial Secretary has roused this Club to vigorous life, and under Mr. Harold Cox's lead made it an effective fighter. To strengthen the club and bring up its numbers its chairman, Lord Welby, and Mr. Cox, its secretary, invite all free traders, no matter of what political creed, to enter its doors, and in order that the path may be made easy, the subscription has been reduced to one guinea. We commend the step and the club itself to all who take an enlightened interest in the prosperity of the country.

The Mexican Central Railway Company publishes details of an offer made to holders of first and second consolidated income and registered income bonds. Provided a satisfactory amount is deposited, these securities will be exchanged for 5-year gold collateral trust debenture certificates of 1908, bearing interest from October 1 next at the rate of 3 per cent. per annum for three years and at 4 per cent. per annum for four years thereafter, and redeemable at par on any interest date. The offer is $230 par value in the debenture certificates for each first consolidated income bond of the par value of $1,000 and $140 par value in the debentures certificates for each second consolidated or registered income $1,000 bond.

Guernsey has every reason to be satisfied with the working of its State Telephones. The revenue of 1902 provided all expenses, together with depreciation and capital sinking fund charges, and still left a profit of £157. The number of lines working at the end of the year, exclusive of junctions, was 1,073, and as the population of the island is 40,300 this means one telephone to every 37·5 inhabitants, proving Guernsey to be the best telephoned area in the United Kingdom.

Great corporations cannot expect to escape where the mere ordinary mortal suffers, and railway companies must bear their share of local burdens along with the rest; but the reply of Mr. Gerald Balfour to Sir John Colomb's question as to the total aggregate amount of rates paid to local authorities by railway companies of the United Kingdom in each of the years 1882, 1892, and 1902 certainly gives one pause. The returns furnished by the companies do not distinguish rates from taxes, but the information supplied shows that whereas in 1882 the total amount paid was £1,773,634, by 1892 it had grown to £2,368,558, and by 1902 to £4,227,593. Of course the greatly increased scope of the railways and the benefits they derive from the large sums spent by municipal authorities, together with other important matters must be taken into consideration, but the figures are sufficiently striking for all that.

Some years ago, if we recollect aright, there was a book published under the title of "Ironclads in Action," Might we suggest to the compiler of that doubtless valuable publication a companion volume, to be described as "Ironclads in Mock Action"? There would be great scope in a work of that description for statistics of the slaughter, ship sinking, boiler bursting, gun jambing, ironclad ramming and other suggestive facts attendant on autumn manœuvres. Perhaps the writer would be able to remove the impression, gradually becoming fixed in the public mind, that our fleet is likely to prove self-destructive to a large extent in the event of its being called upon to defend our shores or protect our commerce on the ocean, as long as we have any commerce left to protect.

Natal has had a Government crisis which is terrible, and is going to have a new general election, which we hope it has money to pay for.

Naturally, the gentlemen who manage the great Morgan shipping combine are demanding a subsidy from the Washington Government to "countervail" that just bestowed upon the Cunard Company by our Government. This is the way in which great nations now rival each other, and it is perhaps better than loaded artillery and mutual slaughter. They are modest, too, these worthy men, for all they desire is £600,000 per annum, or $3,000,000. Will they get it? We should not be surprised, indeed, might have been almost certain that something like this sum would have been voted with great alacrity by the United States Congress if the shipping combination had not entered into an agreement which compels it to keep so many of its ships under the British flag. Cousin Jonathan is not going to subsidise British ships in any form, of that Mr. Morgan and his friends may

rest assured, but the demand is an interesting example of what in these days is called "enlightened progress" in commerce.

In dealing recently with the question of imported Asiatic labour, General Louis Botha carefully pointed out that Asiatics had "ruined Natal," and were driving the white man off the land in that settlement. But that might be good for the revenue, as long as such Asiatics submit to pay taxes, a vital point in Natal's indebted condition.

It is to be supposed that the Canadian Pacific Railroad Board reckons on being able to fish a few millions out of our money market by help of the extra ½ per cent. dividend bait which it has now thrown at us. It may succeed, and certainly the money is badly wanted. Some years ago the board intimated its intention to spend £500 per mile of line out of capital in improving the permanent way. That has, doubtless, all gone long ago, and the permanent way is still in a lamentable condition, so that another £1,000 per mile might disappear thereon without much to show for it. Therefore, more millions must be raised, and traffic receipts are bound to continue flourishing, with net revenues to correspond, until the millions can be found. There would not be the slightest doubt about their subscription were we not so poor, were not our underwriting shop closed for repairs.

The Grand Trunk Company will also require a great deal of money to build that new Pacific line, to be all its own, which is sanctioned by the Canadian Government amid protests from the opposition, and the task may be hard for it likewise, especially as its net revenue does not grow in correspondence with its gross. However, it must push forward with capital demands or perish, and since the Canadian Government itself cannot venture upon entering the market for capital to provide railway subsidies, the next best thing is to set the Grand Trunk on the job. It has paid away so much in dividends of late that it must be getting deucidly hard up, don't you know.

People in the City are rather angry about the concealment of the fact that £7,000,000 of the £10,000,000 Exchequer bonds due on August 7 has been renewed instead of the £6,000,000 advertised. Money jobbers think themselves tricked by Mr. Ritchie, and want to know who had the advantage and why the truth was not told. They were calculating upon getting £4,000,000 to play with, and probably got only £2,500,000. Indeed, they really got nothing, because the £3,000,000 paid off came out of the Transvaal guaranteed loan after the approved British fashion of paying one debt by raising another, so extra-popular with our Government. After all, though, was not the step inevitable, since there was only £3,000,000 of that Transvaal loan available, and since the Government was in other respects awfully hard up? It has to find so much money for the army and navy that it cannot spare anything with which to really pay off debt. All it can do is to play at paying, and pile it up.

An esteemed correspondent in Paris asks us where he can get quotations for the shares of the Morgan Shipping Combine. We have enquired, and can find none. Certainly there is no market in London, and the last we heard of them in New York was that the common shares were offered at 5 cents to the dollar, and found no buyers.

As with the Allsopp Company, the directors of the Welsbach Incandescent Gas Light undertaking encountered from preference stockholders considerable opposition to their scheme of capital reduction. Fortunately, Mr. Justice Buckley came to the conclusion that not only was the loss fully proved, but the reorganisation proposal was fair to all parties, and duly sanctioned the writing down. Already proprietors have derived benefit from the decision in a marked appreciation in the price of the company's securities on the Stock Exchange, and now that the capital is on a more reasonable basis they ought soon to see some return on their investment.

Ernest Terah Hooley is again figuring rather prominently in the financial world, and it is fitting perhaps that one of his notorious promotions should have committed the happy despatch during the past week. This is the Blaisdell Pencil Company, whose shares, if memory serves us, were persistently "tipped" as a desirable purchase by the halfpenny daily journal which has obtained such droll prominence in other directions. The purchase price of the invention was £86,667—a ridiculously small amount for a man like Hooley to trouble about—but most of it was in cash, a circumstance which went far to redeem any shortcomings in size. The public never took kindly to the pencils—the covering was composed of paper in place of wood, and could be unwound instead of being cut away with a knife—and after two or three years unsuccessful trading the concern went through the process of reconstruction. It availed nothing, however, and on Wednesday resolutions were passed for voluntary liquidation. The number of Hooley companies that have escaped a similar fate is rapidly approaching the vanishing point.

Lord Allerton's speech at the half-yearly meeting of the Great Northern Railway on Tuesday last is the most cheering railway utterance we have read for many a day. Hitherto this line has been subjected to rather severe criticism, on account of its out-of-date methods, and it is pleasant to find the board making a real effort at reform. A saving of 500,000 engine miles in the half-year in itself is an excellent achievement, and we now learn that in connection with a friendly neighbour—the go-ahead North-Eastern Railway presumably—the problem of empty wagon haulage is being taken in hand, and an experiment is about to be made, in the form of an interchange of wagon stock between the two companies. The programme for the current year contemplated the building of forty-five new engines, which they hoped to charge entirely to revenue, against twenty-eight constructed last year. These new engines would be of a powerful type, and the company intended to initiate the bold policy of "scrapping" locomotives, even though they were not entirely worn out, where it was evident that advantages would be derived from replacing them with engines capable of performing present day work. Then they had in hand the construction of 1,000 15-ton wagons, which it was anticipated would bring about a reduction in the cost of loading and handling. The electrification of the suburban lines was receiving serious consideration, and in order to, where possible, save passenger mileage some experiments were taking place in the more sparsely populated districts of running a self-contained auto-car holding 35 to 40 passengers. This might improve the service in such neighbourhoods at less cost than by providing ordinary engines. The speech is distinctly encouraging.

Shareholders in Lloyd's Bank are still being pestered with circulars from Arthur Dougall Cochrane, almost imploring them to take up shares in that very singular concern the Royal British Bank, of which the "Right Hon. Lord de Morley" still poses as managing director. Having been instructed by the Courts of Law to make it clear that the affair has no connection with the great Lloyd's Bank, that fact is necessarily, and with a fine instinct of self-puffing, emphasised in the circular, and we can but repeat our former advice to Lloyd's Bank shareholders and others that they should have nothing whatever to do with the Royal British Bank.

Messrs. Close Brothers and Co. have won their appeal to the House of Lords in the action brought against them by the Assets Development Co., Limited. The decisions in the case have been varied, if not always sound. First, Mr. Justice Buckley decided in favour of Messrs. Close, then this decision was reversed by the Appeal Court, and now in the end the House of Lords declares Mr. Justice Buckley was right, and the Appeal Court wrong. However, all's well that ends well, and we congratulate Messrs. Close on at last obtaining a satisfactory verdict.

While sympathising deeply with Paris in its latest tragedy, the most appalling yet recorded in the history of electric traction, we, at the same time trust that the lesson it teaches may be carefully conned by those responsible for the management of our tubes. It is hardly likely an accident will arise from the same cause in our deep level railways, as the precautions against fire appear to be better than those on the Metropolitan of Paris, but there still remains the possibility of a panic arising from a collision or other cause. And how do the officials of the tubes propose to safeguard against this?

The Investors' Review.

The Week's Money Market.

BANK RATE 3 PER CENT. (Reduced from 3½ per cent. on June 18.)

Norfolk House, Friday Evening.

All week until to-day money rates have been stiffening up, as we have throughout insisted that they must do about this time. The truth is the supply of banking credit which is called money has not at any time this year been abundant and is not so now. As the autumn comes on, we shall probably have to encounter an export of gold which might easily assume embarrasing proportions. We generally have to send gold out towards the latter part of the year in payment of raw produce of all kinds imported, and imperial finance will this year increase the liability, because we have decided to buy up the Netherlands Railway of South Africa, at a cost of £14,000,000 or more. The proprietors and bonded creditors of that corporation are mostly Dutchmen and Germans, consequently the greater part of the remaining instalments falling due upon the Transvaal guaranteed loan will have to be sent abroad, and if to the extraordinary demand thus created loans granted to United States Railroad corporations be added, ground enough is afforded to sustain those who are working short loan and discount rates up. It must never be forgotten that we have accumulated no gold at all this year. The total stock in the Bank of England is now only £35,272,000, the smallest figure at this date since 1900, and a sum wholly insufficient to at one and the same time afford domestic credit adequate support and meet foreign export requirements. Leaving out of view the risk our market runs owing to the large mass of foreign banking capital employed here, as Mr. Schuster was careful to point out, it will be seen that money and discount rates cannot keep low here without exposing us to ticklish coincidences.

Short loans, however, have never been steadily dear this week. The market had to borrow about £500,000 from the Bank on Tuesday for a week, at 3½ per cent., in order to enable it to meet its share of the Transvaal loan instalment due on that day, and call loans sometimes ran up to 3½ per cent., and were usually 3 per cent. On Stock Exchange pay day, also, money became 3 per cent. over night, but, generally speaking, the rate was 2½ per cent. both for call and notice advances, and only yesterday did the seven-day rate become 2¾ per cent. to any large extent. The market again weakened this morning, so that seven-day money was no better than 2½ per cent., and call money fairly easy at 2¼ to 2½ per cent. The ease in credits thus shown led people to conclude that very little, if any, of the Transvaal loan money was lent out yesterday by the London and Westminster Bank, as it would have had to be called in again this afternoon to be ready for disbursement to holders of the debt of the South African Republic. Should this be the correct inference it merely emphasises the exceeding narrowness of the margin between ease and scarcity.

With discounts it has been otherwise. The rate has kept stiffening up all week and bill brokers skilfully utilised the tremour of dread about gold exports to New York to harden quotations until the minimum rate for three months' remitted bills touched 2⅞ per cent. with the bulk of the business done at 2 13-16 per cent. A further advance again took place without forcing up the Bank rate, and the market is hardly prepared for such a step as yet. Bankers, however, are all poor, thanks to the Universal shrinkage of the prices of securities on which credit is generated, and for other reasons. Therefore no bank is a ready buyer of bills from the brokers, and the latter being accordingly left in great measure to their own devices are nervous, and thoroughly disposed to shield themselves by exacting as high rates as they think they can obtain. But for the competition of foreign bankers we think the discount rate would never have fallen under 2½ per cent., and it should not, even allowing for that, now go below 2¾ per cent. Brokers were unwilling to work this morning under 2 13-16 per cent., and occasionally obtained 2⅞ per cent. There was a very fair business doing, and no disposition shown to concede anything to sellers.

All bar gold arriving continues to go to the Continent, the price being still 77s. 10⅜d. per oz. A call of £1,750,000 is due to-morrow on the Underground Electric Railway profit-sharing notes. To-morrow, also, Transvaal 5 per cent. bonds to the amount of £2,500,000 will be paid off. There is a further £75,000 due on London and South-Western Bank shares, and about £47,000 on Metropolitan Electric Tramways preference shares. The dividends on the Midland, North-Eastern, South-Western and Great Eastern Railways, however, fall due to-morrow, and, together with some minor disbursements, will scatter £4,200,000. Gold movements at the Bank continue insignificant but, so far as they go, adverse.

Calls on new issues in the coming week are of small impertance. On Monday £300,000 is due on Liverpool 3 per cent., and on Wednesday £169,600 will be payable on Middlesex 3 per cent. Other small items make up a total of about £155,000. Dividend disbursements, however, are on a considerable scale. County Bank, Taff Vale Railway and other dividends will release £428,000 on Monday, Great Central payments on Thursday will amount to £268,000, and the North-Western consolidated stock dividend on Friday will set free about £1,000,000.

SILVER.

Indian support was withdrawn from the Silver market during the early days of the week, and quotations gave way to 25 5-16d. per oz. for cash and 25⅜d. per oz. for future deliveries. At these figures, however, a good many special orders came forward, and as India resumed buying on a small scale prices sharply recovered to 25½d. and 25 5-16d. per oz., respectively, closing firm. The belief is growing that the Indian Government will be compelled to enter the market, and purchase the metal earlier than had been anticipated. For the Rs.50,00,000 India Council drafts offered for tender on Wednesday, the applications amounted to Rs.2,90,90,000 in bills and Rs.17,55,000 in telegraphic transfers. The allotments in bills were Rs.46,97,000, and in transfers Rs.3,03,000, tenders at 1s. 4d. and 1s. 4 1-32d., respectively, receiving about 20 per cent.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict., cap. 32, for the Week ending on Wednesday, August 12, 1903.

Exclusive of £55,000 last week paid over in aid of local expenditure making the total of such payments to date £2,667,868.

The total estimated income for the year is £144,270,000, and the total income to date is £44,724,557 from ordinary revenue sources, including £12,238,000 from customs, £10,107,000 from Excise, £5,104,000 from estate, etc., duties, and £7,308,000 from income-tax. In addition £310,000 has been borrowed under Telegraph Acts, £28,000 for the Uganda Railway, £438,000 for naval works, and £750,000 for military works. Also £4,000 has been borrowed for Land Registry buildings. It is to be noted that £6,962,272 of the expired £10,000,000 of exchange bonds has been renewed, so that only £3,000,000 has been redeemed, out of the Transvaal Guaranteed loan, leaving the net debt at £7,000,000.

The year's estimated ordinary expenditure is £143,954,000, of which £27,000,000 is the National Debt charge, and £114,035,000 the "supply" outgo. Up to date £50,818,000 has been disbursed, including £37,729,000 for "supply," principally Army and Navy corruption and extravagance. In addition borrowed money has been laid out as follows:—Telegraphs £310,000, Uganda Railway £38,000, naval works £438,000, military works £1,050,000, Land Registry buildings £4,000.

Balances at Banks of England and Ireland £3,346,000, against £6,102,000 a year back.

The following statement shows the dates on which the remaining instalments on the Transvaal guaranteed loan of £30,000,000 have to be met:—

£15 per cent. on Tuesday, September 15, 1903.
£15 per cent. on Tuesday, October 13, 1903.
£15 per cent. on Tuesday, November 10, 1903.
£15 per cent. on Tuesday, December 8, 1903.

Instalments may be paid in full, under discount at the rate of £2 per cent. per annum.

TREASURY BILLS OUTSTANDING.

Tenders for £1,000,000 six months' Treasury bills were opened on Monday at the Bank of England. The total amount applied for was £3,034,000; and tenders for bills at six months at £98 7s. 9d. receive about 14 per cent.; above, in full. The average rate per cent. was £3 3s. 1d.

Stock Market Notes and Comments.

Has the end of the liquidation in Yankee Railroad shares been reached? You might just as well ask us to indicate under which thimble lies the pea, but it may be interesting to quote a sentence in one of the Press financial telegrams from New York descriptive of Thursday's Wall Street market. "At the opening," it says, "banking interests distributed manipulative orders for leading stocks." Just so. The rise is the product of manipulation, and if the public follows the lead thus given them and stakes its money, we shall have active markets with rising prices throughout the autumn. Will the public follow? We think not, not yet at least. Too many bitter lessons have been administered to the amateur gambler and speculative investor to be speedily forgotten, so the dealing remains professional and the recovery in prices largely the outcome of option manipulation favoured by manufactured cheap credit money, lent on Wall Street by big houses at a loss so as to create an impression that the market is easy. It is not easy, on the contrary, it remains strained, and the autumn pressure on the currency and on banking credit has yet to be applied. So dreadful does it look to those who gaze into the future that a special session of Congress is going to be summoned mainly in order that some form of "poker-chip" money may be devised and thrown upon the market to help it to tide over the autumn and early winter. Appearances are, therefore, wholly deceptive, and not only can we give no advice to the public here to buy the lower grade securities of American Railroads, but we are still inclined to advise them to sell out what they have got whenever they see a profit. Do not wait in the hope that that profit may grow bigger. Take small profits and be thankful.

Kaffir shares have also been going up this week, and there, likewise, it is manipulation with automatic uniformity. The Rand houses, in whose hands the market lies, send out tips through their society touting channels and their press, advising the public to come in and pick up this, that, and the other "fine bargain," but so far the public has not responded, and it is wise. Leave these houses to their own devices for another six months, or help them to some of the good things they are asking you to buy directly they put prices high enough to enable you to get out without loss. The mock "boom," for it is nothing else, has been set agoing by the common interpretation of Mr. Chamberlain's promise of a free hand to the Milner

Government of the Transvaal in the matter of Asiatic labour. "It is all right now," the market man says, "so let us go ahead and buy," and doubtless from all that Mr. Chamberlain will do in the way of listening to the protests of South African whites of all races it is all right, but we are by no means convinced that the presence of Asiatics on the mines is going to yield those immediate profits to shareholders the eager wholesale vendors are so ready to prophesy. However, the advance, should it come, is to be welcomed for the sake of the many thousands of people who are now suffering from the depreciation and crippled by their losses. Should the advance go on, and we have no great confidence that it will, sensible people ought to keep their heads and sell out whenever a favourable opportunity occurs. New elements of disturbance will be brought into South Africa by Chinese or Indian labourers, and there is no knowing where the industry may be a year or two hence. All will not be plain sailing for the mine bosses, of that the public may be quite sure. The real problem the public must study is whether it is better to supply further money to the South African bosses by relieving them and their finance companies of the bales of shares manufactured for sale, or to take some of their own money back by disposing of the shares already held when they get the chance. We should let the bosses carry the shares.

Why do Consols continue to shrink in price while other things are so disposed to take to ballooning? For a variety of reasons, one being the discovery by multitudes of investors that the rate of interest has come down permanently to 2½ per cent. As we have all along said, these multitudes never realised that this was going to take place until they found the amount of their dividend warrants cut down. We have heard of one stockholder who actually sent his warrant back to his broker complaining that "a mistake" had been made. Now, however, the whole mass of stockholders has become aware of narrowed income, and selling is therefore continuous while there are no buyers. Then, embarrassed credit institutions have unquestionably been flinging out stock, and will probably have to continue to do so in proportion as the money market becomes difficult towards the end of the year. Against influences of this depressing kind nothing in the way of steady buying can be set. Why should any man in his senses buy a political stock whose interest has been cut down, and whose prospects are at best dubious, a stock to which no effective sinking fund manipulation can be applied by reason of the multitude of other debts the Government has to carry? An overloaded market is left without efficient support, and consequently the permanent tendency of the stock must be to fall.

The Week's Stock Markets.

A rather more cheerful story about the Stock Exchange can be told this week, and already a good many people are quite prepared to become enchanted with the idea that all the trouble is now at an end, and that a fine old-fashioned boom must inevitably follow the recent appalling slump. It is quite possible that the upward movement in Yankee shares which set in during the past few days may be carried a good deal further before breaking down again under the weight of realities, and a few gamblers may get in and out at a profit, but the market is not one to be rushed into headlong, and outsiders would do well to consider whether a few dollars rise, entirely due to professional play, has eliminated any of the inherent rottenness which has lately played such havoc with all sections. Markets everywhere are essentially hollow, purely credit sustained, and must continue so until a drastic clear out has taken place of the immense creations of paper rubbish thrown on to them during recent years. At the outset it seemed as though another week of acute distress was to be experienced, but gradually the tide turned and the adjustment of the fortnightly account which commenced on Monday, proceeded much more smoothly that at one time seemed probable. There were, of course, big differences to be met in the Yankee section, but only two small firms were "hammered," and members now look as happy as they were last week despondent. The fact, however, that no big failure occurred makes it increasingly certain that immense losses lie somewhere concealed, sooner or later to make their presence felt with ruinous consequences.

Consols for cash fell at the start to 90¾, but then shared the improvement in other sections, and hovered around 91 for a day or two. Stock, however, was dribbled into the market, owing to political fears, and the not very comforting monetary outlook, and finish ⅜ down for cash, at 90 9-16 to 90 11-16, and ⅛ easier for the September account at 90 11-16 to 90 13-16. Childers 2½ per cent. close ½ weaker, and Transvaal scrip lost all its premium, leaving off at par, or a fall of ⅜. Khaki stock was slighly lower at 97½. India stocks and other British Funds all remained as before, but amongst Home County and Corporation stocks Cheltenham and Wigan 3 per cent. each declined 2, and Metropolitan 3½ per cent., and

3 per cent., and Southend 3 per cent. closed 1 down. Colonials continue flat, and during the week Tasmania 3½ per cent. lost 2, New South Wales 3 per cent. and Province of Quebec 3 per cent. 1, and Queensland 3½ and 3 per cent. ½.

The Foreign bond market was not much disturbed by the ominous course of events in South Eastern Europe and the continued unrest in the Far East, principally because business in them has almost deserted our market. Servian and Bulgarian issues were flat, leaving off 1½ to 2 down, but although Turkish groups were always inclined to recede, the net loss does not exceed ¼. Most active inter-bourse things close steady. Spanish, however, were ¼ easier, Egyptian Unified are unchanged, and the preference finish ½ higher. Portuguese and Greek Monopoly and Rentes regained early losses. Chinese and Japanese fluctuated narrowly, and most issues finish as before. In the South American division Brazilians were helped by the settlement of the Acre territory dispute with Bolivia, and Argentines and Uruguays likewise showed an improving tendency. As usual account money was difficult to lend profitably, notwithstanding that it was obtained on fairly easy terms outside. Italians and Russians, scarce as usual, were continued at even to 2 per cent. Portuguese cost 3 per cent., Spanish 2 to 3 per cent., and Turks 3 to 4 per cent. On most South Americans the carry-over charge was 3 to 4 per cent., and the worst rubbish never commanded more than 5 per cent. No very important changes occurred during the fortnight, but Japanese fives were up 1¾, and the 4 per cent. 1, while Chinese showed gains of ⅛ to ½. Most leading Europeans were higher, and Argentines, Brazilians, and Uruguays moved favourably to a small extent.

Home Railway ordinary stocks still fail to attract investors, and the modest improvements in prices shown at the close are entirely a reflection of the recovery in Yankee Railroad shares. Rates seemed pretty stiff at the settlement, running to 8 and 9 per cent. on Great Central and South Western and 6 and 7 per cent. on Great Western, Midland deferred, Great Eastern, North-Western, Caledonian deferred, Brighton "A," Great Northern deferred, and little Chathams. Nevertheless it was said that the "bull" account had been reduced, a circumstance that contributed to the improvement in quotations. One or two accounts were forcibly closed, attributed to Scotch banks, but they were probably not of great importance, and the effect soon wore off. Central Londons were depressed on account of the disaster on the Paris Metropolitan, closing 3 down for the deferred. Elsewhere losses did not exceed 1, and amongst the improvements was an advance of 1½ in North Western. Making up prices were rather sickly-looking, and Brighton "A" headed the list with a loss of 4. South Western deferred was 3 lower, Great Eastern fell 2⅝, Chatham first prefs., South-Western ordinary, and Districts 2½, and Dover "A" 2¼. Then came losses of 2 in Central London deferred, and South Eastern ordinary, and North Western, Metropolitan, Furness, and Great Northern preferred gave way 1½. The rest were 1 or less easier.

Wall Street experienced another very bad day last Saturday, chiefly because of a very disappointing statement issued by the New York Associated Banks, and violent bear attacks said to emanate from the Standard Oil and Gould interests. This caused our market to open on Monday in a rather nervous condition, and an effort to stem the tide of demoralisation met with but scant success. At the start prices were put about a dollar above the New York parity, but the rise immediately started heavy liquidation, with Eries, Atchisons and Union Pacifics prominent, and the early rise rapidly disappeared. The slump, however, was followed by renewed support, Canadian Pacific shares leading with a jump of 2½, and Wall street was only too pleased to keep the advance going as long as it could. Unfortunately the improvement again brought sellers forward, and once more weakness supervened. There was no further rally, and a day of ups and downs left Atchison 2⅜ weaker, and Milwaukee and Louisville 2 lower, while Wabash preferred and Union Pacific ordinary fell about 2, and Denver preferred, Erie seconds, Illinois Central, New York Central, Norfolk ordinary, Southern preference, and Wabash bonds 1 or more. After we finished business a slight rally took place on the other side, for which an increase of ½ per cent. in the Canadian Pacific dividend was largely responsible. Harriman interests also lent aggressive support to Union and Southern Pacifics, and with Morgan protecting his Steel Trusts opening losses were more than recovered. So Tuesday was a happier day, as without anything important taking place, Wabash preference shares and bonds put on 2½ and 2, Norfolk preferred and Illinois each rose 1, and improvements of ½ to ¾ were noticeable in Atchison, Baltimore, New York Central, Southern Pacific, and Union Pacific. Had dealers then gone home all would have been well, but they created the usual "Street" market, and the outcome of the pandemonium was the loss of most of the advances mentioned. Undeterred by this, however, Wall Street kept its advance going, the Government crop report published after

hours on the previous day being the chief aid to the upward sweep. The condition of wheat was disappointing, but this was more than offset by the good showing made by the corn crop, and with excellent annual statements expected from the Erie and Reading companies, the session again ended with fair improvements. A statement by Mr. Wm. Rockefeller that the St. Paul Company had $20,000,000 on deposit with various trust companies, which is ample for all requirements, and that there is no need for further borrowing had a pronounced effect. By this time traders had got the "all trouble over" idea into their heads again, and prices went ramping up in fine style. A firm opening here was followed by some forced closing, chiefly in Atchisons, Eries, and Unions, but this done with there was no holding the market. Louisville rushed up 3 and Atchison ordinary, Baltimore ordinary, Erie ordinary and second preference, Southern preference, and Union Pacific ordinary were from 2 to 2½ better. Continental and Wall Street support helped things along, the firmness on the other side being largely due to the statement that the control of the Seaboard Air Line had been secured by Messrs. Ladenburg, Thalmann and Co., and that the system would be operated in harmony with the St. Louis and San Francisco undertaking. Thursday was a day of uninterrupted advance, and the idea that the worst had been seen became more firmly established than ever. Dangerous accounts in New York were said to have been adjusted, gold imports were certain and would prevent any momentary stringency, and Mr. Wm. Rockefeller, being duly interviewed, asserted that "if the market goes up 5 points it will go up 20." By the end of the day Chesapeake, Reading ordinary, and Wabash debentures were 3¼ to 3½ better, Milwaukee advanced 4, New York Central, Southern Pacific, and Union Pacific 2½ or thereabouts, Atchison ordinary and preference, B. and O, Erie, Louisville, Norfolks, Southern ordinary and preferred, and Wabash preferred 2 or a little more, and the rest ½ to 1¾. Final prices show gains of 1 to 4 dollars. Yet must we not forget that it is purely a speculators' rally, quite unsupported either by the American or British public, that heavy railroad borrowings will be effected as soon as they can be so without bringing about a smash, that some of the leading roads have decided to cease the publication of traffic receipts and that immense losses still remain hidden, which must some day be revealed. The market should still be left alone. Making up day brought with it some ugly differences. Atchison in the fortnight had lost a further 7¼, Southern preferred 6, Wabash preference 5½, Union Pacific ordinary 5, Erie common 4½, Louisville 4¼, Milwaukee and Denver preferred 4, Chesapeake and Wabash B bonds 3, B. and O. 2½, and Atchison preferred, Ontario and Southern and Wabash common 2. On the other hand Illinois Central were up 2½, and Baltimore preferred 1. Money generally cost about 4 per cent.

Canadian Pacific shares were knocked down at first by a "bear" raid, on unfounded rumours of troubles in Montreal, but they were soon on the up grade again, being put higher, it was said, by a pool which has lately been absorbing stock against those who had sold short. Then came the announcement of an increased dividend, and at the close the shares are 2¾ better. Trunks were also rushed up by country speculators, but became dull towards the close, when it became fully recognised that no dividend would be forthcoming on the "Thirds" for the past half-year. The statement was out to-day, and shows that the full dividend can be paid on the second preference, with a balance over of £5,600. At the close prices are very little altered. Canadian Pacifics made up 2¾ better, and Trunks 1 down for the ordinary and ⅜ easier for the third preference. Money was 4 to 5 per cent. as a rule, with some business done at 6 per cent.

Business was very feeble in the section devoted to Foreign Railways, but the weakness prevailing elsewhere at the commencement of the week proved contagious, and a long list of losses of 1 or thereabouts was put on record. Most of the movements were in debenture and preference stocks, and therefore not of great importance, but Buenos Ayres Western ordinary dipped 1 and Argentine Great Western ordinary was also easier to the same extent on news of an earthquake at Mendoza. On the other hand, Rosario ordinary stock went up ½, and Cucuta first debentures were quoted 3½ higher. Mexican issues received very scant attention either from "bulls" or "bears," and at the end are practically unaltered. Money on Argentines generally cost about 5 per cent., and on Mexicans 6 to 8 per cent. Movements on the fortnight were nearly all adverse, and ranged up to 3 in leading Argentines. That was the loss on Cordoba Central first preferences and others, including Western ordinary and Argentine Great Western preference were 1½ to 2½ easier. Rosario ordinary stood out with a gain of ½.

Idle and uninteresting sums up the condition of the Miscellaneous markets, and few important incidents have emerged. Welsbachs had a sharp rise when the capital reorganisation scheme was sanctioned by the Court, and Gas Lights continue strong, a gain of 3 during the week taking them to 88 xd. London Docks deferred recovered smartly when it became certain that the Port of London bill would be carried over to next session. P. and O. deferred showed heaviness, and the deferred finishes 1½ down. Sweetmeat Automatics were exceedingly weak, a reduction in the third interim dividend by 2½ per cent. coming on top of another sharp fall on the weekly receipts. The market does not now anticipate a total dividend for the year of more than 15 per cent., against 21¼ per cent. for the preceding twelve months, owing in part to considerable losses said to have been incurred in the name stamping machines recently introduced. The shares are finally ½ lower. Aerated Breads still lack active support, and are now down to 11, a further decline of ½, but other Caterers held their ground. Nelson's were dull, while other Meat things kept steady, with a modest improvement in Imperial Cold Storage. Textiles presented nothing of interest, but in the Iron and Steel group Vickers continued to recover. London General Omnibus stock was marked up 3 on the report, and a further fraction was added to B. E. T. ordinary shares. Frederick Hotels preference were flat and lower. The account to be arranged on Tuesday was a small one, and rates were much the same as at recent settlements.

No signs of a revival of public demand has been shown to-day in any market, but Wall Street operators have caught "bears" on our Stock Exchange in Yankee Railroad stocks by a vigorous purchase of call options, and the South African houses continue to do their best to sustain the price of Kaffir shares. Consols dropped ¼, and Grand Trunk thirds and ordinary were flat on the half year's revenue show.

MINING NOTES AND NEWS.

In spite of the rally in the Kaffir market during the whole of the last week of the amount the making-up list showed shrinkages throughout the list, some of the declines being heavy, thus making it easy for the imagination to picture what would have happened had the relapse continued without intermission. Though quotations, therefore, were against speculators for the rise the differences to be met were not so serious as they threatened to be before the meeting of the Boers at Krugersdorp, and it is doubtful whether the settlement could have passed into history without further failures. As it is, punters have had something to be thankful for, and they have assuredly felt relieved. The largest fall was in Tanganyikas, which shed £1, followed by osses of ½ in South African God Mines, Apex and Daggafontein, ⅜ in Driefontein, East Rand Mining Estates, Frank Smith Diamond, Northern Copper, Anglo-French Matabeleland, and Rose Deep, ¼ in Rand Mines, Robinson Central Deep, Cason Block, Angelo, Cinderella Deep, De Beers deferred, Crown Deep, Durban Roodepoort, Henry Nourse, New Unified, and Zambesia Exploring. Against these there were rises of ¼ in Ferreira, 5-32 in Robinson Randfontein, and ⅛ in Bonanza, Ginsberg, Jubilee, and Lace Diamonds. West Australians also generally made up lower, Ivanhoe relapsing 5/8, Fingall Consols 5-16, and Sons of Gwalia ¼. There were heavier losses, still, amongst West Africans, London "Wags" dropping as much as 2½, Ashanti Goldfields 1¼, with shrinkages of ½ in Adulessa, Gold Coast and Ashanti Explorers, and ⅜ in Ashanti and Gold Coast United. Egyptian shares were conspicuously weak through the account, Nile Valleys making up ¾ lower, Nubia ⅜, and Block E's ¼. In the miscellaneous list the principal change was a fall of 5½ in Nimrod Syndicate.

Rates, on the whole, were light, about the same as at the previous settlement. Consolidated Gold Fields, East Rands, Modderfonteins, South African Gold Trusts, Rand Mines, and Randfonteins, were carried over at 4½ to 5⅝ per cent., Johnny's Consolidated and Barnato Consols at 5 to 6 per cent., whilst the general rate was 6 to 7 per cent. On De Beers and Jagers the charge was 2 to 4 per cent., whilst Chartered were done at ½d. to 1½d. On Rhodesian shares the general rate was 6 to 8 per cent., and was slightly heavier on West Africans and Egyptians. In the Westralian market Great Boulders, Ivanhoes, and Great Fingalls were continued at 6 to 8 per cent., whilst on other shares, such as Associated, Great Boulder Main Reef, Lake View Consols, and Oroya-Brownhill, a charge of 5 to 7 per cent. was made. Golden Horseshoes were carried over at 4 to 6 per cent., and Associated Northern Blocks at 5 to 7 per cent. For the new account the Kaffir market again put on as cheerful an appearance as possible, the talk on the labour situation once more being of an optimistic tenour. A goodish inquiry for shares was said to come from various quarters, and a large amount of business was done in options for the end of the year on the part of Continental operators. The result was a general advance in prices, though, in some cases, they did not close at the best. On Tuesday the Rand gold output for July and the labour returns for the same month were published. The market had previously looked for a largely increased production, and it expressed itself as not dissatisfied with the figures. From the Rand itself the output was 242,070 oz., of a value of £1,028,250, an increase of 13,903 oz. and £59,056 respectively. From the outside districts, however, only 9,573 oz. were obtained, of the value of £40,667, which is a decrease of 580 oz., and of £2,461. Thus the total was 251,643 oz., of the value of £1,068,917, compared with 238,320 oz. and £1,012,322. The net gain in labour during the month was 2,208 "boys," the total number employed being 66,662. The market started off as though it were going to send prices sky-high, but the upward flight could not last, and they speedily dropped again, many shares closing below the figures of the previous evening.

The Labour Importation Association held a meeting at the Geldenhuis Deep on Monday night, at which some three hundred miners were present. A resolution was put to the effect that in view of the gravity of the situation brought about by the dearth of native labour, the meeting pledges itself to support the Association in their endeavour to secure unskilled Asiatics. The resolution was carried, there being sixteen dissentients. The Lieutenant-Governor has been asked to forward a copy of the motion to Mr. Chamberlain. It is the intention of the Association to hold a series of meetings along the reef in order to obtain the views of the men. This was regarded by the market as additional evidence of the trend of local feeling in favour of the importation of Asiatic labour, and it tried to rejoice accordingly. But business has been exceedingly quiet, and punters have had all their energies taxed to keep prices from falling. They go up, then down, but never kept at their highest elevation.

The West Australian market has been quiet throughout the week, and prices have tended in a downward direction. The silence in which the directors of the Associated Northern Blocks have hitherto sought refuge from the clamours of a few shareholders and the financial press to know why they have dismissed Mr. Landau has at last been broken. They have addressed a circular to the shareholders, the text of which we give in a separate note, notifying that they will convene a meeting on the arrival of Professor Liveing in this country. That will be some weeks hence, and it is to be hoped full explanation of their conduct will be given.

Of the other sections of the market there is practically nothing to say. Nothing bearing the least resemblance to business has been done in them, and prices have scarcely moved in any direction. In coppers Rio Tintos have been fairly strong, and are higher than a week ago.

Transvaal Chamber of Mines.—At the monthly meeting of this Chamber, held at Johannesburg, on July 17, the report of which is to hand by mail, Mr. Carl Hanau, moved the following resolution:—"That this Chamber hereby declares itself in favour of the importation of indentured alien labour under legislative restrictions, as we are convinced that labour in sufficient quantities for the requirements of the mining industry, and the industrial and agricultural population, and for the Public Works Department, is not available in South Africa, and having regard to the fact that the mining industry is unable to secure even half the number of natives it requires, and that the C.S.A.R. administration is now employing per mile of line open more than double the number of natives employed by the Netherlands, the Orange Free State, and the Pietersburg Railways prior to the war, we strongly urge the Government to cause a public inquiry to be held into the employment of natives on the railways, and, further, to totally prohibit the employment of natives on railway construction in the Transvaal and Orange River Colony, until sufficient unskilled labour has been secured for the mines." This modest demand, however, did not meet with the hearty support of the Chamber. Mr. Reyersbach, for instance, thought that when the finding of the Commission was out then would be the right moment for Mr. Hanau's resolution to be put before the Chamber. Thereupon he moved the following amendment:—"That immediately the report of the Government Commission which has been appointed by His Excellency the Lieutenant-Governor of the Transvaal to inquire into the labour available for the industries, and for agriculture in the Transvaal, has been issued, the Government be asked to call a special session of the Legislative Council to pass any legislation necessary to give effect to the finding of such report; and having regard to the fact that the mining industry is unable to secure even half the number of natives it requires, and that the C.S.A.R. administration is now employing per mile of line, open, more than double the number of natives employed by the Netherlands, the Orange Free State, and the Pietersburg Railways prior to the war, we strongly urge the Government to cause a public inquiry to be held into the employment of natives on the railways, and, further, to totally prohibit the employment of natives on new railway construction in the Transvaal and Orange River Colony until sufficient unskilled labour has been secured for the mines." There is a wonderfully subtle distinction between the spirit of these resolutions. Mr. Carl Hanau has the manliness to say outright that he wants Chinese, whilst Mr. Reyersbach shouts:—"Softly, Carl, my boy, the radicals and pro-Boers can hear you. Don't speak so loudly, there are ears about and stone walls are alive sometimes. Let us dissemble. Let us disguise ourselves and pretend to be what we are not. We know, of course, the Labour Commission will report in favour of Chinese; that's a foregone conclusion, but we needn't take on that we know it. Let us pretend to be ignorant of what it will do, and assume a submissiveness to its opinions. If you'll just let me alter the phraseology of your resolution, Carl, it'll do the trick nicely, and our real thoughts will be concealed effectively from the most prying of radicals." Thus was evolved the resolution asking the Government to give legislative effect to the finding of the Commission, the inference being that the finding will be such as to necessitate legislative action. But suppose the Commission says there is enough labour in Africa for the mines' needs and says the magnates must search and pay for it? What will be the use of such resolutions then? For the amendment was carried with one dissentient, it is said. What wisdom to be sure.
